

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REVIEW OF NEW BOOKS.

Correspondence of William Pitt, Earl of Chatham. Edited by William Stanhope Taylor, Esq. and Capt. John Henry Pringle, Executors of his Son, John, Earl of Chatham, and published from the Original Manuscripts in their Possession. Vol. II. 8vo. pp. 471. London, 1838. Murray.

BEFORE saying a word of the important contents of this volume, we have to bestow our hearty praise upon the care and diligence bestowed upon its arrangement and annotation by Mr. Taylor and Capt. Pringle, who have really performed their useful task in so able a manner as richly to deserve the public commendation. Readers are seldom aware of the pains and trouble it requires to satisfy dates and secure accuracy and order in publications of this kind; and it is, therefore, that we feel the greater satisfaction in directing attention at the outset to the merits here displayed.

The light thrown upon parliamentary proceedings, at a period when reporting was prohibited or in its infancy, is not one of the least valuable results to be acquired from this correspondence; and other historical illustrations, as well as curious points in the individual characters of public men having much influence on the age in which they flourished, are necessary consequences of its contemporary and unbiased revelations.

One letter in December 1757, one in 1758, four in 1759, and a number in 1760, 61, 62, 63, 64, 66, and 1768, when, in July, Mr. Pitt finally arranged his new ministry, fill this volume; and the next must accordingly embrace a most interesting epoch. But our business is with that before us; and we do so at once, without further preface. Here is a remarkable notice of the relations between the King of Prussia and Voltaire (March 1760), in a confidential letter from Mr. Mitchell, at Berlin, to Lord Holderness, the secretary for foreign affairs; it is dated 31st July, and says—

"Two days ago, happening to dine with the King of Prussia alone, I took the liberty to observe, that some late letter his Prussian majesty had written, which had fallen into the French minister's hands, seemed to have given great offence. His Prussian majesty replied, 'I have wrote no letter but one to Voltaire.' I ventured to say, 'Perhaps your majesty may have in that letter made use of some strong expressions with regard to the Duke of Choiseul?' he answered, 'No, I think I made use of this proverbial praise, that the duke was possessed by ten millions of Austrian devils;' that as to the rest, he had told Voltaire he would keep to his alliance with England, and that if the French had a mind for peace, they must speak out plainly; and he said that this letter to Voltaire was an answer to one he had received from him, in which Voltaire had assured him, that the French ministry were perfectly well disposed towards a peace. I think it proper to acquaint your lordship minutely with every circumstance concerning this affair, which I wish may agree with the accounts received from other parts: but I cannot help adding, that the King of Prussia's correspondence with Voltaire has,

on this and on former occasions, given me some uneasiness and suspicions; for I believe the court of France make use of the artful pen of Voltaire to draw secrets from the King of Prussia; and when that prince writes as a wit to a wit, he is capable of great indiscretions. But what surprises me still more is, that whenever Voltaire's name is mentioned, his Prussian majesty never fails to give him the epithets he may deserve; which are, 'The worst heart and greatest rascal now living;' yet with all this he continues to correspond with him. Such, in this prince, is the lust of praise from a great and elegant writer; in which, however, he will at last be the dupe: for, by what I hear of Voltaire's character, he may dissemble, but never can nor ever will forgive the King of Prussia for what has passed between them.—*Mitchell MSS.*"

The seven years' war we abstain from touching, because the few scattered lights we could select would not illuminate that stirring epoch sufficiently to reward us or our readers; and we therefore more willingly pass on to matters more susceptible of extract. It is amusing to find the patriots Barré, Wilkes, and others, soliciting promotion and places from the minister; and delightful to see, by his answers, how firmly he followed the line of his duty unwavering by all private motives. In the midst of all his toils, is not the following a delicious picture?—

"Mr. Pitt to Lady Hester Pitt.

July 2, 1761.

"My dearest Life,—I have gone through the labours of the *corps diplomatique* from ten this morning till past two, and am not at all the worse for the sweat of my brow. I have just received an epistle from Pam,* with a continuation of good accounts from the nursery. All are in perfect health. I propose to see them to-morrow evening, and to devote Saturday to children and to hay-making; and I hope Sunday will prove a day of rest from business—a day of impatience, but of a sweeter kind, it is sure to prove, big with the dear expectation of receiving again my delight and comfort on Monday. The enclosed note to Lord Temple you will be so good as to deliver to him. My compliments to all. Your ever loving husband,

"W. PITT."

A lord-mayor's day, after Mr. Pitt's resignation of the seals, and to which he was pressed by Mr. Beckford, is a picture of the times.

"William Beckford, Esq. to Mr. Pitt.†

Soho Square, November 6, 1761.

"My dear Sir,—There does not a man exist who is more heartily and warmly attached to you than myself. You may, therefore, easily conceive I would not advise any measure that could possibly be of detriment to you, or my country. Men's hopes and fears are strangely agitated at this critical juncture; but all agree universally, that you ought to make your appearance at Guildhall on Monday next with

* "A familiar name of Mrs. Sperry, a most faithful and attached servant, who, in the capacity of nurse, brought up all the children."

† "Endorsed by Lady Chatham:—'Mr. Beckford, 1761; to press my lord to appear with Lord Temple: to which he yielded for his friend's sake; but, as he always declared, both then and after, against his better judgment.'"

Lord Temple; and, upon the maturest reflection, I am clear you ought not to refuse this favour to those who are so sincerely your friends. As you cannot say any one prediction of mine has proved false, so I hope you will give me an opportunity of being declared a true prophet in the present case; which will afford great comfort to, my dear Sir, your ever faithful and affectionate,

"W. BECKFORD."

"Thomas Nuthall, Esq. to Lady Chatham.

Friday, November 12, 1761.

"When I wrote my last note to your ladyship, I had heard but little concerning the triumphal entry into the city on Lord-Mayor's day. It now comes out, that a party of bruisers, with George Stephenson, the one-eyed fighting coachman, at their head, had been hired to attend the chariot which contained the blazing comet and the new chancellor of the exchequer† (which last, it seems, has undertaken to raise the supplies for the next year by a tax upon wild ducks), and to procure shouts and acclamations from the mob. By the time the procession, which moved but slowly, had got into St. Paul's Churchyard, these fellows had hallooed themselves hoarse; and it had been given out that Mr. Pitt was in the chariot, by which means, they had artfully obtained the mob to join them: but, on the east side of St. Paul's Churchyard, some knowing hand stepped up, and looking full at the idol, pronounced, with a fine, hoarse, audible voice, 'By G—d, this is not Pitt; this is Bute, and he damned to him!' (I beg pardon of your ladyship for writing such words, but historians ought to tell facts as they happened.) Upon this, the tide took another turn; and the bruisers' lungs being worn out, the shouts from the independent mobility were instantly converted into hisses, accompanied with a few vulgar sayings, as 'D—n all Scotch rogues!' 'No Bute!' 'No Newcastle salmon!' 'Pitt for ever!' By the time they reached Cheap-side, it was discovered there were some bruisers hired for protectors: this gave still greater offence, and then they began to be more outrageous; and on the turn into King Street an attack began on the coachman and footmen behind with dirt, some of which found its way into the chariot, and very much altered the colour of the new chancellor's ruffles;‡ for it fixed on him only. Before they arrived at

* "Mr. Nuthall was an eminent solicitor, who transacted Mr. Pitt's private business from a very early period until his death. In 1766, he was appointed solicitor to the treasury. On returning from Bath, in March 1775, he was attacked by a highwayman on Hounslow Heath; who, on his demands not being complied with, fired into the carriage. Mr. Nuthall returned the fire, and, it is thought, wounded the man, as he rode off precipitately. On arriving at the inn at Hounslow, he wrote a description of the fellow to Sir John Fielding; but had scarcely closed the letter, when he expired."

† "Lord Barrington."

‡ "In a letter written about this time to Mr. Mitchell, the new chancellor says, 'I continue, my dear Mitchell, without application, to advance, or indeed desire; being convinced that I have long been placed too high. When the time comes for my retiring to the situation best adapted to my nature, I hope to fall easily. I promise you that your old friend will not fall in the dirt. If the duty you owe to the best and most amiable master that ever lived since the days of Titus would permit you to leave the station you are now in, it would give me infinite satisfaction. Old friends fall off, and I find new ones are not so easily made as I thought they were, when I was younger.'—*Mitchell MSS.*"

Guildhall, the bruisers were almost bruised to death themselves. Stephenson had been obliged to retire under the chariot, and with great difficulty got into Guildhall Coffee-house in great disgrace, and trampled under foot. It was with no small labour the chariot got up to the gate of Guildhall, where the constables and peace-officers, being numerous, prevented further mischief; but had there been a furlong further to go, the mob would certainly have cut the harnesses in pieces, and probably gone to greater extremity. At night, his lordship took the opportunity to get into the lord chancellor's state coach, and went away with him, and by that means got home quietly; but I have not yet heard how he rested.—I am, madam, your most obedient servant,

"T. NUTHALL."

A note or two in some of Mr. Mitchell's interesting correspondence will shew us a little of the inside of parliament about this period.

"Yesterday, when the report was made from the committee, and Mr. Pitt was not present, a new attack was made upon him by some members who had not spoken the day before. Colonel Barré, whom Lord Shelburne brought into parliament, renewed the debate with unusual warmth, making use of expressions extremely harsh, such as that of a 'profligate minister,' and the 'execration of the people of England.' He was censured by Charles Townshend and Mr. Beckford. Lord George Sackville took occasion to speak that day for the first time since his disgrace; and, it is said, spoke with great address and great caution, but in opposition to the measures of a German war.

"Jan. 29, 1762. Would you know a little of the humour of parliament, and particularly with regard to Mr. Pitt? I must then tell you that Colonel Barré, a soldier of fortune, a young man born in Dublin of parents of a mean condition, his father and mother from France, and established in a little grocer's shop by the patronage of the Bishop of Clogher; a child of whom the mother nursed (these particulars I have from Mr. Millar, upon his own certain knowledge); this young man (a man of address and parts), found out, pushed, and brought into parliament by Lord Shelburne, had not sat two days in the house before he attacked Mr. Pitt. I shall give you a specimen of his philippics. Talking of the manner of Mr. Pitt's speaking, he said, 'There he would stand, turning up his eyes to heaven, that witnessed his perjuries, and laying his hand in a solemn manner upon the table, that sacrilegious hand that had been employed in tearing out the bowels of his mother country!' Would you think that Mr. Pitt would hear this and be silent; or would you think that the house would suffer a respectable member to be thus treated? Yet so it was."

Our next quotation is a remarkable one, and will, we think, both amuse and please our readers, the first by the letter, the last by the answer.

"The Rev. Paul Shenton to Mr. Pitt.

"Hardlip, near Chatham, December 4, 1764.

"Honoured Sir,—I am a clergyman, and a sincere well-wisher to the glorious society in Albemarle Street, and to all Mr. Pitt's friends and party. I have often had thoughts of making my wishes known to Mr. Pitt, but have hitherto been deterred by the fear and awe of approaching so great a name. I have at length broke through my natural timidity, and have ventured in this manner to let the glorious minority know, they have many friends in secret. My intention of intruding upon your

time, is this. In my two parishes I can procure eight or nine votes; and in the neighbourhood I may venture to say I could procure twenty. I belong to a club of gentlemen, some of whom have votes, and all sincere partisans of Mr. Pitt. Your intention is to bring in at the election for the county some gentleman of your party; that is, the party of honour and virtue. If Mr. Wilkes returns to England by the time of the election, and if you would honour us so far as to send down that able statesman, I sincerely believe the county in general would elect him for his own and your sake. If it is incompatible with Mr. Wilkes's affairs to represent the county, I dare be bold to say, that the county will make choice of any one you will recommend. I have some thoughts of writing a pamphlet, to exhort the people of England to repeal the union act. This book I should be extremely glad of dedicating to Lord Chief Justice Pratt; or, if I could have your permission of dedicating it to yourself, I should think myself superlatively happy. In this little pamphlet I have traced the union from the time that Edward the First conquered Scotland, and shall point out, *honesto calamo*, all the miseries and disgraces England has suffered, since she has been united to that barren province. I have nothing more to add, but to ask your pardon for this great freedom. I am, honourable Sir, your most obedient, most humble servant,

PAUL SHENTON."

"Mr. Pitt to the Rev. Paul Shenton.

[From a draught in Lady Chatham's handwriting.]

"Hayes, December 8, 1764.

"Sir,—Having received a letter signed with the name to which I direct this, I cannot defer a moment expressing my astonishment and concern, that one of your rank, a clergyman, could so misconceive of me, as to imagine that I countenanced libels, because I disapproved part of the methods of proceeding relating to them. Let me undeceive you, sir, by telling you, that no well-wisher of mine, which you are so good as to say you are, can have led you into this error. I have ever abhorred such odious and dangerous writings; and in the late unhappy instance of the North Briton, no man concurred more heartily than I did in condemning and branding so licentious and criminal a paper. Next, as to a pamphlet, which you say you have thoughts of writing, to exhort the people of England to repeal the act of union, and which you wish to dedicate to me, or to the great magistrate you mention,—know, sir, that I revere the union, as the main foundation of the strength and security of this island; that it was the great object of our immortal deliverer, King William; that France may wish to dissolve it, but that all good Englishmen will ever maintain it inviolate. You will, I doubt not, accept, in good part, this free, but not unuseful admonition to misguided zeal; and if you really favour me with your good wishes, you will be glad to understand me aright. Be assured then, sir, that I disdain and detest faction, as sincerely as I reverence and love the laws, rights, privileges, and honour of my country.—I am, sir, your obedient humble servant,

WILLIAM PITT.

"P.S.—This letter to you may serve for all who, like you, are so widely mistaken concerning me."

A lesson for all times from a patriot, statesman, and minister:—It might be printed in type of gold. The domestic letters between this great man and his wife, are equally honourable to his private virtues; and we must give another example:—

"Mr. Pitt to Lady Chatham.

"Bath, Sunday, one o'clock, Nov. 17, 1765.

"My dearest love knows my diary as far as Wells. It continued quite prosperous as far as Bath, where I arrived in the face of day. I passed a much better night for my fatigue, and I am better this morning; foot much swelled, hand less weak, and easier. Thank the Almighty that I am able to send you such an account as your kind thoughts will repose on with comfort. Brother James much better, but shattered and pale enough from having dispersed the gout by bathing. I have the pleasure to tell you that his mind is just in the reasonable posture that I could wish. Would to heaven he could impart some of his right spirit somewhere else! The great of this world seem not to have forgotten the Somersetshire hermit, if the mighty names of Newcastle, Norfolk, Bedford, Rockingham, &c., are flattering to the pride of man. I was interrupted here by a kind visit from Mr. Colibee, the mayor,—a less sounding name, but an honest and steady friend. How I shall sustain these honours, I know not; but while I am relating them to my love, the spirits flow, and the hand obeys. I must, however, check my own career, and despatch the servant before another interruption. Heaven bless and protect the noble mother, and the promising little flock! For this time, adieu, and think with some comfortable hope of the health of your ever-loving husband,

W. PITT."

"Mr. Pitt to Lady Chatham.

"Bath, Monday Night, Nov. 18, 1765.

"Thank Heaven that I am able to hold a pen, and tell my love the feats I have this day performed. I have visited the fair down of Claverton, with all its piny forests, and have drunk one glass of water as I returned, sitting in my coach of state, in Stall Street. Hitherto all goes prosperously with my bodily concerns; so that I have no pain, worth mentioning, but that of being separated from my kind love, and not seeing five little faces, which formed round her a group, which sums all delight—all which my heart can taste. It is, indeed, a pleasure to think that I am writing what will give my dearest life pleasure, and help to make the hours of separation more easy and comfortable. It raises civilities upon me here, from various quarters; and, to my own sense of things, only renders my situation more unaccountable, not to say ridiculous. But no more of this,—

'Who sees not Providence all kind and wise,
Alike in what it grants, and what denies?'

The Hoods are pretty well. The captain and Mr. James Grenville, as also Mr. Mayor, are all that I have opened my doors to. Many, I find, are enough disposed to take a view of me; whether from mere curiosity to see a strange new creature, viz. a leader whom nobody follows, or any other reason why, I do not conjecture. I must now, my life, draw to a conclusion; for my hand admonishes me not to be too bold. Kisses upon kisses to the little children.—Your ever-loving husband,

W. PITT."

The grand American questions, which succeed and occupy the rest of the volume, we must leave to political reviewers; and conclude with one letter, very fitting to be given in a miscellany like ours.

"Lord Cardross to Mr. Pitt.

"Walcot, near Bath, June 19, 1766.

"Accept, my dear sir, from a friend who has the most unfeigned affection and respect for you, these few lines; in return for which, all I ask is to have the honour of a card from yourself or Lady Chatham, to inform me how

your most valuable health has been since you left Bath. My dear father has been greatly indisposed of late, and is, at present, confined to his bed by a fever. His brother-in-law, Sir James Stuart, has been with him,—an unfortunate person, by one false step taken, even against his true principles, very early in life, but a man of consummate sagacity, great experience, and profound learning. He is about to present to the republic of letters, next winter, a work of great utility, which has cost him twenty years' application, upon the principles of political economy. I have perused part of it, and I know it will afford Mr. Pitt great pleasure, and me great instruction. This ingenious uncle of mine told me one day, in conversation, that, after having lived fifty years, and gone through almost all the geographical and literary world, three things only had surmounted his most sanguine expectations,—the amphitheatre at Verona, the church of St. Peter's at Rome, and Mr. Pitt in the House of Commons. A brother of mine is just arrived from our colonies of East and West Florida, and gives me but a very unfavourable account of the capabilities of those countries. He brought me, likewise, a curious account of a negro conqueror, who has subdued a great part of Africa lying near our settlements, and has occasioned the building of our new fort on that coast. He carries eight Arabic secretaries, who record his feats in that language. My brother has also conversed with Commodore Byron's officers, and confirms the accounts of the Patagonian giants. I was much delighted by the accounts of the Duke of Grafton's spirited apology in the House of Lords. It appears to me to have been such a testimony as I should have wished to have given in that assembly.—I am, with the most sincere regard and respect, your most faithful and obedient servant,

"CARDROSS."

The notes upon this letter afford fair proof of the editors' services; and we regret that by an oversight, discovered too late to be remedied, we cannot print and publish them along with it.

The Bubbles of Canada. By the Author of the "Clockmaker." 8vo. pp. 332. London, 1839. Bentley.

SAM SLICK (otherwise Mr. Justice Haliburton) is too popular to need a complimentary introduction to the British, the American, or the European public. But in the present work he has taken a graver tone, and suited his manner and argument to the importance of his subject. Not that we have not often the Swift-like humour and keen sarcasm of his former productions; but, in the main, the nature of his statements are of necessity statistical, political, and instructive. His ability, his experience, and his intimate personal knowledge of the colonies about which he writes, must give great weight to all he says; and we are of opinion that both those who differ from, and those who agree with, his views of the past and present condition and future prospects of these national possessions, will read, and ponder, with advantage, the pages which we now introduce to them.

With regard to the author's sentiments, we have only to notice that, as in all such questions, the *Literary Gazette* only holds the scales even, to shew what is in them; and, as affects persons, whatever Mr. Haliburton may adjudge towards Lords Brougham or Durham, Mr. Hume, Mr. Roebuck, or any one else, we merely report his language, and offer nothing of our own. It is by such means alone we can

enable our readers to form their own estimate of the works we review.

The Bubbles of Canada are in letters addressed to James Haliburton, Esq. the James Burton of Egyptian literary celebrity, who, we believe, has reassumed the original family name, which, like that of the writer himself, is derived from the old race of Haliburton on Tweedside, and connected with Sir Walter Scott, by his maternal ancestry. The first of the correspondence is a very fair specimen of the style and genius of the whole.

"My dear Haliburton,—As the people of this country know but little of the dissensions in Canada, they very wisely confine their observations to the dissensions of those who govern it. This is a more intelligible, as well as a more amusing subject. Every body talks of Lord Brougham and Lord Durham, but nobody speaks of Canada. Instead, therefore, of inquiring what is to become of that valuable colony, what measures are, or ought, to be adopted to ensure its tranquillity, and to protect British subjects and British property there, people very properly limit their attention to the more interesting question—What will the governor-general do when parliament meets? To inquire whether the English or the French population of Canada is in the right, requires some investigation to ascertain facts, and some constitutional knowledge to judge of those facts, when collected. It is, at best, but a dry subject. But to decide whether Lord Brougham or Lord Durham has the best of the dispute, is a matter so well suited for easy conversation, and humorous argument, that it is no wonder it has more attractions than the other. Such, however, is the acerbity of politics in this country, that even this affair is made a party question; and the worst motives are imputed for every thing that is said or done by either. There are not wanting those who gravely assert, that while Lord Brougham was affecting to brush off the flies from the heels of an old rival, he intentionally switched him so hard as to arouse his temper, and to induce him to kick. They maintain that there are two sorts of tickling, one that is so delicate as to produce laughter and pleasurable sensations; and another that irritates both the skin and the temper by the coarseness of its application. They say that his lordship is much addicted to the latter species, and applies it equally to both friends and foes; in short, that his play is too rough to be agreeable. While, on the other hand, there are some who are so unkind as to insinuate that Lord Durham was very willing to take offence, and to shelter himself under it. That he felt he had voluntarily undertaken a load which he was unable to draw; and that, knowing greater expectations had been formed of him than he could ever realise, had no objection to kick himself out of harness, and extricate himself by overthrowing friend or foe, so long as the public were willing to believe the fault to be that of the teamster, and not of the steed. Be that as it may, the exhibition has been an entertaining one; and they deserve some credit for having afforded amusement and occupation to the public at this dull season of the year. There they are,—the crowd has gathered round them,—the idle and the vulgar stand gazing,—and each one looks anxiously for what is to follow. What can be more agreeable to a British mob—a people essentially fond of the prize-fight—than the contest of these two champions, men who have always courted their applause, and valued their noisy demonstrations of pleasure higher than the quiet respect of those of more taste and more re-

finement? It affords, however, no pleasure to the colonist. He regards one as a man of splendid talents and no conduct, and the other as a man who, without the possession of either, has advanced to his present high station merely by the force of extreme opinions. He has no sympathy with either. The one is too much actuated by his implacable hatred, the other by his inordinate pride. The former is dangerous from his disposition to do mischief, and the latter unsafe, from his utter inability to effect any good. After all the addresses that have been presented by the Canadians, this language may possibly appear strange and strong, but addresses afford no proof: they are cheap commodities every where. Place-hunters may flatter, and vulgar men may fawn, and office-holders tremble and obey, but the truth must still be told. A governor is the representative of royalty, and colonists have been taught to venerate the office, whatever they may think of the man. At the present crisis it is the test of loyalty. You will search in vain among those addresses for the names of the dissatisfied; and if those who signed them have expressed themselves strongly, they felt it was no time to measure words, when hesitation bears so strong a resemblance to a repugnance springing from a different cause. But even among these customary offerings of official respect, you will find several exhibiting a choice of expression that bespeak a desire to separate the approbation of measures from the usual deference to rank and station, and others marking the distinction in explicit terms. The colonist by no means regrets his resignation, because he has shewn, from his irritable temper, inconsiderate conduct, and crude and dangerous schemes, that, of all men, he was the most unfit depository for the extraordinary powers that were intrusted to him; but he does regret that public attention should be diverted from so important a subject as our Canadian affairs, to so unimportant a matter as my Lord Durham's private quarrels. He is desirous that the questions at issue between the people of Canada and Great Britain should be understood; and he doubts not that the good sense and good feeling of this country will apply the proper remedies. In compiling a statement of these grievances, pretensions, or claims (or by whatever other name you may choose to designate them), I shall hope to contribute towards this desirable object.

"If ever you had the misfortune to have had the toothach, you have doubtless found that every one of your friends had an infallible remedy; each of which eventually proved, upon trial, to be nothing more than a palliative, a nostrum that soothed the anguish for a time, by conciliating the nerve; but that the pain returned, with every change of atmosphere, with increased power, while the sedative application became less and less efficacious the oftener it was repeated. You have also found, as others have experienced before you, that while you were thus temporising with an evil which required more prompt and skilful treatment, you had lost the opportunity of filling the cavity and preserving the tooth, by suffering decay to proceed too far to admit of the operation, and, after years of suffering, had to submit at last to cold iron,—the *ultima ratio* of dentists. Whether the system of palliatives and concessions, that has been resorted to in Canada, is a wise and proper one, I shall not presume to say; but all men must agree that it at least has the merit of displaying an amiable inclination to avoid giving pain. Whatever doubts may arise as to the comparative

measures of past years, there can be none whatever entertained that they cannot be persisted in any longer with advantage. I shall content myself, however, with merely presenting you with a statement of the case, and you shall decide for yourself whether stopping, or forcible extraction, be now the proper remedy."

His general opinion is afterwards thus expressed:—

"As a colonist, at once a native and a resident of a distant part of the empire, I am not only unconnected with, but perfectly independent of, either of the great parties of this country, of Tories, or Whigs, or Radicals; nor do I consider this as a subject at all involving the principles for which they severally contend. The question is one wholly between the people of this country and the colonists, and must be considered as such; and so far from my Lord Durham's assertion being true, that there has been misgovernment, I am prepared to shew, that every administration in this country, without exception, from the conquest of Canada to the present time, whether Tory or Whig, or mixed, or by whatever name they may be designated, have been actuated but by one feeling, an earnest desire to cultivate a good understanding with their new subjects of French extraction, and on one principle, a principle of concession. Canada has had more privileges and indulgences granted to it than any other of our American colonies: unpopular officers have been removed; obnoxious governors have been recalled; constitutional points abandoned to them; all reasonable changes made (or, as they would express it, grievances redressed); and the interests of commerce and of persons of British origin postponed to suit their convenience, or accommodate their prejudices; in short, every thing has been done, and every thing conceded to conciliate them, that ingenuity could devise or unbounded liberality grant, and no sacrifice has been considered too great to purchase their affections, short of yielding up the colony to their entire control; and for all this forbearance and liberality they have been met with ingratitude, abuse, and rebellion."

Mr. Haliburton proceeds to treat of the government of these provinces from the year 1763, of the population, the revenues, and, in short, of their entire history; in which he displays an intimate acquaintance with the facts, which he brings before us in a lucid and ample manner. Into these details, however, it is impossible for us to enter; and we must be content to quote some of the winding-up passages, which are redolent of the "Clockmaker."

"Those persons who had always espoused their cause in England seem to have fully penetrated their object. 'I do not marvel at it,' said my Lord Brougham; 'to me it is no surprise—I expected it.' Men of sanguine temperament are apt to expect confidently what they desire ardently. That he wished them to be independent, he made no secret. Whatever we may think of his lordship, as a statesman, for entertaining such a patriotic wish, we cannot but admire the unflinching friendship that induced him, through good report and evil report, to adhere to the cause he had determined to advocate. That they might not feel discouraged by partial reverses, he held out the language of promise to them that the day was not far distant when they could hope to realise the object of their wishes. He deprecated our thinking too harshly of them for their vain attempt. 'Where,' he continued, 'in what country—from what people did they learn the lesson?—of whom but ourselves, the

English people? We it is that have set the example to our American brethren; let us beware how we blame them too harshly for following it.' Not content with interceding for their pardon, he solicited, as a boon for them, what they had failed in an attempt to seize as plunder. 'I hold these colonies,' he said, 'as worth nothing; the only interest we have in the matter concerns the manner in which a separation, sooner or later inevitable, shall take place. Is it not, then, full time we should make up our minds to a separation so beneficial to all parties? These, my lords, are not opinions to which I have lately come; they are the growth of many a long year, and the fruit of much attention given to the subject.' The effect of this language upon the loyal population of the provinces it is not easy to conceive. At no time could such a doctrine be heard with indifference, but during a period of unusual excitement it was too mischievous not to awaken a general indignation. On the minds of the Americans it has had a powerful effect, in speculating upon the result of an active sympathy on their part. Disaffection having now succeeded in producing anarchy and bloodshed, assumed the shape of insurrection, the natural result of so many years of agitation. The tragical events of this sad revolt are too recent and too impressive to be forgotten, and the recital would be as painful as it is unnecessary. Anxious, however, as I am not to dwell on the mournful picture which it presents, justice requires that I should pause, and pay the tribute of my respect to the pious, amiable, and loyal Catholic clergy of Canada. They have preserved a large portion of their flock from contamination, and we are mainly indebted to their strenuous exertions that the rebellion has not been more general and more successful. They have learned from painful experience, what ecclesiastics have ever found under similar circumstances, that treason always calls in infidelity to its aid; that there is a natural alliance between the assailants of the throne and the altar; and that they who refuse to render tribute to Cæsar are seldom known to preserve, for any length of time, 'the fear of God before their eyes.' The history of this Canadian revolt is filled with instruction to the people of England. It teaches them the just value of the patriotism of those who are the intemperate advocates of extreme opinions; it shews that courage in debate may sometimes evaporate in the field, and that those who lead others rashly into danger are not unfrequently the first to desert them basely in the hour of need. It exhibits in bold relief the disastrous effects of incessant agitation, and demonstrates that the natural result of continued concession to popular clamour is to gradually weaken the powers of government, until society resolves itself into its original elements. These truths are too distinctly marked to require to be retouched. He who runs may read, but he that would carry away the moral must pause and consider. It is written in the blood and suffering of the colonists, and prudence suggests the propriety of their availing themselves of the painful experience of others, instead of purchasing it by the severe and painful process of personal experience. The successful advocacy here of similar opinions must necessarily produce the like results, aggravated by the increased power of numbers, and the greater value of the plunder. I have seen enough of England to admire it; of its institutions, to respect it; of the character of its people, to love it; and of the blessings conferred by its limited monarchy, to know

how to estimate the enviable lot of those who have the good fortune to inhabit it.

"O fortunatos numquam sua si bona noverint!"

I should feel indeed that kindness could awaken no emotion, and hospitality no gratitude, if, after having received as an obscure, provincial author, the most flattering indulgence, as a colonist, the most hearty welcome, and a stranger, the most considerate attentions, I did not express warmly what I feel deeply. My knowledge of its constitution preceded that of its people; and if my studies have led me to admire its theory, personal observation of its practical effect has confirmed and increased that favourable impression. It is a noble and admirable structure! *Esto perpetua.*"

Of Lord Durham's late mission, he declares, "That many of the measures he proposed for the benefit of Canada were good, it would be uncharitable to doubt; but as none of them have been matured, it would be presumptuous to say so. That others, however, were of a dangerous nature, we have reason to know. The evils to be reaped from this mission have not yet ripened for us to gather; but the seed is sown, and, it is to be feared, taken root too extensively. What could be more injudicious than to send to the contented and happy colonies of Nova Scotia and New Brunswick, and ask for deputies, to listen to crude and undigested schemes for their future government, or to give their own visionary plans in exchange for his? What more cruel than to unsettle men's minds as to the form of their government, and make the stability of their institutions a matter of doubt? What more pernicious than to open a political bazar at Quebec, for the collection and exhibition of imaginary grievances? In the Lower Provinces, we are contented and happy. We need no reforms but what we can effect ourselves; but we are alarmed at changes which we never asked, and do not require. The federative union proposed by his lordship has opened a wide field for speculation, directed men's minds to theoretical change, afforded a theme for restless, young demagogues to agitate upon, and led us to believe that our constitution is in danger of being subverted. Most people think, and all reflecting men know, that it would ripen the colonies into premature independence in less than ten years; and who, I would ask, that is attached to the mother country, and desirous to live under a monarchical form of government, can contemplate a scheme pregnant with so much danger, without feelings of dismay? Who would continue to live in New Brunswick, if, at every disturbance in Canada, the governor-general is to propose to new model their form of government? Who would consent that that united and loyal colony should have its peace and happiness jeopardised by any union with the disaffected and troublesome French Canadians? or will approve of the political quackery that would compel Nova Scotia to swallow a nauseous medicine, for the purpose of effecting a cure in Canada? The danger arising from such visionary schemes as have lately been unfolded to the colonies, is passed for the present, and I heartily rejoice that it is; but it is to be hoped that powers coextensive with the Lower Provinces may never again be intrusted to any man. In this country, there is a general and very natural repugnance manifested to give up the bodies of deceased friends for experiments for the benefit of science. It is difficult to imagine how so sensitive a nation could consent that their colonists should be considered of less value, and be delivered alive into the hands of the

operator, for the advancement of politics. In Paris, I heard, with horror, that a lecturer had illustrated his theory by applying his dissecting knife to the limbs of a living animal. I shuddered at the recital of such atrocious cruelty; but little did I dream that, at that very time, a kind and merciful Providence was graciously averting a similar fate from our own species on the other side of the water. All British America has been agitated during the past summer by substantial fears, or mocked by unreal hopes, and ambition has now reached where sedition failed to penetrate. The absurd and impracticable scheme of colonial representation in parliament, although disgusting, from its rank properties, to delicate palates, was well suited to the rapacious appetites of provincial sycophants. The bait was well selected, and soon attracted the longing regard of a shoal of political sharks. The self-denying tenets of the sour sectarian have not been proof against the temptation. His nostrils have been too powerful for his conscience, and, scenting the strong odour of this savoury appendage from afar, he has hurried to the surface to regale himself with its flavour. The canting hypocrite has offered his aspirations for the conversion of parliament to such liberal views; and the profligate demagogue of the village has expressed a hope that a deficiency of morals may be compensated by an abundance of zeal. They have been lulled to sleep by its soporific effect, and have dreamed of this ladder, as did Jacob of old, and of the ascent it offered to high places. The woolstack and the ermine—the treasury and the peerage—appear within their grasp, and they invoke blessings on the man who promises so much, and who hints at his power to do even more. If I did not feel too indignant at all this, I too might weep over the scene of folly and of weakness, and would mingle my tears of sorrow with those that pride has shed, and blot out all trace of it for ever. The advocate of the ballot-box and extended suffrage is not the man to govern a colony. While you have been speculating upon the theory we have been watching the experiment. When the lower orders talk of these things we know what they mean; their language is intelligible, and their object not to be mistaken: but, when a nobleman advocates democratic institutions, we give him full credit for the benevolence of his intentions, but we doubt the sanity of his mind. Keep such men at home where there is so much of rank, intelligence, and wealth to counterbalance them. Here they serve to amuse and gratify agitators, and make useful chairmen of popular assemblies, by preserving a propriety of conduct, and a decency of language, where violence and outrage might otherwise prevail. But send them not among us, where their rank dazzles, their patronage allures, and their principles seduce the ignorant and unwary. If we trespass upon your rights of sovereignty, repress us; but while you maintain your own privileges, respect the inviolability of ours. When we ask, in the Lower Provinces, for a federative union, it will be time enough to discuss its propriety; but, in the meantime, spare us the infliction of what to us is so incomprehensible and so repugnant—a radical dictator and a democratic despot. I have already far exceeded the limits I had designed to confine myself to, and must, therefore, draw to a close. I have now shewn you, that after the conquest of Canada, that country was governed by English laws; that the royal proclamation invited British subjects to remove there; and promised them the protection and enjoyment of those laws; and that in violation of that promise, in order to conciliate the

French, their legal code was substituted for our own: that an injudicious division of the province was made, whereby the French were separated from the great body of English subjects, in consequence of which Canada became a Gallic, and not a British colony. That they have been kept a distinctive people by those means, and by permitting the language of the country and the recording language of their parliament to be French; that they have always had an overwhelming majority of members of their own origin in the legislature, who have been distinguished by an anti-commercial and anti-British feeling; that this feeling has been gradually growing with the growth of the country, until they were in a condition to dictate terms to government; that this feeling was manifested by the manner in which they have constantly resisted local assessments, and made commerce to bear every provincial expenditure,—in the way they neutralised the electoral privileges of the voters of British origin; in the continuance of the oppressive tenure of the feudal law; in taxing emigrants from the mother country, and them only; in their attempts to wrest the crown land from government; in their attack on the Land Company, and the introduction of settlers by them; in their opposition to a system of registry; in their mode of temporary legislation; in their refusal to vote supplies, and in the whole tenor of their debates and votes. I have shewn you that the policy of every government, whether Tory or Whig, has been conciliatory (a fatal policy, I admit, and one that naturally admits and invites demands), and that every reasonable change required (with many very unreasonable ones) has been conceded to them; that they are a people exempt from taxes, in possession of their own laws, language, and religion, and of every blessing, civil, political, and religious; in short, that Canada is the most favoured colony of Great Britain, and that the demands they now make are inconsistent with colonial dependence.

"The subject (he affirms, with becoming seriousness, in conclusion,) has now assumed a new aspect. Pretensions have been put forth that involve the question of independence, and Great Britain must now decide whether she is to retain the province or not. It is a crisis in the history of this country which other nations regard with intense interest. The fate of Canada will determine that of all the other colonies. The retreat of the soldiers will invite the incursions of the barbarians, and the withdrawal of the legions, like those of Rome, from the distant parts of the empire, will shew that England, conscious of her present weakness and past glories, is contracting her limits and concentrating her energies, to meet, as becomes her character, the destiny that awaits all human greatness."

Poems. By Richard Monckton Milnes, author of "Memorials of a Tour in Greece." 2 vols. 8vo. London, 1838. Moxon.

THESE volumes, from the notice of which we have been too long delayed, are like a beautiful garden, tastefully laid out at the foot of a steep eminence, but here and there running up into the high hill side, until it seems to partake of the grandeur of the heights, to catch the light and shade which the overhanging trees make, and to image the deep shadow which the jutting precipice throws down. But vain is our attempt to describe the beauties of this poetical Eden, and the solemn splendour hanging around it; if we cull a few flowers, we cannot present the happy effects they produce when growing together in

a bed; we shake off the delicate dew that hung upon them; we bring them together without their corresponding features. We cannot gather the sweet air which stole around them, and all those gentle sounds with which the spot is hallowed—the sunshine that slept upon them, and the low rustling they made; we can but bring them drooping and severed, and shorn of half their freshness.

Seriously, then, out of so many charming poems, and all wearing such distinct features, we are at a loss what to extract to shew the writer's great and varied power. From dreaming in a gondola to contemplating the fallen majesty of Venice, or running riot with the moon, or pouring forth a flood of sweet and melancholy music for the dead, all are alike beautiful. Mr. Milnes's very faults have obtained our pardon; his quaint conceits, far-fetched allusions, and homely images, all shew that the mood of his mind, when far from its happiest state, possesses a peculiarity which almost belongs to him alone: and this, without proceeding further with our remarks, we will attempt to prove by an extract—itsself one of the veriest trifles which the volumes contain.

"*Song, after the Old Manse.*
My heart is freighted full of love,
As full as any argosy,
With gems below and gems above,
And ready for the open sea,
For the wind is blowing summerly.
Full strings of nature's beaded pearl,
Sweet tears: composed in amorous ties
And turkis-locks, that no churl
Hath fashioned out mechanic-wise,—
But all made up of thy blue eyes:
And girdles wove of subtle sound,
And thoughts not trusted to the air,
Of antique mould,—the same as bound,
In Paradise, the primal pair,
Before Love's arts and niceness were:
And caracets of living sighs;
Gums that had dropt from Love's own stem;
And one small jewel most I prize,—
The darling gaud of all of them,—
I wot so rare and fine a gem
Ne'er glowed on Eastern anadem.
I've cased the rubies of thy smiles,
In rich and triply plated gold;
But this no other wealth defiles,
Itself itself can only hold—
The stealthy kiss on Maple-wold."

There is the true smack of the old writers about these stanzas; they remind us of the happy touches of Herricks or Suckling: but here follows something far greater, every line of which appeals to the heart, and carries its own praise:—

"*The Long-Ago.*
Eye which can but ill define
Shapes that rise about and near,
Through the far horizon's line
Stretch a vision free and clear:
Memories feeble to retrace
Yesterday's immediate flow,
Find a dear familiar face
In each hour of Long-ago.
Follow you majestic train
Down the slopes of old renown,
Knightly forms without disdail,
Sainted heads without a frown;
Emperors of thought and hand
Congregate, a glorious show,
Met from every age and land
In the plains of Long-ago.
As the heart of childhood brings
Something of eternal joy,
From its own unsounded springs,
Such as life can scarce destroy:
So, remindful of the prime
Spirits, wand'ring to and fro,
Rest upon the resting time
In the peace of Long-ago.
Youthful Hope's religious fire,
When it burns no longer, leaves
Ashes of impure desire
On the altars it deceives;
But the light that fills the past
Sheds a still diviner glow,
Ever further it is cast
O'er the scenes of Long-ago.
Many a growth of pain and care,
Cumbering all the present hour,

Yields, when once transplanted there,
Healthy fruit or pleasant flower;
Thoughts that hardly flourish here,
Feelings long have ceased to blow,
Breathe a native atmosphere
In the world of Long-ago.

On that deep-retiring shore
Frequent pearls of beauty lie,
Where the passion-waves of yore
Fiercely beat and mounted high;
Sorrows that no snows still
Lose the bitter taste of woe;
Nothing's altogether ill
In the grief of Long-ago.

Tombs where lonely love repines,
Ghastly tenements of tears,
Wear the look of happy shrines
Through the golden mist of years:
Death, to those who trust in good,
Vindicates his hardest blow;
Oh! we would not, if we could,
Wake the sleep of Long-ago!

Though the doom of swift decay
Shocks the soul where life is strong,
Though for frailty here the day
Lingers sad and overlong,
Still the weight will find a leaven,
Still the spoiler's hand is slow,
While the Future has its Heaven,
And the Past its Long-ago."

Who can read this without feeling a holy awe gathering around the heart, a sensation akin to that which is awakened by the perusal of the Holy volume; making even "sorrow lose the bitter taste of woe," and sending us along, amid "sainted heads without a frown," past "tombs where lonely love repines," in silent meditation? But we must confine our extracts within a smaller compass, displaying here and there a gem, and leaving our readers to imagine the costly workmanship by which it is surrounded. Here, then, is the gloomy imagery of grief, which we extract from a beautiful poem, entitled "The Flight of Youth." Fain would we give the whole, but its length prevents us.

"Bow your heads very low,
Solemn-measured be your paces,
Gathered up in grief your faces,
Sing and music as ye go;
In disordered handfuls strew
Strips of cypress, sprigs of rue;
In your hands be borne the bloom,
Whose long petals once and only
Look from their pale-leaved tomb
In the darkness lonely;
Let the nightshade's beaded coral
Fall in melancholy moral
Your wan brows around,
While in very scorn ye fling
The anamath upon the ground."

Here is another delightful extract from "The Lay of the Humble," which it goes against our very heart to curtail: so finished a poem it is seldom our lot to read in these days:—

"Athwart my face when blushes pass
To be so poor and weak,
I fall unto the dewy grass,
And cool my fevered cheek;
And hear a music strangely made,
That you have never heard,
A sprite in every rustling blade,
That sings like any bird.
My dreams are dreams of pleasantness,—
But yet I always run,
As to a father's morning kiss,
When rises the round sun;
I see the flowers on stalk and stem,
Light shrubs, and poplars tall,
Enjoy the breeze,—I rock with them,
We are merry brothers all.
I do remember well, when first
I saw the great blue sea,—
It was no stranger-face that burst
In terror upon me;
My heart began, from the first glance,
His solemn pulse to follow,
I danced with every hallow's dance,
And shouted to their halloo.
The lamb that at its mother's side
Reclines, a tremulous thing;
The robin in cold winter-tide,
The linnet in the spring.
All seem to be of kin to me,
And love my slender hand,—
For we are bound, by God's decree,
In one defensive band."

Now for a specimen of the author's sculpture—two statues, which Flaxman could all but have given life to; we have the breathless marble before us in the eight following lines:—

"I saw two children intertwine
Their arms about each other,
Like the lithe tendrils of a vine
Around its nearest brother:
And ever and anon,
As gaily they ran on,
Each look'd into the other's face,
Anticipating an embrace."

Assuredly the following is worthy of ranking with poetry of the highest order. It will bear reading more than once; and, upon a second thought, we give it entire.

"Life in Death."

Indeed you do me wrong,—I merit not
Those hard censorious eyes and dull regards,
Because I have not wept, or sighed, or raved,
Or sat in a mute madness, though I knew
That she, whom we so loved, is gone away.
I have lost nothing, why then should I weep?
She is to me the same she ever was,
A never-ceasing presence, a life-light,
In the dark watches of the pleasant night,
Or some far darker passages of day.

If I would weep, or mourn her fancied loss,
The sure fire, that burns from her calm eyes,
Laps up my tears, and tells me she is here:
If I am sick at heart, she sits beside me,
And lays the velvet back of her white hand
Upon my cheek, to ask if all be well,
Or parts the hair upon my heated brows.
Since that one instant, in itself a life,
When, as commissioned messengers, my eyes
Went to her, and brought her into my soul
A gift, the greatest of all possible gifts,
Which God-empowered man can give to man,
A notion of the absolute beautiful:
Since then, all nature has been one to me,
One form impregnated with her sole spirit:
I feel the ambient sweetness of her breath
In flowering roses and the woods of spring;
Her voice is gushing from the nightingale;
There's not a cloud that walks the unsullied air,
But takes from her its majesty of gait,
For space was made to shew how she could move.
I do not say, that when I saw her lie
Hushed to cold sleep by nature's lullabies
(The same that plaintive nuns eternally
Sing as she rocks to rest her dearly loved),
I did not for one moment stare aghast,
And know the blood stood still about my heart;
But soon the wailing left me there alone,
And in the quiet of the gloom I saw
The blessed image, moving, ministering,
By me, about me,—just as heretofore.

Oh ye who talk of death, and mourn for death,
Why do you raise a phantom of your weakness,
And then shriek loud to see what ye have made?
There is no death to those who know of life—
No time to those who see eternity."

No one can peruse this poem without being struck with the force and beauty of many of the thoughts, if even they are not able to grapple with the deep spirit that reigns throughout the whole. The images called up by the imagination, which is so enwrapped as to "feel the velvet back of her white hand upon the cheek," or "parting the locks from the heated brow;" the glance that "brought back into the soul her spirit," the idea of "space" being only made "to shew how she could move," are to us the strongest proofs of the great power of the poet. None but a master-hand would dare to meddle with such a subject after what Shakspeare has done in "King John," when Constance, lamenting for Prince Arthur, says,—

"Grief fills the room up of my absent child:
Lies in his bed, walks up and down with me,
Puts on his pretty looks, repeats his words," &c.

But we have done, and must add, that it has seldom been our lot to bestow so much just and unqualified praise upon any work as we have ventured to give the present. The volumes are full of true and sterling poetry, and will, we doubt not, do much to bring about that change in this (the highest) department of literature, which, if we err not, we see fast approaching. It is really a relief after the namby-pamby stuff which we have of late had

to peruse in some of the Annuals,* and other things, miscalled poems, to alight upon such a green and refreshing pasture as we have here found. There is a right spirit about the work, which all who love poetry must feel, and to all such among our readers, we would recommend to procure the volumes. If they cannot afford to purchase them, and are connected with any libraries, let them be voted in, in the place of the next bad novel. We had marked several passages for extract in the second volume, nor can we part from it without plundering its pages of the following:—

"The Golden Book."

Is now unwritten in, and stands unmoved,
Save when the curious traveller takes down
A random volume from the dusty shelf,
To trace the progress of a bruted name;

The Sycutant
Is shattered, and of its resplendent form
There is no remnant, but some splintered morsel,
Which in his cabin, as a talisman,
Mournfully hangs the plous gondolier;

The Adrian sea
Will never have a Doge to marry more,—
The meagre favours of a foreign lord
Can hardly lead some score of humble craft
With vilest merchandise into the port,
That whilom held the wealth of half a world.

Thy palaces
Are battered to the careful Israelite,
Or left to perish, stone by stone, woe down
In desolation,—solemn skeletons,
Whose nakedness some tufts of pitying grass,
Or green boughs trembling o'er the trembling wall,
Adorn but hide not.

And are these things true,
Miraculous Venice? Is the charm then past
Away from thee? Is all thy work fielded
Of power and beauty? Art thou gathered
To the dead cities? Is thy ministry
Made up, and folded in the hand of thought?
Ask him who knows the meaning and the truth
Of all existence:—ask the poet's heart:
Thy book has no dead tome for him,—for him,
Within St. Mark's embossed porticoes,
Thy old nobility are walking still:—
The lowliest gondola upon thy waters
Is worth to him thy decorated galley;
He never looks upon the Adriatic
But as thy lawful though too faithless spouse;
And when, in the sad lustre of the moon,
Thy palaces seem beautifully wan,
He blesses God that there is left on earth
So marvellous, so full, an antidote,
For all the racks and toils of mortal life,
As thy sweet countenance to gaze upon."

Another extract from "A Dream in a Gondola," and we take our farewell with regret.

"The heavy ample byblus-winged boat,
In which I lay aloof,
Became a deft canoe, light-wove
Of painted bark, gay-set with lustrous shells,
Faintly rocked within a lone some cove
Of some rich island where the Indian dwells;
Below, the water's pure white light
Took colour from reflected blooms,
And, through the forest's deepening glooms,
Birds of illuminated planes
Came out like stars in summer-night;
And close beside, all fearless and serene,
Within a niche of drooping green,
A girl, with limbs fine-bounded and clear-brown,
And hair thick-waving down,
Advancing one small foot, in beauty stood,
Trying the temper of the lambent flood."

* Upon the subject of the Annuals generally, we had intended to write a few remarks after we had finished our reviews or notices of the whole number; and, perhaps, we may yet do so, for the series is not yet complete. In the meantime we beg to state, that, in the *Literary Gazette* observations upon productions of this class, we never propose to try them by a higher standard, either in art or literature, than that to which they pretend, and, in point of fact, justly belong. They are the pretty and elegant trifles of the day, with engravings more or less beautiful, and literary compositions seldom aiming at higher rank than that of appropriate illustration. We would as soon think of dissecting a butterfly like a snake, or a diamond beetle like an elephant, as we would think of applying the elaborate rules of criticism to such performances. If they please their hour, and serve as tokens of kindly affections, they have done their duty; and, to overlook all their merits in order to pick out all their little blemishes and faults, as you would errors in history or false opinions in philosophy or religion, seems, indeed, to us to be equally uncalled for, unjust, and ridiculous.
—Ed. L. G.

† "The Libro d' Oro, the Venetian Peerage."

Germany, Bohemia, and Hungary, visited in 1837. By the Rev. G. R. Gleig, M.A., Chaplain of Chelsea Hospital. 3 vols. 12mo. London, 1839. J. W. Parker.

WE have received these volumes too late in the week to be able to do more than give them a slight introduction to the public. In them, Mr. Gleig appears to us to have superadded to the pleasant qualities of an intelligent tourist, the more important considerations attached to his character as a Christian minister. His rambles, his description of scenery, his sketches of persons and classes, are all such as we might have expected from his popular pen; but the great stress of his work is laid upon the moral and religious condition of Germany. We regret to say, that his views in these respects are very unfavourable. Laxity of morals, and scepticism and infidelity in religion, seem to possess the country almost wholly. The clergy have little influence upon the minds and manners of the people; and there seems to be little beyond the earthiness of the earth in the whole wide system of society.

With these brief preliminary explanations, we can only further copy a few extracts to illustrate our author. At Berlin, he says:—

“I do not wish to represent the Prussian government as in any respect discountenancing religion, or the Prussian people as utterly depraved. I believe, on the contrary, that the wishes of the first are all sound and wholesome, and that the last, considered in the mass, are quite as moral as most of their neighbours that belong to the same great family. Intoxication, for example, is the reverse of frequent among the Prussians, and even the street-quarrels of the lowliest classes generally evaporate in words. But in other respects I do not find that the moral tie holds them with too tight a pressure. I had occasion to inquire of one whose opportunities of judging were excellent, how Berlin, and indeed Prussia in general, might in this respect be accounted of? and I received an answer, which I give almost in his own words:—‘Berlin,’ said he, ‘is a scene of constant intrigue. We don’t all drink, we don’t all play,—but we all intrigue. From the prince to the peasant, each has his *affaire d’amour* in hand, and we care very little though all the world should know it. Of the rest of Prussia I am less competent to speak; but you will probably find that what takes place in the capital, takes place in the provinces also.’ Startled by an avowal so candid, I became naturally anxious to ascertain to what causes my friend attributed a state of things, the evils attending which he did not scruple to deplore. In this respect, however, I found him either less willing or less able to be communicative. I hinted at the mischievous tendency of the law of divorce, but he would not agree with me. ‘It was better,’ he said, ‘that every facility should be afforded for the dissolution of the marriage contract, than that persons should live together unhappily.’ I asked, Whether there was no principle of religion in the land, to operate as a check upon the indulgence of men’s vicious humours? ‘Oh, yea,’ he replied, ‘we are a very religious people. Don’t you see a church in every parish? But our religion takes no heed of such matters as these, and we should soon quarrel with it if it did.’ ‘And your clergy,’ continued I; ‘are they without weight enough to make their example felt, even where their precepts may fail in securing attention?’ ‘Our clergy!’ replied he, with a smile;—‘why, yea, they are very excellent people in their way,—very good men, without doubt; but, really, no human being pays the slightest regard either

to what they say or what they do.’ ‘Well, but the Gospel, on which your religion professes to be founded,—is it quite held at nought among you?’ My answer was another smile, of which I could not, without real pain, stop to analyse the import. He immediately added, however, as if conscious that he was treading upon delicate ground, ‘The Gospels are by no means slightly estimated among us. We all admit that the code of morals taught in them is perfect,—but—but—we don’t profess to be guided by it.’ If I had held this conversation with a very young, or a very ignorant person,—if a mere man of pleasure, or (and the expression may, perhaps, carry more weight with it) a mere man of the world, had so spoken to me;—nay, if my own personal observations had not confirmed his statements, to an extent that was very painful,—I should have been slow to give them credit, even at the moment, and still more slow to repeat them now. As it was, I could only lament the existence of a state of things so melancholy, and look round for causes which might account for it. The result of these inquiries I now proceed to lay before my reader; praying that, before my views be condemned, they may be judged with candour; and assuring him, that, as they have not been taken up either lightly or in a spirit of prejudice, so am I quite ready to lay them down again whenever I shall have been convinced that they are founded in error.”

Of the Saxon people we are told:—

“In the minutest points of domestic economy—in the management of their time, and the adaptation of themselves to circumstances, the Saxons are as mulish and bigoted a race as it has any where been my fortune to mix withal. A Saxon would think you mad, were you to suggest the possible occurrence of events which should impose upon him the necessity of dining, except at his accustomed hour; or of devoting a season which he has been wont to set aside for relaxation, to any serious or grave employment. A Saxon has no notion whatever, that either he or his neighbour may be hurried. He has been accustomed to perform every given operation in his own particular way, and not all the reasoning which you can use will convince him that it might be improved upon. According to his own view of the case, he belongs to the wisest, and the bravest, and the most civilized nation under heaven; and hence, every attempt on your part to wile him out of the circle within which he has hitherto moved, will be sure to fail. The Saxon is neither a lively nor a domestic animal, even in his recreations. Though the evening of every day be given up to amusement—during the summer in the open air, in winter under cover, his tastes are such that, except when dancing, he rarely associates with him either his wife or his sister. No doubt the amiable couple walk arm-in-arm to the public garden, or to the grass-plot in front of the inn, where the band is accustomed to play; but having reached that point, they separate, as if by mutual consent; and while the husband applies to smoking and drinking beer beside other husbands, the wife attaches herself to a knot of wives and maidens, who saunter about, or sit apart at a table by themselves. In like manner, when a *soirée* takes place during winter, the men range themselves at one end of the room, and the women at another; nay, to such an extent is this indisposition to associate carried, that I have heard of places where it was seriously proposed to have one public assembly-room for the men, and another for the women. At Schandau, just before we quitted it, the propriety of such an arrangement was gravely mooted; whether or

not it has been carried into effect, I have not learned.

“When we come to the region of morals, I should say, that, though higher than that of Prussia, the standard in Saxony is not very elevated. There is here the same lamentable deficiency of religious principle, which we find all over Protestant Germany. People may or may not go to church on a Sunday,—and their children they send to school because the law requires it,—but the practices which, more than all others, mark the degree of reverence in which men hold their religion, are here unknown. I never heard of a family in which prayers were daily said, nor knew an instance of a child being trained by its parent to the habit of private devotion; and, as to the mode of observing the Lord’s-day, I confess that I do not see on what grounds a Christian can defend it. Not content with holding their little revels in the evening, before the inn, or amid the public gardens, they seem to regard the prosecution of their ordinary employments as no breach of the Divine will. I have repeatedly seen both men and women hoeing in the fields, and working in the shoe-shop, just as busily on a Sunday as on any other day in the week.”

Our time only permits us to add one trait of Bohemia, through which Mr. Gleig took an interesting pedestrian excursion. At Gabel,

“My toilet was as yet incomplete, when I walked the landlady, first to demand whether I could speak Latin; and, on my answering in the affirmative, to announce that the priest of the pariah was below in the hall, and should be glad to converse with me. I desired her to inform the reverend gentleman that I should make all the haste I could to equip myself; after which I would wait upon him with great pleasure. Having accomplished the necessary changes in my apparel, and otherwise made myself comfortable, I descended the stairs, and found that the gentleman with the red nose and grizzly head, was none other than the priest who desired to make my acquaintance. Neither his appearance nor his situation,—a conspicuous place in a pot-house, which all the idle and beer-loving members of the community seemed to frequent—at all prepossessed me in his favour; but I took care to exhibit no symptoms of disgust in my manner, and our conversation began. His reverence spoke horrid Latin, of course; mine, from long disuse, was probably not much better; but, as I pronounced all my words according to the accentuation of my schoolboy days, we at least understood one another. I found him full of curiosity, and wonderfully ill informed, not only as to the political and intellectual state of England, but even in reference to its geographical situation. But his ignorance manifestly proceeded rather from the lack of opportunity than of the desire to be better informed; for of his questions I began to fear, at last, that there would be no end. By this time a whisper was circulating through the town, that two Englishmen were arrived; and as very few of the Gabelites had ever seen an Englishman before, the coffee-room became speedily crowded. Large was then the consumption of beer, and dense and dark the cloud of tobacco-smoke which circled overhead. Yet, to do them justice, the curiosity of these simple people never once prompted them to commit a breach, however trifling, of real good manners. We were, indeed, besought to eat our supper at the table beside the priest, and we readily consented; while, by degrees, all the vacant spaces were filled up by another priest, by several

well-dressed tradesmen, and, as we afterwards ascertained, by an officer of the Austrian army, who, having retired from the service on a pension, had married and settled in the town. But the individual who interested us the most was the postmaster; for whom, as he spoke both English and French fluently, the padre despatched a messenger, and whom we found not only a most agreeable, but a very intelligent and well-informed man. He had travelled much as a merchant; had visited France, Spain, Switzerland, Italy, and Russia; in the last of which countries he had resided several years, as chief clerk to an English house at St. Petersburg. I do not know that I ever felt myself in a situation more amusing, as well as more perfectly novel, than that which I now occupied. The good people, indeed, seemed so eager to obtain information, that I had few opportunities of adding to my own; yet their curiosity, tinged as it was throughout with the most perfect good humour, and even politeness, highly diverted me, and I did my best to appease it. One circumstance, it is true, affected me painfully. I allude to the creditable figure cut by the priests; who, it appeared to me, had no business in such a place at all, further, at least, than as casual inquirers. Among all the beer-drinkers present, however, my red-nosed acquaintance and his curate were the most industrious. It was quite edifying to see with what rapidity their pitchers were emptied, and how sedulously the hostess—uninvited, though certainly unchecked—replenished them; and when I add, that each pitcher contained a good quart, the amount of fermented liquor swallowed by these thirty souls may be guessed at. Nor, I regret to add, was the tone of their conversation much out of keeping with their habits in other respects. I inquired into the state of morals in this place, and received, in bad Latin, such an answer as I do not choose to translate, and affected scarcely to understand. Here, then, was a palpable illustration of the axiom which has so often been laid down—that, of all the means that ever were devised to degrade religion in the persons of its teachers, the compulsory celibacy of the clergy is the most effectual. In HERNSKRIETCHEN and AUFENBERG, it is very true, that no such lamentable results have followed: but what then? At the former place, a most deserving man is condemned to spend his days uncheered by any of those domestic endearments, the influence of which is felt the most where it is most needed. He does not complain, I admit; he has too much principle and even manliness to complain of that which is irremediable. But who can doubt that he feels his lot bitterly, or that his pastoral duties would be discharged just as faithfully, and far more cheerfully, were it different? So, also, at the latter place: the curate is yet a youth, full of that fire of enthusiastic self-devotion which, while it burns, more than supplies the place of all social and domestic relations. But how long will this last? And see how the system operates in Gabel, ay, in hundreds and thousands of places similarly circumstanced, where no such enthusiasm is at hand to counteract it. Here are two clergymen, well stricken in years, for the elder cannot be less than sixty, and the younger but a few years short of it. Their home, as they informed me, is in the cloisters of the church; but such a home! Nobody inhabits it who, except for mercenary reasons, would shed one tear were they to die to-morrow. Of books they possess but a slender store, and, were it otherwise, who can always

live among his books? Their professional vocations wear down their energies, and they stand in need of relaxation. Where do they seek it? Not in the quiet and happy circle of their own families—for they have none—nor among their neighbours, who may esteem and respect, but will scarce unbend before men who are become masters of their most secret thoughts. They, therefore, betake themselves to the pot-house, and in drinking and ribald conversation, look for that amusement which, under a better state of things, the reformed pastor is sure to find in the bosom of his own family, and among his friends. I do not mean to justify the individuals, who, on the contrary, deserve utter reprobation; but surely a system which throws such temptations in men's way cannot be seriously defended by any one who has the interest of religion at heart. From the priests, as they began, under the influence of repeated potations, to exhibit their true character, I gladly turned away," &c. &c.

Hood's Comic Annual.

(Second notice.)

OF HOOD, in his own happy vein, we may well say, "none but himself can be his parallel:" witness the following *incendiary*, if ever there was an incendiary composition, with which he terminates his alarming history of the revolutionary incidents at Stoke Pogis. (See *Literary Gazette*, No. 1144.)

"Come, all confagrating fellows,
Let us have a glorious rig;
Sing old ROSE, and burn the bellows;
Burn me, but I'll burn my wig!
Christmas time is all before us;
Burn all puddings, north and south;
Burn the turkey—burn the Devil!
Burn snap-dragon—burn your mouth!
Burn the coals! they're up at sixty;
Burn Burn's Justice—burn Old Coke;
Burn the chestnuts—burn the shovel!
Burn a fire, and burn the smoke!
Burn burnt almonds—burn burnt brandy.
Let all burnings have a turn;
Burn Chabert, the salamander—
Burn the man that wouldn't burn!
Burn the old year out, don't ring it;
Burn the one that must begin;
Burn Lang Syne, and, whilst you're burning,
Burn the burn he paided in.
Burn the boxing—burn the bandle!
Burn the baker—burn his man;
Burn the butcher—burn the dustman.
Burn the sweeper, if you can!
Burn the postman—burn the postage—
Burn the knocker—burn the bell;
Burn the folks that come for money—
Burn the bills, and burn 'em well.
Burn the parish—burn the rating.
Burn all taxes in a mass.
Burn the paving—burn the lighting—
Burn the burners—burn the gas.
Burn all candles, white or yellow—
Burn for war and not for peace;
Burn the car of all the talow—
Burn the king of all the greece.
Burn all caners—burn in Smithfield.
Burn tea-tattle hum and bug;
Burn his kettle, burn his water,
Burn his muffin, burn his mug.
Burn the breaks of meddling vicars,
Picking holes in Anna's urns!
Burn all Stearn's opodeldoc,
Just for being good for burns.
Burn all swindlers—burn asphaltum!
Burn the money lenders down—
Burn all schemes that burn one's fingers!
Burn the cheapest house in town!
Burn all bores and boring topics;
Burn Brunel—ay, in his hole!
Burn all subjects that are Irish!
Burn the niggers black as coal!
Burn all Bos's Imitators!
Burn all tales without a head!
Burn a candle near the curtain!
Burn your Burns, and burn your bed!
Burn all wrongs that won't be righted!
Burn poor Soup, and Spanish claims!
Burn that Bell, and burn his Vixen!
Burn all sorts of burning shames!

Burn the Whigs! and burn the Tories!
Burn a parties, great and small!
Burn that everlasting Fogy—
Burn his Sutees once for all!
Burn the fop that burns tobacco!
Burn a critic that condemns!
Burn Lucifer and all his matches!
Burn the fool that burns the Thames!
Burn all burning agitators—
Burn all torch-parading elves!
And, oh! burn Parson Stephens' speeches,
If they haven't burnt themselves."

It would be dangerous to leave off with so much tinder or gunpowder by candle-light; and, merely as an insurance against fire, we add

"The Bachelor's Dream."

My pipe is lit, my grog is mix'd,
My curtains drawn, and all is snug;
Old Puss is in her elbow-chair,
And Tray is sitting on the rug.
Last night I had a curious dream,
Miss Susan Bates was Mistress Mogg—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
She look'd so fair, she sang so well,
I could but woo and she was won;
Myself in blue, the bride in white,
The ring was placed, the deed was done!
Away we went in chaise and four,
As fast as grinning boys could dog—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
What loving *tées-à-tées* to come!
But *tées-à-tées* must still defer!
When Susan came to live with me,
Her mother came to live with her!
With sister Belle she could not part,
But all my ties had leave to log—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
The mother brought a pretty Poll—
A monkey too—what work he made!
The sister introduced a bean—
My Susan brought a favourite maid.
She had a tabby of her own—
A snappish mongrel christen'd Gog—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
The monkey bit—the parrot scream'd,
All day the sister strumm'd and sung;
The petted maid was such a scold,
My Susan learn'd to use her tongue;
Her mother had such wretched health,
She sate and croak'd like any frog—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
No longer deary, duck, and love,
I soon came down to simple 'M!
The very servants cross'd my wish,
My Susan let me down to them.
The poker hardly seem'd my own,
I might as well have been a log—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
My clothes they were the queerest shape,
Such coats and hats she never met!
My ways they were the oddest ways!
My friends were such a vulgar set!
Poor Tomkiss was snubb'd and buff'd—
She could not bear that Mister Hogg—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
At times we had a spar, and then
Mamma must mingle in the song—
The sister took a sister's part—
The maid declared her master wrong—
The parrot learn'd to call me 'fool'!
My life was like a London fog—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
My Susan's taste was superfluous,
As proved by bills they had no end—
I never had a decent coat—
I never had a coin to spend!
She forced me to resign my club,
Lay down my pipe, retrench my grog—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
Each Sunday night we gave a rout
To fops and flirts, a pretty list,
And when I tried to steal away
I found my study full of what!
Then, first to come and last to go,
There always was a Captain Hogg—
What d'ye think of that, my cat?
What d'ye think of that, my dog?
Now was not that an awful dream
For one who single is and snug—
With pussy in the elbow-chair
And Tray reposing on the rug?
If I must totter down the bill,
'Tis safest done without a clog—
What d'ye think of that, my cat?
What d'ye think of that, my dog?"

MISCELLANEOUS.

Hind's English Stage, Nos. I. and II. : Othello, Hamlet. London, 1839. Simpkin and Marshall.

TASTE and judgment have been well exercised in the production of this handsome edition of the plays of the immortal bard. The illustrations are exceedingly well executed, and the history of each play is at once original and neatly written.

Tranquil Hours. By Mrs. Thomas. Pp. 242. London, 1839. Saunders and Otley.

ALTHOUGH we cannot award these poems any high praise, we are bound to admit that they possess considerable merit, and here and there display much true feeling; and it has been our lot to peruse many a volume that did not exhibit these excellences. The versification is often harmonious, and we sometimes stumble upon a thought that soars above the common height of "prettiness." Coming from a lady, we are too gallant to pass the volume by without offering an extract, which we do from —

"A Summer Morning.

It is the dawn! a few bright crimson streaks
Night's fearful mystery already breaks;
Aurora's rosy fingers have begun
Her blushing chaplet for the waking sun.
Lo! where the roses, gorgeous in the east,
Ruddy as Bacchus' cheeks from recent feast;
Light fleecy clouds receive the golden prize,
And richer colours deck the laughing skies.
Up springs the lark, and shakes his dewy wings,
And as he rises, most delighted sings:
Not Pagan knees stuccoer homage pay
To thee, thou shining Majesty of day,
Than the sweet skylark, in its matin song.
While prattling echoes the glad strains prolong.
Awaked by thee, each flower more vivid grows,
Like beauty's cheek, when fresh from soft repose."

An Account of the Kingdom of Caubul, and its Dependencies in Persia, Tartary, and India; comprising a View of the Affghan Nation, and a History of the Douranee Monarchy. By the Hon. Mountstuart-Elphinstone. A new and revised edition. 2 vols. 8vo. London, 1839. Bentley.

THE Hon. Mountstuart Elphinstone is known to every person acquainted with our Indian empire to be one of the ablest functionaries who ever exercised civil authority or conducted diplomatic affairs in that vast country. Whatever comes from his pen, therefore, comes with a weight which entitles it to the utmost consideration and confidence; and now that the subject of these volumes has acquired a new and pressing importance, in consequence of the turn of events, it is with much satisfaction we receive another and revised edition of his valuable labours. With notes, added from more recent and excellent sources (Mr. Conolly, Sir A. Burnes, &c.), Mr. Elphinstone has not only perfected his "Account" to the present time, but has constructed a map of great utility as a reference, and which, though very modestly spoken of by the author, will be found to be by far the best to consult in regard to any operations in Afghanistan or Caubul. Altogether the work has been reproduced at the most appropriate period; and we cordially recommend it to every reader who feels an interest in Indian (may we not say, in British?) affairs.

ARTS AND SCIENCES.

ABYSSINIA.

BARON A. VON KATTE, a Prussian nobleman, has lately published an account of his visit to Abyssinia. He did not penetrate so far into the country as the French travellers, Combes and Tamisier, who, in some respects, appear also to have met with a better reception from the natives, and whose account, written in a

romantic style, is calculated to please readers who are fond of strange adventures; but Katte has, at least, the advantage of love of truth, and of the unadorned simplicity of his narrative.

Katte commenced his journey into the interior from Massuah, and proceeded, by way of Cadagena, Aigenti, Madurri, and Gurra, to Adowa, the end of his journey, where he was kindly received by Prince Udde, and Mr. Isenburgh, the Prussian missionary. Though the same places have been visited and described by Bruce, Salt, and others, Katte's work contains many new observations. The political state of Abyssinia, too, has undergone a great change since Salt's visit. Katte gives the most favourable account of the natural beauties and riches of the country, with which the population makes the most afflicting contrast; and though the inhabitants in general profess Christianity, they are described as a very degraded people, without any inclination to civilisation, and at the same time immoral, thievish, treacherous, and, beyond all conception, cowardly. We subjoin a few of the most interesting descriptions:—

"The mountains between Ellet and Cadagena, are covered with thick forests of lofty cedars, tamarinds, and wild citron trees. The aloe is magnificent, and the cactus, of manifold species, grows like a wood. The finest grass rises to an astonishing height, but withers and rots, as no hand takes the trouble of cutting it down. The wild orange is every where met with among these beautiful mountains, and, notwithstanding its bitter taste, is a favourite food of the people. A botanist would reap an ample harvest here, for there are probably many unknown plants in these mountains and in the deep valleys. But all these plants grow so close together, and flourish in such rank tropical luxuriance, that it is scarcely possible to penetrate through them. The valleys, too, have the character of this fine vegetation. None but those who have seen the valleys of the Tyrol, and have fancy enough to imagine them covered with the vegetation of the torrid zone, and with the tropical sky, can have any idea of this enchanting scenery. On the top of the mountains, the character of the vegetation alters; the tropical plants, and the lofty citrons and tamarind trees, gradually disappear, and are succeeded by the gigantic cedar, which, however, decreases in size the higher you ascend, and becomes at last dwarfish and stunted. Aloes, and cactus, however, of the most diverse forms, never cease, and do not disappear even on the highest summits. The latter, especially, covers large tracts, through which it is difficult to find a way. It diffuses a disagreeable, overpowering smell, and the natives do not venture to pass the night near spots covered with cactus. There are numbers of elephants on the mountains south of Aigenti. The path they have taken is too clearly marked to be mistaken. Trunks of high and thick trees, which are snapped like a reed, and often obstruct the way; large tracts of grass trampled down, bushes which appear quite destroyed, are the traces which these enormous animals leave behind them. A young man, the muledriver, who spoke Arabic pretty fluently, and was very talkative, told me many stories of the size and strength of these animals, and in what manner they were killed, when, suddenly, one of my servants came running towards me, made me a sign to be still, and then led me a few steps on one side, to a spot whence I had a fine prospect over a beautiful valley. In the slope of this valley there were about twenty elephants. The dark gray, shape-

less masses of these gigantic animals, were moving round a group of trees, from which they broke boughs with their trunks, and ate the leaves at their ease. It was the first time that I saw elephants in a wild state. These creatures were of prodigious size. I estimate them at eighteen or twenty feet, and I believe that they were rather above than below that height. A small elephant, about six feet high, was the only one that remarked us, and appeared to be alarmed, while the others did not even condescend to look at us. I was told that the elephant is dangerous only in the rutting season, or when he perceives a camel. The elephants have the bitterest enmity to that harmless animal. When the camel scents the elephant it stops still, trembles in all its limbs, and utters an uninterrupted cry of terror and affright. No persuasion, no blows, can induce it to rise; it moves its head backwards and forwards, and its whole frame is shaken with mortal anguish. The elephant, on the contrary, as soon as he perceives the camel, elevates his trunk, stamps with his feet, and, with his trunk thrown forwards, snorting with a noise like the sound of a trumpet, he rushes towards the camel, which, with its neck outstretched, and utterly defenceless, awaits, with the most patient resignation, the approach of its enemy. The elephant, with its enormous shapeless limbs, tramples on the unfortunate animal in such a manner, that in a few minutes it is scattered around in small fragments. At first I did not entirely believe this account; but in the sequel I spoke on the subject with the leader of a caravan from Sennaar, who told me the same, and assured me that sometimes, in the neighbourhood of the Kolla, entire caravans perish in this manner. Innumerable birds, decked with the most splendid and varied plumage, which glows as they fly, in a thousand shades of colour, seem alone to animate the groves, while their incessant cry, and loquacious chatter, interrupt the deathlike silence that would, otherwise, prevail in these solitudes. One beautiful large purple bird, with a note like the deep tones of a flute, is distinguished, above all the rest, by its fearlessness. It flew sportively before us, alighted on the nearest branch, and looked at us with its large cunning eyes, as if it would have said, 'Go no further, for nothing but mischief awaits you.' It is no wonder that birds act so important a part in the eastern tales, and are endowed with finer senses, so that they flutter about man as protecting genii, and, with their familiar chatter, inspire him with resignation, hope, and confidence. I well remember the first time that I saw, in Yemen, the bird bulbul, of which the Arabian tales have so much to relate. It was sitting on the extreme point of the loftiest tree, and scarcely did it raise its far-sounding, rolling tenor voice, when all the Arabs in my company joined in, stood still, and addressed a number of questions to it, to all which it was never weary of answering. This bird is held in the highest estimation in Persia and Turkey; to kill it would be looked upon as a great crime. I wondered at never seeing this beautiful bird in Abyssinia; but the people are too prosaic for him; he would die of ennui."

Many passages in Katte's Journal confirm the excessively cowardly disposition of the Abyssinians. The following is a fragment of his adventures:—"We were still about a league from the village, when we met a body of about twelve armed men. Scarcely were they perceived by my guide and the servants, when the latter, paralysed with terror, stood still. Pale as death, and trembling in all their limbs, they with difficulty supported themselves by

leaning on the asses that carried my effects. I could not conceive what they meant. One of these people advanced to me, looked at me attentively for some time, and then made a sign to the rest to go on. He himself followed them, after he had addressed a few words, which I did not understand, to my guide, who was too much frightened to answer. It was not till they were quite out of sight that my people came to themselves. From their animated conversation, and the haste with which they went forward, I saw plainly that there had been some danger. I learned afterwards, at Nabish Adi, that we had met the most notorious robbers in the whole province, who had probably been deterred from attacking me by the fire-arms which I constantly wore in my girdle. I frequently had to do with robbers afterwards, but was always convinced that a well-armed, resolute man, need not fear whole bands of them. On the road you may generally get rid of them, that is, if the servants themselves are not in league with them, nor paralysed by fear. Least of all do they venture to attack a white man. Perhaps the chief cause of this is the colour of the whites; for the sudden appearance of a white, in parts where none have been seen before,—where the people, perhaps, do not even know that there are such in the world,—may seem to the blacks as ominous, and demoniacal, as that of a negro in some village in the interior of Germany, where, in the first fright, all would probably run away, and fancy that the devil was come."

It is well known that for several centuries Christianity has had numerous adherents in Abyssinia, and, at present, it is the most generally prevalent religion. Kasse draws a very unfavourable picture of these black Christians. "I found every where in Abyssinia a confirmation of what I so frequently found in the East, namely, that the professors of Christianity are, in all moral respects, far below the Mahometans. If any one looks there for fidelity and probity, let him not knock at the door of a Christian, or he will find himself most cruelly deceived. This is not owing to the oppression which Islamism exercises over Christianity, for this oppression is by no means so severe as people in Europe fancy; it rather proceeds from the hatred with which the different Christian parties persecute each other,—from the endless family intrigues, generated by covetousness, and supported by falsehood,—in the practice of the austerities prescribed by their religion itself, which harden their heart,—and, lastly, from the moral corruption in which the young, particularly the males, are brought up. The influence of the priests is, on the whole, very great, especially over the lower classes of the people; but the state of indigence in which almost all of them live, has never allowed them to acquire such political power as in other Christian countries. They are absolutely dependent on the princes, who sometimes let them feel the whole weight of their power. Some who had ventured to excommunicate princes, have atoned for their rashness with their lives. The last Adune himself was in danger of this fate; but the intervention of some great men saved him. The author learned how great the poverty of the priests is from one of them, who, though he had the highest rank next to the Confessor of Prince Udde, and was constantly about the prince's person, had no mule, and anxiously waited till Udde should give him one. The lower clergy live in such deplorable misery, that many of them are, literally speaking,

sometimes on the point of perishing for hunger. Under these circumstances, it is not to be wondered at if their character is at a very low ebb. It is affirmed that many of them have never read the Bible, and are not acquainted even with the New Testament. Hence the Alakas, or learned men, are ashamed to be taken for priests, and, therefore, wear a different dress. Such of the clergy as apply themselves to the study of works on theology, do it only that they may be the better able to dispute,—for this is the soul of the Christian religion in Abyssinia. Nobody takes the trouble to preach plain morality; and it is, therefore, wholly unknown there. In such disputations they have much practice, and often contrive, in a truly sophistical manner, to entangle their opponent in his own arguments. Every European traveller, who is not well versed in the dogmas of the several Christian parties, and especially in the writings of the fathers of the fifth century, should, therefore, take good care to avoid engaging in a religious controversy with such a disputatious Abyssinian priest. A false quotation, and, still more, want of acquaintance with one of these authorities, immediately fixes on him a reputation for ignorance,—the very worst character that a European can have in Abyssinia. As their object is by no means to convince, but only to embarrass and entangle their adversary, that they may afterwards decry him as a blockhead, it is the most advisable to avoid these useless disputations, from which nobody can expect any good. The author saw priests repeat the same question perhaps twenty times, which the Protestant missionary as often answered. They went away, saying, 'You are right'; but they were sure to return on the following day with the same objections. Hence it appears that the mass of the people must remain in a deplorable moral condition. Lying, deceit, laziness, and theft, are their universal characteristics; positive virtues are sought in vain. The Abyssinian people have for many centuries professed Christianity; they know the Bible and many canonical writings; but Christianity, as it is taught them, is unhappily distinguished by nothing but the most absurd and subtle disputes, party hatred, and persecution. It has not impelled the people to any useful activity, to any improvement in learning; they are as rude, perhaps more rude, than when they renounced paganism."

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

CAMBRIDGE.—The Hulsean prize was adjudged to D. Moore, of Catharine Hall, in this University, for his Essay on the following subject, "That a Revelation contains mysteries is no solid argument against its truth."—*Cambridge Chronicle*.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—United Service Museum, 9 P.M.; Entomological, 8 P.M.; British Architect, 8 P.M.
Tuesday.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8 P.M.; Society of Arts, 8 P.M. (On the Use of Bone in the Arts, by the Secretary).
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; Literary Fund Committee, 3 P.M.; Medicobotanical, 8 P.M.; Graphic, 8 P.M.
Thursday.—Royal Society, 8 P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.
Friday.—Royal Astronomical, 8 P.M.
Saturday.—Guy's Hospital, 8 P.M.

FINE ARTS.

Historical Sketches of the Old Painters. By the Author of "Three Experiments of Living," 12mo. pp. 296. Boston (U.S.), 1838. Hilliard, Gray, and Co.

The object of the author of this little volume

is stated to be "an attempt to make more graphic and real the history of men, whose names are familiar to most of us, and with whose works we are becoming more and more acquainted." This is addressed to the inhabitants of America; but the work is one which will be read with great pleasure in Europe. The author, although he disclaims any pretension to a knowledge of the fine arts, is evidently a man of cultivated and elegant mind. His "Sketches" comprehend the principal painters from Apelles down to Claude. They consist of a combination of fact and fancy. In the early part of the series, fancy, of course, predominates; in the latter, fact. As a specimen of the manner in which the subjects are treated and decorated, we will quote a touching passage from the sketch of Antonio Allegri da Coreggio.

"Here comes Antonio, with his new picture," said Maddelena to her father Nicolo; 'do, dear father, speak kindly to him.' 'Nay, daughter,' replied Nicolo, 'thou canst not expect me to be as dovelike as thyself. I will speak to him as one man may speak to another. It would have been well for thee had I not yielded to thy foolish fancy in the first place. Hadst thou married Pietro, thou wouldest have taken thy proper station in the world, and been mistress of one of the finest inns in Coreggio. I should not see thee, as I do now, wanting the necessities of life.' 'Father,' said Maddelena, 'thou art mistaken; I want nothing. I am the happiest being in the world.' 'Then why dost thou weep?' said Nicolo, for the tears of the young wife were falling like a morning shadow. 'Look!' said she, 'Antonio is just coming up the hill—see how feeble he walks—he can scarcely carry his picture—ah, he stops to rest—do you see how pale he is?' 'Yes, yes, I see; he had better have taken my advice, and worked at my trade; I offered to give him a year's instruction for no remuneration but his services; but nothing would do but he must paint pictures, that are good for nothing in the world. Now jars, and pipkins, and milk-pans, and flower-pots, are good for something, and will always bring money.' 'Yes, father; but Antonio's works will bring him fame—glory.' 'Fame! glory!—nonsense! Canst thou live upon these commodities?' 'We want but very little to live upon; indeed, father, if Antonio were well, I should not have a wish ungratified. He is so kind, so gentle, so fond of our little Giovanni, and of the infant. Oh, there are few so blest as I am! To have such a husband, father,—one whose genius will lead him to immortality!' 'It is in a fair way of leading thee to immortality, my poor child,' said Nicolo with feeling. 'Thou art almost as pale as he. I little thought, when I let thee out of my fold, that thou wouldest find no other shepherd.' 'Say what you please to me,' said Maddelena, 'you are my father, my dear father, and I can bear it all; but I beseech you do not say such things to my poor Antonio; they make him miserable, they break his heart.' 'I wish you had married Pietro,' reiterated Nicolo, 'he has a stout heart.' 'Rather say, you wish I was in my grave; for I would sooner be there, than married to him. No, no, you do not wish such misery for your poor child. Look, father! Antonio is up again, and coming—ah, when you see his picture, I am sure you will say to him, 'You did right, Antonio, to pursue painting; it will lead you to immortality.' Antonio slowly ascended the hill, and Maddelena met him. 'Let me look at it,' said she, and he turned the picture towards her. 'How beautiful!' she exclaimed,

'they are just such faces as we shall see in heaven.' When they entered the house, the painter modestly set down the picture with its face to the wall. 'A warm day, Antonio,' said Nicolo; 'thou shalt have a cup of my good old wine to refresh thee.' 'Rather a cup of milk,' replied Antonio, 'I do not love your heating draughts; they only add to the heat here,' and he laid his hand upon his breast. 'My dear husband,' said Maddalena, soothingly, 'thou hast painted too closely for these few days past; but it is for you, father, Antonio has been engaged. He said he would paint a picture for your room, and he has brought it.' 'It is but a little thing,' said Antonio rising, 'but I will show it to you.' 'Wait a moment,' exclaimed Maddalena, 'I hear our little Giovanni, and baby too is awake;' and, going out, she returned in a few moments with the child in her arms, seated herself near the window, with Giovanni leaning upon her lap, and said, 'Come, Antonio, I am ready.' Slowly, and with some trepidation, the painter displayed the picture. It was a Madonna with the infant in her arms, and John near her—Maria and her children—bearing a very striking resemblance to the living group before them. Nicolo gazed upon it; his stern features relaxed; he attempted to speak, and burst into tears. 'My daughter!' he at length exclaimed, 'my little Giovanni! just as they look now;' and suddenly turning to Antonio, he seized his hand. 'Yes,' continued he, 'thou wert right to pursue painting; it will lead thee to immortality.' 'Did I not say so?' said the delighted wife; and her arms were in a moment around her father's neck.

We entirely agree with the author, that "it were well if the thirst for amusement could be partly satisfied with such entertainment as flows from a history of the development and rewards of genius, or at least suffer the reader to draw a lesson from the lives of those who have used or perverted this noble gift of the Creator."

NEW PUBLICATIONS.

Findens' Royal Gallery of British Art.
Part II. Moon.

WE have been impatiently looking for the second number of a publication, the first number of which so powerfully excited our admiration, and our expectations are completely gratified. The plates of which the present part consist are "the Smuggler's Intrusion," engraved by F. Bacon, from a picture by Sir D. Wilkie, R.A.; "Neapolitan Peasants going to the Festa of the Pié di Grotta," engraved by S. Sangster, from a picture by T. Uwins, R.A.; and "The Ruins of Carthage," engraved by J. T. Willmore, from a picture by W. Linton. They are all first-rate productions. In the one at the head of the list, the combined ferocity and cunning in the countenance of the bold and burly ruffian, contrasts finely with the innocent but alarmed expression of the family of the peasant into whose cottage he has unbidden rushed, for the evident purpose of hiding himself and his illicit spoil. "The Festa of the Pié di Grotta," which takes place on the 8th of September, is one of the principal and most interesting of the numerous holidays commanded by the priests and enjoyed by the populace of Naples. This is the only festival at which the peasantry are privileged to enter the Villa Reale—the public gardens of Naples—and they take full advantage of the license: crowds from the surrounding country come in at an early hour, and bear along with them the fine fruits of the season; and the long reed of the marshes, which grows so lux-

uriantly in the delicious climate of Naples, is borne by hundreds, in honour of the Madonna della Grotta." Mr. Uwins's masterly and elegant composition represents a family of these picturesque and apparently happy peasants. They form a charming group; and Mr. Sangster has done every possible justice to the beautiful original, at which we well recollect gazing with great delight when it was exhibited at Somerset House in 1834. To "The Ruins of Carthage" we adverted in a former Number of the *Literary Gazette*: but it may be contemplated again, and again, and again, with still increasing enjoyment. The Claude-like composition is among Mr. Linton's happiest efforts; and Mr. Willmore's execution, especially in the serene gradation of the sky, and the tremulous glitter of the water, is transcendent.

Outlines of Celebrated Works, from the best Masters, of Ancient and Modern Sculpture.
Nos. I. to VI. Murton.

A VERY clever and pleasing little publication, in our opinion well calculated to assist in cheaply diffusing the general principles of taste in the fine arts. The outlines have been drawn on the stone with great delicacy, spirit, and correctness, by T. J. Rawlins; and, with reference to modern sculptors especially, afford an easy means of estimating their respective and distinguishing qualities.

ORIGINAL POETRY.

THE DYING GIRL TO HER LOVER.

FAREWELL beloved, the evening breeze is stealing
Softly around us, and the low, sweet sigh
Of waters murm'ring by
Falls on my soul, in gentle tones revealing
Visions of future hours, when I shall be
Thine, but in memory.
Wilt thou not sometimes wander forth alone
Beside this tranquil lake, and fondly dwell
On all we've loved so well? [tone,
And, as the breeze bears forth each plaintive
Will not my spirit seem to hover near,
Thy cherished voice to hear?

Yet must I leave thee, tho' thy saddened brow
Grows paler than it's wont, and each fond smile

Fades from thy lip the while;
Still would I see thy soul less troubled now,
Lest mine be won from loftier feelings back
Unto its earthward track.

Fain would I watch thy lonely couch beside,
When sickness hath o'erspread thy pallid cheek
With fever's fearful streak;
Oft have I prayed, let good or ill betide,
That I might live to catch each breath and tone,
In joy or grief, thine own.

Yet hast thou deemed my warmest love grew cold, [given,
When all my soul's fond hopes to thee were
Too much estranged from heaven;
But there are thoughts and feelings still untold,
That flow like buried streams, for ever on,
Unchanging and unknown.

I had not said so much in by-gone hours,
But now my pulse beats feebly, and each breath
Seems to me fraught with death;
And if to call thee mine, when sorrow lours
Can brighten once again thy sunken eye,
Then can I calmly die.

Calmly could leave this fair and glowing scene,
Of eve's soft shadows and of morn'g's beams—
The bliss of early dreams,—
If less of sorrow on thy brow were seen,

And hopes of future hours could chase the gloom
That shrouds the lonely tomb.

methinks the night grows chilly, and the breeze
Seems not to pour its wonted fragrance round;
Scill fainter grows the sound
Of night-birds warbling in the moonlit trees,
While on my soul fond hopes and yearnings
swell,—
Mine own in death, farewell! S. C.

BIOGRAPHY.

MRS. GEORGE MACLEAN.

ACCOUNTS have reached England of the sudden death, at Cape Coast Castle, on the 15th October, of this richly gifted Being, whose writings, under the signature of L. E. L., have long been a well-spring of pleasure to all whom Genius had a power to charm. Her earliest efforts, whilst yet little more than a child, were made in the pages of the *Literary Gazette*, which many of her future productions have enriched and adorned. To express what we feel on her loss is impossible—and private sorrows of so deep a kind are not for public display:—her name will descend to the most distant times, as one of the brightest in the annals of English literature; and whether after-ages look at the glowing purity and nature of her first poems, or the more sustained thoughtfulness and vigour of her later works in prose or in verse, they will cherish her memory as that of one of the most beloved of female authors; the pride and glory of our country while she lived, and the undying delight of succeeding generations. Then, as in our day, young hearts will beat responsive to the thrilling touch of her music; her song of love will find a sacred home in many a fair and ingenuous bosom; her numbers which breathed of the finest humanities, her playfulness of spirit, and her wonderful delineations of character and society—all—all will be admired, but not lamented as now. She is gone, and, oh, what a light of mind is extinguished; what an amount of friendship and of love has gone down into her grave!

The death of her uncle, the Rev. Dr. Whittington Landon, Dean of Exeter and Provost of Worcester College, Oxford, is announced in the same day's journals. He was one who took a constant interest in the welfare and rising fame of his matchless relative.

DRAMA.

PANTOMIME.

PANTOMIME-NIGHT at the theatres, like boxing-day with another large class of the community, is a sort of jubilee, which attracts the attention of all ranks,—the old world and the young.

In criticising these performances, and especially in comparing them with former productions of the same kind, we ought not only to endeavour, as it seems to us, to divest ourselves of early predilections and prejudices, and of the mist which intervening time has cast over our senses; but we should consider that the alterations in the theatres themselves must have led to considerable changes in the invention and getting up of such spectacles. The immense size of the great stages renders the execution of tricks and transformations much more difficult; and the exertions of the principal performers also not only more fatiguing, but necessarily of a different kind. It is easy to manage fifty square feet of machinery; not so, five hundred or five thousand. It is easy to

* Since writing this, accounts have been received which intimate that Mrs. Maclean fell a sacrifice to the incautious use of a medicine which she took for the relief of spasms.

descend a trap five feet deep, or leap through a window three feet high; not so pleasant, a fall of twenty feet, or a jump of a dozen, with a very disagreeable uncertainty as to what is to be your reception below, or on the other side.

There are numerous other inconveniences with which the large houses have to contend; but, perhaps, the greatest of all at the present time, is the strange and anomalous state of the public press, as it affects dramatic speculation and property. Adventuring sums of importance and magnitude on experiments is, at the best, but too precarious; it is, indeed, a pity to see the spirit of party and partisanship vitiating almost every newspaper report of the performances, and often most unjustly prejudicing the interests it ought to be their pride to cherish and protect. Belonging to the body, we are sorry to offer these observations; but it is a public duty; and by a very little pains we will shew how apt that public is to be misled by following the guidance to which we have alluded.

After witnessing the new pantomimes, we took the trouble to refer to the journals for contemporary opinions, to ascertain whether or not they agreed with our own; and we think our readers will be as much surprised as we were to discover how flatly they contradicted each other: witness the following specimens of

COMPARATIVE CRITICISM!!

On *Jack Frost*, at Drury-lane, says the *Times*, it is—

"A new and splendid Christmas pantomime. . . . In all the genuine attributes of a comic pantomime, in fun and frolic, well-devised tricks, adroit transformations, excellent scenery, and pleasing music, the production deserves great commendation."

From this the *Morning Chronicle* diametrically dissents; for it declares, after describing the opening—

"Such is the poem, as far as its unintelligibility would allow us to comprehend it. . . . Of the tricks, caperings, and tumblers, we cannot, we regret to say, speak very favourably. The former were none of them new; and excited but little wonder amongst the holiday children."

And what says the *Herald*, *vice versa*?

"The pantomime abounded as much in broad nonsense as we had ever had the fortune to be acquainted withal."

But from this the *Post* utterly and expressly dissents; for it assures us that

"There is not enough of broad fun in it, and it is too long."

Now come we to the particulars touching the clowning of Wieland; and they are prettily contradictory!

"Mr. Wieland appeared as the Clown, and, certainly, since the days of the elder Grimaldi, we have never seen his Clownship so humorously supported. . . . His success was complete."—*Times*.

"Mr. Wieland, strange to say, is but an indifferent Clown—the party-coloured garb, and the motley face, evidently suit him not."—*Chronicle*.

"Wieland was the all-in-all of the whole thing. Not only did he throw far more general significance into the humour of the Clown than any individual since old Grimaldi's time." &c.—*Herald*.

The mention of "old Grimaldi," smacks of an understanding with the *Times*' critic.

More general again.

"Many of the transformations were clever, but the instantaneous changes of entire scenes was the most remarkable feature in the mechanical arrangements of the whole piece."—*Herald*.

"The staidness and the paucity of the tricks wearied the audience early in the evening; and the dullness of a harlequinade within a harlequinade, enacted by some Dutch artists, of the names of Lehmann and Winther, and the bad working of the scenery, from first to last, completed the distaste so effectually, that much loud disapprobation followed the fall of the curtain."—*Chronicle*.

"In every change (of the scenery) we see something to praise and to admire."—*Times*.

"The scenery is all good—and there are some clever jokes."—*Post*.

Come we to the Dutch actors, and there is no better agreement; no less direct contradiction.

"The Lehmann and Winther family are clever, but less favourably received than the intrinsic merit deserved,

Their performance was distinguished by ease, grace, and agility."—*Times*.

"There was the celebrated (!) Lehmann and Winther family. Such a set of stupid people could not be matched on the humblest of our stages. They were dismissed with hootings."—*Herald*.

Of Van Amburgh:—

"But independent of these legitimate props and supporters, the leases called in a great number of auxiliaries."

"Van Amburgh holding sovereign sway and mastery over his wild beasts," &c.—*Times*.

"The performances of Van Amburgh are almost of too painful a nature to be a fit introduction to a Christmas pantomime, and a child beside us turned pale with terror," &c. &c.—*Chronicle*.

Of the music, *encores* a little.

"The music is happily composed and selected—nothing of the noisy and monotonous character we have usually observed in pantomime music."—*Times*.

"The music of the pantomime is noisy, and, therefore, good."—*Chronicle*.

"The music all through reflected credit on Mr. Ellison."—*Post*.

The *Times*, as we have seen, represents the piece as most deserving in every feature, and most successful to its close. Not so others:—

"It can never be a very favourite pantomime; but, with omissions and abbreviations, &c., it may yet serve its turn."—*Chronicle*.

"On the whole, the thing went off with moderate success."—*Herald*.

And so much for the pantomime at *Drury Lane*.

With regard to *Covent Garden*, the *Times*, never averse to giving Macready a slap, has him on the hip about his Christmas performances.

"*Jane Shore*, and *Fair Rosamond*—a most injudicious and improper choice. No two particular portions of history it was more desirable should remain undisturbed and forgotten."—*Times*.

Now, this is too severe: we never much admired the dull tragedy of *Jane Shore*, but its poetical justice ought at least to absolve Rowe from the charge of immorality. In every tragedy there is guilt and crime; and the poet is only answerable for the just retribution with which he visits them. As for the *Rosamond* story, as treated in the theatre, it was not liable to the slightest objection. But, *allons*: the audience pleased the critic as little as the performances, and he kindly extends his reprehension to them.

"The house was crowded in every part, but (strange to say!) not with the aristocracy of the land; for, excepting a few rows on the dress-circle and upper boxes, we never remember to have seen a greater assemblage of the 'unwashed' enclosed within the walls of any theatre."—*Times*.

As Macready gives no orders, we do not see how he could prevent this squalid appearance (though it did not strike us), without refusing the poor-looking creatures' money at his doors. The check-takers, for instance, addressing them thus—

"Do you think to get into the boxes with a pair of—like these? Be off with you! Return this fellow his money."

"Now, pray ma'am, stand back—if you don't put off that shabby boozet, there is no pit admission here for such as you."

"You dirty unwashed blackguard!—You go to the gallery! Police, police! take this sweep into custody."

But let us go to what is our more immediate object, the critiques on the pantomime. The opening scenes before the characters are transformed.

"The various characters are introduced, disguised in the most absurd and most amusing manner."—*Times*.

"We pass somewhat reluctantly from this beautiful introduction—this exquisite framework of the piece, into the burletta portion."—*Chronicle*.

"We are sorry to find the contest (in the introduction) between Nature and Art carried on in so low a style."

"Ugly masks, which offend the sight too long."—*Post*.

"Nature and art are most happily brought in contrast, and the painter has most admirably illustrated both with a pencil full of imagination, taste, and vigour."—*Herald*.

The pantomimic part gives rise to equally discordant statements; and it should be remembered that many of these matters are statements of facts which admit of no variety of opinion if truly reported, and not matters of judgment, in which no two people need agree.

"Scenes well painted, did much for carrying through a pantomime ill-contrived, and still worse executed."

And at the close—

"Hissing and applause seemed nearly equal, and, if we were to decide the casting vote, we feel obliged to say it would be given to the former. Curtains, and greater facility given to the shifting, or a few more nights' will put this 'grand Christmas pantomime' entirely hors de combat."—*Times*.

"The repetition was announced, and no mistake: and if compressed by an hour, a continuous enjoyment may be expected for the young holiday makers, and not less for their maturer friends."—*Chronicle*.

"The practical jokes not unworthy of the comic muse."

But

"The children seemed delighted."—*Herald*.

We had marked the critiques upon the minor theatres to shew that, though in a lesser degree, and with evidently less of private feeling, similar discrepancies prevail; but, for the present, we shall be content with what we think will be deemed a curious exhibition of the modes in newspaper criticism. We should be sorry to impute improper motives to any respectable journal; but it is impossible not to see, that in some instances the persons whom these journals employ are induced to misrepresent the theatres, either by eulogy or censure. And, even in their case, we would not impute corruption; but men's minds may be biased in other ways, and likings or resentments so augmented, as to lead to a dereliction from what is due to truth and the faithful discharge of a public trust.

Our own notice of the week is, that the *Covent Garden* pantomime has fulfilled the promise it gave, and is nightly acted to crowded and applauding houses. At *Drury Lane*, matters remain as *per last*.

There is one thing just now connected with the Drama, and more largely with social morals than has been animadverted upon, upon which we would bestow a moment's notice. We allude to the proceedings in progress for the shutting up of many shops at eight o'clock in the evening. This will throw a vast number of unemployed and idle persons upon the town an hour or two earlier than heretofore; and it cannot be doubted that many of them will become frequenters of the theatres, to the manifest advantage of the theatrical interests. It will be well if no more objectionable pursuits be found for the rest.

Adelphi.—Mr. Bihin, a very great French actor, made his appearance in London, on Monday, at the Adelphi. With the remembrance of the dwarf Hervio Nano, who was so recently on the same boards, still fresh in our minds, imagine our astonishment to see his place supplied by one, who we of a verity believe to be eight feet high, and finely proportioned withal. A burletta entitled *The Giant of Palestine*, concocted by Mr. Stirling, partly from Tasso's "Jerusalem," and partly from his own head, served to introduce the new-comer, who was warmly welcomed. Mr. Bihin is light and active for his size, and exhibits none of that dull heaviness so common in the overgrown. The piece is well arranged as a vehicle for shewing the powers of the giant, and was greatly enlivened by some capital comic acting on the part of Mrs. Keeley and Mr. H. Beverley; the lady's expression of fright after her swagger of "Who cares for a giant?" when she finds him standing behind her, was as admirable as any thing we ever saw. Two other attractions made their appearances in the same evening. The first, a very handsome young lady, by name Miss Fortescue; the second, a farce, called *Jim Crow in his new Place*: but the greatness of the first performer (Mr. Bihin), so absorbed our ideas, that we can only add that

all of the novelties were quite successful, and that poor Yates was so dreadfully fatigued by his exertions that he was forced to resign, by permission of the audience, his part in *Nicholas Nickleby* to Mr. Wright, who went through it very respectably, and made it as laughable and ridiculous as he could.

Olympic.—On Wednesday, Madame Vestris made her first appearance after her unpropitious trip to America, and was received with the most enthusiastic welcome by a house crowded in every corner. A bouquet of flowers was thrown upon the stage, which she took up, and clasped, and kissed, with evident emotion. A new Christmas piece, founded on a novel version of *Bluebeard*, by Mr. Planché and Mr. Charles Dance, was produced on the occasion, and met with much applause. As the crowd prevented our witnessing it, we (having the fear of newspaper guidance before our eyes) dare not offer any criticism upon it. Madame Vestris is, of course, the heroine; and we are assured looked well, though thinner than when she left us.

VARIETIES.

Upeal, 28th October.—The two great chests which King Gustavus III. after having sealed them at every joint, delivered on the 1st of January, 1789, to this university as a present, with directions not to open them till after the expiration of fifty years, have been brought out of the cellars of the university, and deposited in one of the galleries of the library. As the time expires on the 1st of January, 1839, the senate has sent an address to the crown prince, as protector of the universities, requesting him to be present at the opening of the chests on New Year's Day. The prince has accepted this invitation. The two mysterious chests are of different sizes, and secured by numerous iron bands; the largest is so heavy, that four horses would scarcely be able to draw it. Since they have been placed in the library, which is open to the public, numbers of persons go every day to look at them.

The Himyarite Language.—M. Freynel, writing from M. Jidda to M. Mohl, in a letter published in the *Journal Asiatique* for July, announces the discovery of "the language spoken at the court of the Queen of Sheba, and which the savages of Mahrah still speak." This is the Himyarite language, or, as M. Freynel terms it, the *Ehkhik*, which is the name of a noble race, who still use it in Hakk, Mirbat, and Zhafer, on the southern coast of the Arabian Peninsula. The language is Semitic, but, *sui generis*, forming an additional class to the three enumerated by Gesenius. The grammar of the language is very peculiar, and in many respects refined; it has some affinities with those of the Hebrew, Arabic, Phœnician, and Ethiopic. There are three articulations of the letter *s*, to pronounce which requires contortions of the mouth that destroy the symmetry of the face. "It is horrible," observes M. Freynel, "to hear and see the language spoken!"—*Asiatic Journal*.

[Having copied this from the last Number (CIX.) of the "Asiatic Journal," we may point attention to the great increasing interest of this, and, indeed, of all publications connected with the East, in consequence of the existing state of affairs in our Indian empire, and the adjoining countries, including the Punjab, Afghanihan, Caubul, Persia, Ava, &c. &c.; respecting which the periodicals contain much information.—*Ed. L.G.*]

Shakspeare's Biography.—We mentioned, a few weeks since, the discovery of some interest-

ing memoranda illustrative of the life of the immortal bard, which had been made by Mr. Severn, the librarian of the London Medical Society, among the volumes under his care. The facts of the case are, we understand, as follows. An incumbent of Stratford-upon-Avon, who was inducted into the living about 1640, and directed his attention to the cure of bodies as well as souls, left behind him a collection of *Ephemerides*, in which he has inserted, among sundry medical formulæ, a number of scattered anecdotes and traditions respecting Shakspeare, some of which he had learned from the gossip of the town—among others, from one of his female patients, a descendant, either granddaughter or great niece of the poet. The books in which these notes are inserted are understood to have been in the possession of the Society from the time of its foundation, but it being supposed that the M.S. notes they contain were nothing but prescriptions, have never been regarded as of any value, until their being accidentally brought under the notice of Mr. Severn, led to the discovery of their importance in illustrating the personal history of one, by connexion with whom the veriest trifles become of value. We understand the curiosity of the lovers of Shakspeare and his times will shortly be gratified by their publication.

Weather Prophets.—The new year recalls our memory to the weather prophets, who begin very unluckily. Murphy predicts frost with snow for the 1st; fair, with a return of frost, for the 2d; frost, accompanied with snow, for the 3d; fair, frost, for the 4th; and changeable, snow, for this day. All wrong! Mr. Simmonite is hardly more lucky, unless we have to-day the "downfall and wind" which he predicts.

A Hurricane.—In a conversation the other day, after mentioning the movement of immense stones by the tempest in the West Indies, Mr. L. mentioned that, just before his arrival there, a twenty-four pounder had been blown, by the violence of the storm, from the battery into the sea. "That (rejoined Mr. J. M.) explains to me what I never could understand before—the meaning of its 'blowing great guns!'"

A Jew Bargain.—We had a good laugh, the other day, on Westminster Bridge, where a Jew chapman was selling oranges, and a customer had bated him down from eighteenpence to fourpence for a dozen. Having picked these, the unconscionable fellow insisted on having one in, or declared he would not take them; and, after much chaffering, the Jew tossed in the orange, with the following speech:—"Vell, den, take 'em; but you have dem *sheeper* as meshelf, if I *sthole* dem, sho help me Got!"

A Poor Party.—Another instance of the whim in conversation among the lower orders was overheard at Hammersmith. Two or three men and women, out holiday-making, had pretty evidently spent all their money, and one said to the other—"What, have you nothing left for another glass?" "No," was the reply; "no, not even so much as to pay the 'pike for a walking-stick!'"

LITERARY NOVELTIES.

LIST OF NEW BOOKS.

History of Denmark, Sweden, and Norway, by S. A. Dunham, Vol. I. (forming Vol. CX. of the "Cabinet Cyclopaedia.") fcap. 8vo. 6s. 6d.—Holidays House: A Series of Tales, by Miss C. TO CORRESPONDENTS.

We have received the following letter so late, that we insert it without being aware if it need a comment or note from *Ed. L. G.*

To the Editor of the *Literary Gazette*.

Sir,—At the close of your second notice (Dec. 23d) of the "Memoirs of Charles Mathews," you have, from some extraordinary misrepresentation, been led into a statement in reference to my husband's bond with Mr. Arnold, which I consider myself bound to correct. You say, when reverting to the terms of the bond of Mr. M., were not so very bad for an experiment yet to be tried. To this I have simply to reply, that no clause whatever in my favour, or in relation to myself, existed; and, on the contrary, this very fact formed the basis of Mr. Mathews's subsequent dissatisfaction and distrust of mind, when he felt his health likely to be seriously affected by the excessive labour of his undertaking. The absence of any provision for his family, in the probable event of his premature death, was the principal cause of his mental sufferings, and which led to the necessity of cancelling the original bond; but not, as you infer, to the advantage of an equal participation in the profits arising from his own exertions.

I am sure, sir, you will promptly, as kindly, rectify a misstatement calculated to raise a false estimate of Mr. Mathews's feeling and conduct on the occasion in question. In placing myself before the public, I was desirous to send in silent submission to every opinion; but where facts (however unintentionally) are misrepresented or perverted, and my husband's memory affected in the most remote degree, I may be pardoned for feeling, perhaps morbidly, sensitive and tenacious.

In answer to your final observation, in allusion to the various public critiques quoted from in the course of the "Memoirs," I beg to refer you to pages 383 and 4 of the second volume; wherein I have given my reasons for such quotations, and at the same time explained that the original notices were part of a large collection formed since my husband's death for my own gratification, and long before I had an idea of publishing: so that the weakness you imputed to him in attaching consequence to such authorities (not half of those in question, I am sure, ever met his eye), must in justice belong solely to myself.—I am, Sir, &c., ANNE MATHews.

25 Michael's Place, Brompton.

As we do not think that Sir F. Chantrey ever denied his obligation to Mr. Stothard for the drawing (design) of the children's tomb in Litchfield Cathedral, we see no occasion to insert Mr. Robert Stothard's proof of the fact. We cannot insert Rose's lines.

NEW QUARTERLY MAGAZINE.

On the 1st of January.

NEW WORKS FOR MEDICAL STUDENTS, &c.

Printed for Longman, Orme, and Co.

PRACTICAL and SURGICAL ANATOMY.

By W. J. BRASHER WILSON.

Teacher of Practical and Surgical Anatomy and Physiology. 1 vol. 12mo. with 50 Engravings on Wood by Bags. Price 10s. 6d. cloth lettered.

THE ELEMENTS of MATERIA MEDICA;

comprehending the Natural History, Preparation, Properties, Composition, Effects, and Uses of Medicines. Part I. containing the General Axioms and Classification of Medicines, and the Mineral Materia Medica. By Jonathan Pereira, F.R.S. and L.S., Lecturer in the Medical School of the London Hospital, and at the Aldersgate School of Medicine. 8vo. with upwards of 150 Engravings on Wood, including Diagrams explanatory of the Processes of the Pharmacopoeia. Price 16s. cloth lettered.

"The lectures of Mr. Pereira have been acknowledged, by those acquainted with the subject, to constitute by far the best authority in the English language in reference to the natural history and chemistry of the articles in the Materia Medica; while, with respect to their medicinal applications, a department in its very nature admitting of less perfection—he gives in a clear and lucid manner all that has been satisfactorily made out."—Medical Gazette.

FLORA MEDICA; or, a Botanical Account

of all the most Remarkable Plants applied to Medical Practice in Great Britain and other Countries. By John Lindley, F.R.S. &c., Professor of Botany in the London University College. 1 vol. 8vo. 15s. cloth lettered.

"We feel bound to recommend it in a strong manner to the medical public. Many examples which we might enumerate, show how important it is that the investigation of medical plants should be taken up by some one fully qualified to the execution of so difficult a task. No one was better adapted to fulfil the object in respect to their medicinal properties, than Dr. Lindley; and we feel confident that his work will obtain the patronage which it justly merits."—Lancet.

"The student will find in Dr. Lindley's work all that can be desired in a treatise on medical botany."—Edinburgh Medical Journal.

By the same Author,

KEY to STRUCTURAL PHYSIOLOGICAL, and SYSTEMATIC BOTANY. For the Use of Classes. 8vo. 4s. 6d.

TO BE HAD OF ALL BOOKSELLERS.

REVIEW OF NEW BOOKS.

The Art of Deer-Stalking. By William Scrope, Esq. Large 8vo., pp. 436. London, 1839. Murray.

HAPPY the man who is competent to review this volume; for he must have seen and enjoyed some of the things of which it gives so vivid a description; he must have inspired the invigorating breath of the Highland hills; he must have looked around on the glorious and ever-varying prospects which they present; he must have felt his limbs strengthening day after day, and the languors of the south or the capital forced to yield to the bracing air and exercise of the mountains; he must have become familiar with the whirr of the grouse, the haunts of the blackcock, the strong spring of the Alpine hare, and the bare summit seat of the ptarmigan; he must have climbed the highest steep where the eagle soared, and where solid oceans of gneiss, porphyry, or granite saluted his eye on every side, as far as his horizon ranged; he must have witnessed the gentle roe leap, startled from its couch, and the red deer rush like an avalanche through the rocky pass; he must have partaken of the hospitality of these regions, where the native heart is a contrast to the stony soil, and, from the peasant to the peer, the stranger is welcomed with the best the booby can afford, and the utmost enjoyments which the castled abode of refined tastes, cultivated minds, and noble fortunes, can supply.

Hence health of body and vigour of mind;—health before which Bihin, the giant, might quail, and vigour enough to sustain the Premier through all the toils of the approaching session. We fear the noble lord had no opportunity to lay it in; but he may, possibly, have a portion of it near his official hand, at least if we can depend on the sporting accounts of the last season in the north.

But why should we endeavour to imitate the style in which Mr. Scrope has clothed his living sketches; he speaks of his experience as of past years, but he writes of them as freshly and passionately as if they were of yesterday—as if he had just returned from the chase, and was recounting its trophies over the first circle of claret in lodge or hall. Let us, therefore, turn to him.

“Shall (he begins) a poaching, hunting, hawking squire, presume to trespass on the fields of literature?” These words, or others of similar import, I remember to have encountered in one of our most distinguished reviews. They ring still in my ears, and fill me with apprehension as it is; but they would alarm me much more if I had attempted to put my foot within the sacred enclosures alluded to. These are too full of spring-traps for my ambition, and I see ‘this is to give notice’ written in very legible characters, and take warning accordingly. Literature!—Heaven help us!—far from it; I have no such presumption; I have merely attempted to describe a very interesting pursuit as nearly as possible in the style and spirit in which I have always seen it carried on. Ten years’ successful practice in the forest of Atholl have enabled me to enter into all the details that are connected with

deer-stalking. That it is a chase which throws all our other field-sports far in the back-ground, and, indeed, makes them appear wholly insignificant, no one, who has been initiated in it, will attempt to deny. The beautiful motions of the deer, his picturesque and noble appearance, his sagacity, and the skillful generalship which can alone ensure success in the pursuit of him, keep the mind in a constant state of pleasurable excitement.

“I have attempted also to illustrate all the essential points that occur in stalking deer, both in slow and quick time, and to describe all the various turns and accidents of the chase drawn from actual experience. This, I thought, could be best done by the recital of moderate sport, since a long catalogue of deer, killed in succession on the same day, unaccompanied by some striking or unusual incident, would only be a tedious repetition of events similar to each other. In practice, however, I did my best, as fine venison was always in request. If my success was occasionally very considerable, it must be recollected that the deer were numerous, and that I was assisted by clever scouts. The being my own stalker, also, was an advantage that long practice enabled me to profit from: no one, I think, can make the best of events when his movements are controlled by others, and are a mystery to himself.”

This is most true, and there is nothing like independence in the sports of the field as in the business of life. Many a fair chance is stopped or missed through the want of it.

In the earlier chapters, the natural history and habits of the red deer are described in an agreeable manner; and we pick out a few of the most curious particulars. The question of horns will be read with interest even by inhabitants of London, who, notwithstanding steamers, have never seen the sparkling isles and purple heaths of Scotia.

“The shedding of the horns continues till the beginning of June; but deer of a year old will carry them till August or September; these new horns are very sensitive, and the harts at this time avoid bringing them into collision with any substance. When they fight, they rear themselves upon their hind legs, and spar with their fore feet, keeping back their heads. They carry their horns just as long as the hind carries her fawn, which is eight months. They are not always shed at the same time, but one of them occasionally drops a day or two after the other. I myself have seldom found any other than single horns in the mosses of the forest. It is a remarkable fact, however, that the number which are picked up in any forest bears no proportion to those which are shed; and this cannot arise from their being overlooked, for they are a valuable perquisite to the keepers, and there is no part of the forest that is not traversed by them in the course of the season. What, then, becomes of them? Hinds have been seen to eat them: one will consume a part, and, when she drops it, it will be taken up and gnawed by the others. The late Duke of Atholl, indeed, once found a dead hind which had been choked by a part of the horn, that remained sticking in its throat. It is not, however, credible that all

those which are missing are disposed of in this way; they rather seem to be thus eaten from wantonness and caprice, and I am not able to account satisfactorily for their disappearance. The new horns which deer acquire annually are covered with a thick sort of leaden-coloured skin, which remains on them till the deer are in good condition: it then begins to fall off, and, for a short space, hangs in shreds, ragged and broken; but they remove it as quickly as they can, by raking their antlers in the roots of the heather, or in such branches of shrubs as they can find adapted to the purpose. When they have shaken off this skin, which is called the velvet, and which disappears in the months of August and September, they are said to have clean horns; and, as these deer are in the best condition, they are the particular object of the sportsman.”

From this subject we may naturally pass to the amours of these noble animals.

“This is a very wild and picturesque season. The harts are heard roaring all over the forest, and are engaged in savage conflicts with each other, which sometimes terminates fatally. When a master hart has collected a number of hinds, another will endeavour to take them from him: they fight, till one of them, feeling himself worsted, will run in circles round the hinds, being unwilling to leave them: the other pursues; and, when he touches the fugitive with the points of his horns, the animal, thus gored, either bounds suddenly on one side, and then turns and faces him, or will dash off to the right or the left, and at once give up the contest. The conflict, however, generally continues a considerable time; and nothing can be more entertaining than to witness, as I have often done, the varied success and address of the combatants. It is a sort of wild just, in the presence of the dames who, as of old, bestowed their favours on the most valiant. Sometimes it is a combat à l’outrance, but it often terminates with the effect of the horn of Astolfo. In solitary encounters, there being no hinds to take the alarm, the harts are so occupied, and possessed with such fury, that they may be occasionally approached in a manner that it would be vain to attempt at any other time. From the summit of a mountain, in Atholl forest, I once saw two harts in fierce contention, in a mossy part lower down the hill. I came into sight at once, not expecting to see deer in the situation in which these happened to be. I could neither advance straight forward nor retreat without danger of giving the alarm. One possibility alone was open to me; this was to get into the glen to their right, when I should be entirely hidden from their view, and then come up, concealed by the hilly, as nearly opposite to them as possible. I was certainly a very considerable distance to the north of them, but my position was so bad that I looked upon my chance as a mere nothing. I lay down, however, flat on my back, among the rugged and loose stones of Cairn-marnac, with a rifle in my hand; Thomas Jamieson, with the other rifles, placed himself behind me in the same uncomfortable position. We had a full view of the deer for some time, so that with their ordinary vigilance they would un-

doubtedly have seen us; the stones, however, formed an uneven outline, which was in our favour, and thus we did not absolutely attract their notice. Whilst the stags were fiercely engaged, we worked our way down on our backs, looking apace: when they rested for a space, and sometimes they would do so on their knees, from mere exhaustion, we moved not a limb; and in this manner we wormed ourselves gradually into the glen, not without certain uncomfortable bruises. Then, being out of sight, we sprang up, and made the best of our way to the point immediately below them; and moving cautiously up the hill, which was sufficiently steep for our purpose, we came all at once in full view of one of the combatants, who was then alone; he sprang off at full speed, but all too late for his escape, for my ball struck him dead on the spot. His antagonist, I imagine, had been beaten off. I expected to have killed them both. A conflict of this savage nature, which happened in one of the Duke of Gordon's forests, was fatal to both of the combatants. Two large harts, after a furious and deadly thrust, had entangled their horns so firmly together that they were inextricable, and the victor remained with the vanquished. In this situation they were discovered by the forester, who killed the survivor, whilst he was yet struggling to release himself from his dead antagonist. The harts remain at Gordon Castle, still locked together as they were found. Mesentius himself never attached the dead body to the living one in a firmer manner."

The care of their young is natural and interesting:—

"The period of gestation in a hind is eight months. She drops her fawn in high heather, where she leaves it concealed the whole of the day, and returns to it late in the evening, when she apprehends no disturbance. She makes it lie down by a pressure of her nose; and it will never stir or lift up its head the whole of the day, unless you come right upon it, as I have often done. It lies like a dog, with its nose to its tail. The hind, however, although she separates herself from the young fawn, does not lose sight of its welfare, but remains at a distance to the windward, and goes to its succour in case of an attack of the wild cat, or fox, or any other powerful vermin. I have heard Mr. John Crerer say, and it is doubtless true, that if you find a young fawn that has never followed its dam, and take it up and rub its back, and put your fingers in its mouth, it will follow you home for several miles; but if it has once followed its dam for ever so small a space before you find it, it will never follow human being. When once caught, these fawns or calves are easily made tame; and there were generally a few brought up every year by the dairy-maid at Blair. I speak of hinds only; stags soon turn vicious and unmanageable. When the calf is old enough to keep up with a herd of deer, and to take pretty good care of itself, its mother takes it off, and leads it into ground that can be travelled, without difficulty, avoiding precipitous and rocky places.

"Deer, except in certain embarrassed situations, always run up wind; and so strongly is this instinct implanted in them, that if you catch a calf, be it ever so young, and turn it down wind, it will immediately face round and go in the opposite direction. Thus they go forward over hill-tops and unexplored ground in perfect security, for they can smell the taint in the air at an almost incredible distance. On this account they are fond of lying in open corries, where the swells of winds come

occasionally from all quarters. I have said that deer go up wind; but, by clever management, and employing men to give them their wind (these men being concealed from their view), they may be driven down it; and in certain cases they may easily be sent, by a side wind, towards that part of the forest which they consider as their sanctuary. It is to be noted, that on the hill-side the largest harts lie at the bottom of the parcel, and the smaller ones above; indeed these fine fellows seem to think themselves privileged to enjoy their ease, and impose the duty of keeping guard upon the hinds and upon their juniors. In the performance of this task the hinds are always the most vigilant, and when deer are driven they almost always take the lead. When, however, the herd is strongly beset on all sides, and great boldness and decision are required, you shall see the master hart come forward courageously, like a great leader as he is, and, with his confiding band, force his way through all obstacles. In ordinary cases, however, he is of a most ungallant and selfish disposition; for, when he apprehends danger from the rifle, he will rake away the hinds with his horns, and get in the midst of them, keeping his antlers as low as possible. There is no animal more shy or solitary by nature than the red deer. He takes the note of alarm from every living thing on the moor,—all seem to be his sentinels. The sudden start of any animal, the springing of a moor-fowl, the complaining note of a plover, or of the smallest bird in distress, will set him off in an instant. He is always most timid when he does not see his adversary, for then he suspects an ambush. If, on the contrary, he has him full in view, he is as cool and circumspect as possible: he then watches him most acutely, endeavours to discover his intention, and takes the best possible method to defeat it. In this case he is never in a hurry or confused, but repeatedly stops and watches his disturber's motions; and when at length he does take his measure, it is a most decisive one: a whole herd will sometimes force their way at the very point where the drivers are the most numerous, and where there are no rifles; so that I have seen the hill-men fling their sticks at them, while they have raced away without a shot being fired."

All Mr. Scrope's statements of the habits of the deer resemble those we have so briefly quoted; and so real that we seem to partake of the scenes he paints so truly. Stories of the prodigious age of deer he appears to think no better founded than many of the superstitious legends which he also repeats from Highland authorities; and no one who has ever roamed in the dusk or darkness, amid the brawls of streams, the faithlessness of bog, the strange forms of stone rock, and precipice, can doubt but that imagination must lay a potent wand upon the belief of a Highlander!

"And now (he says, in one of his Ossianic pictures), what do you think of this wild region? Do you not almost feel as if you were wandering in a new world? Here, every thing bears the original impress of nature, untouched by the hand of man since its creation. That vast moor spread out below you; this mass of huge mountains heaving up their crests around you; and those peaks in the distance, faint almost as the sky itself,—give the appearance of an extent boundless and sublime as the ocean. In such a place as this, the wild Indian might fancy himself on his own hunting grounds. Traverse all this desolate tract, and you shall find no dwelling, nor sheep, nor cow, nor horse, nor any thing that can

remind you of domestic life; you shall hear no sound but the rushing of the torrent, or the notes of the wild animals, the natural inhabitants; you shall see only the moor-fowl and the plover flying before you from hillock to hillock, or the eagle soaring aloft with his eye to the sun, or his wings wet with mist."

And the tenant of this scene:—

"Give me the glass; I see him plainly enough: he is shot through the body, rather far behind, and cannot go far. Now one of the deer is hoking his wound—now he begins to falter—now he turns aside and sends a wistful look after his companions, who are fast leaving him, happy and free as the air we breathe. He is making another effort to regain them: poor fellow! it may not be; yon shall never join them more. Never again shall you roam with them over the gray mountains,—never more brave the storm together—sun your red flanks in the corrie—or go panting down to your wonted streams: 'brief has been your dwelling on the moor!'"

These are from an Englishman; a native idea of Badenoch is somewhat different: first to the Gown-cromb (blacksmith) of one of its villages.

"He was taxed, but in a merry mood, with many dexterous feats of poaching, and driving the duke's deer to the north, when the wind served, which he did not altogether deny. 'Well,' said Tortoise, 'take some more whisky, and a pinch of snuff from my mill; but you must not steal the duke's deer, mon.' 'Monte-toute! Y'ere a trou Sassenach, an the like o' ye chieft aye ca' liftin' stealing, which is na joost Christian-like.' 'Well, what would you give for such bonny braes, and birks, and rivers as are in the forest of Atholl, if they could be transferred to your wild country?' 'And are there na bonny braes and birks in Badenoch? Y'ere joost as bad as our minister; but fat need the man say any thing mair about the matter, fan I tell 'im that I'll prove, frae his ain Bible, ony day he likes, that the Liosmor, as we ca' the great garden in Gaelic, stood in its day joost far the mair o' Badenoch lys noo, an' in nae fther place aneth the sun; is no there an island in the Loch Lathine that bears the name o' the Liosmor to this blessed day; fan I tell you that, an' that I have seen the island mysel, fa can doubt my word?' 'But, Mac, the Bible says the garden was planted eastward, in Eden.' 'Hoot! ay; but that dinst say but the garden might be in Badenoch! for Eden is a Gaelic word for a river, an' am shure there's nae want o' them there; an, as for its bein' east o'er, that is, when Adam planted the Liosmor, he sat in a bonny hothan on a brae in Lochaber, an nae doot lukit eastwar to Badenoch, an' saw a' thing sproutin' an growin' atween im an the sun fan it cam ripplin' o'er the braes frae Athole in the braw summer mornin'." 'But, Mac, the Bible further says, they took fig-leaves and made themselves aprons; you cannot say that figs ever grew in Badenoch.' 'Hout-tout! there's nobody can tell fat grew in Badenoch! the days of the Liosmor; an' altho' nae figs grow noo, there's mony a bonny flag runs yet o'er the braes o' both Badenoch and Lochaber. It was fig's skins, an no fig blades that they made claes o'. Flag, I maun tell you, is Lochaber Gaelic for a deer to this day; a fan the anid gudeman was getting his reproof for takin' an apple frae the guidwife, a' the beasties in Liosmor cam roon them, an, among the rest twa bonny rae; an fan the gudeman said, 'See how miserable we twa are left: there stands a' the bonnie beasties weel clad in their ain hair, an' here we stand shame-faced and nakit—awee! fan the twa rae heard

that, they lap out o' their skins, for very love to their sufferin' maister, as any true clansman wad do to this day. Fan the gudeman saw this, he drew as flag's skin on her naimsel, an the tishier o'er the gudewife: noo, let me tell ye, thae were the first kilts in the world.' 'By this account, Mac, our first parents spoke Gaelic.' 'An' fat ither had they to spake, tell me? Our minister says they spoke Hebrew; and fads Hebrew but Gaelic, the warst o' Gaelic, let alane Welsh Gaelic.' 'Well done, Mac; success to you and your Gaelic!' 'Success to me an my Gaelic! I tell ye that the Hieland Society, or Gaelic Society, or a' the societies in the world, canna ca' again my Gaelic! nor the name or origin o' the first dress worn by man, for—

'Ere the laird cardit or the lady span,
In flag's skins their hale race ran.'

'We would require proof for this, Mac.' 'Proof, mon! disna your Bible say, 'cursed is the ground for Adam's sake,' an that curse lies on Badenoch an Lochaber to this day; for if there be in all Scotland a mair blastit poverty-stricken part than 'ither o' the twa, may Themus Mac-na-Tolshach's auld een never see it! an for the truth o' fat I'm saying, its joost as true as any story of the kind that's been tauld this mony a day; let them contradic me fa can.' Thus the Gown-cromb's wit at length fairly got the better of his patriotism."

We must not omit an example of the legendary lore.

"The belief in 'spirits of a limited power and subordinate nature' dwelling amidst woods and mountains is, as you know, common to all nations, and more particularly to such as are of a wild and romantic character. The lonely man who journeys over the vast uninhabited space, feels himself almost unconnected with human society; and when darkness falls upon the moor, objects of dubious form loom around him and disturb his imagination. Thus traditions of witches and fairies are numerous in the forest of Galloway; one at least I will give you, as a specimen of their character. Murdoch, a noted deer-stalker, went at sunrise into the forest, and discovering some deer at a distance, he stalked till he came pretty near them, but not quite within shot. On looking over a knoll he was astonished at seeing a number of little neat women dressed in green, in the act of milking the hinds. These he knew at once to be fairies; one of them had a hank of green yarn thrown over her shoulder, and the hind she was milking made a grab at the yarn with her mouth and swallowed it. The irritable little fairy struck the hind with the band with which she had tied its hind legs, saying at the same time, 'May a dart from Murdoch's quiver pierce your side before night!' for the fairies, it seems, were well apprised of Murdoch's skill in deer-killing. In the course of the day he killed a hind, and in taking out the entrails he found the identical green hank that he saw the deer swallow in the morning. This hank, it is said, was preserved for a long period, as a testimony of the occurrence. This was met our deer-stalker's only adventure; for upon another occasion, in traversing the forest, he got within shot of a hind on the hill called the Doune, and took aim; but when about to fire, it was transformed into a young woman; he immediately took down his gun, and again it became a deer; he took aim again, and anon it was a woman; but on lowering his rifle it became a deer a second time. At length he fired, and the animal fell in the actual shape of a deer. No sooner had he killed it than he felt overpowered with sleep; and having rolled himself in his plaid, he lay down on

the heather; his repose was of short duration, for in a few minutes a loud cry was thundered in his ear, saying, 'Murdoch, Murdoch! you have this day slain the only maid in Doune.' Upon which Murdoch started up and relinquished his spoil, saying, 'If I have killed her you may eat her:' he then immediately quitted the forest as fast as his legs could carry him. This man was commonly called Munack Mac-Jan, or Murdoch the son of John; his real name, however, was Macpherson. He had a son who took orders, and obtained a living in Ireland; and it is said that the late celebrated R. B. Sheridan was descended from one of his daughters. The most extraordinary superstition prevalent was that of the Liannan-Spell, or fairy sweethearts; and all inveterate deer-stalkers, who remained for nights, and even weeks, in the mountains, were understood to have formed such connexions. In these cases the natural wife was considered to be in great danger from the machinations of the fairy mistress."

Perhaps they were not always fairies?

Short accounts of the deer-forests of the north, such as Blair Atholl, Lord Glenlyon's; the Black Mount, the Marquess of Breadalbane's; Glenartney, Lord Willoughby d'Eresby's; Braemar, the Earl of Fife's, &c. &c., form a very suitable appendage to the history of the sports which they so delightfully furnish. The embellishments, too, after Landseer and Mr. Scrope himself, are exceedingly characteristic and pleasing. And then there is poetry by Monk Iewis, T. H. Liddell, and Disraeli; a curious notice of the very curious Black Book of the Campbells, at Taymouth Castle; and other accessories, which render the volume altogether one of varied attraction and interest. Few persons could have written such a book, for it is replete with classic literature and elegant taste, as well as with the hardy exploits of the gallant deer-stalker. What he should be in the physical way is so amusingly described in the following extract, that, wishing the gods had made us many such men, we conclude with the full-length portrait:—

"After all, a man should be trained in the way he should go as soon as he is out of petticoats; if not, the symmetry of the Antinous will avail him aught. I have not the slightest doubt, indeed, but that Pan would have caught Daphne much sooner than Apollo. He would have made a much better run, and probably a better thing of it altogether. Now this is all very well; but your consummate deer-stalker should not only be able to run like an antelope, and breathe like the trade winds, but should also be furnished with various other undeniable qualifications. As, for instance, he should be able to run in a stooping position, at a greyhound pace, with his back parallel to the ground, and his face within an inch of it, for miles together. He should take a singular pleasure in threading the seams of a bog, or in gliding down a burn, *contre a terre*, like that insinuating animal the eel,—accomplished he should be in skillfully squeezing his clothes after this operation, to make all comfortable. Strong and pliant in the ankle, he should most indubitably be; since in running swiftly down precipices, picturesquely adorned with sharp-edged, angular, vindictive stones, his feet will unadvisedly get into awkward crannies, and curious positions:—thus, if his legs are devoid of the faculty of breaking, so much the better,—he has an evident advantage over the fragile man. He should rejoice in wading through torrents, and be able to stand firmly on water-worn stones, unconscious of the action of the

current; or if by fickle fortune the waves should be too powerful for him, when he loses his balance, and goes floating away upon his back (for if he has any tact, or sense of the picturesque, it is presumed he will fall backwards), he should raise his rifle aloft in the air, Marmion fashion, lest his powder should get wet, and his day's sport come suddenly to an end. A few weeks' practice in the Tilt will make him quite *au fait* at this. We would recommend him to try the thing in a spout, during a refreshing north wind, which is adverse to deer-stalking; thus no day will be lost pending his education. To swim he should not be able, because there would be no merit in saving himself by such a paltry subterfuge; neither should he permit himself to be drowned, because we have an affection for him, and moreover it is very cowardly to die. As for sleep, he should be almost a stranger to it, activity being the great requisite; and if a man gets into the slothful habit of lying a-bed for five or six hours at a time, I should be glad to know what he is fit for in any other situation? Least, however, we should be thought too niggardly in this matter, we will allow him to doze occasionally from about midnight till half-past three in the morning. Our man is thus properly refreshed, and we retain our character for liberality. Steady, very steady, should his hand be, and at times wholly without a pulse. Hyacinthine curls are a very graceful ornament to the head, and, accordingly, they have been postically treated of; but we value not grace in our shooting-jacket, and infinitely prefer seeing our man, like Dante's Frai, '*che non hanno copercchio piloso al capo*,' because the greater the distance from the eye to the extreme point of the head, so much the quicker will the deer discover their enemy, than he will discover them. His pinnacle or predominant, therefore, should not be ornamented with a high finial or tuft. Indeed, the less hair he has upon it the better. It is lamentable to think that there are so few people who will take disinterested advice upon this or any other subject; but, without pressing the affair disagreeably, I leave it to a deer-stalker's own good sense to consider whether it would not be infinitely better for him to shave the crown of his head at once, than to run the risk of losing a single shot during the entire season. A man so shorn, with the addition of a little bog earth rubbed scientifically over the crown of his head, would be an absolute Ulysses on the moor, and (*ceteris paribus*) perfectly invincible."

Rob of the Bowl; a Romance of the Days of Charles II. By J. P. Kennedy. 3 vols. 12mo. London, 1839. Bentley.

THE period of the second Charles is a fit and good period for romance, as it is near enough to our own time to create a real interest, and remote enough to allow the skilful writer to invest it with such charms as imagination may suggest. In the present instance, too, the effects are aided by the scene being laid in America, where the ancient capital of Maryland opens the descriptions; and the characters are introduced in distinct and clever relief. The British settlers, and a little of their wild neighbours of the western woods, are brought into action in a vivid manner; and altogether we have as stirring a story as the lovers of fiction founded on, or connected with, actual circumstances, could desire. Among the notables of the Lord Baron of Baltimore, absolute Proprietor of Baltimore and Avalon, is a Captain Jasper Dauntrees, who plays a conspicuous part in

these pages, and would be no bad companion to Dugald Dalgetty, of famous memory. Rob of the Bowl himself is very original; and the interest attached to a haunted house in his vicinage, fills up those mysteries which render tales of the kind popular with the great majority of readers.

From such a production it is scarcely possible to extract a suitable specimen without trenching upon the author's secrets, and our own page, much more than would be agreeable to his or our readers. We shall, therefore, select the portrait of the heroine, the youngest daughter of the worshipful Anthony Warden, collector of the customs at St. Mary's, as an example of the talent and style which belong to the whole:—

"Of the beauty of the Rose of St. Mary's (for so contemporaries were wont to designate her) tradition speaks with a poetical fervour. I have heard it said that Maryland, far-famed for lovely women, hath not since had a fairer daughter. The beauty which lives in expression was eminently hers; that beauty which is scarcely to be caught by the painter,—which, changeful as the surface of the welling fountain, where all the fresh images of nature are for ever shifting and sparkling with the glories of the mirror, defies the limner's skill. In stature she was neither short nor tall, but distinguished by a form of admirable symmetry, both for grace and activity. Her features, it is scarce necessary to say, were regular,—but not absolutely so; for, I know not why, perfect regularity is a hindrance to expression. Eyes of dark hazel, with long lashes that gave, by turns, a pensive and playful light to her face, serving, at will, to curtain from the world the thoughts which otherwise would have been read by friend and foe; hair of a rich brown, glossy, and, in some lights, even like the raven's wing,—ample in volume, and turning her brow and shoulders almost into marble by the contrast; a complexion of spotless, healthful white and red; a light, elastic step, responding to the gaiety of her heart; a voice melodious and clear, gentle in its tones, and various in its modulation, according to the feeling it uttered;—these constituted no inconsiderable items in the inventory of her perfections. Her spirit was blithe, affectionate, and quick in its sympathies; her ear credulous to believe what was good, and slow to take an evil report. The innocence of her thoughts kindled a habitual light upon her countenance, which was only dimmed when the rough handling by fortune of friend or kinsman was recounted to her, and brought forth the ready tear,—for that was ever as ready as her smile."

The various adventures belong to the school of Scott, and remind us of the "Monastery" and the "Pirate." After one of these, the return home of the party offers us a separable quotation:—

"As the captain continued to urge his journey, which he did with the glee that waits upon a safe deliverance from an exploit of hazard, he turned his face upwards to the bright orb which threw a cheerful light over the scenery of the road-side, and in the distance flung a reflection, as of burnished silver, over the broad surface of St. Mary's river, as seen from the height which the travellers were now descending. Not more than two miles of their route remained to be achieved, when the captain broke forth with an old song of that day, in a voice which would not have discredited a professor:

'The moon, the moon, the jolly moon,
And a jolly old queen is she!
She hath strolled o' nights this thousand year,
With ever the best of company.'

Sing, Hic and hoc sumus nocturno,
Huzza for the jolly old moon!"

'Why, Garret, vintner, art asleep, man?' inquired the captain. 'Why dost thou not join in the burden?' 'To your hand, captain,' exclaimed Weasel, rousing himself and piping forth the chorus:—

'Hic and hoc sumus nocturno,
Huzza for the jolly old moon!"

which he did not fail to repeat at the top of his voice at each return. Dauntrees proceeded:

'She trails a royal following,
And a merry mad court doth keep,
With her chirping boys that walk in the shade,
And wake when the balliff's asleep.
Sing, Hic and hoc sumus nocturno,
Huzza for the jolly old moon!"

Master owl he is her chancellor,
And the bat is his serving-man;
They tell no tales of what they see,
But wink when we turn up the can.
Sing, Hic and hoc sumus nocturno,
Huzza for the jolly old moon!"

Her chorister is Goodman Frog,
With a glow-worm for his link;
And all who would make court to her,
Are fain, good faith! to drink.

Sing, Hic and hoc sumus nocturno,
Huzza for the jolly old moon!"

This ditty was scarcely concluded — for it was spun out with several noisy repetitions of the chorus—before the troop reined up at the gate of the fort. The drowsy sentinel undid the bolt at the captain's summons, and in a very short space the wearied adventurers were stretched in the enjoyment of that most satisfactory of physical comforts, the deep sleep of tired men."

We are sorry that we cannot do more for the bucaniers, and other well-drawn personages, who figure in this work; but in truth, extract is impossible, and we must dismiss it with the commendations we have bestowed.

Arboretum et Fruticetum Britannicum; or, the Trees and Shrubs of Britain, Native and Foreign, Hardy and Half-Hardy, Pictorially and Botanically delineated, and Scientifically and Popularly Described; with their Propagation, Culture, Management, Uses, &c. By J. C. Loudon, F.L.S. and H.S.S. 8 vols. 8vo. Illustrated with above 2500 Engravings, and about 400 8vo. and 4to. Plates. London, 1838. Longman and Co.

THE great mass of information respecting trees and shrubs, collected together in these volumes, and the numerous and beautifully executed wood engravings, render this work one of great interest, not only to the botanist and practical cultivator, but the amateur and general reader. Common as trees are, and continually as we see them before our eyes, there are few subjects on which general readers are worse informed. The hard names and cramped phrases of the botanist seem to close the door against all passing intruders, who wish merely to take a glimpse of the objects of his science; and few persons who have not studied botany have an idea of there being more than half-a-dozen or a dozen different kinds of trees, even in the most extensive plantations. All these persons will be delighted with Mr. Loudon's *Arboretum*; as in the popular part of the work, which occupies nearly two-thirds of the whole, he describes so many different and beautiful trees growing in the immediate neighbourhood of London, as must give a great additional interest to every morning drive taken two or three miles out of town, or even round the Regent's Park.

We shall now offer a few extracts, taken from the different portions of the work. It must be observed that Mr. Loudon not only gives descriptions, &c. of his trees, and their uses for timber, but he details the uses made of their

fruit; and, as many of our readers may remember Mr. James's amusing description, in one of his late works, of the cake called *la galette*, which is made of chestnut flour, we shall quote Mr. Loudon's description of the uses to which the fruit of the chestnut is applied in the south of Europe.

"The principal countries where the chestnut is employed as an important article of food are, the South of France and the North of Italy, where it serves, in a great measure, as a substitute for both the bread and potatoes of more northern nations. In these countries it becomes a matter of importance to preserve the chestnuts during winter; and, accordingly, great care is taken in gathering, keeping, and drying them, so as to ensure a constant supply. When the chestnuts are ripe, those that are to be preserved are collected every day from the ground on which they have fallen from the tree, and spread out in a dry airy place, till the whole is gathered together. But, as it is often a considerable time before the chestnuts are all ripe enough to fall from the tree, if the season be so far advanced as to be in danger of snow or heavy rains, after the fallen chestnuts have been collected and set on one side for drying, the tree is beaten with long poles, to knock off the remaining fruit. This operation is called *gauler les châtaignes*. But the fruit thus collected is only considered fit for immediate use; and the greater part of it is carried to the local market, or sent to Paris. The husks of the chestnuts beaten off the trees being generally attached to the nuts, they are trodden off by peasants furnished with heavy sabots, when the nuts are wanted for immediate use; but, when the chestnuts are to be preserved a few months, they are generally kept in their husks in heaps in the open air, or in barrels of sand, which are actually sometimes sprinkled with water in very dry seasons, in order to preserve the full and plump appearance of the nuts. One of the modes of drying chestnuts, in order to preserve them for several years, is, to place those which have been collected from the ground on coarse riddles, sieves, or hurdles, in a dry airy place, and afterwards to expose them to the sun; or to boil them for a quarter of an hour, and then dry them in an oven. In Simois and Périgord, where the chestnut flour is used for making the kind of cake called *la galette*, and the thick porridge called *la polenta*, which are the common food of the peasantry, the chestnuts are dried with smoke. A thin layer of nuts, which have been deprived of their outer husks, is laid on a kind of kiln pierced with holes; and a fire is made below with the husks, and part of the wood of the tree, which is only permitted to smoulder, and is not suffered to burst into a flame. In a short time the chestnuts begin to sweat; that is, their superabundant moisture oozes out through their skins. The fire is then immediately extinguished, and the chestnuts are suffered to become quite cold. They are then thrown on one side, and a fresh layer is spread out, and subjected to the same process. When a sufficient quantity of chestnuts is thus prepared, to cover the floor of the kiln, at least one foot deep, they are laid upon it, and a gentle fire is made below, which is gradually augmented during two or three days, and is then continued during nine or ten days, the chestnuts being regularly turned, like malt, till the nuts part readily from their skins: they are then put into sacks, which have been previously wet, and thrashed with sticks, or rubbed upon a large bench or table; after which they are winnowed, and are

then ready for the mill. During the process of drying, the fire is watched night and day; and the under side of the floor of the kiln (or hurdles, if these have been used as a substitute for a paved floor) must be frequently swept, to clear it from the soot. The dust which escapes from the chestnuts, when they are winnowed, together with the broken nuts, are carefully preserved for feeding cattle, and are called in France *biscat*. The most general modes of cooking chestnuts in France are, boiling them in water, either simply, with a little salt, or with leaves of celery, sage, or any herbs that may be approved of, to give them a flavour; and roasting them, either in hot ashes, or in a coffee-roaster. They are also occasionally roasted before the fire, or on a shovel, as in England, but, when thus prepared, they are thought not so good. In whatever way the chestnuts are roasted, the French cooks always slit the skin of all except one; and when that cracks and flies off they know that the rest are done. Chestnut flour is kept in casks, or in earthen bottles well corked: and it will remain good for years. *La galette* is a species of thick flat cake, which is made without yeast, and baked on a kind of girdle, or iron plate, or on a hot flat stone. It is generally mixed with milk and a little salt, and is sometimes made richer by the addition of eggs and butter; and sometimes, when baked, it is covered with a rich custard before serving. *La polenta* is made by boiling the chestnut flour in water or milk, and continually stirring it, till it has become quite thick, and will no longer stick to the fingers. When made with water, it is frequently eaten with milk in the manner that oatmeal porridge is in Scotland. Besides these modes of dressing chestnuts, which are common in Italy as well as in France, many others might be mentioned; particularly a kind of *bouilli*, called *châtigna*, which is made by boiling the entire chestnuts, after they have been dried and freed from their skins, in water, with a little salt, till they become soft, and then breaking and mixing them together like mashed potatoes; and a sweetmeat called *marrons glacés*, which is made by dipping the marrons into clarified sugar, and then drying them, and which is common in the confectioners' shops in Paris."

Every one has heard of Venice turpentine, and may know that it is procured from the larch, but the following description of the mode of procuring it will, probably, be new to our readers.

"To obtain the turpentine, trees are chosen which are neither too young nor too old; as only full-grown trees, not yet in a state of decay, will yield good turpentine. When the sap begins to be in motion, in spring, if a few drops of turpentine are seen exuding from the bark, it is a proof that the tree is full of resinous juice; and, if the trunks were split, there would be found, five inches or six inches from the heart of the tree, and eight inches or ten inches from the bark, several dépôts of liquid resin, contained in cavities which are sometimes one inch thick, three inches or four inches broad, and as much in height. In a trunk of forty feet in length, as many as six of these large reservoirs of liquid resin have been found, and several smaller ones. When the wood of a tree cut down in this state is sawed up, a cut with a hatchet will make the turpentine flow abundantly; and the sawyers often find the movement of the saw impeded by it. Young and vigorous larches have none of these reservoirs, which appear not to be formed till the tree has attained its full growth; and it is, consequently, in this state only that the tree is

in a fit condition for being pierced for the extraction of its resin. The peasants of the valley of St. Martin, in the Pays de Vaud, use augers nearly an inch in diameter, with which they pierce the full-grown larches in different places, beginning at three feet or four feet from the ground, and mounting gradually to ten feet or twelve feet. They choose, generally, the south side of the tree, and, when practicable, the knots formed by branches which have been broken or cut off, and through which the turpentine is seen exuding naturally. The holes are always made in a slanting direction, in order that the turpentine may flow out of them more freely; and care is always taken not to penetrate to the centre of the tree. To these holes are fixed gutters made of larch wood, which are one inch and a half wide, and from fifteen inches to twenty inches long. One of the ends of each gutter terminates in a peg, through the centre of which is bored a hole about one inch and a half in diameter. This end of the gutter is forced into the hole made in the tree, and the other end is led into a small bucket, or trough, which receives the turpentine. In the countries where larches are abundant, particularly in the Briançonnais and the Vallois, may be seen, in the fine weather of spring, a prodigious quantity of little buckets at the foot of the trees, each attached to a tree by a slender tube, or gutter, through which the clear limpid turpentine, glittering in the sun, trickles down, and soon fills the bucket; while, every morning and evening, the peasants hasten from tree to tree, examining their buckets, taking away, or emptying those that are full, and replacing them with empty ones. This harvest, if so it may be called, continues from May till September; and the turpentine requires no other preparation, to render it fit for sale, than straining it through a coarse hair-cloth, to free it from leaves, or any other accidental impurities that may have fallen into it. When a hole made in a tree does not produce turpentine, or when the turpentine ceases to flow, the hole is stopped with a peg, and not opened for a fortnight or three weeks. When these holes are reopened, the turpentine is generally found to flow from them in greater abundance than from the other holes in the tree, and they continue to give still more and more, till the flow of the sap is stopped in autumn by the cold. A full-grown healthy larch, if tapped when of the proper age, will yield seven or eight pound of turpentine every year, for forty or fifty years."

With regard to the profit to be obtained by planting, there is much interesting information in this work, which should be read attentively by every landed proprietor. The love of one's country, and the wish of upholding England as monarch of the seas, are strong motives for planting oaks for the use of the navy; but the length of time which must elapse before the trees can be cut down, confines this kind of planting to the rich magnates of the land. No such objection holds good against the larch. An oak tree is not fit for naval timber till it is from ninety to a hundred and fifty years old; and it has been calculated that it requires the produce of fifty acres to build one 74-gun ship; but the quick growth of the larch prevents the necessity of waiting thus long for the return of capital, and renders it the most eligible of all timber trees for planting, where the proprietor possesses land in a suitable situation.

"There is no name (says Mr. Loudon) that stands so high, and so deservedly high, in the list of successful planters, as that of the late

John, duke of Athol. His grace planted, in the last years of his life, 6500 Scotch acres of mountain ground solely with the larch, which, in the course of seventy-two years from the time of planting, will be a forest of timber, fit for the building of the largest class of ships in her majesty's navy. Before it is cut down for this purpose, it will have been thinned out to about 400 trees per acre. Each tree will contain at the least 50 cubic feet, or one load of timber; which, at the low price of one shilling per cubic foot (only one half of its present value), will give 1000*l.* per acre, or, in all, a sum of 6,500,000*l.* sterling!! Besides this, there will have been a return of 7*l.* per acre from the thinnings, after deducting all expense of thinning and the original outlay of planting. Further still, the land on which the larch is planted is not worth above from ninepence to a shilling per acre. After the thinning of the first thirty years, the larch will make it worth at least ten shillings an acre, by the improvement of the pasturage, upon which cattle can be kept summer and winter."

Indeed, there is no part of the *Arboretum Britannicum* more interesting, in a national point of view, than the facts which Mr. Loudon has brought together respecting the rapid growth of the larch, on soil fit for little else than planting; the durability of its timber, which is always greatest on such soils, and the numerous uses to which it is applicable both in civil and naval architecture. Mr. Loudon has made no imaginary calculations, but has drawn all his conclusions from facts on record, and chiefly from the experience of the Duke of Athol, in his extensive larch plantations already mentioned. Perhaps the most astonishing fact respecting the larch is, that a man who begins to plant this tree at twenty-one years of age, should he live to seventy, may see a frigate built from trees of his own planting. The larch, in short, as naval timber, is to the oak, what the railroad is to the common road.

We have confined ourselves to quotations of the useful kind; but if we had room we might give proofs that the work is as entertaining as it is instructive, and that it may be read with pleasure both by the young and the old. Mr. Loudon not only treats of the history, geography, uses, propagation, &c. of trees and shrubs, but he gives us information respecting the insects which live on them; the fungi and mosses which grow on them; the diseases by which they are attacked; the birds which they feed, or which make their nests in them; the superstitions respecting them; and their legendary and poetical associations.

Can it be necessary to recommend such a book to those who already know Mr. Loudon's encyclopædias? We need only say, that in the *Arboretum et Fruticetum Britannicum* he has far surpassed himself; he is, in short, the Evelyn of the nineteenth century, and we do not know that we can award him higher praise.

Sketches of Scenery in the Basque Provinces of Spain, with a Selection of National Music, arranged for Piano-Forte and Guitar: illustrated by Notes and Reminiscences connected with the War in Biscay and Castile. By Henry Wilkinson, Member of the Royal College of Surgeons, and late Staff-Surgeon in the British Legion. Imperial 4to. pp. 80. London, 1838. Ackermann and Co.

THIS volume gives us some vivid descriptions of the many horrors, miseries, and privations witnessed and suffered by the luckless British Legion during the late campaign. Placed in a situation (that of staff-surgeon) where the more

painful scenes attendant upon warfare would necessarily pass under his eye, Mr. Wilkinson could scarcely avoid mixing such with his lighter and more agreeable task of scenic description; from the former we select the following:—

"Here I also found that gallant young officer Dupont, who had suffered amputation of the thigh the previous evening. He received me in a singular manner, evincing the most philosophical indifference for his serious loss.

Unfortunate, but it is the chance of war; hard knocks were to be expected! Of what use would it be to grieve now? it would never restore me my lost leg, and would certainly be prejudicial to my recovery." Such were his words, and there was nothing assumed in his manner,—his bearing was natural, easy, and frank, and I could not but admire his surprising coolness. I may as well conclude his history here. He did well the three or four weeks he remained in Irun. After that period had elapsed, the wounded officers were collected from the different hospitals, placed in a boat on the Bidassoa, and brought round the coast to San Sebastian. I remember being told of their arrival, and hastening down to offer my assistance in their removal. I found the boat aground in the deep mud of the harbour, and it was even difficult for an active man to get on board. The wounded were, consequently, detained some time in their uncomfortable position. How fared it with the brave and philosophical Dupont? After shaking hands with Ormsby and De Burgh, I spoke to him. I was struck with the querulous tone of his voice, so different from what it was on my first seeing him after his loss. His pulse was quick, his skin was hot and dry, and fears arose in my mind for his life. I observed a sheet stretched along the bottom of the boat, and inquired what it covered. He shuddered, and recoiled with horror, as he replied, 'The body of poor Pheelan, who died on our short passage here. This it is that has shocked me the most, and I am afraid I shall soon follow him.' There was an earnestness and solemnity about his voice and manner that made me feel sure he spoke prophetically. Dupont was removed to his billet, was attacked by feverish symptoms, and, in spite of the most unremitting care and attention, fell a victim within three weeks' time. He was buried on the castle hill of San Sebastian, amongst the fallen brave."

And again:—"I pass over the sickening horrors of that flight: suffice it to say, that many officers and men sunk to the earth in a state of complete physical exhaustion, and, with the powers of the mind in full activity, they waited till the bloodhounds came up to despatch them. Thus perished the talented but eccentric Carnaby, the warm-hearted Dalrymple, the wild and jovial O'Brien, and many men of the Rifles and Scotch. Captain Harris, who escaped, was several times on the point of giving up the race, but he was prevented by a gallant fellow, an orderly of Colonel Wilson's, who, although wounded through the arm, persisted in forcing him onwards. That officer told me that he passed Carnaby and Dalrymple, and heard the dying shrieks of O'Brien. How affecting the description he gave of their hopeless parting: 'Oh, Harris, help me, help me, or I fail!' 'Cheer up, Carnaby, and you may yet escape; I cannot help you—I can scarcely move myself.' 'Then farewell, Harris, for here I wait my death.' The imagination quails before the picture presented to the mind, of the bitter moments of agony endured by these fine young men, till their

murderers came up. The thoughts of the homes they were never more to see,—of relatives and friends whose hands they would never again grasp,—the more tender recollections of the husband or lover,—all concentrated in the brief period of a few short minutes, must have been keener far than the bayonet that terminated their existence."

An anecdote in the commencement of the march is amusing, though it also terminates sadly.

"He was established with a brother-officer in an excellent billet, containing two deliciously clean beds. They had not been long in possession, when a comfortable and substantial-looking man, rather beyond the middle age, entered the house, and claimed possession. A hot altercation was the result; but the affair was settled by Jenner's kindly giving up one bed to the new comer. Provisions were scarce with the assistant-surgeon and his friend,—imagine, then, their delight on seeing an immense cauteen brought into the room, containing abundance of good things, in the shape of tea, coffee, sugar, preserves, and cherry-brandy. Their delight amounted to ecstasy when a huge Yorkshire ham and a number of eggs were produced. The party made an excellent supper, and as the wine warmed the heart of the old commissary, (for such he proved to be) he began to descant on the annoyances he had endured during our march. He had lost some of his baggage, and been frightened to death by a few shots fired at our force, in passing through an extensive forest. He had imagined that our marches would be very much the same as those of detachments moving from town to town in England, over good roads, and with the advantage of baggage-wagons. Once on the subject of home, by a natural enough transition, he described in glowing terms the comforts he had left behind in his house at Norwood. 'What an old fool I was to come out here, where no living creature cares for me! How differently was I estimated at home! My wife and daughters looked up to me as a superior being. Every wish I formed was anticipated. I jumped into the omnibus in the morning, reached the city, transacted my little business, and by half-past four was set down at my own door. Oh, what a confounded old fool I was, to leave my little villa at Norwood, to come soldiering in Spain!' Poor fellow, he never saw his cherished home again; he fell a victim to the demulating pestilence that raged at Vittoria."

Some thirty pages, at the end of the volume, are devoted to a pleasant collection of Spanish music. Mr. W. says:—

"He fears these latter most beautiful melodies will lose considerably by their English adaptation. The language to which they have been hitherto united is the Basque or Bascuense, a dialect as totally different to [from] pure Castilian as the Welsh language to [from] the English. Heard in that wild country, amidst the sublime works of nature, and gushing forth without art from bands of children, these airs possessed an indescribable charm, and produced an effect it would be hopeless to attempt to imitate in an English drawing-room."

Nevertheless, several of these airs are very delightful, and grow upon the ear on repetition. The embellishments are,—"*Renteria*;" "*Plains and City of Vittoria*;" "*Alza, Renteria, and Lezo*;" "*Position of Lord John Hay, at Passages*;" "*Port of Passages*;" "*Carlisle Fort, El Parque, with Fontarabia, and Mouth of the Bidassoa*;" "*Irun, with Mount San Martial and the Bridge of Behobia*;" "*Fontarabia, with the Convent and*

Bridge of Capauchinos;" "*Fontarabia*;" "*Hernani*;" "*San Sebastian*;" "*Burial-place of British Officers on the Castle Hill of San Sebastian*."

Parallèle des Langues de l'Europe et de l'Inde, &c.; avec un Essai de Transcription Générale. Par F. G. Eichhoff, &c. 4to. Paris, 1836. *Essay on the Nature, Age, and Origin of the Sanscrit Writing and Language.* By E. W. Wale, D.D. M.R.I.A. 4to. Dublin, 1838.

SINCE the appearance of Grimms' earlier volumes, and the more immediate and consequent researches of Bopp, the learned world have turned their eyes, with no common curiosity, to Hindostan; and, with a sage consistency, equally remarkable and creditable to the actual enlightened state of the age, while they have steadily refused to recognise the history of India as affording a clue to that of Europe, they have as steadily insisted that, on the sister subject of languages, the former should afford the most satisfactory key to the latter. A modification of the two points might, possibly, produce a nearer approach to the truth; but it is our misfortune, that even the few who have attempted this course have been induced, at the same time and by way of counterpoise, to embrace an opposite error with a zeal equal to that of their adversaries—and which, in truth, always distinguishes every portion of mankind whenever they are obviously in the wrong.

The two works before us are singularly illustrative of the two classes,—the orthodox and the infidel,—who with rival zeal approach the Jaganât idol of Sanscrit science and monstrosity, to venerate or destroy. M. Eichhoff is a true believer; he takes all that has been asserted on the subject for granted; and, seeing the system complete, and in vogue before him, he never doubts of its perfection, but cordially adopts the creed of languages, and employs, for its illustration and support, all the elaboration of labour and thought robbing the genius of his fancy in a tissue of no ordinary eloquence and elegant simplicity.

Dr. Wale, on the contrary, is an impugner of Sanscrit antiquity; but, in order to assail it with effect, he has raised up to the level of its walls, after the fashion of ancient besiegers, a mound of his own, in the shape of the Greek system, and which, we fear, would offer little or no resistance to any sally of his opponents. He has connected, too, this Greek system with some portion of the Hebrew, but with rather more ingenuity than success; and crowned the whole with a kind of horn-work, in the shape of hypotheses and assertion springing from his own head entirely, and carried to a height that satisfactorily rivals the labours of Diabolus, when, according to honest John Bunyan, he "built up a wall before Mr. Understanding's house, so that he could see nothing from his parlour windows." But though he thus established

"a formidable dyke
Betwixt his own and others' intellect,"

in one part of his argument, we are bound to say, that there is much reason, force, and truth, in portions of Dr. Wale's work; and these require careful inspection, and a complete refutation, before the integrity of the Sanscrit can be insisted upon by its admirers.

We cannot conceive where, in the Scriptures, is to be found any authority for that simultaneous perfection of utterance, and intuitive ability, which, according to M. Eichhoff, Dr. Kidd, and some other writers, were bestowed upon Adam by the Deity. In the age of John-son, it might have been allowable to reason

upon Speech as a single operation, or gift, and to confound the state of its subsequent cultivation, in some one of the stages, with the enunciation of the First Man. But there exists no ground whatever for this supposition in the Scriptures themselves; and from all we can see in examining the wrecks of language and dialect, the system being every where obviously progressive, there is, or may be, much room to doubt whether the language of our first parents was not a simple articulation—a medium, possibly, between the insonant utterance of animals (not uniform, because varying with various emotions) and the improved monosyllables of the Chinese, artificially modulated by tones and notes, ascending, descending, and sustained, or simply continuous. Chinese writers have compared their tongue with the Sanscrit, though but partially in every sense of the word: a bolder and more efficient comparison, though, unfortunately, but too limited hitherto, has been instituted, or rather inculcated, by a few of our own countrymen. Without granting the originality claimed by the Chinese, we are certainly disposed to admit so far their claim to an earliest antiquity, inasmuch as we hold the monosyllable form of their language to be an incontestable evidence of original formation.

We not only concur entirely in the remarks of Dr. Wale, that Hebrew letters were originally syllables—and the slightest comparison between the Zend and Hebrew will shew, that, in corresponding words, the first is only a cultivated form of the latter; but we do not hesitate also to declare our opinion, in opposition to M. Eichhoff and a favourite European notion, that what we now call vowels were at first undistinguished from other consonants. The early Syriac alphabet, or syllabary, is one proof of this; the pointing of the short vowels, as in Hebrew and Arabic, a second; the nasal aspirates and vocalisation of the older Persians, a third. The Ethiopic, a fourth instance, brings this down to a late period; and, if further confirmation be wanting, it is found not only in this, forming the sole explainable basis of the cuneiform character, but also, and more undeniably, in the unquestionable evidence of the Sanscrit itself; where, not only in the case adduced by Dr. Wale, but continually, the long vowel does not give vocality to the consonant it follows, but preserves its own sound perfectly distinct from the short vocalic produced by the utterance of the foregoing consonant.

If Dr. Wale had recollected the passage to which we have referred respecting the Syriac alphabetic invention, he might have added to the argument adduced from Nicophorus, the fact, that the Ethiopic alphabet was rather a restoration than an invention. But we entirely coincide in his opinion of the great mistake of Abel Rémusat, and, in truth, we ourselves look upon the basis assumed by the latter as the fundamental error that pervades his "Dissertation on the Tartar Dialects," and perpetually embarrasses his conclusions. The distinction of consonant and vowel is clearly a refinement, for it must have succeeded the earliest utterance and simple recognition of both sounds.

We must, consequently, dissent entirely from the opinion of M. Eichhoff, that, in the first instance, the perfection of the organs and their extreme delicacy permitted a crowd of varied inflexions, imperceptible at the present day; the vowels, in their sonorous modulation, being the spontaneous cries of the soul, while the more firm and articulate consonants characterised a deeper impression, and marked thoughts by a single trait.

Notwithstanding our occasional agreement with Dr. Wale, and the praise we have bestowed upon a portion of his Essay, we must observe, that there are many important points touched upon to which he does not appear to have given sufficient consideration. We cannot understand the necessity of presuming the Sanscrit to be derived from the Abyssinian, merely because there was a communication between the two countries in the sixth century of the Christian era. The communication between England and the United States comes down far later, yet England and the English alphabet are not derived from America. To Oriental scholars, whom we presume Dr. Wale addresses, the communication in question, long before the time of the Caliph Omar, is familiarly known, and does not require the evidence of two pages from Montfaucon to establish it now. Nor is there any force in the assertion that no alphabet can be proved to be original, for this proof is clearly an impossibility in itself. His Greek origin for the Egyptian alphabet is at least amusing, if not novel. His assertion of the cuneiform Persian, as Syriac letters, is consistent, if not satisfactory; and the cause assigned for the superabundance of Sanscrit letters is not only new, but likely to remain so. What is meant by the Indian finding no example in any Asiatic writing for syllables beginning with a vowel, "for none of the Shemite class afford an example" of it, we do not attempt to comprehend. Were there none but Shemite languages in Asia twelve hundred years since? Was there no Græco-Bactrian sovereignty, nor alphabet? No Greek alphabet there for the casket copy of Alexander's Homer? Did not the ancient Persian prefix a vowel to many consonants? Did not the Hebrew itself take a form both vocal and aspirate in the same manner? Or is this not a Shemite language? And has Dr. Wale even seen the inscriptions of Persepolis? We trust that before he again enters the difficult field of Sanscrit controversy, the obvious marks of superficiality and inconsiderateness, both as to the astronomy and grammar, and not of the Brahmins alone, will be erased by Dr. Wale from his books.

Although we have at the very outset expressed our dissent from the opening portion of M. Eichhoff's volume, we freely grant him all the praise—and this is no trifle—that his work deserves. Based upon a principle which, even if erroneous, is at least admitted by the far larger proportion of scholars and the most eminent Orientalists, both of this country and the Continent, the laborious researches of M. Eichhoff serve every where to confirm the proposition he has undertaken, and by a series of instances evident to the simplest comprehension. To a course of demonstration that has reflected immortal honour upon Grimm and Bopp, is superadded a general view of language itself, and its divisions into the different families of the human race, with a care and accuracy of arrangement, a depth of thought, and a tried perspicuity of detail and definition, that leaves ever after the writer's object and views an integral portion of the reader's mind. The glow of a brilliant fancy illuminating the deeps of science is aided, too, by the charm of a classic purity of expression almost unknown to philology. Often as the subject before us has formed the theme of learned dissertation, we do not remember ever to have met with it in such happy groupings as fill the commencing portion of Dr. Eichhoff's work, and demand for it a place in every library.

Regarding the Hebrew Scriptures as the safe and sound records of man's earliest history,

we have, nevertheless, objected to giving them a species of commentarial belief, a faith of deductions, unsupported altogether by their proper evidence, but founded merely upon argumentative conclusions, drawn from them in days when comparative philology had no existence, and the theorists, consequently, who formed these conclusions had no scientific basis upon which to ground their doctrines. It is clear that such writers, however learned, were not so capable of judging as ourselves, with the lights of the present day before our eyes; and, therefore, that the errors which they have attached to the Scriptures ought to be most carefully distinguished from the holy text; and this for the sake of faith, no less than of science. We read of names bestowed on beasts, and instructions given to man, by his great Creator; but what right have we to suppose these were not all expressed by simple sounds? We find in the later relations of society novel discoveries of every kind arising on the scenes, and novel situations formed out of novel and more intricate complications—just as the game of chess is more complicated than that of draughts.* To those novelties in life fresh names are applied; which, in the earlier stages of society, were as unknown as the positions they represent. Who can say, therefore, that syllables do not combine progressively, as words increase, in proportion to the increase of the ideas they represent? M. Eichhoff is surely, then, asserting a questionable case, if not a positive error of fact, when he affirms, that "language is not a gradual invention, the result of long combination." Let us but examine the remains of the oldest and rudest languages that are left to us, and we shall see grounds for, at least, withholding our consent to this long-received, but very doubtful assumption. The author himself seems to support our scepticism, when he affirms, "We can only receive as fact that primitive words must have been few in number, and all monosyllabic." And he goes on to shew that simple terms must have been subsequently analogically applied to analogies, as height and depth, cavity and projection, light and warmth, cold and darkness, are expressed by the same sounds. Facts which evidence incontestably that what we now call figures of speech are, in truth, only substitutions, arising from paucity of language, in every age and country of the world.

There is much truth, as well as beauty, in the view of language originally, as taken by M. Eichhoff; and we extract the following passage from his second head; namely, division of languages:—

"The history of languages is the basis of that of nations amidst the thick darkness that covers the early ages of the world, amongst the errors and fables wherewith each people has surrounded its cradle; it forms the clue that directs us with method and probability at least, if not with certainty, marking the analogies and differences in the human family; characterising each successive generation; and printing on the changeable soil those traces of its rapid passage which so many succeeding events seem to have effaced for ever. What, in fact, can general history teach us of the first establishments of men, of their customs, their divisions, the formation of tribes, and their respective dispersions? Who has followed their silent march across deserts, rivers, and mountains, and seen the vast web of nations spreading progressively over the

* Or, as proficients in the former play more complicated games than mere novices.

earth? A single volume, in a few sublime pages, has given us a glimpse of this imposing mystery; but, confined to great truths, it proclaims the original unity of nations without tracing the outline of their vicissitudes. There, where history is mute and revealed tradition has paused, what guide remains to us for this most interesting research if not comparative ethnography, which can in some shape reconstruct the world as at its birth, by the union of geography with the science of languages (*la linguistique*), the general movement of its population?"

The ample view of nations and languages that follows is, as we have already remarked, so full of clearness, perspicuity, and beauty, that we shall not be surprised to see it published, with, indeed, the whole of this portion, in a separate volume, as admirably calculated for every library and table where knowledge is desirable in her most graceful form. One theory, doubtless, is as good as another, where all are so questionably supported; but we must confess, nevertheless, that we do not see how an Indo-Persian race could have formed "that ethnographical tribe cradled in the lovely and smiling valley of Cashmere;" a fact we consider more than apocryphal: but it is only doing justice to M. Eichhoff to notice how forcibly, adopting this point as the common centre, he has thrown off, like radii, the diverging races that, from the land of their birth-place, traversed Asia and Europe, the islands of the East and the West, to people the earth and to enjoy it.

We must, however, object, and formally, to the application of the term Indian for the Sanscrit language, even if we grant, as a matter of general belief, that this ancient tongue is really the original of Hindostan. This fertile source of controversy is not the point of our objection; but, till it can be shewn demonstratively that the fact is so, we must oppose a nomenclature that has no basis, but, philologically speaking, of assumption; and that discards the recognised forms and terms of science on this head, to introduce an arbitrary appellation in a novel and contradictory sense to its received usage, thereby confusing by science what science would strive to simplify. On what ground can the Sanscrit be more Indian, *par excellence*, than the Tamul, a language pronounced by the highest living authority for the former, and assuredly one of its warmest, but at the same time, wisest advocates (Professor Wilson), to be of quite equal antiquity with the Sanscrit, and essentially different from it? If M. Eichhoff cannot prove that this last perfect language has given rise to the imperfect, instead of being improved from some, or all of them, as seems most natural, what right can he have to take their proper denomination to designate this one? And is not the term Sanscrit as well, or rather infinitely better understood, and a more appropriate epithet for that perfected tongue, than the vague generality implied by the word Indian? Would the learned writer inflict upon us a second confusion like that already existing, and bewildering philologists in the term *Persian*, used to designate at once the *generic* and the *specific*, and often also two individuals of this latter class into the bargain—the *Parsi* and the *Persic*, as they are sometimes called? Is the Hebrew, we would ask, Indian? Is the Pali, Indian? Yet do not these enter deeply into the composition of the Sanscrit? To say nothing of affinities with the Chinese. Why, then, should M. Eichhoff endeavour to render a complex and generic denomination

simple, in order to consider *simple* that which calls itself *compound*?

It is this disposition to prefer one particular system that leads M. Eichhoff, we conceive, to affirm so confidently that the warlike Persians wrote in the arrow-head character before they had a special alphabet. This is a point that cannot be taken for granted; we know the cuneiform to be as old as the Persian invasion of Scythia; it may be much older: but whence came the reputed Greek characters added at the siege of Troy? If M. Eichhoff will examine, he will find them to be Persian. And this simple fact shews the danger of taking possibilities for certainties.

Another assertion, not less confident, nor less unfortunate, is that the Greeks took their alphabet from Phœnician, or Chaldean. Now, whence comes the Chaldean alphabet? A glance at several of its forms shews them contracted from the arrow-head character, and not through Phœnician or Samaritan medium. How, according to our author's theory, is this possible? The fact is the more striking from M. Eichhoff's own remark, that, "in spite of the Indian origin of nearly all the European tongues, their first written alphabet was the Phœnician or Hebrew." A salutary scepticism would surely have doubted, or looked further, if only from this one statement.

The errors of learning are a thankless, though necessary, task for the critic; and we turn from these oversights, the result of receiving blindly the reigning impossibilities of opinion, to a general view of our author's object. This, as he states it himself, is to afford a view of the original or radical forms of words, so that students of various tongues may have their labours simplified by seeing at a glance the affinities of words and languages. We are happy to say that this laborious, but useful, task is performed most satisfactorily by the method adopted; and strongly recommend M. Eichhoff's work as equally instructive and entertaining in both the general, or lighter, and the scientific portions.—A rare praise.

Music and Friends.

[Second notice.]

AMID the influx of new publications, we shall only return to this work to give one extract from the second volume.

"In the summer I paid a visit to Mr. Anacreon Moore, when he resided at Mayfield Cottage, Derbyshire. He met me at the bridge-foot, where I alighted from the coach, a little beyond Ashbourne, and took me a near way over the fields. When we came to the top of the hill which commanded a view of the spangled vale below, I exclaimed,

'I can tell, by that smoke that so gracefully curls
Above the green elms, that your cottage is near!'

He was pleased with the quotation (the well-known song of 'The Woodpecker'), and we stopped a few minutes to survey the richness of the landscape. On arriving, it was delightful to be welcomed by his graceful wife, who was assiduous in entertaining her company. The condition imposed upon his visitors was to tarry with him only a certain number of days, having but one spare nest, which was to receive another bird the moment the former had flown. Another stipulation was, that immediately after breakfast he should be left alone till within an hour of dinner; he was then devoted to you for the remainder of the day. As he was desirous of shewing me the country, he broke through his plan, and formed a picnic party, with a neighbouring family, for the next day. His object was to shew me the

romantic district, Dovedale, not more than two or three miles from his abode. The morning was fine, and we had an ass to carry the provisions. We proceeded by the way of Okeover Hall, and I was treated with a sight of that exquisite painting, the *Madona* by Raphael. In our walk, the most beautiful spots were pointed out by the bard. When we lolled round our table-cloth, spread upon a luxuriant bank by the murmuring Dove, it was delightful to hear the tone of his voice. He felt inspired amid the scenery, and, having passed the live-long day, we left the happy valley with reluctance, to stroll home in the evening. The next morning I was shewn into the library, and while there, a letter came from Mr. Jeffrey, complimenting him upon the learned review of the *Fathers* which he had written for the 'Edinburgh Review.' So much erudition was displayed in that article, that the editor sent him a *carte blanche*, pressing him to choose his own subject, and he should not be surprised if his next communication was a learned disquisition on astronomy. He put into my hands a MS. book, in the handwriting of Lord Byron, a memorial of his extraordinary life. I had scarcely feasted my eyes many seconds, when a carriage drove up full of ladies, to make a morning call. He said, 'I must take this book from you, I dare not let it lie about.' It was instantly put under lock and key."

We do not think Moore will feel complimented by having the authorship of "The Woodpecker" attributed to him.

MISCELLANEOUS.

The Scrap-Book; Moral and Religious. Extracts from esteemed English Authors. By Charles Woodfall. Pp. 280. London, W. Ball and Co., Hatchard and Son, Nisbet and Co.; Edinburgh, Johnstone; Dublin, Curry and Co.

WE are well pleased to see the name of Woodfall, so well known and much respected in our literature, attached to a selection like the present, which does so much credit to the feeling and judgment of the selector. We think there must be nearly a hundred excellently chosen passages from the finest lights in the beautiful circle of our sacred writers.

The Menageries. The Natural History of Monkeys, Opossums, and Lemurs. 2 vols. Vol. I. Pp. 443. London, 1838. Knight.

A VOLUME, under the auspices of "the Society for the Diffusion of Entertaining Knowledge," and contains popular accounts of nineteen of the curious creatures belonging to the monkey tribes, with woodcuts of their half-human varieties.

Arabian Nights, Parts I. and II. (London, J. Thomas; W. Smith; Simpkin and Co.)—While Lane's admirable edition of these famous tales are going through the press, the editors of the present parts have thought it a good time to bring out the old text in a cheap form with notes, &c., by M. G. Moir Bussey, and engravings from the designs of R. Smirke. Price is the great recommendation.

The Sporting Review, No. 1. (London, Ackermann.)—The Sportsman, No. 1, New Series.—The first of these exhibits a *split* between Nimrod and his old *oams* in the "Old Sporting Magazine," and the "New Sporting Magazine;" against both of whom he discharges a rattling shot from his well-charged fowling-piece. The review then takes up the usual sporting subjects, and treats them with diligence in the collection of intelligence and spirit in other parts. "The Sportsman" is a new start with a periodical of some standing, with the former course of which we are very little acquainted. It has two nice plates of horses and a dog.

The Farmers' Magazine, No. 1.—Addressed to the agricultural classes, and containing accounts of cattle shows, improvements in machinery, breeding, farming, &c. It is also a break in the series, and we know little of its precursors.

The Belle Assemblée is another and similar break in a series which has reached ten volumes; all about fashions, dresses, and tales of deep interest for readers who delight in such productions.

Ure's Dictionary of Arts, Manufactures, and Mines, Part V. (London, Longman and Co.)—The value of this work increases with every publication. This Part treats of gold, gems, flax, foundling, gas, glass-making, and other important branches of industry.

The Popular Cyclopædia, Vol. VI. Part II. (Glasgow, Blackie and Son.)—The popular work is drawing towards its close. The present Part contains from "Sundial" to "Waver," and concludes the sixth volume.

Milman's Edition of Gibbon, Vol. X. (London, Murray.)—Mr. Milman has almost terminated his labours. Two volumes more, and we shall have the most complete edition of Gibbon yet published.

The Genius and Wisdom of Sir Walter Scott, &c. &c. Pp. 204. (London, Orr and Co.)—A multitude of excellent passages selected from Scott's works; but, as was said of the "Beauties of Shakspeare," where are the rest?

Smith's Standard Library. (London, W. Smith.)—In an eightpenny octavo, we have "Paul and Virginia;" and Madame Cottin's "Elizabeth" and the interesting "Life of Colonel Hutchinson" in one at half-a-crown. They are neatly printed in double columns. This is truly carrying out the principle of cheapness.

Bentley's Standard Library of Popular Modern Literature.—Bentley's "Astoria," No. LXXII.—Washington Irving's "Astoria" in a single volume, and Bulwer's "Last Days of Pompeii," deserve each the public thanks. A portrait of Irving adorns the one, and a frontispiece and excellent vignette the other. The original Van Amburgh is here seen in Glaucon.

John Seare's Last Words, &c. Pp. 36. (London, Ward and Co.)—A dissenting pamphlet, the gist of which is to argue that the Church of England loses more souls than it saves.

Philogen's Cosmopolitan, Political, and Statistical Review. Part I. pp. 32. (London, Wiley and Putnam.)—A new political periodical, which takes a high and authoritative tone on questions of foreign policy. It is of free principles, and as we are not competent to say what weight is due to its statements, we shall content ourselves with observing that its views are, in many instances, more comprehensive and original than those to which we are accustomed in the usual organs of public opinion.

Effects of the Introduction of Ardent Spirits and Implements of War among the Natives of the South Sea Islands and New South Wales, by D. Wheeler. Pp. 21. (London, Harvey and Darton.)—Whether Europe and the United States have done more good to savage races by their attempts to civilise and Christianise them, or evil, by the communication of vile disease, the use of ardent spirits and other demoralising means, is a question it would be difficult to determine. We are much inclined to believe that the balance of ill greatly preponderates. This little pamphlet, extracted from the writings of "A Minister of the Society of Friends," affords melancholy proof of the continual and fatal introduction of these curses among the natives of the regions designated; and we are not surprised to find that American temperance ships are the most active in the cruel traffic.

Mr. G. Godwin, jun.—Papers on Architecture. Pp. 40. These clever essays are brought together from "London's Architectural Magazine," which, we believe, finishes with this month. They well deserve the attention of the architectural student.

The Vicar's Dream. Pp. 25. (London, Whittaker and Co.)—Some sad, doggerel trash, about the late government in Canada.

Rara Mathematica, &c. No. II. (London, Parker.)—Hardly so well-chosen as the articles in the first number (see our No. 1126), but still well deserving of a place among curious works of science.

Essays on the most Important Diseases of Women, by Robert Ferguson, M.D. &c. Pp. 292. (London, Murray.)—The able professor of obstetric medicine and diseases of women and children in King's College, London, has here given the public at large the advantage of his science and experience. This volume treats of puerperal fever, and is of high and interesting character. Dr. Ferguson's lecture, on opening the medical classes in October 1836, is added to the publication, which we consider to be one of great value.

An Exposition of Quackery and Imposture in Medicine, by the Author of the "Philosophy of Living." With Notes, by W. Wright, Surgeon-Aurist. &c. Pp. 228. (London, J. S. Hodson; Edinburgh, Black; Dublin, Fanning and Co.)—The original work of Dr. Caleb Ticknor of New York, and a very sensible and piquant exposure of many practices which deeply affect the dearest interests of society.

The Annual Register, &c. for 1837. (London, Rivington, and all other Booksellers.)—This useful volume pursues its quiet course, and collects all the usual matters for reference now and hereafter.

The Village Magazine, Nos. I., II., III., IV. (London, Tins.)—A cheap, little, monthly publication, of which we have already expressed a favourable opinion;—not forfeited by the succeeding numbers.

The Student's Cabinet Library of Useful Tracts, XXXI. (Edinburgh, Clark; London, Simpkin and Marshall.)—This nice little work goes on very faithfully. The present Part is the first of a philosophical series, and gives us *Sanitary Economy*.

The Scottish Banker, &c., by W. H. Logan. Pp. 134. (Edinburgh, Fraser, and Crawford; London, Washbourne; Dublin, Curry, jun., and Co.)—A brief but clear exposition of the system of banking in Scotland, where banking has been practised with so much benefit to the people and the country. Mr. Logan is an experienced and practical man; and his little book a very

useful one. We rejoice to observe that a Bank, to be conducted on the same principles, is just announced to be formed in London, with a capital of 3,000,000*l.*, and a most satisfactory list of directors.

ARTS AND SCIENCES. SOCIETY OF ARTS.

MR. AIKIN 'On Bone and its Uses in the Arts;' No. 2. The secretary commenced this, his second lecture on the same subject, by a few introductory remarks as a summary of the last; he then proceeded to observe that the scrapings, shavings, or saw-dust of bone is an article which bears a good price in the market, being much used by pastry-cooks and others as a material for jelly, which it readily gives out to boiling water. The jelly thus produced is probably quite as good as that from calf's foot; and the shavings, when dry, have the advantage over calf's foot, of not suffering any change by keeping. On the subject of bone manure, Mr. Aikin stated that it had of late years attracted, in a very particular degree, the attention of the English farmer. Bones are collected in the streets of London and other great towns, and after being sorted, those that are not required for other purposes are used as manure. In the Thames, above London Bridge, may always be seen a few sloops and cutters, chiefly from Hull, which are occupied in this trade: they take the bones on board generally in a more or less putrid state, and stow them in bulk in the hold. Here they soon begin to ferment, giving out an odour by which the bone ships are detected at a considerable distance; and when the cargo is discharged at Hull, it is frequently reeking and smoking hot from decomposition. This probably softens the texture of the bones, and renders them more easy to be crushed in the mill through which they are passed, previous to disposing of them to the farmers. They are employed chiefly in two ways, either as a top dressing to grass land, or are drilled with turnip seed, the plants from which, under the stimulating effects of this powerful manure, quickly pass through their first stage into the rough leaf; and thus, in a great measure, avoid the attacks of the fly and other insects, by which young turnip plants of tardy growth are often entirely cut off. We pass to another branch of the subject, more scientific. The four simple substances of which the animal matter of bone is composed, are carbon, hydrogen, nitrogen, and oxygen; and of those, the three latter, when in an uncombined state, and at the usual temperature and atmospheric pressure, are in the form of gas. Now and then it happens that three substances, habitually gaseous, are combined with one naturally solid, and when these four substances are likewise capable of uniting together by twos and threes, or, in other words, of forming binary and ternary compounds, the attraction that holds together all the four is easily disturbed by a moderate increase of temperature, in consequence of which, the same elements, by arranging themselves differently, produce two or more different substances. This is the case in the present instance. On exposing bone shavings even to a lamp heat, they are observed immediately to become black; shewing that the new compounds, which are the result of this decomposition, are not capable of combining with the whole of the carbon, but that part remains in the state of charcoal, intimately mixed with the earthy matter. This mixture goes by the name of bone-black, or animal charcoal. Part of the carbon combines with part of the oxygen, and forms carbonic acid; while part of the hydrogen and part of the nitrogen produce ammonia; the carbon and the ammonia, as they

are formed, combine and produce carbonate of ammonia; which, therefore, is another of the useful substances resulting from the decomposition of bone. Part of the oxygen and hydrogen combine and produce water; and part of the oxygen, hydrogen, and carbon, by combining, produce a volatile oil, of a strong and peculiar odour, which goes by the name of animal oil. The remainder of the carbon and hydrogen, with probably some nitrogen, combine and produce an inflammable gas. Thus the decomposition of the single substance, bone, produces five new substances,—namely, animal charcoal, carbonate of ammonia, animal oil, water, and an inflammable gas. We might pursue these interesting researches further did our space permit. It has, in conclusion, been shewn that bone contains a considerable quantity of valuable nutriment (this chiefly in the last lecture); that, in its entire state, it is applicable to a variety of useful purposes; that the worker in steel employs it for case-hardening small and delicate articles; that, in proportion to its weight, it is the most valuable and active of all manures; that, in the absence of other combustibles, it may be, and is, largely used as fuel in the plains of Tartary and South America; that, by its decomposition in close vessels, it produces hartshorn, ammonia, and animal charcoal; and that, when burnt to ashes, it becomes useful to the assayer, furnishes a valuable polishing powder, and is the material from which phosphorus, that curious and interesting substance, the most combustible of all solids, is produced. Upon the whole of these heads we, of course, in our report of this able lecture, have no room to dilate.

GEOLOGICAL SOCIETY.

JANUARY 9. Mr. Whewell, president, in the chair.—During the late discussions in Paris respecting the Stonesfield fossils, one of the arguments iterated by M. de Blainville, in favour of their saurian nature, was founded on the supposed existence, in America, of a fossil reptile with double fangs, and named by Dr. Harlan, *Basilosaurus*. In our notice of the memoir read before the Geological Society on the 19th of December, it is stated, that Mr. Owen withheld his consent to the validity of M. de Blainville's argument until the nature of these remains was better known. Since that meeting, Dr. Harlan has arrived in London, and with a right scientific spirit and love of truth, he has not only permitted Mr. Owen to have the original specimens in his possession, but has allowed him to slice some of the teeth for microscopic investigation. Dr. Harlan read a notice of the discovery of the fossils; and Mr. Owen, an elaborate paper on their anatomical structure. Of the first we shall give a note next week. Mr. Owen commenced his memoir by alluding to the frequent reference of M. de Blainville to the *basilosaurus* in support of the supposed saurian nature of the Stonesfield fossils, and his own unwillingness to admit the validity of the argument till the teeth of the fossil had been re-examined, with an especial view to their alleged mode of implantation. He then mentioned the liberal manner in which Dr. Harlan had permitted him to examine the specimens brought to England. The following is a very brief analysis of the anatomical details of this important paper:—The crowns of the hinder tooth in the upper jaw are compressed, obliquely conical, and contracted in the middle, so as to give a transverse section, somewhat of the hourglass form, and the opposite wide longitudinal grooves which produce this shape, becoming deeper as the

crown approaches the socket, at length meet and divide the root of the teeth into two separate fangs. A transverse section of a tooth made near the base of the crown, presented two irregular rounded lobes joined by a narrow neck or isthmus. From the form and structure of the crown, it is evident that the pulp was originally simple, but soon divided into two parts, from which the growth of the ivory of the tooth proceeded, as from two distinct centres; each of which is separately surrounded by concentric strata of growth, the anterior one sending an acute-angled process into the isthmus uniting the two portions. The cavity of the pulp, which is very small in the crown of the tooth, contracts as the fangs descend, and is almost obliterated near their extremities, proving that the teeth were developed from a temporary pulp. The anterior teeth had single fangs. The lower jaw, Mr. Owen has been able to study only in a plaster-cast of a fragment. It contains four teeth, of which the two posterior are nearly contiguous; the next has an interval of an inch and a half; and the most anterior, which is of smaller size, is at a distance of two inches from the preceding. This fragment confirms the evidence afforded by the portions of the upper jaw, that the teeth in the *basilosaurus* were of two kinds; the anterior being smaller, more simple in form, and more remote from each other, than those behind. As there is no known instance of either fish or reptile having its teeth implanted by two fangs in a double socket, Mr. Owen proceeded at once to compare the teeth of the *basilosaurus* with those of the mammalia, which most nearly resemble them in these respects. Among herbivorous cetaceans, the molars of the manatee have two long and separate fangs, lodged in deep sockets, and the anterior teeth, when worn down, present a form of the crown somewhat similar to that of the American fossil; but when perfect, the grinding surface is very different from those of *basilosaurus*, supporting two transverse conical ridges, and the hinder molars recede still further in, having three transverse ridges. The dugong presents a nearer general resemblance to the fossil in its molar teeth, the anterior ones being smaller and more simple than the posterior, and the complication of the latter being due to exactly the same kind of modification as in the *basilosaurus*; a transverse section of the posterior molar gives also an approach to the hourglass figure. In the back teeth of the dugong, there is likewise a tendency to the formation of a double fang, and the establishment of two centres of radiation for the calcigerous tubes of the ivory. Though Mr. Owen confined his comparison chiefly to the mammiferous class, yet, in consequence of the presumed saurian nature of the fossil, he showed that the teeth of the *basilosaurus* differ from those of all known saurians in their more complex and various forms; from the *mosasaurus*, in being implanted in distinct sockets, and not ankylosed to the substance of the jaws; from the *ichthyosaurus* and all the lacertine saurians, in being implanted in distinct sockets, and not placed in a common continuous groove; from the *plesiosaurus* and crocodilian reptiles, in which the teeth are in distinct sockets, in the fangs not being single and expanding as they descend, but double fanged, diminishing in size, and becoming consolidated by the progressive deposition of dental substance from a temporary pulp in progress of absorption. If, therefore, an opinion had been to be founded upon the obvious external characters of the teeth alone, he should have concluded that the fossil was a mammiferous animal of the cetaceous order in-

termediate to the herbivorous and piscivorous sections of that order as it now stands in the Cuvierian system. As those anatomists who regard the *basilosaurus* as an exception among reptiles, in having teeth with two fangs, may consider the solidification of the fangs and the absence of numerous successional teeth as inconclusive evidence of the mammiferous nature of the fossil, Mr. Owen had transverse sections made of a tooth, to ascertain whether the evidence of the intimate structure of the dental substance in the *basilosaurus* would be contradictory to the previous inferences of the mammiferous characters, or give cumulative proofs of their correctness. Mr. Owen first premised that in the teeth of those fishes which are implanted in distinct sockets, the medullary canals are arranged in a beautiful reticulate manner extending through the entire substance of the tooth; that in the *ichthyosaurus* and crocodile, the calcigerous tubuli radiate from a simple central pulp to every part of the circumference, and that the crown of the tooth is covered with enamel, but the part placed in the alveolus is surrounded by a thick cortical substance; that in the dolphin the crown is covered with enamel, and the inserted base with cementum; that in the cachalot and dugong the whole of the exterior of the tooth is covered with cementum, traversed in the latter by numerous fine tubes closely aggregated, and giving off numerous branches, the purpurine corpuscles, or cells, being scattered in the interspaces of the tubes which here and there communicate with the true calcigerous tubes of the ivory. In a fine section of a tooth of the *basilosaurus*, taken from about the middle of the exposed crown, Mr. Owen found that the tooth is invested by a layer of cementum, and not enamel; and that it presents the same microscopic characters as the cementum of the crown of the tooth of the dugong. The entire substance of the ivory of the tooth consists of fine calcigerous tubes, radiating from the centre of each lobe, and without any mixture of coarser medullary tubes. They present a regular undulating course, and, like the calcigerous tubes of the dugong, exhibit most plainly the primary dichotomous bifurcations, and the subordinate lateral branches, which are given off at acute angles. Upon the whole, the microscopic characters of the texture of the teeth of the *basilosaurus* are strictly of a mammiferous nature; and confirm the inference respecting the position of the fossil in the natural system drawn from the external aspect of the teeth. Mr. Owen then proceeded to show that in the original separation and subsequent union of the epiphyseal laminae of the large vertebrae, the fossil also indicates a character of the herbivorous cetaceans and mammiferous quadrupeds. In the smaller vertebrae the epiphyses are wanting; and Mr. Owen agrees with Dr. Harlan, in inferring that there were originally three separate points of ossification in the body of the vertebrae,—a character never observed in the vertebrae of saurians, but most prominently among those of the cetaceans. Mr. Owen drew other arguments in favour of the mammiferous and cetaceous nature of the fossil, from the great capacity of the canal for the spinal cord, and in numerous characters presented by the vertebrae. The hollow structure of the lower jaw has been adduced as evidence of the saurian nature of the fossils; but it occurs also in the cachalot, and is, therefore, equally good for the cetaceous character. In the compressed shaft of the humerus, and its proportion to the vertebrae, the fossil approximates the true cetaceans; but, in the expansion of the distal extremity, and the form of the

articular surface, this humerus stands alone. Lastly, Dr. Harlan having examined with Mr. Owen the section of the teeth, fossil and recent, has admitted the deductions in favour of the mammiferous nature of the *basilosaurus*; and having suggested the propriety of its name being changed, Mr. Owen proposes to call the fossil *Zygodon*, in reference to the posterior molar teeth resembling two simple teeth tied together. A paper, 'On the Geology of the Neighbourhood of Lisbon,' by Mr. Daniel Sharpe, F.G.S., was commenced.

BOTANICAL SOCIETY.

JANUARY 4. Mr. Gray, president, in the chair.—Mr. Daniel Cooper, curator, communicated a paper, being 'Remarks on the Dispersion of Plants in the Environs of London, and the Formation of Plains, exhibiting the Distribution of Species over Localities.' The metropolitan botanist can certainly boast of a Flora, perhaps, not to be equaled throughout the whole of England. Surrey is particularly rich in orchideous plants. In Kent, two species of *orchis* have been found, which are not found in Surrey; viz. *Opherys furtiva* and *Opherys tetraphylla*. This tribe is not confined to the counties of Surrey and Kent in the London district, as might be supposed; they also occur in Essex and Middlesex, but not so frequently. Towards Harefield and St. Albans they make their appearance in great quantities. We have, in the combined counties of Surrey and Kent, twenty-eight species out of thirty-six British orchideous plants, the remaining eight being mostly confined either to local or northern districts. Nor is Kent behind her sister-county in other rare plants. *Athias herata*, *Polypogon Monspeliensis*, and *P. littoralis*, *Euphorbia tenuissimum*, *Hutchinsia petraea*, *Valeriana calceitrapa*, *Salvia pratensis*, *Hieracium niger*, *Paris quadrifolia*, *Gentiana amarella*, and *Gentiana pneumonanthe*, may be considered but a few of them.

MEDICO-BOTANICAL SOCIETY.

THE ordinary meeting of this society was held on Wednesday last, Gordon Gill, Esq., in the chair, and Her Majesty's acceptance of the patronage of the institution was announced.—After the election and admission of new members, Dr. Sigmond resumed his lecture on tea, and gave an elaborate account of the tea plant recently discovered in Upper Assam, prepared in the East Indies, and now imported for the first time into this country. A specimen of the tea, a second importation, was exhibited; but the learned professor said, that it was not equal in quality to that exhibited at the last meeting, being a part of the tea first imported—the latter having been injured in its voyage; and, consequently, undergone another firing at Calcutta. This arose only from insecure packaging, and did not affect the importance of the trade which the discovery would open to us with India. Dr. Sigmond mentioned, that the tea imported had been prepared in its wild and uncultivated state, and was believed, although prepared as a black tea, to be the tea which, in China, was made into green tea. The tree was nevertheless incontrovertibly proved to be the true tea plant; and the climate and soil of the tract of country where it was found, corresponded in every material particular with that of the largest and best tea farms in China.—The lectures are to be published at the request of the members.—At the conclusion, tea was made from the specimen exhibited, and appeared of an agreeable flavour. Digitized by Google

At the usual monthly meeting, a number of new members were elected. Total receipts for the past year, 14,094*l.* 2*s.* 8*d.*; total expenditure for the same period, 12,588*l.* 12*s.* 1*d.*; excess of income over expenditure, 1505*l.* 10*s.* 8*d.* The council reported from the medical superintendent and head keeper that, from the spring of 1837, though the mortality among the larger carnivora used to be dreadful, not a single lion, tiger, or leopard, has been lost. This improvement is, of course, owing to the attention of those whose duty it is to look after the health of the animals in a scientific manner. Among the donations recently made to the museum is an Indian fowl, remarkable for having had one of its spurs engrafted upon its head. The spur, in consequence of its removal to a part in which the supply of arterial blood was greatly increased, had grown to an unnatural size, and hung down in crescentic shape, presenting a very singular appearance. A specimen of the white bait, presented to the Society by Mr. Williams, was exhibited by Mr. Yarrell, in order to shew the large size sometimes attained by this species; its dimensions were—entire length, six inches; depth, measured about midway between the dorsal fin and the extremity of the head, one inch two lines.

JAN. 5. Professor Wilson in the chair.—A letter by Lieut. Wellsted, of the Indian navy, was read to the meeting, 'On the Identity of the Himyaritic Writing and Dialect of Job, with that still spoken by the Inhabitants of Mahrah.' In this letter, Lieut. Wellsted mentions his discovery of inscriptions on the south coast of Arabia, in an unknown character, having much resemblance to the Abyssinian; and gave his reasons for supposing that they contained the ancient Himyaritic language. He observed that, according to Edrisi, the Himyaritic tongue was spoken at Mahrah in his time, and that an Arabic proverb existed to the same effect concerning Zhafar, both places at no great distance from the spot where these inscriptions were found. M. Fresnel, now in Arabia, has a servant from that part of the country, who, of course, speaks the dialect, and from his mouth he has taken down a considerable vocabulary, the paradigm of a verb, with several sentences, some of which have been published in the "Journal Asiatique." The great Himyaritic empire is said by the Arabian historians to have lasted above 2000 years, to have extended its limits to India, and to have numbered among its sovereigns the celebrated queen of Sheba. One of their monarchs is supposed to have led an army of 12,000 Arabs into Chinese Tartary, where their vestiges still remain. Many persons have doubted the existence of this empire, but recent discoveries had shewn that it had been the seat of large and populous cities, a list of which he had given in his travels, vol. ii. p. 440. He also alluded to a wall of blocks of hewn marble, thirty feet in height, and carried round a hill half a mile in circumference, on a spot marked by our geographers as a desert. This was a matter of much interest; and he was informed, when on the spot, that whole districts were strewn with similar edifices. He then alluded to the discovery of inscriptions by Mr. Cruttenden at Sana, similar to those which he had himself discovered, and concluded with a hope that some other officers of the Indian navy would follow up the example that had been set before them: in reference to which he had the au-

thority of Sir James Carnac, recently appointed to the governorship of Bombay, for stating that he would be most happy to aid the views of the Society in this, or any other object that might conduce to the advancement of our acquaintance with the less known portions of the Eastern world. Professor Wilson read some notes, in order to shew to the Society the state of our knowledge with regard to the Himyaritic language and character. He said that Arabian authors had not unfrequently mentioned that Himyaritic or Homerite inscriptions, and that some had attempted explanations of them; and that, however valueless these might be, and many were palpable inventions, they at least indicated a commendable curiosity, which might in some cases have been productive of useful results; at all events, the results of their researches should not be condemned without examination. M. Rüdiger, in the Göttingen "Zeitschrift," gave two specimens of alphabets not unlike those under consideration, with their Arabic equivalents, taken from MSS. in the Royal Library of Berlin, and referred to others in the Paris Library. Professor Wilson said there was one in the Public Library of Cambridge, among the valuable collection of Burckhardt; and that it was possible that some assistance might be derived from these sources. He observed that the inscriptions found by Lieut. Wellsted, those by Mr. Cruttenden at Sana, and by Mr. Hulton at Deea, agreed sufficiently with the Ethiopic character to warrant the belief in a common origin. He thought, therefore, that there would be no insuperable difficulty in deciphering these inscriptions, particularly if the Himyaritic language be still spoken. Inscriptions in a rude character, in some points resembling those of the south of Arabia, have been found in the north also; and an extensive series of those found in the Wady 'l Mukatteb, is engraved in the third volume of the "Transactions of the

Royal Society of Literature." All that had been written on the subject previous to 1785 has been collected by De Sacy, and was published in Paris in 1808; since which the subject seems to have dropped, until the discovery of Lieut. Wellsted, and the labours of M. Fresnel, who is now in Arabia, and has written several interesting letters on the subject of Arabian history before the time of Mohammed. In one of these letters, M. Fresnel promises to send a grammar and vocabulary of the Himyaritic language. He remarked that foreign orientalists, who, he was ashamed to say, were deep in such matters long before we knew of their existence, were of opinion that these characters were really those of the Himyaritic language, and that the language was still spoken. If this were the case, these inscriptions ought to be readily translatable; and, until this was done, he thought it prudent to suspend our judgment on their origin, or their importance in confirming any historical conclusions derived from traditional sources. Lieut. Wellsted then said, that in addition to what was already published, he had found inscriptions in other parts of Arabia, which he would shortly forward to the Society; and he took the opportunity to express his regret that while much expense and danger had been incurred in sending expeditions into Africa, the much more interesting and equally unknown territories of Arabia should have been scarcely attempted. His own experience led him to believe that the difficulties attending such a measure were greatly overrated; and he would be happy to prepare a detailed plan for carrying it into effect.

Notes.—As this subject is one of the deepest interest both to philology and ancient history, we have caused the annexed specimen of these Hymyaritic characters to be engraved from the inscriptions at Nukub-el-Hedjer, copied by Lieut. Wellsted, who deserves the highest praise for his exertions and discoveries in this important inquiry.

XI. በገዢነት ላይ የሚከተለውን ድምር ይጻፉ

MR. LUNBECK in the chair.—On Thursday evening the meetings were resumed, after the Christmas recess. A paper 'On the Law of Human Mortality,' communicated by Mr. Roget, was read. This memoir is based on the experience of the Equitable Society. The paper is divided into tables subdivided into decades, but such is the irregularity, that unless reference be had to the doctrine of probabilities, no great dependence can be placed on it; allusion is likewise made to the Northampton tables, as well as to the methods of Gompertz and Mills. The decrements of life at every age, it was stated, succeed each other with great regularity. In the decade from ten years of age to twenty, the mortality was found to be $\frac{1}{10}$ by the Northampton tables, and $\frac{1}{11}$ by those of the Equitable.

MR. HAMILTON, vice-president, in the chair. — Mr. Rosser exhibited a brass figure of a stag, having a strong spike rising from the back, in the possession of Mr. Wake, of Southampton, found about sixteen inches below the surface at Neveston, near Redbridge, Hants. Mr. Rosser described it to be part of an ancient candlestick, and that the figure must have originally stood on an artificial mound or other broad base.

as the size of the spike adapted it to a large and weighty taper; the earliest candlesticks were not furnished with sockets, but the candles were stuck on spikes; and Mr. R. referred to three former exhibitions of similar articles.—Mr. Nichols communicated an account of two very fine tessellated pavements lately discovered in the triclinium and adjoining room of a Roman villa, near Bath, and which were found singularly covered with slabs of lias.—A farther portion of the 'Life of Sir Peter Carew' was read, and the remainder postponed.

On Thursday, the minutes of the last meeting were confirmed; and Lord Carrington, Mr. B. Bond Cabball, and other members, elected. The paper read was by the Rev. Mr. Tomlinson, and related to a very important date in Egyptian antiquities. An inscription attached to an astronomical hieroglyph on the roof of the Memnonium, and confirmed by a like hieroglyph and inscription on a mummy-case, determines the date of that celebrated building to be of the period of Rameses the Great, and above 1460 years before the Christian era. But it is more valuable, as it fixes the rising of the star Sophea, or Syrius (the dog-star), at the commencement of the month Thoth in the

Egyptian calendar, and commences a year of 365 (not 360) days, at so precise a time as to enable us to determine a certain point of chronology within the brief space of four years, from which many other historical events may with accuracy be calculated. From the zodiacs figured, and referred to by Biot, Burton, and others, Mr. Tomlinson shewed that the Greeks had changed the Egyptian forms to those we now see; the elder zodiacs having tortoises, alligators, &c., as signs. This discovery, if the inscription can be entirely depended upon, is of great importance to the Egyptian antiquary.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Tuesday.—Linnæan, 2 P.M.; Horticultural, 3 P.M.; Civil Engineers, 7 P.M. (Anniversary); Electrical.
Wednesday.—Society of Arts, 7½ P.M.; Medico-Botanical, 8 P.M. (Anniversary); Medico-Botanical Anniversary, Election of Officers, &c.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.
Friday.—Royal Institution, 8½ P.M.; Botanical, 8 P.M.
Saturday.—Royal Asiatic, 2 P.M.

FINE ARTS. THE DAGUERTYPE.

Paris, 6th January, 1839.

WE have much pleasure in announcing an important discovery made by M. Daguerre, the celebrated painter of the Diorama. This discovery seems like a prodigy. It disconcerts all the theories of science in light and optics, and, if borne out, promises to make a revolution in the arts of design.

M. Daguerre has discovered a method to fix the images which are represented at the back of a camera obscura; so that these images are not the temporary reflection of object, but their fixed and durable impress, which may be removed from the presence of those objects like a picture or an engraving.

Let our readers fancy the fidelity of the image of nature figured by the camera obscura, and add to it an action of the solar rays which fixes this image, with all its gradations of lights, shadows, and middle tints, and they will have an idea of the beautiful designs, with a sight of which M. Daguerre has gratified our curiosity. M. Daguerre cannot act on paper; he requires a plate of polished metal. It was on copper that we saw several points of the Boulevards, Pont Marie, and the environs, and many other spots, given with a truth which Nature alone can give to her works. M. Daguerre shews you the plain plate of copper: he places it, in your presence, in his apparatus, and, in three minutes, if there is a bright summer: sun, and a few more, if autumn or winter weaken the power of its beams, he takes out the metal and shews it to you, covered with a charming design representing the object towards which the apparatus was turned. Nothing remains but a short mechanical operation—of washing, I believe—and the design, which has been obtained in so few moments, remains unalterably fixed, so that the hottest sun cannot destroy it.

Messrs. Arago, Biot, and Von Humboldt, have ascertained the reality of this discovery, which excited their admiration; and M. Arago will, in a few days, make it known to the Academy of Sciences.

I add some further particulars. Nature in motion cannot be represented, or at least not without great difficulty, by the process in question. In one of the views of the Boulevards, of which I have spoken, all that was walking or moving does not appear in the design; of two horses in a hackney coach on the stand, one unluckily moved its head during the short operation; the animal is without a head

in the design. Trees are very well represented; but their colour, as it seems, hinders the solar rays from producing their image as quickly as that of houses, and other objects of a different colour. This causes a difficulty for landscape, because there is a certain fixed point of perfection for trees, and another for all objects the colours of which are not green. The consequence is, that when the houses are finished, the trees are not, and when the trees are finished, the houses are too much so.

Inanimate nature, architecture, are the triumph of the apparatus which M. Daguerre means to call after his own name—*Daguerotype*. A dead spider, seen in the solar microscope, is finished with such detail in the design, that you may study its anatomy, with or without a magnifying glass, as if it were nature itself; not a fibre, not a nerve, but you may trace and examine. For a few hundred francs travellers may, perhaps, be soon able to procure M. Daguerre's apparatus, and bring back views of the finest monuments, and of the most delightful scenery of the whole world. They will see how far their pencils and brushes are from the truth of the *Daguerotype*. Let not the draughtsman and the painter, however, despair—the results obtained by M. Daguerre are very different from their works, and, in many cases, cannot be a substitute for them. The effects of this new process have some resemblance to line engraving and mezzotinto, but are much nearer to the latter: as for truth, they surpass every thing.

I have spoken of the discovery only as it regards art. If what I have heard is correct, M. Daguerre's discovery tends to nothing less than a new theory on an important branch of science. M. D. generously owns that the first idea of his process was given him, fifteen years ago, by M. Niepe, of Chalons-sur-Saône; but in so imperfect a state, that it has cost him long and persevering labour to attain the object.

H. GAUCHERAUD.

[From the "Gazette de France," of January 6, 1839.]

Previously to receiving the above, we had written the following paragraph.—*Ed. L. G.*

Nature Painted by Herself.—A French journal contains a remarkable account of experiments with the *Camera Lucida*, the result of which is the exact and actual preservation of the impressions reflected by natural images upon copper plates. What the process is we are not told, but, as far as we understand it, by exposing the copper to these reflections, and immediately rubbing it over with a certain material, the likeness of whatever is so impressed is retained with perfect accuracy. Some difficulties occur where there is motion in the objects, whether animals, or leaves of trees stirred by the wind, &c.; but, if really true, this is a very extraordinary discovery for the fine arts. Some of our readers may be aware that, some fourteen or fifteen years ago, Sir H. Davy and other scientific men amongst us, strenuously endeavoured to attain this desideratum; and by means of *nitrate of silver*, upon which light and shade produced certain effects, seemed to have all but accomplished their end. It was not however complete; for the changes in colour were too evanescent to admit of permanent fixture. We shall be glad to find the French experimenters more successful.

ENGRAVING.

To the Editor of the Literary Gazette.

SIR,—Perhaps you will allow an old amateur of the fine arts, who has, for upwards of forty years, endeavoured, by all the means in his power, to assist the exertions of British artists,

and advance the reputation of art in this kingdom, to offer to the public, through the medium of your valuable *Gazette*, a few remarks upon the *taste* of the present day, with respect to engravings. My collection is arranged chronologically—an arrangement which has the effect of shewing the state of the art in every year. I have been looking over it lately, and while prepared to admit the superiority of some few productions of the last three or four years, it strikes me forcibly that, in a general point of view, the art of engraving is not so well supported as it was twenty or thirty years ago. I ascribe this circumstance to the rage existing for *pretty* prints; nature is sacrificed in order that young ladies may have nice looking things for their albums. I do not think we are deficient of talent,—indeed, Mr. Doo has just given us a proof of his surpassing abilities,—but the right sort of talent does not receive the encouragement it deserves. We have no Strange, no Woollet—at least, no engravings in the styles of these great masters have been given to the world; but we have hosts of fancy bits sold at per dozen, which only deserve to be carted away as so much rubbish; and we have also the most charming landscapes to look at, but, unfortunately, they are like nothing upon the face of this earth. In the topographical engravings published formerly, the buildings had the appearance of being made of stone or bricks, but now we have buildings of silk and satin, trees of velvet, and skies of a softness and brilliancy surpassing those of Italy, above the Tower of London and St. Paul's! For fancy subjects, I am surprised that the style of Bartolozzi is not imitated; for that great master is certainly unrivalled for the grace, purity, and simple elegance, of his treatment of such subjects; the horrible taste which prevailed for a time of printing in red ruined some of his finest historical works; but those who possess proofs in black of such of his productions, have perfect treasures. It is a pity that Bartolozzi did not devote more of his attention to a higher branch of art than fancy subjects. I have copies of his Holy Family after Del Sarto—a glorious work of genius; the divine expression of the painter being perfectly imitated by the engraver. I think this one of the finest groups of the Holy Family that has ever been produced. It is a pity that steel engraving was not produced in Bartolozzi's time. Caroline Watson, who flourished during part of the reign of George the Third, contributed some splendid things to our treasures of art: her "On Earth Peace," after Raffaele's picture, in the collection of the Marquess of Bute, is an exquisite gem. We have more mezzotinto engravings now than we had formerly; and in this branch of the art a great improvement is visible: from Earle to Cousins, the leap is great indeed. It does not appear to me that we lack talent; on the contrary, I think we have more talent than we ever possessed; but it is not called into play properly. If the patrons of art would give more encouragement than they do to great works, whenever they are produced, and less to the trifling things, which are cheap, we should soon observe a great improvement in this respect. I will not trespass further upon your time, Mr. Editor, but leave these hasty remarks for the consideration of the noblemen and gentlemen, upon whom the arts depend for protection. And with admiration of the enlightened opinions you have ever expressed in your columns of new engravings, and the steady support you give to the cause of art, allow me to subscribe myself, yours, &c.

GRAPHIC SOCIETY.

THE first meeting of this Society, on Wednesday evening, was an auspicious commencement of the session. It was numerously attended by members and their friends; and the treat afforded by the numerous and beautiful works of art greatly interested us. Beside the richly furnished folios of drawings contributed by Mr. Windeas, Mr. Wadmore, and other amateurs and collectors, there were a folio of drawings of Alpine scenery, by Mr. Brockedon; a folio of beautiful sketches, by Mr. George Barnard, made in a recent tour chiefly on the coast of Genoa; and some fine studies from nature, by Sydney Cooper and by Mr. Lance. But, to us, the most interesting set of sketches exhibited were those by Dr. Holroyd who has just returned from his travels in Nubia. He ascended the Nile to Sennar, and has returned from a line of route hitherto untravellered by an Englishman, and has made drawings of pyramids, temples, and ruins of high antiquity; of costume, arms, implements, &c. &c., which will greatly extend our knowledge of countries so little known, and of people and places unknown until Dr. Holroyd's journey, which has extended to 2500 miles above Cairo.

NEW PUBLICATIONS.

A New Series of Designs for Ornamental Cottages and Villas. By P. F. Robinson, Architect, F.A.S. F.G.S. &c. Fifty-six Plates. The Landscapes drawn on Stone by J. D. Harding and T. Allom. Bohn.

IN his prefatory address, Mr. Robinson says, "My former work on 'Rural Architecture' having passed through four editions, and having been generally received with much favour, I am induced to publish a new series, consisting of buildings already executed or now in progress. Two of these designs arise from alterations made in old buildings; and it may be observed, that good effects are frequently produced by such alterations, at a very moderate expense, and that cottages especially may be rendered attractive by a judicious improvement of the form, as regards doors, windows, and chimneys. This, however, requires the hand of experience, and cannot be effected by a mere workman. It is like the last touches given to a picture by the hand of the master, and requires delicacy and feeling in the application. The improvement which has taken place during the last ten years in our rural architecture is very evident; and it is pleasing to observe the interest which this humble but attractive pursuit excites. When good effects can be produced at a moderate expense, and the scenery of our native country embellished by improving the condition of the peasantry, the work may be considered truly national."

The value of these pleasing designs is much enhanced by the accompanying estimates of the probable cost of erecting them. We were much amused with "the smallest building in which a human being could be placed." Mr. Robinson says that it might be erected for 100*l.*, or, under favourable circumstances, for something less. We fear there are thousands of human beings in this and the neighbouring island, who are living in buildings in the erection of which not a tenth part of that sum has been expended. But, then, to be sure, they are not "ornamental."

MUSIC.

The Musical Bijou; an Album of Music and Poetry, for 1839. Edited by F. H. Burney. D'Almaine and Co.

Songs, duets, quadrilles, waltzes (and by

Strauss, too), pieces, a march, cachuchas, and, in truth, light music of every kind, abounds in this nicely arranged volume; almost all the popular composers of the day have contributed a portion of this varied *lome*.

Grand Fantasia for the Piano-forte, introducing favourite Aïras from Rossini's celebrated Opera of "Guillaume Tell." Composed by Sigismund Thalberg. D'Almaine and Co.

THE opera of "Guillaume Tell" is so deservedly admired, and Thalberg so highly appreciated by every lover of music, that we need scarcely say, the best airs of the composer are, by the masterly hand of the arranger, rendered brilliantly effective in this piece.

Loose came to our Gate. Sung by Miss Rainforth.—*In Summer's Cot.* Sung by Miss P. Horton.—*To the Merry Greenwood.* Sung by Mr. Frazer.—*The Cup of Peace.* Sung by Miss Rainforth and Miss P. Horton. At the Theatre Royal, Covent Garden, in the Opera of "The Foresters." The Music by E. T. Loder. D'Almaine and Co.

IN our somewhat unfavourable notice of the opera of "The Foresters," we mentioned Mr. Loder's music as being a pleasant relief to the general heaviness of that play. Judging from the selection now before us, we may say, they will be found equally agreeable for private singing. The last-named duettino, more particularly, from its wild simplicity, must be listened to with delight, when and wherever it is sung.

A la Canto Anima Bella. Written and Composed by Guido Sorelli, Esq.; Arranged for the Piano-forte by Edward Solomon, Esq.

A MOST sweet and graceful composition, but it is too short; another verse would be a decided improvement. We seldom have to complain of not having enough; in this case we would hint that there is sufficient room on the wide margin for another printed verse.

Offspring Brightest. The Words by Guido Sorelli, Esq.; the Music by Charles Solomon, Esq.

WE do not admire Mr. Sorelli quite so much in English; in truth we are somewhat puzzled to find out what the words mean. The music is pretty enough.

Oh Adolescentissima. Words and Melody by Guido Sorelli; Arranged by Charles Solomon, Esq. THE air of this is pretty, and well suited to the words.

DRAMA.

THERE are no dramatic novelties this week, and we have only to warn our readers that the Haymarket closes in three days.

VARIETIES.

H. B.—The more rife the political turmoil, the more material for the humour of the caricaturist; and so it was not to be expected as the meeting of parliament drew near that "H. B.'s" pencil would be idle. Two novelties (Nos. 566 and 7), full of figures, have just appeared, and do honour to his scenic effects. The first is "Another Peep into the Playground."—"You're none of my child;" every body disclaiming Lord Durham. On one side, Lord Melbourne is shouldering him off, backed by the Chancellor of the Exchequer, the Secretary of State, &c.; while on the other, Roebuck and Molesworth are ready to meet him; with Wellington, Brougham, Peel, and Lyndhurst, looking on in admirable attitudes and singularly droll expression. Lord Durham's scowl asance at the first lord is also in capital style, and forbodes the coming storm. The other piece is a "Coach

Dinner; Castle Inn, Windsor:" the present ministers seated at table devouring a large dish of "salery," O'Connell as their driver declaring that he would not turn out. On the other hand, the opposition are just entering the door from a cold ride, and the landlord, John Bull, with the Queen at his elbow, is bidding the party at table make room for those hungry travellers who are waiting for their places. There are nearly twenty characters in this very clever and amusing performance.

The Antarctic Expedition.—We rejoice to find that progress is making in the arrangements for this interesting expedition, so warmly recommended from the British Association at Newcastle. The scientific committee appointed to that effect have seen the government authorities, and, we believe, the necessary measures have been agreed upon.

Metropolitan Literary and Scientific Institution.—We are well pleased to observe that a liberal and well-arranged institution has been opened, under the above title, in that spacious mansion known by the name of Salvador House, Bishopsgate Street. A very brilliant and interesting conversation took place on the occasion, Thursday, the 3d, when Chalon's original portrait of the Queen, and a portrait of Grace Darling, by a north-country artist, were exhibited by Mr. Moon. The president, Mr. Thos. Bell, delivered an excellent address on the benefits to be derived from such associations, in all the praise of which we cordially agree. "The Times" newspaper observes, "It is situate in a locality where such an institution was much needed; and, as it contains reading and news-rooms which are open from eight in the morning till eleven at night, we have no doubt it will be found of great utility to the inhabitants of the city, especially as the news-room is well supplied with the morning and evening papers, and the reading-room with the quarterly, monthly, and weekly periodicals, and various pamphlets. The syllabus of the lectures for the current half-year is issued among them—we notice some of great interest. A library of circulation and reference is attached to the institution, which appears to have been carefully selected, and contains copies of most of our standard works. We understand that classes for the study of languages, music, drawing, &c. are in progress of formation. We sincerely hope the institution will meet with the encouragement it deserves, and that it will be eminently useful in diffusing useful knowledge among mankind."

Animal Magnetism.—Dr. Elliotson has resigned his professorship at the London University, in consequence of the authorities discharging Miss Okey, and interfering with his magnetic experiments. Miss Okey, it is stated, had pretended to new inspirations and powers, in consequence of which, being taken to the bed-sides of the sick in the wards, she could foretell their death or recovery. In the former case she pronounced the fatal doom by saying that *Great Jackey* had got them (a new and familiar name for the Angel of Death); and in the latter event that only *Little Jackey* had obtained possession. A majority of the medical pupils, it is said, are irate at the exit of Dr. Elliotson, whose Mesmerism was, at any rate, a source of curious amusement, and who in other respects was well calculated to be a favourite with his class.

The Aldine Magazine, Part I., containing the weekly Numbers for December, is cordially welcomed by us, as a fellow-labourer in literature. The papers under the signature of *An Old Bookseller*, possess a good fifty years'

interest for all literary people; but the plan is altogether praiseworthy for its original features, and the contents generally are very amusing. There is a mistake in the supposition that Canning, as well as Chateaubriand, had been aided by the Literary Fund. M. Chateaubriand acknowledged the obligation at an anniversary where Mr. Canning presided, and most liberally subscribed to the society.

The Funnyskire Fox (W. Spooner) is a new toe-totum game, like the game of goose, &c., which Mr. Spooner has ingeniously invented as a change of amusements for the juveniles at this season. It seems well devised to interest them, and the sport is full of incidents to retard or throw out the keenest hand.

The Game of the Golden Eagle is another nice game with cards and pictures, to teach the elements of natural history as applicable to British diurnal birds of prey.

Teachers' Scientific Games: Astronomy.—A play with cards and question and answers, and intended to inculcate a knowledge of the celestial sphere. Young folks are indebted to the same publisher for this agreeable induction into the paths of science.

An Index Geological Map of the British Isles. By J. Phillips, F.R.S., G.S., &c. (London, J. Weale).—An admirable and useful production. It is an index to every geological paper connected with the pursuit of the science, and with mining and other important subjects in England. The distinctions of colour and shading, to mark the formations, is new to us, and most highly approved.

An Illustrated Chart of English History from Egbert to Victoria. By L. Gordon. (London, J. Souter).—This is one of the nice Christmas productions for deserving youngsters: a roll on which the history of England is neatly pictured, and the descent of the crown chronologically traced, in a manner likely to make an impression on their mind. A descriptive volume of sixty pages accompanies and explains it. Owing to an error in printing, the death of Charles I. (at p. 30), is dated 1604; greater care should be taken with works of instruction.

A Catalogue of London Periodicals, with their Prices, &c. &c. (London, Longman).—An exceedingly useful broadside. For London, as well as provincial booksellers, stationers, and newsvenders, it is a sheet of indispensable information.

Dearden's Miscellany, No. I. (London, Orr; Nottingham, Dearden).—A very pleasing, provincial, literary miscellany; with a superior choice of subjects, and a fair portion of talent in the general execution.

Heads of the People, No. III. (London, Tys).—This periodical goes on drawing characters with considerable talent. The present No. contains "the Spoilt Child," "the Old Lord," "the Beadle of the Parish," and "the best" "the Linendraper's Assistant." The pertinacity of these gentry is illustrated by an anecdote declared to be literally true, viz. that it was the rule in one shop to discharge any shopman who suffered a customer to depart without buying something!

The Social Gazette (No. I.) is acknowledged. Its seeking to be useful, and its appeal to the parochial clergy, guardians of the poor, &c. &c. seem to be very commendable.

The Weather in the Far West.—A traveller in the Knickerbocker steamer on the Mississippi writes, that they had been contending for some days with large masses of floating ice; and now, says he, "we are (Nov. 17) firmly imbedded in the middle of the river, with provisions and fuel failing, and all methods

to move the vessel unavailing." In this dilemma the writer ludicrously describes the gradual disappearance of the ship's stores. The Dutch steward, on being asked by a passenger for some butter, replies, "De putter! he peen all gon!" and on further being desired to bring a lady a cup of tea, despondingly says, "De dee! she peen all trunk up." However, the Knickerbocker finally escapes. Cold comfort this in the early part of November. We ought not to grudge Mr. Murphy a few frosty days.

LITERARY NOVELTIES.

LIST OF NEW BOOKS.

The Boy's Country-Book, being the Real Life of a Country Boy, edited by W. Howitt, fcap 8vo. with Woodcuts, 6s.—Love's Exchange; a Tale, by C. J. Boyle, 3 vols. post 8vo. 31s. 6d.—Historical Records of the British Army: the First, or Royal Regiment of Foot, fcap 12s.—Goethe's Faust, translated into English Prose, by A. Hayward, 3d edition, fcap, 8s.—The History of Egypt under the Ptolemies, by Samuel Sharpe, 4to. 1s. 6d.—The Life of Thomas Reynolds, by his Son, 2 vols. 8vo. 30s.—The Book of Fables, square, 1s. 6d.—Thistlethwaite's Sermons for Charity Schools, with a Life, 12mo. 10s.—Parochial Ministrations, by the Hon. and Rev. S. Best, 12mo. 3s. 6d.—Rousseau's Remarks on Copyhold Enfranchisement, 8vo. 3s. 6d.—The Genius and Wisdom of Sir W. Scott, 12mo. 3s. 6d.—Incidents of Travel in Greece, Turkey, Russia, and Poland, by J. G. Stephens, fcap, 7s. 6d.—Recollections of Ireland, 12mo. 3s.—Father Butler, by W. Carleton, fcap, 3s. 6d.—The Unions and Parish Officers' Year-Book, 1839, 12mo. 3s. 6d.—The Art of Deer-Stalking, by W. Skrepe, royal 8vo. 2s.—Philip's Life and Times of Bunyan, 8vo. 12s.—Harley's Lithographic Drawing-Book, 7s. 6d.—C. Longitude ... 3 51 W. of Greenwich.

TO CORRESPONDENTS.

We thank "A Lover of British Art" for his suggestions. We fear, however, that any attempt to carry it into effect would be productive of at least as much delusion as truth, besides being liable to other objections.

"The Cheltenham Looker-On," a very model journal for a fashionable watering-place, has commenced its third series with unflinching spirit; and we have to thank its conductors for No. 1.

The editor of the "Veterinarian" has our thanks for his No. for the new year, which contains so much valuable matter on the subjects to which it is directed.

The lines of "E—ly" are declined; we are, indeed, indispensed to admit any poems upon this deplorable event, which, as yet, time has not divested of any of its distressing features.

The same answer applies to J. S. H.

ADVERTISEMENTS.

Connected with Literature and the Arts.

The Courses of Instruction in Hebrew, the Oriental, and other Foreign Languages, will also be resumed.
Civil Engineering and Mining.—The Lectures in Chemistry will recommence on Monday, the 14th inst.; and the other Lectures will be resumed on Wednesday, the 23d inst.
Medical School.—The Spring Division of the Courses of Lectures will begin on Monday, the 23d inst.
Junior Department.—The Classes in the School will be reopened on Wednesday, the 23d of January, at Nine o'clock a.m. Jan. 9, 1839.

CAUTION.—MR. NEWMAN, Artist's Colporteur, 24 Soho Square, in consequence of his Name and Address having most unwarrantably been placed in his complacent manner at the Door of the Shop recently opened by Mr. Joseph, 14 Soho Square, calculated to mislead, and which has in fact in several instances misled, the Public, most respectfully informs his Friends that his Business is conducted on the same terms, and at the same House, where it has been published for so many years, and that he has no connexion with Mr. Joseph.

TO THE BOOK-CLUBS AND PROPRIETORS OF CIRCULATING LIBRARIES OF THE UNITED KINGDOM.
8 New Burlington Street, Jan. 1839.

MR. BENTLEY begs to acquaint Members of Book-Clubs, and Proprietors of Circulating Libraries, that, with the view of meeting a very general wish that Works of Fiction should be sold at a more moderate rate, he has been induced to publish, from the commencement of the present Season, Novels by the most popular Writers, at a price which will place them within the reach of all the Educated Classes.

The great and increasing number of Literary Institutions and Circulating Libraries, throughout the country, is a proof of the eagerness of the Public to peruse new works of merit. This craving has been checked, in the case of Works of Fiction especially, by the operation of the very high price at which they have for some years been published. Mr. Bentley has therefore reduced the price of the Works to be published by him from the commencement of the present Season, from 10s. 6d. to 6s. per Volume, the form and style of printing and paper being the same.

The Works already published upon this plan are—
Mr. Dickens's *Oliver Twist* * A Romance of Vicarage, second Mr. Cooper's *Red Rover*, 2d edition, 10s. 6d.
and *Honourable Blood* (new Captain Glascock's *Land Sharks* edition) and *Sea Gulls*, new edition,
Mrs. Trollope's new Story, and Hoffman's *Wild Scenes in the*
and *Widow Barnaby* Forest and Prairie, (just
The Vicar of Wrexhill, new ready.)
edition.

These will be followed by New Works of Fiction by the undermentioned distinguished Writers—
Sir Edward Lytton Bulwer, Mr. Theodore Hook
Bart. Captain Glascock, R.N.
The celebrated Author of "Sam Mr. Ainsworth
Slick," Mr. G. F. R. James
Mr. Charles Dickens, "Bos" Mrs. C. Gore
Mr. Maxwell, Author of "Stories of Waterloo" "The Old Solon"
Mr. Lover.

* *Oliver Twist* being illustrated, the price is 25s. instead of 24s.

PATENT COLOUR PRINTING.

Just published, price Ninepence, Part II. of

VALPY'S GREEK TESTAMENT.

Fourth edition, with Parallel References, and other Improvements, 3 vols. 8vo. 2l. 5s. boards.

GREEK TESTAMENT,

WITH ENGLISH NOTES,

Critical, Philological, and Explanatory, from the most eminent Critics and Interpreters; with Parallel Passages from the Classics, and with References to Viger for Idioms, and Bos for Ellipses; to which is prefixed, a short Treatise on the Doctrine of the Greek Article, according to Bishop Middleton, Mr. Granville Sharp, &c. briefly and comprehensively explained, as applicable to the criticism of the New Testament. The various Readings are recorded under the Text. Greek and English Indexes are added.

By the Rev. E. VALPY, B.D.

Two Plates are added, one illustrative of the Travels of the Apostles, and the other a Map of Judea, and a Plan of the City and Temple of Jerusalem.

This Work is intended for Students in Divinity, as well as the Library.

"This Greek Testament is the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish to purchase only one edition."—*Horne's Introduction to the Bible*.

"Valpy's Greek Testament" is to be preferred to either Dr. Burton's or Dr. Bloomfield's."—*Christian Guardian*.

"This is a valuable accession to the aids of the undergraduates, the divinity student, and even the theologian. We cordially recommend it; and those who wish to purchase only one comprehensive Greek Testament, and that not very expensive, will find in this edition the very object of their search."—*Christian Remembrancer*.

Printed by A. J. Valpy, and sold by Messrs. Whittaker and Co. London, and all other Booksellers.

REVIEW OF NEW BOOKS.

Legend and Romance, African and European.
By Richard Johns, Lieut. Royal Marines.
3 vols. 12mo. London, 1839. Bentley.

THESE volumes contain "Sebastian of Portugal," which occupies nearly two of them, "The Pirate Island," "Attah," "The Recluse of Fernando Po," "The Cape of Storms," and "Vata, or the Leveller of Altars." The author is already advantageously known to the literary world, both as a poet and as the contributor of very clever papers to various periodicals; but he has now put forth a superior strength, and shewn himself equal to more important undertakings. One rare merit which has marked all his productions, is signally obvious in these pages—we mean originality. Neither in the longer narrative nor in the shorter pieces has he borrowed plot, incident, thought, or language, from other writers. His genius has contrived his own stories; the adventures described seem to be the actual transcript of truths, however extraordinary; his thoughts are natural to the circumstances; and even his style has a sort of reality about it, which seems to convince the reader that "here be facts," and no mere creations of the fertile brain.

"In these legends (Mr. Johns tells us) the author attempts to embody some small portion of the romance incidental to the connexion between Europe and Africa. The descriptions of localities introduced are either from his personal observation, or the unpublished authority of greater voyagers than he pretends to be, who have kindly assisted him in his topography. With reference to Western Africa, scenes are laid among pirates and slave-dealers, which, it is to be regretted, cannot introduce more respectable *dramatis personæ*; but such only were the characters lent by Europe to these coasts, till Great Britain commenced her efforts for the abolition of the slave-trade: efforts which, it is to be hoped, will at length be successful, and then brighter days may dawn on Africa's unhappy shores; but such as they were, during the periods referred to, has been portrayed, so far as necessary, for the illustration of the legends. The history of Sebastian, king of Portugal, is involved in much obscurity by the contradictory statements of contemporary historians; but the author, with deference, suggests that the ground he has taken is fully as capable of defence as of assault; though he means not, by such assertion, to throw down the gauntlet to those who would unmercifully sift the historical gatherings of a poor story-teller, in the hope of finding them chaff."

Such is the definition of the writer, and we have but to testify that he has fairly and ably wrought out his conceptions; so carefully founding himself on all his data, that if he had been producing history, instead of "legend and romance," it would puzzle the critic to detect faults in him.

The characters in "Sebastian of Portugal" belong to the noble family of Montoyo, to Moorish captives, and to other subordinate personages, who are deeply involved in love affairs, before the king embarks on his fatal African expedition. Thither the leaders are transported,

and the events of the war skilfully intermingled with the fictions of the author's invention. Among the earlier scenes figures a certain Padré Chavés, of whom we shall beg leave to make an example, *pour encourager les autres*.

"The boon companions" recommenced their wine. The servitor, despite his threat of staying but for one bottle more, was easily persuaded to see out another, and another; while the *padré* was too delighted at the acquisition of the gold, the presence of an old associate, and the opportune absence of Marguerita, not to feel inclined for even extra indulgence,—albeit a difficult point to reach with so habitual a toper. All concealment and restraint forsook him: he felt, that if there were a creature in the world to whom he could unburden himself, it was Nicolao, who well knew the priest's peccadilloes, and had, in fact, by the discovery of them, on more than one occasion, got Chavés completely within his power. 'Don't talk to me of women,' cried the *padré*, in answer to some of the servitor's free jokes; 'I have forsaken them, treacherous minxes! I believe my niece would hand me over to the new inquisitors if she found me confessing millers' wives, after hours, nowadays. Let us stick to wine, Nicolao,' continued the priest; 'dost know what I mean to do with thy fifty pieces? The greatest charity I can confer upon society is to explain the nature of beverages which the ingenuity of man hath concocted under the specious generical name of wine. I am certain that little is known about vinous poisons; and what is more deleterious than bad drink? Here the *padré* took a draught at the flagon before him, which proved his perfect confidence in the present tittle being especially good. Another and another pull at the cup succeeded, till, it is to be feared, his intended inquiry into the pernicious qualities of vinous poison was, for the present, lost in the general philosophy of drinking, on which point he became peculiarly discursive. 'My son,' remarked the maudlin *padré*, looking with grave aspect at Nicolao, who was fooling him to the top of his bent, 'drinking is an honest occupation, and injures no one. Look at the lower animals; they always enjoy a draught more than a feed. The horse snorts with delight in his bucket; the cat purrs as she laps: the ducks lift their heads in gratitude to heaven even for a throttling of muddy water from a green pond. Oh! drinking is a blessed act throughout all creation; and man, being alone in the possession of reason, has invented wine: but it ought to be good, Nicolao. Even instinct teaches where the best liquor is to be found. Look at the bee,' droned the *padré*, closing his eyes and shaking his head, as though he were delivering a homily,—for the purple draughts he had taken sadly bewildered his brain; 'look at the bee, how he goes from flower to flower, tasting and tasting the mawkish stuff, till he comes to the hollyhock; and there he sticks till he swills his full, like a jolly fellow, and drops where he drank. Now for the moral, Nicolao, may'st thou!' and Padré Chavés opened his eyes wide, in a sort of ecstacy, which made his companion roar with laughter; 'I will sing my moral: you may laugh if you will; but that

little insect shames man, even the wisest, who drinks bad liquor.' Then, fixing himself securely in his chair, he trolled forth, with a deep bass voice, this moral lay:

'What is the love of the tulip to me?
Said the happy, and droning tipsy bee;
'The rose may blush as I hasten by;
The lily may hang her head and die;
But, oh! at their jealous pangs I mock,
Mine be the juice of the hollyhock—
To sip the sweets of the hollyhock—
The tipsy sweets of the hollyhock;
Mine, mine, mine the juice of the hollyhock!'

And what is the blush of the fairest cheek?
And what care I for the love it may speak?
Black eye, or hazel, or azure hue,
May weep, like flowers, in pearly dew;
For, oh! at the pangs of love I mock,
As sips the bee of the hollyhock—
The tipsy sweets of the hollyhock:
Oh! mine be the vineyard's purple stock,—
Wine! wine! wine! like juice of the hollyhock!

Let others look to the stores of the hive,
And, like humble-bees, with the thrifty thrive:
Away with care, and let toil be o'er;
The reeking grape gives us wine in store:
For, oh! at the woes of life I mock,
As sips the bee of the hollyhock—
The tipsy sweets of the hollyhock:
Oh! mine be the vineyard's purple stock,—
Wine! wine! wine! like the juice of the hollyhock!

'Bravely sung, my friend! bravely sung!' cried the delighted servitor; 'why, thou art a naturalist, and a philosopher, and the most immaculate of *padrés*!' 'And are you not both ashamed of yourselves?' exclaimed a shrill voice at the door of the apartment. 'Senhor Nicolao, is such your friendship for the *padré*, when you know that a little wine makes him almost beside himself?' With this affecting appeal to Nicolao's conscience for having beguiled the abstemious priest into a debauch, entered Marguerita, a buxom damsel of about five and twenty years. Her uncle regarded her with the leaden eye of intoxication, for the sudden appearance of his affectionate relative had quite finished him. Nicolao, who had been taught to drink among bull-fighters, was sufficiently composed to make all proper excuses. The *padré* was carefully led to his bed, after which the servitor ratified a peace over a glass of *liqueur* with the mollified lady; and then, seeking his horse, was in a few minutes on his road to Lisbon."

This is a just sample of the writer's spirit: and the jolly *padré*'s experiments upon wines, as afterwards related, are equally redolent of humour, and will be read both with amusement and instruction,—for they are curious on the subject.

Camoens, the poet, is introduced, perhaps rather artificially, as he has little connexion with the story (except as the master of Zadig, a faithful Moor); but, as an individual portrait, who brought the orange into Portugal and died in poverty, it stands out boldly and nobly in relief. We will extract as much as we can of his death. Zadig has returned from the disastrous African war.

"Camoens was in far greater poverty than when the Moor had left him. Then, it is true, the superfluities of life were denied, but there yet remained food and raiment: while that which robing and sustenance were to the body, the mind still held in possession, despite misfortune,—hope, to feed and clothe the soul. Though its daily garnish of fair fruit, like the

apple of the Dead Sea shore, became ashes, and the green leaves of promise withered with the setting sun, the morning renewed them: now, no renewal came! Such was the substance of Camoens' welcome to the Moor, who found him in an obscure lodging within the western suburb of Lisbon. 'Ah, Zadig! I am now poor indeed,' continued the bard, pursuing the theme of his increased misery; 'food, raiment, hope, all gone,—even shelter is to be denied me! My last coin is expended! I thought all had abandoned me, and that to-morrow I must have been cast forth to die in the street, or, perchance, carried to an hospital. The broken chalice which contains the dregs of life were better crushed at once than perish thus: but in those dregs a pearl exists no poison can destroy; 'twill rise again to gem the courts of heaven:—such is my belief, Zadig. Hast thou in thy strange creed, made up of chaotic elements, confounding mystery with mystery, a better soul-sustaining hope when the worn frame is tottering o'er that gulf where nature shrinks from that which is most natural—from death?' 'Master,' answered Zadig, evading the question, which he knew was but a gauntlet thrown down inviting argument, 'it is with life we have to do, not death. How wilt thou live on with lack of bread, when disease is feeding on thy wasted powers? Have all means been tried to awaken the compassion of the court? Was it to die near the abode of the rich and proud, the high of birth, they lured Portugal's only bard with the mockery of a pension?' 'Even so, Zadig: my name still swells the courtly retinue. Sebastian dead, I shall be considered the pensioner of Dom Henry; allowed admittance to the presence-chamber, could I crawl there, and yet denied the paltry pittance that would gain me food. My meals have often now a grace more solemn than prayer or thanksgiving—a yesterday of fasting!' 'Dear master,' exclaimed the Moor, 'this must not be:' and his broad chest heaved with emotion as he gazed on the pallid face of Camoens, o'er which a smile played, though it was but a sad one. The smile of the blind is ever painful to the beholder, for the brightness which should illumine it is not there, and the bard was then rapidly losing the sight of that eye which had directed the labours of his immortal pen: thus threatening to involve one, who mentally had been the only light which had risen for ages over the intellectual gloom of Portugal, in perfect night. That Camoens' vivid fancy should yet return, and its scintillations burst forth, even at his own distresses, need not surprise us. Camoens had been taught by affliction to become a Christian philosopher; and Misfortune had so long made her home with him, that she was familiar as a friend. Not even when disturbed by intrusion on the privacy of his thoughts—when visited by those who sought the gratuitous offices of his muse, while they withheld the assistance which might long have kept on earth the soul of the immortal genius whose aid they craved—could he be aroused to anger. A fidalgo, named Ruy Dias de Camara, was the last who came to his miserable dwelling on this ungracious errand. He requested the poet to translate into Portuguese for him the Penitential Psalms, and Camoens thus expressed himself in answer to his solicitations: 'When I wrote verses, I was young and had sufficient food; was a lover, and beloved by many friends: thus I felt poetic ardour. Now I am without energy. Behold! I require two vintners to buy coal, and I have them not.' His appeals to the ministers of Dom Henry had been equally manly and affecting, but subdued. His disease, aggravated by want of

nourishment, long prevented him from leaving his lodgings: his letters to the court were unanswered, and he remained untended and unvisited. The return of Zadig, and the devoted attachment he expressed for Camoens, cheered the desolate sufferer; but he at once saw the improbability of assistance from such a source."

Zadig goes out and begs for him, and returns with a small quantity of bread and wine, of which he gives to his faithful friend.

"Drink, Zadig; the poison of disease is not on my lips. It is true that I am dying; but my frame hath yet the energies of years in it. I have heard, the last of life—the strong desire to live—doth sometimes give reanimation to the sick whom the sage mediciner hath pronounced as on the bed of death. My soul has wearied of this earth, nor will it lend the vital spark to longer bondage. I have already lived too long: I look for fellowship in vain;—friends I have none save thee. Ah! Catherina, heaven is thy fitting home; soon shall I join thee in those realms of bliss. And thou, Antonio! friend of my youth, sharer of every thought, and comrade in fields of toil and danger—yes! we shall meet within the world of spirits, and from the realms of space regard this sublunary scene; amid the wonders of revolving spheres, with all the secret springs of essence and of matter bared to eyes opened on immortality, still pondering one mystery,—how man, who feels that he doth journey to eternity, can toy with life as though it led but to annihilation."

"It was about the tenth month after Zadig had taken on himself the charge of Camoens, whom all others seemed to have forgotten, that the Moor had the mortification of returning home, without even the coarse food which had till then sustained these companions in misery. Supperless had they gone to their hard beds, for Zadig had not that day earned enough to procure a meal. Heavily the bard slept, but the eyes of his watchful friend were ever opening to regard the sick man. The chimes of the church of Santa Anna told the hour of midnight, when Zadig started from the ground. Camoens had called him by name. Seated upright in the bed, his eye dilated, and beaming with a strange lustre which seemed to absorb the rays of the solitary taper placed near him, the bard fixedly regarded the Moor. One hand was resting on the pillow, supporting him in his upraised position, and with the other he slowly beckoned. 'Zadig,' said Camoens, 'I have been in a trance.' 'No, master, thou hast but slept,' quickly answered his alarmed attendant. 'I have been in a trance, Zadig,' solemnly reiterated the dying man, 'and I have seen a vision mingling earth and heaven. I had been ages dead, if bliss like that I felt we may call death, and had in spirit come to hover o'er the earth. Princes and people, ages and bards, a gathering of nations, were calling on Camoens. That fame, winging its way through Christendom, for which my soul in life had panted, now was mine. Honour to Camoens!—every tongue joined in the song of praise. Amid this strange apotheosis, I heard a seraph's voice, and thus it spake: 'Wilt thou return to earth?' The wings that bore me trembled; but I answered, 'Rather be mine with humble strain to swell our loud hosannahs round the celestial throne.' The poet's eye grew dim. 'Zadig!—his head bowed towards the Moor: the hand which had grasped his relaxed its pressure; and the soul of the bard of Lusitania passed to the realm of spirits. His incidental mention of the convent of Santa Anna determined the last resting-place

of Camoens. It was the nearest religious house to the shed which had sheltered the dying bard. Here, beneath a marble slab, were deposited the mortal remains of the author of the 'Luciad,' undistinguished from the humblest unlettered peasant of Portugal; his obsequies unattended, as his death was unlamented, by all save one faithful attendant."

Our author restores Sebastian to his country; but as a private man, who retires to the mountain passes of Astorga, and passes his life far from the ambition of a throne.

Of the other tales we must speak briefly. The "Pirate's Island" is a strange wild story, in which the curse of a father and the fate of a Cornish family, above a century ago, are vividly painted. In this, as well as in "Attah," the next in succession, and indeed in all, the author's acquaintance with the tropical clime and scenery, enables him to draw very striking and real pictures of the situations where he embodies his action. In "Attah," in particular, there are descriptions which effect in prose what Coleridge's "Ancient Mariner" produced in poetry—the most powerful images and emotions. The loves of the slave-dealer and his faithful negro girl are told with deep interest. "The Recluse" and "The Cape of Storms" are also very impressive; but "Vata," the concluding piece, of the Druidical period, is altogether so original a conception, and so boldly executed, that we would especially recommend it to the public.

The Doctrine of the Deluge, vindicating the Scriptural Account from the Doubts which have recently been cast upon it by Geological Speculations. By the Rev. L. Vernon Harcourt. 2 vols. 8vo. London, 1838. Longman and Co.

A FRENCH writer says that, in etymology, "Les consonnes comptent pour peu de chose, et les voyelles pour rien," a principle which, in the volumes before us, has been carried to its full extent. No sportsman can more enjoy the excitement of a chase, than Mr. Harcourt delights in the hunt after an evasive root. If the scent suddenly is lost in the Hebrew language, he falls upon it again in the Coptic, and away he goes in full cry after his victim, until he finally runs it down in the Phœnician, after a series of incredible leaps over every impediment of reason and probability. We regret that this monomania, if we may so call it, disfigures what might otherwise have been an able and instructive work. A great portion of Mr. Harcourt's pages are devoted to an attempt to trace the fables of the heathen mythology to the age of Noah; and in the prosecution of this design, although it is of little value in itself, he has brought together a store of important materials, which may hereafter be rendered eminently available for a different purpose. That part of the work which proves the deluge to have been a type of the Christian sacrament of baptism, and enters into a discussion upon the nature of regeneration, evinces strong powers of argument and a correct judgment, and presents a forcible contrast to the irrational and extravagant tone of his etymological deductions. We extract the following passage, as a fair specimen of Mr. Harcourt's style:—

"The long period of time which was suffered to elapse while the vengeance of God hovered over the devoted earth, was admirably calculated to prove the character of the patriarch, and to give him an opportunity of preaching repentance to the ungodly,—of shewing his zeal in the service of God, and evincing the firmness of his faith; and thus the same flood,

which was the instrument of destruction to the unbelieving world, became the instrument of salvation to those who believed the word of the Lord. But there was another most important advantage gained by the mode of punishment selected. The flood, which purified the earth and expiated its guilt, and renovated the face of nature, inculcated, at the same time, a moral lesson to be transmitted to all succeeding generations: it taught men that there can be no reconciliation to God without atonement, and that the stains of sin must be washed away, and that every sinner must be regenerated in order to escape the curse which sin provokes. St. Peter declares that baptism saves us by the resurrection of Jesus Christ. At first sight the direct connexion between these doctrines is not very obvious; but it must be remembered, that a resurrection from the grave bears a very close analogy to that reappearance from the ark, which was a second life to those who had been entombed, as it were, in that huge coffin, or representative of Hades, the place of departed spirits. It was, therefore, equivalent to regeneration; and St. Paul insists upon the resemblance in express terms: 'We are buried,' says he, 'with Jesus Christ by baptism into death; that, like as Christ was raised up from the dead by the glory of the Father, even so we also should walk in newness of life.' His argument requires that those who have been baptised should live as regenerated persons. Since, then, the idea of escape from destruction was the predominant notion which the Jews associated with the recollection of the deluge, there is another passage in the prophet Zechariah which must be considered an allusion to the same event: 'It shall be in that day, that living waters shall go out from Jerusalem, half of them toward the former sea, and half of them toward the hinder sea: in summer and in winter shall it be. And the Lord shall be king over all the earth—all the land shall be turned as a plain from Geba to Rimmon, south of Jerusalem: and it shall be lifted up, and inhabited in her place,—and men shall dwell in it; and there shall be no more utter destruction, but Jerusalem shall be safely inhabited.' Prophecy is accustomed to mingle images of the future with images of the past. In the present instance, to disentangle the combination, we must consider what destruction is intended. Now, it can scarcely be the destruction of the city; for so far was it from being utterly destroyed at the time when the judgments fell upon it, which were just before denounced, that one moiety of the people were not to be cut off from it: and the event verified the prediction. But the Hebrew word, which is rendered 'utter destruction' in our version, is translated by the Vulgate and Septuagint 'anathema,' because it means a curse as well as desolation. If, then, we bear in mind the compassionate declaration of Him, who had just shewn himself to be so signally the Lord and King over all the earth,—'I will not again curse the ground any more for man's sake,'—we can scarcely doubt that a comparison was intended between the covenant with Jerusalem and the former covenant with the earth. In the preceding verse it is said, that all the land shall be *turned* as a plain; but the more obvious meaning of the Hebrew word is, that it shall be encompassed or surrounded; and if rivers were to burst forth from Mount Sion to the east and to the west, the land would be encompassed with waters, like the earth at the deluge; and then the lifting up of the holy hill above those waters, in order to its being safely inhabited, is in exact correspondence with

an opinion still current among the Hindoos about their holy place, Benares. The mythological reason, says Wolf the missionary, given for its sanctity is, that during a great deluge the space forming the holy ground was raised by supernatural means, so as to remain above the waters, which had drowned the rest of the world. In connexion with which he observes, that the Hindoos have a number of expiatory rites, chiefly of the nature of penances for sin. But the prophetic style required that the cleansing agency of those waters should be principally regarded. They were living waters; waters of salvation; waters flowing from the fountain noticed in the preceding chapter, which was opened to the inhabitants of Jerusalem for sin and for uncleanness. They are the exact counterparts of those rivers in Ezekiel, which flowed from the temple, and carried life and healing with them to every place over which they passed."

Before we close this brief notice of a work, the labour and ingenuity in whose composition, however, occasionally misdirected, we cannot but admire, we feel it our duty to speak in favour of the spirit in which it is written. We are not of that class who dilate upon the poverty and inefficiency of the reason of man, who would forbid its being exercised upon those lofty subjects which call forth its highest powers, and who deem it presumptuous to frame even a conjecture upon those dark but important points which afford a congenial sphere for exertion to the most elevated properties of the mind. Man is indeed but "a little lower than the angels." At the same time, we are still more opposed to those who, when the conclusions of our limited discernment seem at variance with the revelations of infinite wisdom, endeavour to reconcile the Scriptures to reason, instead of reason to the Scriptures; and we are afraid that a feeling which would promote disunion between religion and science, by advocating the interests of the latter as all-important; is but too prevalent. Science must ever be subservient to religion; and, in its attempts to render itself independent, it will be deprived of the only certain warrant for truth it possesses, and be destroyed in the anarchy and confusion of the unsettled ideas which will spring up in the absence of all restraint. If, however, their proper relation be maintained, each will prove of the greatest advantage to the other, mutually giving and receiving fresh assistance; and it is as an attempt to preserve this connexion unimpaired, the dissolution of which would be fatal to one party and injurious to the other, that we bestow our chief praise on Mr. Harcourt's volumes.

Love's Exchange. A Tale. By Charles John Boyle. 3 vols. 12mo. London, 1839. Longman and Co.

WE have to add a new name to the list of successful novelists, though not a name new to successful literature; for Mr. Boyle is, we believe, the brother of Miss Mary Boyle, of whose authorship we had last year occasion to speak so highly. It is not always that talent runs in the blood.

In *Love's Exchange*, there is much of reflection upon the world, or rather upon the feelings with which we begin, pass through, and finish, life's eventful history. These all bespeak a refined mind,—a mind that loves the pure and good, and hurries by the impure and worthless. Then our "plot is an admirable plot," and the secret so uncommonly well kept that we should be more than usually reluctant to betray a *scintilla* of the knowledge we have acquired of it, through two evenings' very

pleasant reading. The prominent characters—such as Lady Helen Loftus, Basil Honeton, Bouchier (the weak and wavering hero), and others, are extremely well drawn; and, altogether, our report must be most favourable to a *début* of so promising a kind, and so able a performance. We are at a loss for examples—as we always are with works of the class—but the following quarrel between a father and son, will shew the author's powers over passion and dialogue:—

"The father and son met down here at the hall: both obstinately persisted in their former resolves. The one loudly demanded pecuniary assistance; and the other, as loudly, met the demand with the most angry and stanch refusal. Sir Maurice, in common conversation, often waxed warm; but in this instance, he became more dreadfully violent than ever. The elder son, his favourite, and the only human being, who, at such a moment, could have possessed the slightest command over his enraged parent, upon that morning was unfortunately absent from the hall. No one, then, being at hand to curb the old man's ungovernable deportment, it soon had its way. After every sort of bitter invective, he peremptorily ordered Sir Ralph to quit the house, declaring, as he hoped to be saved, that he would neither help him, see him again, nor consent to receive any letter or paper sent by him, or concerning him. See him he never did after that day. The dreadful meeting here was their last. Sir Ralph, himself the inheritor of his father's impetuous temper, was worked up to a high pitch of frenzy by this determined rejection, even of his slightest demands. As he quitted Sir Maurice's presence, the overwhelming nature of his embarrassments must have struck him the more forcibly, as he looked around at the princely dwelling he was now about to quit, he might fancy, for ever. Difficulties, hopeless and instant, crowded, one upon the other, into his mind. His anger passed its former bounds; and, in the heat and excitement of the moment, he raised his voice; and, as he crossed the hall, used some loud and dreadful expression. The words—as probably, at that instant, it was intended they should—failed not to reach the quick ears of the old man, for he was still in the room above stairs; he started from his seat, and stepped out upon that same balcony, at which Margaret appeared this morning, when Maurice interrupted her song, and made her come down to us. I should tell you that there were several servants in the hall: some passing slowly through, others loitering more decidedly by the open door of the porch, all, as you may suppose, watching, with much curiosity, the issue of so unusual an occurrence as Master Ralph's visit at Honeton. 'Hear me!' cried Sir Maurice, loudly addressing his son from above, 'Hear me, before you quit this house for ever! Shame and disgrace as you are to the name you bear, I would speak to you once more. You—you—' his speech died away unfinished, so agitated was his manner. 'You have, at least, bestowed upon me a name you might call me by,' retorted the other: 'I am your own son, Sir Maurice Honeton!' 'Son!' burst forth the angry parent, stamping with rage, and knocking his clenched fist against the balustrade—'My son, say you? By Heaven! I will never again consider you as one. Such you shall cease to be called by me, ere another moment.' 'But by others, nevertheless, my honoured father, replied Sir Ralph, sarcastically, 'it will not be so easy to make the world forget I am your son.' 'It shall be easy,' vociferated Sir Maurice; 'I

will disown you this instant. I here utterly renounce you, as God above, whose wrath be on you, is my witness! Mark me, yonder,' he continued, beckoning to the servants; and, raising his voice still higher, 'here, before you all, I cast this son of mine from me. Shut my door against him—drive him from it! Witness what I say—recollect that, from this very hour, I will not, do not, look upon him as my child—I have turned my face from him—I have disclaimed every tie that should connect us! Go from my sight, Ralph Honston, for ever!—Leave a house you should never have called a home—even now you stand as a stranger in it. Leave it—quit my roof—go!' Sir Ralph, as yet, made no reply; but he looked up at his father, and smiled. This was past endurance: words—such as were now dying away upon his own ear, angry, violent words—had far better have been uttered, than that this suppressed laugh should have been perceived by the enraged Sir Maurice. It bespoke such complete indifference to the language which had burst in a paroxysm of fury from his lips, that he was instantaneously wrought up to a more fearful pitch than ever. 'My son! then,' he cried, with an increasing stress of bitter irony on the word, every time it issued from his mouth—'my son!—since I am to call you so, listen to me—listen to your father. You have come to crave your portion: verily, you are my child, and you shall have it. Retract, then, this instant what you have said; and declare that I confer what you have demanded generously. If you do not, a lie is on your tongue; for, what I give you, I give freely—readily—willingly. Take my curse!—do you mark me?—My curse—from my heart I bestow it!' 'A goodly heritage,' cried the other, his anger equally rising; 'but the better to enhance your generosity, it should have cost you, like any other gift, some small repugnance to part with it, my good father!' 'Now, hark ye!' replied the old man, catching at the last word, which Sir Ralph had strongly accented, well nigh choking, at the same time, with his own. 'You are a father too: may you be a wretched one! May you love the boy that calls you so, as I once loved you!' He wiped from his brow the cold drops that had gathered there. 'Let him live, as you have done, to sting his father to the heart!' 'Then, at least, wish me one other, to become my favourite,' retorted the angry man, with a bitter allusion to his own brother. 'Ay!' screamed Sir Maurice, 'I do. Have a favourite—take him to your heart—love him—and let him—die!' Pausing to gain breath, for his rage had seemed to hurry him forward in his bitter imprecations till he was almost exhausted, Sir Maurice repeatedly struck the wood-work, against which he leaned for support."

The portrait of a favourite gamekeeper affords another fair example of truth and expression.

"Upon the wall, under this window, were suspended a motley assemblage of the dead. Polecats, stoats, weasels, owls, and other species of vermin, were nailed up, not only, as if it were deemed thereby impossible to offend any one of the senses, but disposed with a certain degree of order and attention, that bespoke vanity in their destroyer, even when arranging the putrid carcasses of his victims. Hitherto, on entering the humble dwelling, he had found the falconer confined to his seat, though, for all that, busily employed in the education of a young hawk. As he now once more lifted the latch, and pushed open the low door, he discovered the leg to be so far restored to its former

health and activity, that it no longer reposed on the flat surface of an oaken bench. Bernard was altogether in quite a different attitude: he knelt upon the floor, before a short perch, on which stood the hooded bird, which he seemed to be in the act of worshipping, rather than instructing. 'Oh, the brave baggage! the dainty jade! the sweet slut!' cried Bernard, on a sudden, as his ever welcome visitor stood before him on the threshold of his secluded dwelling. 'Look ye, Master Maurice! look ye! See how gallantly she steps from off her perch upon my fist, and back, and without a thought of bating from me. Have ye, pretty mistress? eh! cunning one; have ye then?' he continued, playing with the bird. 'You are an apt hussy, and shall be set to the line right soon.' And, as he ran on in a similar strain, his eyes glistened with delight, and sparkled with scarcely less of brilliancy, than those of the plumed favourite beneath her red hood. 'Why, Bernard, man,' exclaimed his young master, 'you throw away as much honeyed talk, and as many coaxing words, as if a sweetheart, in good truth, stood before you.' Bernard smiled, and again enticed the bird upon his hand. At any other time such a sight would have been hailed with joy by Maurice, have called forth exclamations of loud delight, or questions as to the manner of treating the numerous pupils; but, just now, his thoughts dwelt more with those for whom the iron rule of instruction had been laid aside—hawks, whose gallant prowess, and ready obedience in the fields of air, had been put to the test, and only repaid each repeated trial the more thoroughly. It was, consequently, to his no small satisfaction, that, after the usual inquiry, the falconer declared one day more to be all the rest he required for his hitherto refractory limb, and that the next, 'an' it pleased Master Maurice, should not find him wanting at his usual post.' These good tidings were conveyed to Maurice in a whisper, for a strange step had first attracted the scholar's attention, and she presently started at the sound of another voice in the cottage. In an instant, abruptly quitting the pedagogue's arm, she sprang back to her wooden perch, whilst, to Bernard's discomfiture, a feather or two began to ruffle. 'Tut, tut, baggage!' he exclaimed as pettishly as an offended coquette, and holding forth a bit of raw meat close to the affrighted favourite's beak, and with his other hand gently stroking her on the breast with a small black feather, 'Will you suffer my boy Hal to approach you any moment, night or day, and must needs put up your plumes at your own young master, because, forsooth, he speaks before ye? I took you to be better reclaimed, hussy!' The bird seemed to comprehend the actual words of reproach, or by the tone in which they were uttered, to interpret their meaning; for she smoothed her disturbed feathers, cocked her head on one side, then slightly raising her wings, jumped back upon Bernard's extended arm, and snapping at the bit of red food, gulped it down her yellow throat in a second."

We now select one of the many reflections with which the tale is sweetened and enriched.

"There are some natures so utterly without guile—bosoms, from the first, so void of those latent seeds, which, after but a slight contact with the world, ripen into early suspicion and distrust, that blindness towards the most glaring facts may almost amount to infatuation. In a great degree had the artless Mabel been the dupe of her own inexperience; yet that inexperience was of a kind few could have desired she should discard, before the bitter moment of

necessity had fully come, and she was to learn that the most beautiful, the most unselfish, the most cherished feelings of her heart, had only tended to help in the work of her self-delusion. If a generous nature, from its very character disposed to trust all, had served to deceive her the more completely; in like proportion were her eyes to be opened only the quicker and more widely, when the veil, that had long covered them, should be rent in the very least."

A scene of misery, connected with our preceding extracts, will finally exhibit the author in a striking light. The elder brother has sunk through the ice, and the narrative proceeds.

"'Tarry not, tarry not, Alice; every moment is fearfully precious—death, perhaps, death in it. Fly to your father, find Bernard, and make him follow me. Do you then run, and call every human being you can meet with. Send them all after us, down to the lake. Oh, God! my poor Maurice, there has been fearful delay as it is!' and, seizing the bundle of ropes he had heaped together, he swung them across his shoulder, snatched up a long pole, with a hook at its point, and hurried back to the fatal spot. All was in the state he had left it, save Fleece. The poor dog, as if exhausted by its howlings, or bereft of every instinctive hope, had crept as close to the broken edge as it was able; and now lay quite still, its head resting on its paws, its eyes fixed upon the large open space, from which it suffered nothing to turn it. A low plaintive whine escaped at the intervals of Basil's fruitless endeavours to find his brother. In vain the wretched young man approached within a dangerous distance of the wide opening. In vain he called upon Maurice, letting down the ropes, and pushing the blocks of floating ice from the hole he, every moment, made larger with his repeated blows. The ropes came up again; but no other hand but his own grasped them. Again and again he repeated these endeavours, when Bernard, suddenly dashing down from the woody bank, stood breathless at his side. 'What is it, Master Basil?' cried the affrighted man, loaded with every implement that could promise succour, or that human forethought could have devised: 'what is it?' Uttering the words, his eye encountered Fleece—the beaver hat—the long knotted stick, his own gift that very morning to his favourite. 'The Lord above! Master Basil, whom seek you? Not him—not him—no—not Maurice Honston.' 'Yes, yes,' cried Basil, 'I do seek my brother; I do seek Maurice; and, oh, God! as I fear, never to find him.' Bernard, at these words, let fall the contents of his hands. He was like one smitten by the bolt of Heaven. He turned ghastly pale. His eyes were fixed upon the broken ice—his teeth chattered, and his knees shook with such violence, that he would have lost his footing upon the bank, if Basil had not caught hold of him. An infant's hand might have felled the tall muscular form of the falconer to the earth. 'Rouse yourself, Bernard!' cried Basil, in a beseeching tone, 'rouse yourself! bethink you who it is that needs every effort we can make. Perhaps we might yet save him.' These few words, delivered with that sort of cold tone and calm authority, which often the more clearly denote a well-grounded despair, had instant effect upon the falconer. He seemed by a violent struggle to recover from his stupor; for with a burst of agony he exclaimed—'The poor boy! the poor boy!' As he spoke, tears started from the man's eyes, and rolled down his weather-beaten

cheeks. Seizing some of the implements he had let fall, he proceeded to assist Basil; but, for some moments following, their joint exertions were undisturbed by further conversation. Both remained silent. Basil, grasping a rope held by Bernard, approached the opening in the ice, till it bent under his feet, and he was forced to make a backward step. Bernard dealt blow after blow upon the hard surface of the lake, to enlarge the already wide circle—then plunged the grappling iron below. ‘Am I not to look upon that face again?’ at last sobbed out the faithful servant, as it were, addressing himself. ‘Shall I never hear that cry, with which he kindly hailed me as I passed him an hour ago?’ Oh! my young master—oh! Maurice, Maurice Honeton! where are you?’ ‘Alas!’ replied Basil, ‘I begin to fear that the under current has carried him far down. Maurice! my poor brother! that you could answer—that you could reach this hand!’ Before much more time had been expended by Basil and his companion, in a hundred such attempts to draw Maurice Honeton from his watery grave, a multitude of workmen and others had come to their assistance. Every further effort, however, proved equally vain. The lake was broken up in all directions; flat-bottomed boats were conveyed to the edge, and soon launched amid the fragments of disturbed and floating ice. Grappling irons, hooks, poles, ropes, were lowered, again and again, into the deep water; but each time they returned to the hands that held them, raising nothing but muddy heaps of weeds, or dripping rubbish. At last, however, a party of men, who were considerably lower down upon the lake than the rest, called loudly to their companions, and beckoned that they should join them. Basil guessed the truth, and, followed by Bernard, made his way to the spot. As they drew near, the stiffened body of Maurice Honeton was in the act of being lifted from the water. His face was dreadfully gashed and bruised, the current having driven him with violence against some projecting edge of ice, or equally sharp substance, and carried him, as Basil had said, far from the spot where the stick had fallen from his hand, when he sank through the treacherous opening, to yield his last breath beneath. Basil gazed upon his brother, and spoke to him; yet he was quite conscious that life was extinct; and stooping, he gently closed the lid, for the distorted glassy stare of that once laughing eye was not to be endured. Such affection as Basil felt, hovers round the cold corpse to the last, often refusing to acknowledge the changes that are palpable; watching, speaking, as if life were yet there, till the grave claims the precious relic, locks it up, and, in its avarice, yields it no more to mortal gaze. Basil, for a few moments after he had performed the sad office mentioned above, preserved a silence, which the numerous crowd, now collected, respected too much to break. ‘My mother!’ he at length said, in a low voice, ‘oh my poor mother! how will she bear to look upon him? And he!’—for the thought of the father’s adoration for the one child flashed across the other,—‘he loved him; assuredly my father loved Maurice.’ Basil buried his face in his hands, as if to stifle the accumulated agony of his thoughts; then again he bent over the dead body, and again he brushed back the long, wet, clustering hair, from the inanimate countenance. There could be traced upon it now, no other expression than one of intense suffering. The agony of death was depicted in the most frightful distortions.”

The Life of Thomas Reynolds, Esq., formerly of Killea Castle, in the County of Kildare. By his Son, Thomas Reynolds. 2 vols. 8vo. London, 1839. Hooper; Dublin, Milliken and Son.

THIS is a difficult publication to deal with, and will, probably, not meet with one impartial review in the whole circle of periodical judgment. It is almost impossible to divest oneself of partisanship either on the one side or the other: and the events involved in this narrative are of too deep a nature to admit of public justice or private fairness. The two aspects which the book presents are exactly such as will admit of the eulogies of friends and the bitterest reproaches of enemies. The former will exalt the filial piety of the writer; will dwell on the great service rendered to the kingdom by the explosion of a most dangerous conspiracy; will exculpate Mr. Reynolds from all selfish, and claim for him all patriotic motives; and, in fine, will hold him up as the loyal subject, and, for his loyalty, a maligned and persecuted man. The latter will hardly excuse the efforts of the son, and declare them to be misrepresentations and falsehoods; will paint the father as a sordid traitor, who sold the lives of his friends and associates; will call him by the odious names of spy and informer; and describe him as infamous beyond all example of infamy.

Jaffier, in “*Venice Preserved*,” is only half forgiven when he has redeemed his weakness by self-slaughter; and what could Mr. Reynolds expect from the associates of those whom his revelations brought to expatriation, slaughter, and the scaffold?

Perhaps, amidst these conflicting sentiments, the chief value of the work, leaving opinion upon the individual to be determined by the feelings of readers, may be thought to be the light it reflects upon the existing condition of Ireland at this hour. When we look at similar organisations in parishes, districts, provinces, and the capital, we are staggered with the inference that similar horrors may be concealed under the surface, and that similar crimes, murders, and assassinations, may be followed by like national calamities. May Heaven avert the omens! but the resemblance is fearful.

In 1798, when the rebellion was crushed, Mr. Reynolds (born in 1771) was honoured with public addresses, &c. &c. In 1808, he was closely pursued by the hatred of the United Irishmen, whose cause he had betrayed. He was employed by government in several public capacities at Lisbon and in the north; and, finally, retired to France in 1820, where he lived during the last fifteen years of his varied and memorable life. The statements of his biographer, and the reasons he assigns for his adopting the striking course he pursued on the dangerous emergency in question, will be deemed satisfactory or the reverse, according to the grounds at which we have already glanced: and as no argument of ours could alter the verdict either way, we shall abstain from any political comment, and only observe that the author has drawn some curious materials in support of his positions from the “*Life of T. Wolfe Tone*,” as published in America, and, it seems, much mutilated, and reduced to half its original size, in its preparation for the British market. The preface concludes with the following pregnant hint.

“I have a vast mass of curious documents, which are not in these volumes— anecdotes of all the leading men connected with the United Irish Society, many of whom have to this day remained unknown as United Irishmen. I have, however, carefully abstained from nam-

ing a single individual in these memoirs who has not been already repeatedly named, and I hope I shall be enabled to continue this reserve.”

Mr. Reynolds’s early years appear to have been passed in that sort of reckless dissipation too common to the gay and lively spirit of his country; but as he married, in 1794, at the age of twenty-three, the career was not too long continued for future happiness; and at this epoch his biographer says:—

“It will be observed that, as yet, I have avoided every allusion to my father’s political career, and I have been, perhaps, too prolix in the account I have given of his private life. It is true that the subjects on which I have hitherto written do not usually afford much interest to the reader; but those details have been forced from me by a series of calumnies, which I cannot allow to remain uncontradicted. It has been said that my father was a low-born and needy adventurer; therefore I have thought it incumbent on me to shew that he was well connected, and closely related to the first families in Ireland; and that up to January 1798, he was living in ease, affluence, and respectability.”

More public affairs succeed. In 1791, the United Irish Association was formed, and soon occupied a prominent place on the canvass of Ireland’s troubles and misfortunes. Upon this subject, Wolfe Tone’s work is referred to, and the author endeavours to shew that the exterior objects and pretences proclaimed, were only meant to cover secret designs of rebellion and butchery.

“Samuel Neilson (he says), of Belfast, was particularly active. In a letter which he writes to Mr. Tone, on the 21st of November, he says, — ‘You can form no conception of the rapid progress of the Union here; and I do assure you we are further forward than even I expected we should have been in a twelvemonth. The universal question throughout the country is, ‘When do we begin?’ Do we refuse hearth-money or tithes first?’ Indeed the people of Belfast were not idle; they spared neither pains nor expense to spread their new doctrine through the whole north of Ireland; and they had the satisfaction to see their proselytes very rapidly extending in all directions. The more effectually to spread their principles, ‘twelve of the most active and intelligent among them subscribed 250*l.* each to set on foot a paper, whose object should be to give a fair statement of all that passed in France, whither every one turned his eyes; to inculcate the necessity of union amongst Irishmen of all religious persuasions; to support the emancipation of the Catholics; and finally, as the necessary, though not avowed, consequence of all this, to erect Ireland into a republic independent of England.’”

“The Association spread to such a degree that, on its dissolution in 1798, the returns exceeded 400,000 men, a vast many of whom were perfect fanatics, ready to perform the wildest, the most atrocious act suggested in their committees, or commanded in the name of the Directory. Every man who was not a member, or who did not evince a marked bias and protection towards the members and their opinions, was considered as an enemy, and devoted as a fair object of destruction, in person and property, whenever a secure opportunity for attacking either the one or the other might be afforded. The Directory was a self-created mysterious body, whose persons, means, motions, and intentions, were alike unknown, save only so far as they thought proper to communicate them through their agent; and all orders so communicated must be implicitly

obeyed. There were five directors at its dissolution, four Protestants and one Roman Catholic. I should here observe that throughout this narrative, I mean by Protestants, to indicate all those who are not Roman Catholics, whether they be of the Church of England, or Presbyterians, or other Dissenters.

"The moment a man became a member of it he unexpectedly found himself placed under the censorship of all his associates; the slightest hesitation, opposition, or disapproval, of the orders or reports, communicated from the upper committees, was considered as treason and disaffection; keeping company or habitually associating with persons unfriendly to the Association was held to be just cause of suspicion. A man's acquaintance, his servants, his relatives, and frequently his very children, were so many spies on all his words and actions, which, if suspicious, were directly denounced in some committee. The leaders, conscious of their own criminal projects, and in constant dread of discovery, notwithstanding their precautions, promoted by every means in their power this jealous and suspicious system of espionage among the associates."

Such was the society which Mr. Reynolds joined as a colonel in 1797, in the place of Lord E. Fitzgerald, and, as his son contends, in ignorance of the secret views of the combined leaders.

"But (immediately he tells us) the list of proscription, and other matters, now for the first time laid open to my father, spoke their real intentions in a language not to be misunderstood. What was he to do? To denounce the men who had opened their secrets to him was repugnant to every feeling—to suffer matters to take their course was to make himself an accomplice in their crimes—to quit the Association was to offer himself and his family to the knife of the murderer. The provincial committee, of which he had a few moments before become a member, was to meet in Dublin the next day, the 19th of February. There was very little time for deliberation: he resolved, at all events, not to take another step with these men until he should have ascertained the truth or falacy of what he had heard. He, therefore, sent by the post, from the house he was in, an excuse to the provincial committee, addressed to Oliver Bond, for John McCann, grounded on the shortness of time, the distance, and the urgency of his own private affairs. He was fully aware that, by declining to attend so important a meeting, he was likely to be looked upon with jealousy; but it was not to be avoided. He returned to Kilkea, oppressed, alarmed, unable to doubt, and fearing to credit, what had been told him; yet, when he looked around through the country, every thing confirmed the truth of it, and showed him that disorders, which had hitherto appeared the effect of insubordination among the labouring classes, were in reality the results of a plan concerted by the leaders of the United Irish Association, of a very different complexion from any thing he had hitherto been led to believe. All tended to riot and confusion. Murders and robberies were committed night and day; few men dared to venture from their homes, and these homes were converted into fortresses; the entrances and lower windows of most houses were strongly barricaded; in short, every man, fearful of the visits of the gangs of plunderers who infested the country, put his residence in the best state of defence he could."

Attempts to assassinate him were the result of his drawing back; and he speedily communicated all he knew of the conspiracy to go-

vernment; which led to the apprehension of many persons, and the premature outbreak of the rebellion. His biographer declares that this was done without fee or reward, and that, so far from being benefited, his father was exposed to considerable loss in consequence of the part he took in these calamitous times. At page 220, however, we think there is a suspicious circumstance which would induce us to imagine that Mr. Reynolds was not without some immediate recompense.

"Government (says the author) had strong suspicions that he was privy to Lord Edward's escape and concealment; but the United Irishmen made the first attack on him. On the 16th of April, he was occupied in walling up a closet, which was made in the thickness of the wall of his common sitting-room, and which had evidently been originally intended as a secure place for depositing valuables. The entire room was newly papered, in order the better to conceal the closet, in which he had deposited his family plate, to the value of about 1000*l.*, together with 3500 guineas in gold, which had been unexpectedly paid to him a few days before, and other valuables."

His situation now became one of extreme peril. The Croppies tried to murder him; the government in the provinces (ignorant of his services in the capital) persecuted him, and he had a narrow escape from being executed by a court-martial. All around the most horrible atrocities were committed; and it makes human nature shudder to read the accounts of cruelties and barbarities perpetrated by revengeful rebels and an exasperated soldiery.

"It has (says the author) been my father's lot since then, to witness the ravages of war in the Peninsula, where Spaniards, French, Portuguese, and English, with their German auxiliaries, men trained to rapine, alternately plundered and devastated the country, but in all that disorder, of which he was an eyewitness during six years, he has frequently assured me that he never saw such coolblooded, wanton, useless destruction, as was committed by Captain Erskine and his companions at Kilkea, and over the surrounding country. It was Croppy property, and that was quite sufficient in their eyes to make destruction a virtue. My father's steward, William Byrne, was flogged and tortured to make him discover the supposed dépôt of arms. Lieutenant Love, of the ninth dragoons, son of the quarter-master of the same regiment, being a tall man, tied his silk sash about Byrne's neck, and hung him over his shoulders, while another officer flogged him until he became insensible. Similar acts acquired for Mr. Love the sobriquet of the 'Walking Gallows.'

"At this period the disturbed state of the country rendered all communication difficult and precarious. Expresses were frequently waylaid, robbed, and sometimes murdered, on the roads at noon-day. The military had authority to act independently of the civil power, and courts-martial in the country towns and out-quarters, executed their sentences in a most summary manner, without appeal to Dublin. Men were frequently arrested, tried, and executed, by these military tribunals within the space of two or three hours. In many places they were permanently sitting, and though perhaps composed of very honourable men, yet assuredly they knew nothing of law, and having very rarely the assistance of a judge-advocate, too frequently decided according to the excitement of the moment. The speed with which their decrees were executed unfortunately prevented revision. Stationed

throughout the country to prevent disorder, they were in perpetual war with the inhabitants; and thus, their passions in a continual state of excitement, they could not be very impartial judges.

"Skirmishes took place also at Rathfarnham, Tallagh, Locan, Lusk, Dunboyne, Barretstown, Collon, Bellinglass, Dunlavin, Kildare, Rathangan, Killock, and Oviestown. In all these engagements the rebels were defeated with considerable loss, except those of Dunboyne and Barretstown. The attack on Prosperous was marked by an act of the most infamous treachery. Doctor John Esmond was a Roman Catholic physician and apothecary, a man of good fortune and of high family connexion, and a lieutenant in Mr. Griffith's troop of yeoman cavalry, then stationed at Clane. Not far from his residence was the small town of Prosperous, where a considerable cotton manufactory was established. It was occupied by twenty-eight of the Cork militia, and nine of a regiment of Welsh cavalry, called the Ancient Britons, the whole commanded by Lieutenant Swaine. Esmond was on an intimate footing with Lieutenant Swaine, who frequently dined at his house, from which circumstance, combined with his rank in society, his situation of lieutenant of yeomanry, and his profession, which obliged him to be out at all hours of the night, he found no difficulty in obtaining the password from Swaine, who dined with him on the 23d of May. Thus provided, at one o'clock in the morning of the 24th, at the head of a large body of rebels, he surprised his friend, and burned him and all his men in their quarters. He then seized two gentlemen, residents of the town, a Mr. Stamer and a Mr. Brewer, and an old man who had been a serjeant in the line; these he murdered with deliberate cruelty, and mangled their bodies in a horrid manner. His further proceedings were stopped by the approach of a body of troops, on which he fled from the place and his followers dispersed."

And this is civil war. God forbid that the threatening clouds of our day should ever break into so dreadful a storm!

We have no heart to pursue the details. The second volume is full of repetitions, and there is a severe examination of Moore's "Life of Lord E. Fitzgerald," some of the particulars in which the author vigorously impugns. He shows, we think, that Mr. Reynolds could not have done some of the acts imputed to him in regard to that unhappy nobleman. Besides Mr. Moore, the author runs a tilt at Colonel Palmer, Mr. Perry, &c. &c., with which we will not meddle.

At the close of his life, Mr. Reynolds became religious; and in the spirit of that conciliation we beg to conclude this notice. Unable ourselves to determine what is strictly true, what may be coloured, and what may be erroneous, we shall only add, that the analogy between Ireland in 1798 and Ireland in 1830, renders the work, in our eyes, a very important one, whatever may be its imperfections and errors.

Poems: The Maid of Jaen; Timon; and The Bride of Palencia. By Frank Hall Standish, Esq. 8vo. pp. 205. London, 1830. Black and Armstrong.

THERE is much beautiful description in these poems,—scenes in sunny Spain, where the heart ripens like the grape, and the passions race headlong like the mountain-torrents. The author has seen what he describes, and brought a good judgment to bear upon the arrangement of his subjects, breaking and dividing them

into a thousand pleasing and picturesque forms. Here and there, however, the subjects want a little more depth, the energies are not always forcible enough for the actions; the passions tear along, but the features are not sufficiently lighted up, the thoughts do not cut deep enough into the heart. Still many of the scenes are so skilfully portrayed, that to read the pages is like gazing upon a picture; you have the group before you—the scenery all properly arranged—wherever you turn your eye there is something either pleasing or terrible, a rugged and overhanging cliff, a winding and narrow defile, plains on which the sunshine sleeps, and over these move bandits or vine-gatherers, peasants or soldiers, all in harmony with the landscape. We give the following brief extract, as a specimen of the author's descriptive powers:—

"The golden sun at eve had set,
And busy groups in converse met:
Through Jaen's walks the young and gay,
Saunter'd or talk'd their hours away.
The moon appear'd with cheerful light,
And radiant stars were clear and bright;
The evening breeze had newly sent
Its sapphire cross the firmament;
Now tightened cords of the guitar
In merry measures sound from far;
The hum of voices on the ear,
Is whistling spread by those more near;
Some counting tales of absent friends,
Others, what fruitful fancy lends.
With a wail and sigh and stiff restraint,
Some lovers murmur forth their plaint;
Others more happy in their choice
Are wooing with a cheerful voice;
Beggars solicit at each chink,
And crave what charity may spare;
While boys with kindled torch invoke
Benevolence from those who smoke;
In carriage gay some drive abroad
And view, but mix not with the crowd.
At little distance from the throng
A grave procession moves along;
Roses and orange-flowers display'd,
Beside the brow of every maid;
Clergy in holy garb appear,
And well-dress'd elders close the rear;
Voices of youth at times are heard
With quick conceit and merry word.
Lawyers and magistrates are there,
The soldier too, with lip of hair;
A wedding clearly all denotes;
The kerchief white as banner floats;
A church appears in distance gray,
But shining from the taper's ray."

Wild Scenes in the Forest and Prairie. By C. F. Hoffman, Esq. author of "A Winter in the Far West." 2 vols. 12mo. London, 1839. Bentley.

INASMUCH as these are peculiarly American descriptions, drawn from nature, and not copies of European antecedents, we are much pleased with them. Inasmuch as they place before our eyes in a lively manner scenes and characters which are new to us, we like them. And inasmuch as they preserve some curious legends and traditions of the red men, we are greatly interested in them. Altogether they form a very clever and agreeable miscellany.

Their *locale* embraces three different parts of the country: 1st, the sources of the Hudson in the state of New York; 2d, the banks of the Wisconsin; and 3d, on the Sacondaga, among the hunting-grounds of the Mohawks.

Though the latter are the most wild and romantic stories, we are not sure that we do not prefer those which relate to the upper streams of the Hudson; and at any rate we will commence our notice with these because they describe scenes which we had no idea existed so near the capital, and see-board of one of the oldest settled states, and because we think we have read some of the others in previous publications.

It is rather an odd coincidence that, having devoted our last week's page to Mr. Scrope's

striking delineations of deer-stalking in the "Land of the Mountain and the Flood," we should so immediately be attracted to Mr. Hoffman's well-drawn pictures of "*still-hunting*" (an excellent name for the cautious and stealthy sport) in the new world.

"The Hudson is formed by three mountain-torrents which unite within a few miles of their birthplace. The source of the highest fork is proved by observation to be 4700 feet above tide-water. It rises in an open mountain-meadow, with two adjacent mountains swelling in easy slopes from its sides. There is a still larger fountain-head west of this, in the same vicinity, rising in a singular gorge called 'The Indian Pass': while the northernmost source is in Lake Colden, or rather in Avalanche Lake; a small mountain tarn separated from the former by heavy earth-slides from the adjacent mountain summits, whose granite rocks glitter where the soil and trees have been swept down their denuded sides. The elevation of these two lakes, which have a fall of eighty feet between them, is between 2900 and 3000 feet above the ocean; being, undoubtedly, the highest lakes in the United States of America."

Hither our author made an excursion, and aptly enough tells us that it is "*an unfinished country*."

"There are lakes on the tops of mountains, and swamps among wildernesses of rocks, which are yet to be drained by other means than the thick exhalations which carry them into the atmosphere, or the dripping mosses through which they ooze into the valleys, where day by day the new soil for future use accumulates. Had our New York Indians, who now find it so difficult to hold on to their level and fertile lands in the western part of the state, but 'located' their reservations among these mountains, they might have escaped the cupidity of the whites for centuries yet to come, and have hunted the deer, the moose, and the bear, or trapped for the martin, the sable, and the ermine, all of which still abound here, without molestation, save from the occasional white hunter that might intrude upon their grounds when chasing the wolf or panther from the settled regions, to the east and west of them. There are settlements upon some of these lakes, which were commenced more than thirty years since, and which can now boast of but two or three families as residents, and these are isolated from the rest of the world, with twenty miles of unbroken forest between them and more prosperous hamlets. But the immense beds of iron-ore and other minerals recently discovered, with the increased demand for timber in our Atlantic cities, and of charcoal to work the mines here, must now bring the country into general notice, and hasten its settlement. The demolition of the pine forests, and the conversion of less valuable wood into charcoal, will rapidly clear the country, and convert the lumber-men and charcoal-burners into farmers; while the old race of hunters already begin to find a new employment in acting as guides to the owners of lands, and projecting roads for them through districts where an ordinary surveyor could hardly be paid for the exercise of his profession. One of these hunters, a sturdy original, by the name of Harvey Holt, a redoubtable hunter and celebrated axe-man, has already marked out a road for some of the large landed proprietors through the very heart of the region. He is said to have run his lines with the skill and accuracy of an accomplished engineer; and, before another year elapses, the road will probably be opened. Other foresters, again, finding their ancient

haunts thus invaded by the pioneers of improvement, have fled to wilds beyond the Wisconsin; and a friend who hunted lately upon a tract a little to the north-west of this, in Hamilton county, told me that he heard a veteran hunter of seventy complaining bitterly that he was too old to move, now that the settlers had pushed within thirty miles of him. It seems strange to find so wild a district in 'one of the old thirteenthers,' the 'empire state of New York.'"

Fishing and shooting here, under the auspices of John Cheney, a remarkable denizen of these almost pathless forests, our author vividly relates his adventures. For example, "*camping out*:"—

"'It ain't so bad a place for camping out,' said John Cheney, as he rose from slaking his thirst at a feeble rill which trickled from beneath the roots of a rifted cedar over which he leaned — 'it ain't so bad a place to camp, if it didn't rain so like all natur. I wouldn't mind the rain much, nother, if we had a good shantee; but you see the birch bark won't run at this season, and it's pretty hard to make a water-proof thatch, unless you have hemlock boughs — hows'ever, gentlemen, I'll do the best by ye.' And so he did! Honest John Cheney, thou art at once as staunch a hunter, and as true and gentle a practiser of woodcraft, as ever roamed the broad forest; and beahrew me when I forget thy services that night in the Indian Pass. The frame of a wigwam used by some former party was still standing, and Cheney went to work industriously tying poles across it with withes of yellow birch, and thatching the roof and sides with boughs of balsam-fir. Having but one axe with us, my friend and myself were, in the mean time, unemployed, and nothing could be more disconsolate than our situation, as we stood dripping in the cold rain, and threshing our arms, like hackney-coachmen, to keep the blood in circulation. My hardy friend, indeed, was in a much worse condition than myself. He had been indisposed when he started upon the expedition, and was now so hoarse that I could scarcely hear him speak amid the gusts of wind which swept through the ravine. We both shivered as if in an ague, but he suffered under a fever which was soon superadded. We made repeated attempts to strike a fire, but our 'loco foco' matches would not ignite; and when we had recourse to flint and steel, every thing was so damp around us that our fire would not kindle. John began to look exceedingly anxious: — 'Now, if we only had a little daylight left, I would make some shackleberry-tea for you; but it will never do to get sick here, for if this storm prove a north-easter, God only knows whether all of us may ever get away from this notch again. I guess I had better leave the camp as it is, and first make a fire for you.' Saying this, Cheney shouldered his axe, and, striking off a few yards, he felled a dead tree, split it open, and took some dry chips from the heart. I then spread my cloak over the spot where he laid them to keep off the rain, and, stooping under it, he soon kindled a blaze, which we employed ourselves in feeding until the 'camp' was completed. And now came the task of laying in a supply of fuel for the night. This the woodman effected by himself with an expedition that was marvellous. Measuring three or four trees with his eye, to see that they would fall near the fire without touching our wigwam, he attacked them with his axe, felled, and chopped them into logs, and made his wood-pile in less time than could a city lawyer, who had all his timber

carted to hand. Blankets were then produced from a pack which he had carried on his back; and these, when stretched over a carpeting of leaves and branches, would have made a comfortable bed, if the latter had not been saturated with rain. Matters, however, seemed to assume a comfortable aspect, as we now sat under the shade of boughs, drying our clothes by the fire; while John busied himself in broiling some bacon which we had brought with us. But our troubles had only yet begun."

We have not space to go through the night's endurance, but patience and the huntsman's ingenuity vanquished and wore through them all; and Mr. H. says:—

"The last words I heard John utter, as he coiled himself in a blanket, were—'Well, it's one comfort, since it's taken on to blow so, I've cut down most of the trees around us that would be likely to fall and crush us during the night.'"

Among the sports, "*crusting*" is one of the most prevalent modes of capturing or destroying animals.

"*Crusting*" is the term applied to taking large game amid the deep snows of winter, when the crust of ice which forms upon the surface after a slight rain is strong enough to support the weight of a man, but gives way at once to the hoofs of a moose or a deer; while the animal, thus embarrassed, is easily caught and despatched with clubs. In our northern states, more game is destroyed in this way than in any other; and you may read in the newspapers every winter some account of the inhabitants of a whole village turning out and butchering hundreds of deer when thus entrapped. Only a few years since, it was said that more than a thousand were so destroyed in the township of Catskill in one season. All true sportsmen, however, hold '*crusting deer*' in contempt and abhorrence—for the venison is generally not in season at the time of year when it is thus procured; and this mode of taking it belongs rather to the butcher than to the hunter. *Crusting moose* is rather a different thing, as it requires both skill and courage on the part of the hunter, and the animal has a chance, at least, of escape or resistance. Still, as the law will not, or cannot, protect this noblest of all forest game from destruction in this manner, it must, at no distant day, become extinct within the boundaries of New York. The broad west has no moose-ground so celebrated as that in our northern counties, and when you leave the sources of the Hudson, you must travel westward to those of the Mississippi before you find the gigantic moose as numerous as they were in our forests but a few years since. The woods of Maine, however, are probably richer in this noble game than any within the United States' territories. The moose, who is both more shy and more sagacious than the deer, has his favourite haunts in the depths of the forest. He moves about, not like the elk, in roving gangs, but stalks in lonely majesty through his leafy domains; and, when disturbed by the hunter, instead of bounding away like his kinsman of the forest and the prairie, he trots off at a gait which, though faster than that of the fleetest horse, is so easy and careless in its motion, that it seems to cost him no exertion. But though retreating thus when pursued, he is one of the most terrible beasts of the forest when wounded and at bay; and the Indians of the north-west, among some tribes, celebrate the death of a bull-moose, when they are so fortunate as to kill one, with all the songs of triumph that they would raise over a conquered warrior. The deepest snows of winter, of course, offer

the best occasion for moose-hunting. The sagacious animal, so soon as a heavy storm sets in, commences forming what is called a '*moose-yard*,' which is a large area, wherein he industriously tramples down the snow while it is falling, so as to have a place to move about in, and browse upon the branches of trees, without the necessity of wandering from place to place, struggling through the deep drifts, exposed to the wolves, who, being of lighter make, hold a carnival upon the deer in crusting-time. No wolf, however, dare enter a moose-yard. He will troop round and round upon the snow bank which walls it, and his howling will, perhaps, bring two or three of his brethren to the spot, who will try to terrify the moose from his vantage ground, but dare not descend into it. But, when the hunter, prowling about on his snow-shoes, discovers a moose-yard, he feels so sure of his quarry, that he will sometimes encamp upon the spot, in order to take the game at his leisure; and, when there have been several hunters in company, I have heard of their proceeding patiently to fell the neighbouring trees, and form a lofty fence around the yard, which enabled them to take the animal alive, when subdued by long confinement and starvation. An opportunity of doing this occurred near M'Intyre last winter, when a yard, with three moose in it, an old cow-moose and two yearlings, was discovered and surrounded by a band of hunters. Some of the party were desirous of taking them alive, as one of the proprietors of this extensive property—a gentleman of great public spirit—wishes to make an attempt to domesticate the animal, and, if possible, introduce the use of it to agricultural purposes. This is an exceedingly interesting and hardly doubtful experiment, for the moose has been frequently tamed, and, unlike the common deer, can be halter-broken as easily as a horse. The hunters, however, were too excited with their good luck, to listen to any suggestion of the kind—few of them had ever killed a moose. Their rifles were in their hands, and they were bent at having a shot at the game, which dashed to and fro, snorting and whistling, within the snowy bounds of the yard. The whoops and shouts of their enemies, redoubled by the echoes from the adjacent mountains, made them furious at being thus beset; and, at each discharge of a gun, they would plunge at the assailing marksmen so desperately, that he would be compelled to take refuge behind the nearest tree. The scene became thus so exciting, that all order was lost among the huntsmen. Each fired as fast as he could load, hardly waiting to take aim, lest some quicker-sighted comrade should bear off the prize. The moose, though repeatedly wounded, would charge again and again into the snow-banks around them, and drive their enemies from the brink, retiring, at each turn, to a corner of the yard where they were least molested, and there rally at once for another charge. Faint with the loss of blood, however, they were successively discomfited and borne down by the hunters, who, retreating upon the crust when pursued, would turn upon the moose the moment they tried to retrace their steps, and assail them with axes and bludgeons while floundering in the snow to recover the vantage ground of the yard. The two yearlings, with their dam, after making a most gallant resistance, were ultimately despatched."

"*Withing*" deer is another method of circumvention, and consists in throwing a natural lasso, made of sapling birch, over the animal when swimming, or, perhaps, in the woods. We select a portion of the account of this prac-

tice as a specimen of the writer's power in describing scenery.

"Running the canoe under the trees, whose morning shadows still hung over the lake, we stretched ourselves upon the grass, listening and looking with the most eager attention for the first intimation of approaching sport. There was a slight ripple upon the lake, which was not favourable to our seeing the deer should he take the water at any great distance from us; and the incessant call of the jay, with the ever-changing cry of the loon, created so many noises in the woods, generally so still, that the opening of the hounds might have escaped us unheard. These early sounds, however, soon ceased as the sun came marching up above the mountain tops, and spread the silver waves from the centre of the lake far and wide, into all its sheltered bays and wood-embowered friths. The faint ripple of the waters upon the rocky shore was the only murmur left. My companions were conversing in a subdued voice, and I was lying a little apart from them revelling in the singular beauty of the scene, and trying to fix in my memory the peculiar outline of a ridge of mountains opposite, when I heard the faint crashing of a bough upon the other side of the lake, and running my eye along the water, discovered a noble buck, with fine antlers, swimming beneath the bank. My comrades caught sight of him a moment afterwards, and we all waited with eager anxiety to see him put out far enough for us to row round him, and cut him off from the shore. But the buck had evidently no idea of making a traverse of the lake at this time. He was far in advance of the hounds, and had taken the water at this place, not from being hotly pursued, but only to throw them off the scent, and then double on his own track. He therefore, kept swimming along the shore, close under the steep bank, looking up at it every now and then, as if in search of a '*runway*' which would carry him back again into the depths of the forest."

The ensuing hunt is capitally painted with true sportsman's fervour:—

"The buck, after crossing at the inlet, made a circuit of several miles, and before we could pull half way down the lake, took the water at a runway opposite to the islet, behind which Catlin was watching in his skiff. Cool and experienced in the sport, this hunter never broke his cover until the deer got fairly out into the lake, when he launched out and turned him so quickly, that the buck made for the island which his pursuer had just left. Linus, however, was too quick for him, and threw his withe over the deer's antlers before he could touch the bottom with his feet. But the buck was a fellow of great weight and vigour, and feeling himself thus entangled, he made a lateral spring into deeper water, which dragged the hunter out of the boat in an instant. Linus fortunately seized one of the oars, which, being rigged with swivels instead of rowlocks, still kept him connected with the skiff. But his situation was a precarious one; the buck becoming the assailant, struck at him with his forefeet, and got him again fairly under water. He rose this time however, with the oar between himself and his antagonist, and while clutching the gunwale of the boat with one hand, seized the withe which had escaped from his grasp, in the same moment that the buck made a pass at him with his horns, which ripped up the bosom of his shirt, and was within an inch of goring him to death. But before the desperate animal could repeat the thrust, the hunter had gained the skiff, now half full of water, and seizing the first missile that came to hand, he dealt the buck a

blow upon the head, which, followed up by a slash from his hunting-knife, put an end to the encounter.

"A group worthy of Inman's pencil was collected around the roaring fire, by which the dripping Catlin was drying himself; while Cheney, with the fat buck before him, and the dogs licking the blood at his feet, as ever and anon he paused in his operation, and turned round to us, to point out some graceful line of fat with his hunting-knife, would have formed the prominent features of the picture. The potatoes, in the meantime, were roasted whole, or sliced up with various savoury matters, which were put into the kettle to boil; and though we had omitted to bring tumblers with us, Cheney's are hollowed out and fashioned some most ingenious drinking-cups, which were ready by the time divers choice morsels of venison had been grilled upon the coals. There were a few drops at the bottom of an old flask of cognac for each of us; we had Mackinaw-blankets, stretched upon balsam branches, to recline upon; there was no call of duty or business to remind us of the lapse of hours; and stories and anecdotes of former huntings in these mountains, with practical discussions as to what part of a deer afforded the most savoury venison, prolonged the repast till sunset."

Cheney's adieu to his companions is worthy of their association (see page 121), but we also must say good-by to the Hudson; and make an extract from another quarter, though we have to wait a week for it.

MISCELLANEOUS.

The Entomologist's Text-Book. By J. O. Westwood, F.L.S., Secretary to the Entomological Society of London. 12mo. pp. 432. Orr and Co.

MR. WESTWOOD's position, and all his previous writings, declare him to be so intimately conversant with this subject, that we need only announce this Text-Book to the lovers of the science, in order to secure their attention to so valuable a guide. A mass of the contents originally attracted much notice and praise in "The British Cyclopædia of Natural History," but Mr. Westwood has rearranged, recast, and added, to these papers, so much as greatly to increase their usefulness, and fit them for their present popular purpose.

Lardner's Cabinet Cyclopædia; No. CIX.: Natural History; Fishes, Amphibians and Reptiles. By W. Swainson, Esq., F.R. and F.L.S., &c. Pp. 368. London, 1839. Longman and Co.

MR. SWAINSON's system of classification is prominently brought forward in this volume, which is prefaced by an able essay on the nature and relations of Monocardian animals, and particularly of fishes. The analogies between fish and other classes of animals are very remarkable, and Mr. S. exhibits them in a most interesting manner. Towards the close of the volume we find much recent matter elucidated from the latest discoveries, both in living nature and in geological specimens.

No. CX.: History: Denmark, Norway, and Sweden. By S. A. Dunham, author of the "History of Spain and Portugal." Same Publishers.

THIS volume enters with great spirit into the most ancient legendary lore of Scandinavia; and when we reflect how intimately it is connected with our own, we need hardly point out the interest attached to matters so entirely in common with our northern ancestors. It is a

book of wild tales, rather than a history; but these tales are at the foundation of history.

The Life and Times of the late Countess of Huntingdon, Part I. 8vo. (London, Simpkin and Co.)—With a portrait of this strange old lady, to be finished in eight Parts, and give a minute account of the origin of the great dissenting sect of which she was the head and founder.

Byron and the Abbey, by H. Austen Driver, author of "Harold de Burun," &c. Pp. 34. (London, Longman and Co.)—A brochure in which the author warmly contends for the admission into Westminster Abbey of Thordwaldsen's sepulchral statue of Lord Byron.

Scenes at Home and Abroad, by Herbert Byng Hall, author of "Spain and the War in Spain" &c. Pp. 292. (London, Saunders and Otley).—Some of these tales having already been favourably received as they appeared in the periodicals of the day, the author has completed a pleasant volume of them; with which readers will be equally gratified.

Gleanings from Germany, by James D. Haas. Pp. 369. (London, Hodson; D. Nutt).—A good collection from eminent German writers, and some of them not much known in England. The translation abounds with idioms of the original language; which, however, imparts a sort of quaintness to the style that is rather amusing than otherwise.

Holiday House: a Series of Tales, by Catherine Sinclair, &c. Pp. 387. (Edinburgh, W. Whyte and Co.; London, Longman and Co.; Dublin, Curry and Co.)—The authoress of several successful publications for juvenile readers, has here added to the list another clever performance; in which, advocating the culture of the imagination as well as of the mechanical and useful faculties, she tells stories fit for youth before boys and girls were treated and educated, as if they had all old heads on their young shoulders.

Lectures on English Poetry, &c. by Henry Neele. Pp. 229. (London, Thomas Tegg; Simpkin and Co.)—It speaks well for the public taste, that this tasteful little volume should have come to a third edition. Mr. Neele's observations are generally very just, and, if not profound, with a true feeling for poetry.

Stephen's History of Australia, &c. (London, Smith, Elder, and Co.)—A second edition, indicating the importance attached to this country as a region for colonisation. Mr. S. is a strenuous assertor of its superiority over every other land.

Philopæne's Cosmopolitan, Political, and Statistical Review, Parts I., II., III., and IV. (London, Wilson), is acknowledged.

Dublin Medical Press, No. I.—Dublin appears to be pressing earnestly forward in the establishment of a great medical school. Independently of the able journals already emanating from its press, the present publication, in a weekly form, seems well calculated for the popular diffusion of information in medicine and all the studies connected with that important branch of science.

ARTS AND SCIENCES. GEOGRAPHICAL SOCIETY.

JANUARY 14. MR. W. R. Hamilton, president, in the chair.—Read extracts from the following papers:—1. "Notice of a few simple Observations which it is desirable to make on the frozen Soil of British North America. Communicated by Dr. Richardson, R.N. F.R.S." Travellers into the arctic regions of Asia and America have mentioned, that the sub-soil of certain districts is permanently frozen; and Gmelin long ago declared, that, in Siberia, the thickness of the frozen earth was upwards of one hundred feet; but these statements were either overlooked or disbelieved until very recently, when Professor Baer of St. Petersburg, and Mr. Erman of Berlin, transmitted to the Geographical Society of London some account of the sinking of a well at Yakutsk, to the depth of three hundred and eighty-two feet in the frozen ground. The inquiry is to be prosecuted still further in Siberia, and Professor Baer suggests, that it would be desirable to collect information from the officers of the Hudson's Bay Company, as to the extent of the layer of frozen ground in North America, the thickness it attains in different parallels of latitude, and how much of it disappears towards the latter end of summer; and the council of the Geographical Society, desirous of promoting so important an inquiry in the department of physical geography, have caused instructions to be drawn up and printed for the guidance of the officers of the Hudson's Bay Company, who may be desirous of contributing to the advancement of science by their observations.

—2. A letter from Mr. Consul Brant, at Erzurum, dated 14th Nov. 1838, stating, that he had just returned from a journey in Armenia and Kurdistan; during which he had ascended the mountain of Supan Dagh, rising, to the north of Lake Van, about 10,000 feet above the sea, travelled along the western shore of Lake Van, visited Bitlis and Sert, thence returning to the foot of Ararat, he had traced the valley of the Murad Chai, or eastern branch of the Euphrates, from its source, near Diyadin to Kharput, a distance of about 300 miles; he had also obtained a survey of the river as far as Samosat. He concluded by saying that the tranquillity now introduced into Kurdistan, by the reduction of the rebel chiefs, will enable travellers to visit every part. The Bey of Hekeriyeh is obedient to the Pasha of Van; and Julamerik, in the heart of the mountain fastnesses, may now easily be reached.

—3. A letter from Col. Michell, surveyor-general at the Cape of Good Hope, communicated by A. Borradaile, Esq., and earnestly recommending the erection of a lighthouse at Cape das Aguilhas, to save us in future from such catastrophes as the loss of the *Arnlott*, *Doncaster*, *Northumberland*, and so many other valuable vessels. The Hon. Michael Van Breda, on whose property the ground in question stands, had most generously authorised the writer to state that he will be happy to contribute towards a work so loudly called for by suffering humanity, by giving, in perpetuity, as much ground as may be requisite for a lighthouse, with right of access to the same. The expense is estimated at between 1700*l.* and 1800*l.*; and the yearly cost of lighting, salary, and occasional repairs, at from 230*l.* to 240*l.*—4. From Mr. G. W. Earl, on board H.M.S. *Alligator*, dated Sydney, Aug. 21, 1838:—On the passage out from England, the vessel had touched at Adelaide, on the south coast of Australia; and Mr. Earl gives a very favourable report of the rapid progress of that colony, but he was more particularly struck with the docility of the natives. In consequence of good treatment on the part of the settlers, the aborigines have abandoned their former wandering habits, and have literally become "hewers of wood and drawers of water" for the whole population, depending for their subsistence on the bread and other provisions furnished them, in payment for the labour they perform. In features, these aborigines are remarkable for an extraordinary projection of the brow immediately above the eyes, unlike any the writer had seen either on the east or west coast. Mr. Earl also sends a short vocabulary of their language, which differs entirely from that spoken in the other known parts of the country; it abounds in vowels, and is very soft to the ear. Among many other topics mentioned in his letter, Mr. Earl strongly recommends a small dépôt for provisions, to be immediately established at the point of junction of the rivers Murray and Darling, which would greatly facilitate the communication between Sydney and Adelaide, prove of much mutual benefit, and no doubt soon become a town of much importance.—5. An account of the ascent of Mount William, the highest point in the range of mountains which form the chief physical feature in the south-eastern angle of Australia, by Dr. Lhotsky. This paper was illustrated with various views of scenery, taken in the Warragong Mountains (misnamed Australian Alps, on our maps), and of the remarkable botanical productions of that little known region. Dr. Lhotsky states that the temperature of boiling water, on the summit, was 196° Fahr., indicating an elevation of

about 8400 feet above the level of the sea. The president called the attention of the meeting to the chief donation of the evening, a copy of Mr. Murchison's geographical as well as geological work, "The Silurian System," in two large volumes, with a beautiful map engraved by Mr. Gardner. Having observed that certain border-countries of England and Wales, the Siluria of Caractacus, contained clear evidences of a succession of some of the most ancient strata in which organic remains occur, Mr. Murchison has devoted the last seven years in preparing this work, which is intended to show that the Silurian region may serve as the type of a normal group of hitherto unclassified deposits, which there rise to the surface in successive ridges, and connect the coal formations and other overlying strata with the older slaty rocks. In pursuing this object, Mr. Murchison coloured, geologically, the strata of the Ordnance Survey of eleven counties, of which the large map now presented to the public is an exact reduction, and in which minute details are combined with new views of general classification throughout the country, extending from the southern limits of Cheshire to the extremity of Pembrokeshire. The first volume of this work, embracing descriptive geology and physical geography, includes a full survey of the operations by which the surface of this part of Britain has passed from a submarine condition into dry land, and explains how the present drainage has been effected; each subject being illustrated with woodcuts and coloured sections. In it, the owners of the soil will also find a clear account of the tracts wherein coal may be advantageously sought for, as well as emphatic warnings against the repetition of many trials which have been made to find it amid Silurian rocks. The second volume describes the organic remains of these ancient strata, nearly four hundred species of which are represented in spirited etchings, and highly wrought lithographs.

LINNEAN SOCIETY.

MR. FORSTER in the chair.—A male spadix of the *Encopalotes horridus* (Zamia horrida of authors), which had flowered at Kimmel Park, the seat of Lord Dinorben, was sent for exhibition to the meeting, by command of H. R. H. the Duke of Sussex. The plant had been sent to Lord Dinorben from the Cape of Good Hope, about six years ago, by Lord John Spencer Churchill. The spadix was of unusual size, and bore a strong resemblance to a gigantic pine cone.—Read, 'An Account of the Indian Species of *Juncus* and *Lusula*,' by Professor Don, Libr. L. S. Eight species were described, of which seven belong to *Juncus* and one to *Lusula*. They are all from Northern India, and were collected by Dr. Boyle in the Himalaya range, between the Ganges and Jumna, or in Kunawur, a country situated beyond that chain of mountains. Of the seven species of *Juncus*, four are entirely new, and two are common European species, namely, *Juncus glaucus* and *hyssopus*. The *Lusula* is *spicata*, which occurs on the mountains of Scotland, Wales, and throughout Europe, extending as far as the extremity of Lapland; and being also found in Greenland and Northern Asia. Among the donations was a copy of Mr. Murchison's splendid new work on the "Silurian System of Geology."

ELECTRICAL SOCIETY.

TUESDAY, 15th Jan.—Read 'An Examination of the two Theories of Homogeneous Attraction, and Repulsion of the Particles of the Electric

Fluid,' by Mr. Pollock. Each hypothesis has been supported by such powerful arguments and facts, that both are entitled to fair and candid examination. The advocates of repulsion believe that the particles of the electric fluid are essentially self-repulsive, and only attractive when in motion. In opposition to this, it is asked, If a repulsive force alone existed in the electric fluid, why should two parallel currents attract each other? Why should not this assumed repulsive force carry them from each other in all directions, instead of towards each other? Why should the fluid be confined, by non-conductors, to the surface of bodies, as by the air? Why not radiate in all directions from that surface? The supporters of attraction, asking such questions, consider the electric fluid to be more like a liquid than a gas, nearly incompressible, not elastic, and, therefore, not self-repulsive among its particles, and object to electric atmospheres. The recent researches of Faraday are strongly favourable to these latter views. If the repulsive force alone determined the properties of the electric fluid, why should decomposition be an almost necessary accompaniment of its conduction through compound bodies, as water? Why also, in that case, should induction through a dielectric take place by the action of contiguous particles alone? Would not the self-repulsive force of the electric fluid produce electric action, independently of the decomposition and the contact of contiguous particles? Would it not rather pass through their interstices, where the resistance might be less? Such, however, does not appear to be the case. Mr. Pollock in a former paper (*Lit. Gaz.* 1112) showed, from the action of light upon charcoal, that a change in the arrangement of the particles of charcoal, similar to decomposition, as in Faraday's experiments upon compounds, and a recombination, must occur during the passage of the electric fluid through it. That charcoal, therefore, was a conductor; whilst diamond, which is said to be, chemically, the same body, not undergoing the change, is a non-conductor. If the electric phenomena were dependent upon the self-repulsive action of its particles, why should they not pass through the interstices of the particles of the diamond in the same way as they pass through charcoal? But this difference of the electric properties of the diamond and charcoal has more to do with a difference in their atomic arrangement, than with the self-repulsive force of the electric fluid. Mr. Pollock believes, that the theory of "attraction" is most applicable to the explanation of electrical phenomena, if electricity be considered an isolated science, perfectly distinct from that of heat, light, &c. But, he says, it becomes a question whether the science can be best advanced by a strict adherence to those laws which custom has sanctioned as the only electrical ones; or by enlarging those laws, so as to include the phenomena which constitute links between the kindred sciences of electricity, heat, and light, and may be said to belong to either indifferently? The electricity of a thunder-cloud gives no evidence of either heat or light; but when it passes to the earth, as a thunderbolt, it gives evidence of both, which are as strictly electrical phenomena as any other can be, being dependent upon the transfer of the electric fluid. Taking the enlarged view, Mr. Pollock thinks no one will dispute that a repulsive force is more characteristic of the phenomena of heat and light, generated from an electric source, than an attractive force; and, in accordance with this view, he believes the "theory of repulsion" to

be the better founded. The mode he recommends, as most likely to clear up these difficulties retarding the progress of electrical science, is to examine the latent heat of bodies, and to trace out its changes occurring during the change of form in bodies: because, it appears that the latent heat of bodies, and their electric fluids, are synonymous. And he thus concludes, if this course were followed up, the apparent anomalies attending the opposing theories of attraction and repulsion, would vanish. The supposed jarring separate fluids of heat, light, electricity, and magnetism, would be put to flight, their apparent inconsistencies cleared away, and one beautiful cause for all natural phenomena be shewn.—Read, also, a communication from Mr. Mackrell, detailing experiments made by himself and Mr. Pollock, with reference to the interference in voltaic batteries, when arranged in series. They consider they have traced a regular progression, and have proposed a formula. Into the details, our space will not permit us to enter.

GEOLOGICAL SOCIETY.

OWING to an accident last week, the second page of transcript paper on which the report of the Geological Society should have been written was a blank, and we were compelled to omit Dr. Harlan's notice on the vertebrae of *Basilosaurus* (one), found in the marly banks of the Washeta River, Arkansas, and others, in hard limestone, in Alabama. In the latter, a fossil corbula, common to the tertiary deposits of the country, was found, as well as Nautilus, Scutella, and Modiola, of extinct and new species. Dr. Harlan is of opinion that the teeth, &c., belong to a marine carnivorous animal; but the fossil bone to a saurian reptile, upon which he had bestowed the above name. Dr. H. also offered some remarks on a fossil discovered, some years ago, near the banks of the Yellowstone River, Missouri, imbedded in hard blue limestone; which he considered to belong to the batrachian order, and to which he proposed to give the name of *Batrachosaurus Missouriensis*.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

We have been requested to correct an error (copied into our paper of the 29d ult.) in printing the subjects issued by the Vice-Chancellor for this year's Epigrams. They are as follow:—

For the Latin Epigram, Οὐχ ἰκανοὶ γίνονται τὰ σφύρανα.

For the Greek Epigram, τὰνῶντα συνίστην.—*Cambridge Chronicle*.

HIMYARITIC LANGUAGE.

To the Editor of the Literary Gazette.

SIR,—I have read with attention and interest your report of Lieut. Wellsted's letter to the Royal Asiatic Society, 'On the Identity of the Himyaritic Writing and Dialect of Job with that still spoken by the Inhabitants of Mahrah.'

I would, however, submit, with all deference to other authorities, that our information must be far more clear and accurate on this subject, than it now is, before we can venture to support such an opinion.

A circumstance like this would be totally contrary to experience, both in ancient and modern times. Thus we find the language of the Jews, after the seventy years of the Babylonian captivity, suffered a material change, in consequence of the introduction of Chaldean methods of inflection and expression. Those nations which appear to have retained their original language unchanged for any considerable period, are either such as, from their pecu-

liar situation, have had but little intercourse with the rest of the world, or those whose country has presented obstacles of such a nature as to be absolutely insurmountable by invading tribes.

With respect to the inscription, I am of opinion it bears a closer resemblance to the Samaritan than to the Ethiopic character; but a greater variety of specimens, copied with the strictest fidelity, and then compared with inscriptions on Samaritan coins, must be afforded before we could determine it. Morinus says—"Antiquas literas Hebraicas easdem fuisse cum Samaritanis ex sicis seu numismatis constat, quæ ex rudibus Hierosolymitanis effossa, characteres Samaritanos plerumque periculis sunt, ex quibus literas seu crucis figuram olim representasse, literasque hebraicas Samaritanas ab antiquis parum differre colligitur."

Now this identical *seu* occurs twice in the inscription given by Lieut. Wellsted in your journal, and the Ethiopic *seu* bears no resemblance to it. Numerous inscriptions will, no doubt, be found by future travellers in these regions. The practice was very prevalent in the earliest times, and is verified in the pillar of Seth, and in that sublime passage in the Book of Job, where, in reference to the words, "I know that my Redeemer liveth," the patriarch says—

בְּעֵת-בִּיחָלִי וְתַחֲרִי לֵעַד בְּצַר תִּזְכָּר

Which might be rendered thus—"Let them be set (i. e. the words) in the rock (or horn stone) with a graving tool of iron and lead, as a memorial (or a witness) for ever."—I am, &c.

WILLIAM GODFREY.

27 Arundel Street, Strand, Jan. 14, 1839.

SOCIETY OF ANTIQUARIES.

MR. HALLAM, V.P. in the chair. — Mr. Haggard exhibited two sacrificial instruments found in the ancient tombs of Etruria; several of these extraordinary instruments have been brought over to England, but we believe no one has been able to explain the exact use of them. Mr. C. R. Smith exhibited a Roman weight found in the bed of the Thames; it was of brass, in the form of a wolf's head, and boldly executed. The reading was concluded of the 'Life of Sir Peter Carew,' giving minute particulars of his death and funeral. Mr. Belz communicated some particulars relative to the battle of Cressy, and the positions and movements of the two armies immediately previous to the battle, which being partly read, the remainder was postponed.*

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Statistical, 8 P.M.; British Architects, 8 P.M.
Tuesday.—Royal Medical and Chirurgical, 9½ P.M.; Zoological, 9½ P.M.
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; Medico-Botanical, 8 P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.; Numismatic, 7 P.M.
Friday.—Royal Institution, 8½ P.M.
Saturday.—Artists' Conversazione, 7 P.M.; Guy's Hospital, 8 P.M.

FINE ARTS.

THE DAGUEROTYPE.

Paris, 9th January, 1839.

M. ARAGO made, on the 7th of this month, a verbal communication to the Academy of Sciences, on the fine discovery of M. Daguerre, which confirms all the important points of the report which we gave last week. We extract some passages—"In the camera-obscura, the image is perfectly defined when the lens is achromatic; the same precision is seen in the

images obtained by M. Daguerre, which represent all objects with a degree of perfection which no designer, however skilful, can equal, and finished, in all the details, in a manner that exceeds belief. It is the light which forms the image, on a plate covered with a particular coating. Now, how long a time does the light require to execute this operation? In our climate, and in ordinary weather, eight or ten minutes; but, under a pure sky, like that of Egypt, two, perhaps one minute, might suffice to execute the most complex design."

Considering the great utility of the discovery to the public, and the extreme simplicity of the process, which is such that any person may practice it, M. Arago is of opinion, that it would be impossible, by means of a patent or otherwise, to secure to the inventor the advantages which he ought to derive from it; and thinks that the best way would be for the government to purchase the secret, and make it public. M. Arago mentions the attempts formerly made to obtain images in a similar manner, by the action of the light on nitrate of silver: on this point he says—"M. Daguerre has found a substance infinitely more sensible to the light than the chloride of silver, which is altered in an inverse manner, that is to say, which leaves on the several parts of the plate, corresponding to the several parts of the object, dark tints for the shadowy, half tints for the lighter parts, and no tint whatever for the parts that are quite luminous. When this action of the light on the different parts of the plate has produced the desired effect, M. Daguerre stops it at once, and the design, which he withdraws from the camera-obscura, may be exposed to the full light of day, without undergoing any alteration."

"If we consider M. Daguerre's discovery with respect to the utility which it may have in the sciences, it is evident that so sensible a reagent as that which he has found, may enable us to make photometrical experiments, which have hitherto been reputed impossible. Such," said M. Arago, "are experiments on the light of the moon; which the Academy had deemed of sufficient importance for it to appoint a committee, composed of M. de Laplace, M. Malus, and myself, to make them. The light of the moon is known to be 300,000 times weaker than that of the sun; yet we did not despair of obtaining some sensible effects, by means of a lens of very large dimensions. We made use of a very large lens, brought from Austria; and, placing some oblique of silver in the focus, that being the most sensible reagent known, not the slightest discoloration was perceptible. It occurred to me, that M. Daguerre might have more success with his new reagent; and, in fact, he obtained, in twenty minutes, on his dark ground, a white image of the moon, with a lens far less powerful than ours."

M. Biot added some details to those given by M. Arago. "I have several times," said he, "seen M. Daguerre, and I can say, that in the numerous trials which he has made to attain these astonishing results, he has discovered several extremely interesting properties of light, some of which might have been foreseen by natural philosophers, as soon as they inquired what must happen in certain given circumstances, but of which others were completely unexpected."

As for the principal discovery, I can speak of the perfection of the results obtained, not after my own judgment, but after that of a celebrated artist, M. Paul Delaroche, in whose

company I have examined some of the designs taken by the new process. M. Delaroche thinks they may give useful hints to the most skilful painters, in the manner of expressing by light and shade, not only the relief of objects, but the local tint; the same bas-relief in plaster and in marble, will be differently represented in the two designs, and you can tell, at the first glance, which is the image of the plaster.

In one of these designs, you may almost tell the hour of the day. Three views of the same monument are taken; one in the morning, one at noon, and the other in the evening; and nobody will mistake the effect of the morning for that of the evening, though the sun's altitude, and, consequently, the relative lengths of the shadows, are the same in both.—*Le Temps*.

Paris, 10th January.

The discovery of M. Daguerre has been for some time past the subject of marvellous statements. The ingenious contriver of the Diorama had devoted himself to the study of the properties of light, with the ardour and perseverance of which genius alone is capable. Yet the accounts, fabulous as they appeared, are conformable to the truth, except that M. Daguerre's pictures do not give the colour, but only the outlines—the lights and shadows of the model. It is not painting, it is drawing, but drawing carried to a degree of perfection which art can never attain. The facsimile is faultless.

Every picture that was shewn us produced an exclamation of admiration. What fineness in the strokes! What knowledge of the chiaroscuro! What delicacy! What exquisite finish! How soft is that stuff! How silent those bas-reliefs! There is a Venus crouching down, seen in different points of view. How admirably are the foreshortenings given: it is nature itself. All this is wonderful. But who will say that it is not the work of some able draughtsman? Who will assure us that they are not drawings in bistre or sepia? M. Daguerre answers by putting an eyeglass into our hand. Then we perceive the smallest folds of a piece of drapery; the lines of a landscape invisible to the naked eye. With the aid of a spying-glass, we bring the distances near. In the mass of buildings, of accessories, of imperceptible traits, which compose a view of Paris taken from the Pont des Arts, we distinguish the smallest details; we count the paving-stones; we see the humidity caused by the rain; we read the inscription on a shop sign. The effect becomes more astonishing if you employ the microscope. An insect of the size of a pea, the garden spider, enormously magnified by a solar microscope, is reflected in the same dimensions by the marvellous mirror, and with the most minute accuracy. It is manifest how useful M. Daguerre's discovery will be in the study of natural history.

The artist has already enriched science with the solution of several problems. The experiments on the light of Sirius have confirmed the testimony of natural philosophy, and abundantly proved that the stars are bodies of the same nature as the sun. At the request of M. Biot, M. Daguerre has submitted his apparatus to the influence of the light of the moon, and has succeeded in fixing the image of that luminary. We observed that the image had a trail of light, something like the tail of a comet, and we ascribed it to the movement of the body during the operation, which is of much longer duration than that by the light of the sun.

We have seen that the impression of the

* In last week's report of this Society's proceedings, for "Evening," read "Sunning."

image is made with more or less rapidity, according to the intensity of the light, which is more powerful at noon than in the morning or evening, in summer than in winter, in a latitude near the equator than near the pole. M. Daquerre has hitherto made his experiments in Paris only; and, even under the most favourable circumstances, they have always proceeded with a slowness which has not allowed him to obtain complete success, except with inanimate nature, or nature in repose. Motion escapes him, or leaves only indefinite and vague traces. It may be presumed that the sun of Africa would give him instantaneous autographs,—images of nature, in motion and life.—*Le Commerce*.

NEW PUBLICATIONS.

The Only Daughter. Engraved by F. Engleheart, from a Picture by Sir David Wilkie, R.A. Moon.

THIS interesting—painfully interesting—perhaps, too painfully interesting work, forms one of the series of masterly productions from the pencil of Sir David Wilkie, classed for publication under the head of “Domestic Subjects.” Nothing can equal the depth of its pathos, except the merit of its execution. It represents a young girl, lying on what there seems but too much reason to apprehend is the bed of death. Her physician (an excellent portrait of Sir Anthony Carlisle) sits by her, and is in the act of feeling her pulse; while her agonised parents are breathlessly awaiting the result of his investigation. In the words of the detailed description which accompanies the print, “All things announce one of those dreadful moments into which are crowded the feelings of years,—one of those fearful trials of the heart which, be their issue what it may, never leave the spirit as young, nor the forehead as fresh, as they found them [it?].” It is said on the highest authority, that “it is better to go to the house of mourning than to the house of feasting;” and, by a parity of reason, the occasional contemplation of a pictorial scene so heart-rending as that before us may make the spectator, though “a sadder,” yet “a better man.” This, at least, is certain—that the painter has here accumulated, with consummate ability, not only in the principal features of the composition, but in its various and well-imagined accessories, every circumstance calculated to produce the melancholy and sympathetic feeling which it was his object to excite. The plate has been engraved in line, with great care and talent, by Mr. Engleheart.

BIOGRAPHY.

EDMUND LODGE, ESQ., F.S.A., &c.

WE have this week to record the death of this veteran in literature. Mr. Lodge died on Thursday, in his 79th or 80th year. He was, we believe, Norroy king-at-arms in the Herald's College, a Fellow of the Society of Antiquaries, and otherwise honoured by literary titles. In 1791, Mr. Lodge published, in 3 vols. 4to. “Illustrations of British History, Biography, and Manners in the Reigns of Henry VIII., Edward VI., Mary, Elizabeth, and James I., from MSS. belonging to the families of Harwood, Talbot, and Cecil.” His next work was the Biographical Illustrations which accompany portraits by H. Holbein, in the royal collection, folio; but his great undertaking, that extensive collection of portraiture and biography planned by Mr. Harding, and so well known under the title of “Lodge's Portraits.” If we remember rightly, it was commenced some twenty-four years ago, and continued with

great spirit during many years. In private life, Mr. Lodge was full of information; and his general habits of some literary peculiarities—such as much study and the lamp are apt to generate. He was much esteemed by his friends and the society with which he mixed.

THE DRAMA.

HAS little of novelty for record. At *Drury Lane*, a smart and successful farce, from the pen of Mr. George Dance, and entitled *Now or Never*, has been produced. At *Covent Garden*, the popular favourites continue to fill the theatre to its utmost capacity every night. The Queen has visited *Drury Lane* twice, and the Haymarket once (on Tuesday, when the very deserving manager, Mr. Webster, took his benefit), in a private style, and was allowed to enjoy the entertainments without much calling forward. The Haymarket closed its season on Tuesday, but on Wednesday Mrs. Fitzwilliam had a bumper benefit.

VARIETIES.

VERY ORIGINAL CORRESPONDENCE.

WE have in our time received a pretty considerable quantity of original correspondence, but seldom any more original than the following, which we insert *literatim*, together with the title-page description of the MS. poems offered to our patronage. Perhaps the sample will satisfy our readers, without our going into the main compositions:—

“To the Sect of the British Association Parleiment & London.

“HONOURED SIR,—we humbly beg Your pardon in trespassing on Your attention at this time I am prompted by stern Tyranic needlessness to this very unpleasant task Your honour will see I have been rather an unfortunate Anemal in life in having to leave my native home Several times for want of employment as a Damaak weaver having having a Shop and looms of my own the first time I went into Army eight years when my Regt was broke I returned to my trade and continued twelve Years more When I was discorced again—By the fall of trade and the failing of Manufacturers Any employment I have had since has been in teaching dancing after a long Series of Seckness I came from the City of Norwich to London Expecting to receive Some Scores of pounds dew to me by Thomas Earl of Elgin and Admiral Sir Philip Durham, who was the Earls Brother in law Elgin is my debtor for Teaching Hes family dancing and the Admiral for Table linen I wove for hes first Lady Charlotte Buce the Earls Sister Elgin has promised Several times to pay me but he has not made hes word good on that point I have not got the tythe of my labour from my Noble Cuntrymen they both had Maney letters seven Years back but the Barrester made up the business with them Wyse was hes name M P I have Sufered a good many privations Since I came to London not having any employment there has been great promises held out to me E'er grass doo grou the beast my die

“Hon^d Sir,—were You pleasd to help me to gite a few of my rustic rhymes in print and make me a flying Stationer I will be iternaly gateful to Your honour and as in duty bound will for ever and ever pray

“R. D. PATERSON

“10 Jun 1830

“18 St Anns St Westminster.”

“Original Poetry Sentimental and humours upon a hundred and fifty Subjects Serlio-comic and between the Second edition double-trile enlarged Some will be upon music and dancing others on drawing and on fencing

Upon history and pollicits Religion too the will be mixt

As lay preachers are nou so many My right may be as good as any on epegrams and epetaphs To make Conserves and Whigs to laugh The Radicals will see some chaff on eulogys and elegys on thorough fares and London flass I'll try some of all ranks to please on a-crostickes there will be many Of caustic ones there is not any on Restitution of all things Wpon popes-prists—Bishops and on Kings Here ye will see some real queere things of songs they'll be a gay tua three Wpon love-war and on Masonry on hunting Sailors and the sea I think my works will make four volumes The price will only be ten shillings It may be less will be no more Extorcion I always abhorre.”

Animal Instinct.—The following fact is related by M. Boden, physician at St. Donnal. It occurred at St. Bonnet-sur-Galaure, canton of St. Vallier, department of the Drome:—“Three dogs, two belonging to M. G., and the other to M. P., of the above village, went out to hunt without their masters. It seems, that after having eagerly pursued a wild rabbit, which took refuge in its burrow, one of M. G.'s dogs, carried away by his eagerness in the chase, entered so far into the burrow, that to retreat was impossible. After scratching to no purpose to extricate him, his two companions returned home, in a state of melancholy and despondency, which was observed by their masters, who could not guess the cause. On the following day the two dogs again disappeared. They returned in the evening to their respective homes, exhausted with fatigue, refusing food, their feet bleeding, and their bodies covered with earth and sweat. The same thing happened on the morrow, and following days. M. G., seeing that his dog did not return, and surprised at the daily disappearance of his second dog, which did not come home till night, and in a most deplorable condition, spoke of it to M. P., who told him that for a week past his dog had done just the same. At length, on the following morning, M. G. was awakened at daybreak by the whining of several dogs that were scratching at his door. He went down to see what was the matter, and his astonishment may be conceived when he saw his dog, which he had supposed to be lost, weak, faint, reduced to a skeleton, escorted by his two deliverers, who had accompanied him to his master's house, and now, seeing him safe in his care, went and lay down quietly on a heap of straw, scarcely able to move a limb. M. G. having then some notion of what might have happened, went out to endeavour to discover the spot where this affecting circumstance had taken place. He found, in fact, that the narrow opening by which his poor dog had entered, was transformed into an open trench, which was evidently the work of the two other dogs.

Schloss's Bijou.—We have just had a peep at the copies of this exquisite little annual which have been prepared for her Majesty and the Duchess of Kent; nothing can exceed the taste with which they have been adorned. They are really as fit for royal presents as the Sultan's diamonds, and will (we doubt not) be hardly less appreciated. Since writing, we are glad to learn that Her Majesty has graciously acknowledged the presentation, with a suitable pecuniary compliment to the ingenious Mr. Schloss.

Literature, &c.—According to the Supplement to “Bent's Monthly Literary Advertiser” for 1838, there appears an increase of new publications, the number of books amounting to 1550 (1850 volumes), exclusive of new editions, pamphlets, or periodicals, being 170 more than in 1837. The number of engravings is eighty-

seven (including thirty-five portraits), sixteen of which are engraved in the line manner, forty-one in mezzotint, fourteen in aquatint, and sixteen in chalk, lithography, &c.

American Ideas of Royalty.—At a ball in the United States, the conversation happened to turn upon the English army, when a young lady remarked to an officer, her partner, "Well now, I guess, your *Miss Kent* knocks you about just as we do our Niggers!" *Miss Kent*, meaning our gracious Queen Victoria!

Encouragement to Artists.—The New City Exchange Hotel, at New Orleans, was opened on the 1st of November last. It is an immense establishment; and some idea may be formed of its costliness and splendour from the fact, that the painting of the ceiling of the ball-room alone, cost 15,000 dollars! The subjects are of a mythological character.

LITERARY NOVELTIES.

Captain Marryat, it is reported, is likely to publish his recent travels in America in monthly parts.

Egyptian Hieroglyphics.—Mr. Goodhugh, we are informed, is preparing a course of lectures, in which an important step towards the discovery of the hidden meaning of these characters will be developed by an investigation of the Hebrew of the Pentateuch. When we consider that the Israelites remained nearly 300 years in Egypt, the natural inference is, that their language must have been as nearly as possible identical with that then spoken in that country; and as the Pentateuch was written immediately after the Exodus, it presents the nearest approximation to the language of the time in which these symbols appear to have been applied to the expression of ideas. Numerous illustrations from ancient monuments will render these lectures highly curious and interesting.

In the Press.

The Year-Book of Facts in Science and Art; exhibiting the most important Discoveries and Improvements of the Past Year, by the Editor of the "Arcana of Science," and late Editor of the "Mirror."

LIST OF NEW BOOKS.

An Answer to the Misrepresentations contained in an Article on the "Life of Clarendon," in No. CXXIV. of the "Quarterly Review," by T. H. Lister, Esq. 8vo. 1s. 6d.—Three Letters to the Marquess of Chandos, on the Effects of the Corn Laws, by R. Torrens, Esq. F.R.S. 8vo. 2s.—Lalla Rookh, an Oriental Romance, by T. Moore, Esq. beautifully illustrated, 1 vol. royal 8vo. 21s.—My First Concealment, by W. A. Currie, 18mo. 2s.—Scenes from Real Life, by Mrs. Sherwood, Second Series, square, 1s. 6d.—Flaxman's Lectures, with large Additions, 62 Plates, royal 8vo. 21s.—Horsley's Collector's Manual; Predaceous Beetles, 8vo. 10s. 6d.—Neodruidic Heresy in Britannia, 4to. 14s.—Journal of the Statistical Society of London, Vol. I. 8vo. 15s.—Sketches and Skeletons of Sermons, Vol. IV. 12mo. 4s. 6d.—The Christian's Daily Portion, by J. Burns, new edit. 12mo. 5s. 6d.—Janet; or, Glances at Human Nature, 3 vols. post 8vo. 31s. 6d.—Gazella; or, Kibber the Wanderer, by F. Worsley, fcap. 7s.—Scenes at Home and Abroad, by H. B. Hall, post 8vo. 10s. 6d.—Horace Vernon; or, Life in the West, 3 vols. post 8vo. 31s. 6d.—J. Bennett's Practical Geometry, 8vo. 15s.—Wesley's Journals, new edit. 8vo. 14s.—The Sabbath Book, Moral and Religious Extracts, by C. Woodfall, 12mo. 5s.—J. Stephens's History of South Australia (being a 2d edit. of the "Land of Promise"), 8vo. 8s.—Transactions of the Zoological Society of London, Vol. II. Part 3, 20s. coloured.—Grammar of the Five Senses, by F. Wingham, post 8vo. 6s.—The Christian Mission, by J. A. Boddy, 12mo. 3s. 6d.—Select English Poetry, 18mo. 4s.—Ecclesiastical Legal Guide, by a Barrister, Vol. I. royal 8vo. 15s.—Daniels's Chancery Practice, Vol. II. Part 2, 8vo. 10s.—The Domestic Altar, by E. Temple, 12mo. 3s. 6d.—The Naturalist's Library, Vol. XXIII. "Marine Amphibia," fcap. 6s.—The Life of Lord Anson, by Sir J. Barrow, 8vo. 14s.—Hints to Mechanics on Self-Education and Mutual Instruction, by T. Claxton, fcap. 4s.—Commentaries on the Law of Bailments, by J. Storey, edited by R. Charnock, 8vo. 18s.—Prior's Life of Edmund Burke, 3d edit. 8vo. 14s.—Manual of Private and Ball-Room Dancing, by B. Dun, 18mo. 2s. 6d.—Miles's Manufacturer's Assistant for Calculating Wages, 18mo. 2s.—Tales and Legends of the Isle of Wight, by A. Elder, fcap. 6s.—Lecount's History of the Birmingham Railway, 8vo. 5s.—Memoirs of Miss Sarah Brunster, of Chester, by the Rev. P. C. Turner, 18mo. 3s.

TO CORRESPONDENTS.

"S. C." is too long for us at this busy time. Mum's subject hardly comes within our province. Sir John Barrow's "Life of Lord Anson" has reached us too late to have the consideration due to such a work paid to it this week.

ERRATUM.—In our notice of Mr. Charles Woodfall's excellent selection from English authors, in our last, p. 24, col. 3, by some mistake the volume was called the "Scrap-Book," instead of the "Sabbath-Book," which is the title, and more accurately designates the object of the work.

ADVERTISEMENTS,

Connected with Literature and the Arts.

CAUTION.—MR. NEWMAN, Artist's Colourman, 24 Soho Square, in consequence of his Name and Address having most unwarrantably been placed in a conspicuous manner at the Door of the Shop recently opened by Mr. Joseph, 14 Soho Square, calculated to mislead, and which has in fact in several instances misled, the Public, most respectfully informs his Friends that his Business is conducted on the same Principles, and at the same House, where it has been established for so many years, and that he has no connection with Mr. Joseph.

SALES BY AUCTION.

Ancient Armour and Arms from Spain.
By MESSRS. CHRISTIE and MANSON,
AT THEIR GREAT ROOM,
KING STREET, ST. JAMES'S SQUARE,
On WEDNESDAY, JANUARY 3d,
AT ONE PRECISELY,

A very important Assortment of
ANCIENT ARMOUR AND ARMS,
Recently received from Spain,

Consisting of Parts of Suits of Polished Steel, engraved and gilt; Helmets and Gauntlets, embossed; Horse Armour and Trappings, in fine old Italian taste; Rapiers and Fencing Daggers, the hilts pierced and richly ornamented; Sixteen Florentine Musket; Tapestry; and a few Pieces of Saxon Porcelain; and a few Pictures.
May be viewed Two Days preceding, and Catalogues had.

THE PONIATOWSKI CABINET OF ANTIQUE GEMS.

MESSRS. CHRISTIE and MANSON
Respectfully inform the Nobility, Gentry, and Public, that the very celebrated and unique
CABINET OF ANTIQUE GEMS,
Chiefly in Intaglio, of the late Prince Poniatowski, of which full Particulars will be shortly given, will be sold by them in the Month of April.

Objects of Taste and Virtue from Florence.

By MESSRS. CHRISTIE and MANSON,
AT THEIR GREAT ROOM,
KING STREET, ST. JAMES'S SQUARE,
On THURSDAY, FEBRUARY 7th,
Precisely at One o'Clock,
The valuable and very interesting

CABINET OF OBJECTS OF TASTE AND VIRTUE,

Of the late PRINCE PONIATOWSKI,
And recently received from his Palace at Florence.
Consisting of a few Antique Marble Busts and Fragments; Bronzes and Terra-Cottas; some Pieces of Greek Pottery and Raffaele Ware; Cups of Crystal and Ivory; Roman Mosaics, by Barberi, Raffaele, &c.; Miniature Paintings in Oil, &c. &c.
May be viewed Two Days preceding, and Catalogues had.

The Poniatowski Gallery of Pictures from Florence.

MESSRS. CHRISTIE and MANSON
Respectfully inform the Nobility and Public, that
On FRIDAY, FEBRUARY 8th,
And following Day, precisely at One o'Clock, they will
SELL BY AUCTION,
AT THEIR GREAT ROOM,
KING STREET, ST. JAMES'S SQUARE,
The very valuable and extensive

Collection of Italian, French, Flemish, and Dutch Pictures, Of the PRINCE PONIATOWSKI, deceased, from the Palazzo Poniatowski at Florence.

This Collection is celebrated for having been formed with a view to assembling the most pleasing Subjects of the different Schools. It comprises a beautiful Landscape, with Waterfalls, by Ruysdael; a Seaport, by Berghem; a beautiful Gem by V. der Heyden; a Landscape by Teniers; and Specimens of the following great and esteemed Masters:

Parmegiano	Brenzino	Possini	Oleozanti
Titian	Domenichino	Rubens	Hooker
Palma	C. Dolci	Canalotti	Denis
Caravaggio	C. Cignani	Sabbatini	Fedanza

May be viewed Two Days preceding, and Catalogues had.

ENGRAVINGS, DRAWINGS, AND PICTURES.
MESSRS. FORSTER and SONS are directed to sell by Auction, at the Gallery, 54 Pall Mall, on Tuesday, 29th January, and several following days, a Collection of Pictures of the Italian, Flemish, and English Schools, the Property of a Nobleman, and a large and interesting Collection of Engravings, including a singular assemblage, illustrative of the event of the French Revolution and the Life of Bonaparte. Also a very choice Series relating to the Army and Navy, well adapted for the Museum of a Naval and Military Club. A variety of Drawings in Water Colours by Ancient and Modern Masters, &c. &c.
May be viewed three days prior.

BOOKS IN THE PRESS.

On Thursday next, the 2d edition, carefully revised, in 2 vols. 8vo. of
THREE EXPEDITIONS into the INTERIOR of EASTERN AUSTRALIA; with Descriptions of the recently explored Region of Australia Felix, and of the present Colony of New South Wales.
By Major T. L. MITCHELL, F.G.S. and M.R.G.S.

SPLENDIDLY ILLUSTRATED WORKS.

In super royal 8vo. with 81 Engravings,
**THE PICTORIAL EDITION OF
SHAKSPEARE.**

Part III. Romeo and Juliet. Price 2s. 6d.
The Notes and Notices embrace every subject that appears necessary to be investigated for the complete information of the reader. The almost endless variety of objects presented in the text will call for the best assistance that the editor can procure from gentlemen conversant with particular departments. In the Design and Engraving of Woodcuts the most eminent Artists are employed. The same desire will preside over the artistical as the literary department—namely, to produce an edition of Shakspeare that, whilst it may be more interesting to the general reader, as well as more attractive as a work of art, than any which has yet been published, shall also at the most complete accuracy; and thus offer a not unworthy tribute to the great poet, which may be acceptable not only to England, but every country where his works are welcomed as the universal property of the civilised world.

To be completed in 44 Monthly Parts.

II. In super royal 8vo. with 25 Engravings, price 2s. 6d. Part IX. of a new Translation of
Tales of a Thousand and One Nights; known in England as the Arabian Nights' Entertainments; with Copious Notes. By E. W. Lane, author of "An Account of the Modern Egyptians." Illustrated with many hundred Woodcuts, engraved by the first English Artists, after original designs by William Harvey. The Work will form Three Volumes. The first will be completed on the 1st of February.

III. In super royal 8vo. with 25 Engravings, price 2s. the 23d Part of
The Pictorial History of England; being a History of the People, as well as a History of the Kingdom. Illustrated with many hundred Woodcuts of monumental records; coins; civil and military costume; domestic buildings, furniture, and ornaments; cathedrals, and other great works of architecture; sports, and other illustrations of manners; mechanical inventions; portraits of eminent persons; and remarkable historical scenes. The Publishers distinctly pledge themselves to the completion of the Work in Four Volumes. Vols. I. and II. are now ready, price 24s. each, bound in cloth.
London: Charles Knight and Co. 27 Ludgate Street.

Post 8vo. 10s. 6d.
FRANCIA'S REIGN OF TERROR; the Continuation of "Letters on Paraguay."
By J. F. and W. P. ROBERTSON.
By the same Authors, 2d edition, with Maps and Plates.
2 vols. post 8vo. 21s.
Letters on Paraguay.
John Murray, Albemarle Street.

RICHARDSON'S NEW DICTIONARY of the English Language.

Abridged, in 1 large vol. 8vo. 12s. cloth.
This Dictionary comprises, as equally essential, the two departments of Etymology and Explanation: the former most carefully and elaborately investigated, and the latter founded, with equal care and labour, upon such results as investigation may discover. This combination, unattempted in all other English dictionaries, will, it is hoped, entitle the book to the character of Scholar's Manual; and, at the same time, pre-eminently distinguish it as a book of common reference.
A Prospectus, accompanied by a specimen, may be had (gratis) of the Publisher.
The larger work, containing nearly 3000 pages of three columns each, price Five Guineas.
William Pickering, Chancery Lane.

WILLIAM HOWITT'S NEW WORK.
In fcap 8vo. with above 40 Woodcuts, by S. Williams, Esq. cloth.
THE BOY'S COUNTRY BOOK; being the real Life of a Country Boy, written by Himself; exhibiting all the Amusements, Pleasures, and Perils of Childhood in the Country.
Edited by WILLIAM HOWITT.
Author of "The Rural Life of England," &c.
London: Longman, Orme, and Co.

THE ANALYST.
Price 4s. No. XXVI. of
THE ANALYST; a Quarterly Journal of Science, Literature, Natural History, and the Fine Arts.
Edited by EDWARD MANNATT, Esq. F.R.S. &c.

Contents.
I. Critical Observations on Burnet's History of the Reformation—II. View of the State of Literature and Speculation in Denmark previously to the Sixteenth Century—III. REVIEW OF NEW BOOKS.

The Life of George Lord Anson, Admiral of the Fleet, &c. &c. By Sir John Barrow, Bart. F.R.S., author of the "Life of Admiral Lord Howe." 8vo. pp. 484. London, 1839. Murray.

AN authentic "Life of Lord Anson" was certainly a naval and national desideratum, notwithstanding the publication of preceding memoirs more interesting from their subject than from any other merit: and such a task could not have devolved into better hands than into those of Sir John Barrow, so long and intimately connected with the concerns of our navy, and so well qualified by his literature and talents to do justice to the undertaking. And a very excellent biography of this distinguished seaman we have; though, strange to say, the author has almost contrived to spoil it—perhaps we should use the word eclipse it? This is done by a "Supplemental Chapter" on the State of the Navies of Great Britain, France, Russia, America, &c., and on the Manning and Health of the Navy. So important is this view at the present epoch, that we feel assured the appendix of sixty-four pages will change places with the main feature of the work, and be read with immediate and infinite interest, whilst the "Life of Anson" may be left to more leisure moments.

Sir John Barrow truly speaks of himself as "an old servant of more than thirty years in this department" (the Admiralty) "under eleven different administrations—Whig and Tory;" and, as far as his official character is concerned, of no political party, his "only party being the Navy;" and it is very gratifying to a lover of his country to find him coming to such satisfactory conclusions as he does on the momentous questions involved in this inquiry. In vindication of his positions, Sir John assails those whom he accuses of misrepresenting the "Navy as neglected and in a progressive state of decay" in his usual trenchant manner when he is much in earnest; and his tilt *inter alia* with (report says) Admiral Hawker, in the present instance, reminds us of his encounter with Admiral Patten nearly "thirty years" ago in the "Quarterly Review." As with the heroes in ancient sepulture, he seems delighted to find a barrow for famous admirals. But in all cases the unchangeableness of his feelings towards the service, and the anxious zeal he displays for its efficiency and honour, reflect high credit upon him, both as a public functionary and an individual Briton.

Into the details of this important "chapter" it is more for the political than the literary press to enter; and we, therefore, dismiss it with so brief a notice, especially as we observe every newspaper is making it familiar to the public, and cutting it right and left, as personal resentments for parties assailed with, perhaps, too little ceremony, or political policy, happen to dictate.

Nor have we much to say respecting the memoir, the principal incidents recorded in which—such as occurred in the voyage round the world—are also generally known. Speak-

ing of Lord Anson in comparison with Lord Howe, the author observes:—

"The moral and physical character of these two officers was very similar. The same personal qualities and constitution of mind were common to each; resolution, with undaunted courage, united with patience, perseverance, and indefatigable attention to their professional duties; modesty and diffidence were the characteristics of both. Howe, on one or two occasions only, spoke in parliament—Anson never. Howe has been represented as silent as a rock; Anson is called, by the same writer, the silent son-in-law of the chancellor. Howe was a family man, and seldom appeared in society; Anson was said to have been 'round the world, but never in it.' Howe's character was strongly marked by benevolence, humanity, and generosity; and Anson's was not less so. Both were firmly attached to the naval service; and it is so far remarkable that both should have had the opportunity of giving the first blow to the French navy, by each having gained the first victory in the two several wars. The comparison might be carried further; but in one respect there appears to be a great contrast—the one was fond of writing, the other appears to have abhorred it; and this leads me to speak of the materials I have collected for the memoir of Anson. In the case of Lord Howe I had upwards of four hundred letters, all written by the noble earl to one individual, which proved a habit of writing; but, unfortunately, the rest of his correspondence had perished. In the case of Anson I have between five and six hundred letters, none of them written by, but all of them addressed to, the noble lord, by a great variety of correspondents, in and out of the profession; all carefully bound up in three large volumes, alphabetically arranged under the names of the writers, so as to afford an easy reference. From several of these letters it appears that Anson, unlike Howe, was as sparing of his pen as of his tongue. Of whatever letters he may have written, not purely official, few have been found; and I understand that those I have spoken of from his correspondents were scattered about the house, until collected by the old house-steward, Jenkins, who had been in his younger days a boy under Lord Anson's cook, and who lived in the Anson family until his death, in 1824; and that these letters owe their present collective form to the care of Mr. Upcott, a gentleman well known in the literary circle for his valuable collection of curious manuscripts, which, for their novelty and variety, ought to have a place in the British Museum, whose library is certainly not overstocked with MSS."

Anson was born at Colwich, Staffordshire, April 23d, 1697, and at a very early period of life entered the navy, and rose to be a lieutenant at the age of eighteen or nineteen.

We cannot discover in the volume a more curious extract wherewith to accompany this paper than the "following instructions, signed by the king, which (saith the author), ought to have been printed at the head of the authentic account of the voyage, especially as it was said by some that Anson had exceeded his in-

structions in burning Payta, and by others that he had failed in the execution of part of them. They are here given from the originals in the State Paper Office, not being found in the records of the Admiralty.

(Signed) George R.

'Instructions for our trusty and well-beloved George Anson, Esq., Commander in Chief of our Ships designed to be sent into the South Seas in America. Given at our Court at St. James's the 31st day of January, 1739-40, in the thirteenth year of our reign.'

'Whereas we have thought proper to declare war against the King of Spain, for the several injuries and indignities offered to our crown and people, which are more particularly set forth in our declaration of war; and whereas, in pursuance thereof, we are determined to distress and annoy the said King of Spain and his subjects, in such manner and in such places as can be done with the greatest prospect of success, and the most to the advantage of our own subjects; we have thought fit to direct that you, taking under command our ships hereafter mentioned, viz.: the Centurion, the Argyle, the Severn, the Pearl, the Wager, and the Tryal sloop, should proceed with them according to the following instructions. You are to receive on board our said ships five hundred of our land-forces, and to proceed forth to the Cape de Verde Islands, and to supply your ships with water and such refreshments as are to be procured there; and you are from thence to make the best of your way to the Island of St. Catherine, on the coast of Brazil, or such other place on that coast as you may be advised is more proper, where you are again to supply your ships with water and any other necessities you may want that can be had there. And when you have so done, you are to proceed with our ships under your command into the South Sea, either round Cape Horn or through the Straits of Magellan, as you shall judge most proper, and according as the season of the year, and winds, and weather, shall best permit. When you shall arrive on the Spanish coast of the South Sea, you are to use your best endeavours to annoy and distress the Spaniards, either at sea or land, to the utmost of your power, by taking, sinking, burning, or otherwise destroying, all their ships and vessels that you shall meet with, and particularly their boats, and all embarkations whatsoever, that they may not be able to send any intelligence by sea along the coast of your being in those parts. In case you shall find it practicable to seize, surprise, or take any of the towns or places belonging to the Spaniards on the coast, that you may judge worthy of making such an enterprise upon, you are to attempt it; for which purpose we have not only ordered the land-forces above mentioned, but have also thought proper to direct that an additional number of small arms be put on board the ships under your command, to be used, as occasion may require, by the crews of the said ships, or otherwise, as you shall find most for our service. And you are, on such occasions, to take the opinion of the captains of our ships under your command at a council of war; of which council of war, in case of any

attack or enterprise by land, the commander of our land-forces shall also be one; which said land-forces shall, upon such occasions, be landed according to the determination of the said council of war; and, when on shore, shall be under the direction and conduct of the commanding officer of our land-forces, subject, however, to be recalled on board by any future determination of a council of war. And, as it will be absolutely necessary for you to be supplied with provisions and water when and where they can be had, you will inform yourself of the places where that can be most conveniently done; and, as we have been informed that the coast of Chili, and particularly the Island of Chiloe, do abound with provisions and necessities of all sorts, you are to call there for that purpose. As it has been represented unto us that the number of native Indians on the coast of Chili greatly exceeds that of the Spaniards, and that there is reason to believe that the said Indians may not be averse to join with you against the Spaniards, in order to recover their freedom, you are to endeavour to cultivate a good understanding with such Indians as shall be willing to join and assist you in any attempt that you may think proper to make against the Spaniards that are established there. You are to continue your voyage along the coast of Peru, and to get the best information you can whether there be any place, before you come to Lima, that may be worthy your attention, so as to make it advisable to stop at it; but if there be no place where any considerable advantage can be expected, you are then to go along the coast till you come to Calao, which is the port of Lima, taking or destroying all embarkations whatsoever that you shall meet with. As soon as you shall arrive at Calao you shall consider whether it may be practicable to make an attempt upon that place or not; and if it shall be judged practicable by a council of war, to be held for that purpose, with the strength you have with you, to make an attack upon that port, you are accordingly to do it; and if it shall please God to bless our arms with success, you are then to endeavour to turn it to the best advantage possible for our service. And whereas there is some reason to believe, from private intelligence, that the Spaniards in the kingdom of Peru, and especially in that part of it which is near Lima, have long had an inclination to revolt from their obedience to the King of Spain (on account of the great oppressions and tyrannies exercised by the Spanish viceroys and governors), in favour of some considerable person amongst themselves, you are, if you should find that there is any foundation for these reports, by all possible means to encourage and assist such a design in the best manner you shall be able; and in case of any revolution or revolt from the obedience of the King of Spain, either amongst the Spaniards or the Indians in those parts, and of any new government being erected by them, you are to insist upon the most advantageous conditions for the commerce of our subjects to be carried on with such government so to be erected; for which which purpose you shall make provisional agreements, subject to our future approbation and confirmation. But, in case you should not think proper to attack Calao, or should miscarry in any attempt you may make against that place, you are then to proceed to the northward as far as Panama; but, as there are many places along the coast which are considerable, and where the Spanish ships, in their passage between Panama and Lima, do usually stop, it will be proper for you to look into those places, and to annoy the Spaniards there as much as it

shall be in your power. And, if you shall meet with the Spanish men-of-war that carry the treasure from Lima to Panama, you are to endeavour to make yourself master of them. When you are arrived at Panama, you will probably have an opportunity to take or destroy such embarkations as you shall find there; and, as the town itself is represented not to be very strong, you are, if you shall think you have sufficient force for that purpose, to make an attempt upon that town, and endeavour to take it, or burn and destroy it, as you shall think most for our service. And, as you may possibly find an opportunity to send privately, overland, to Portobello or Darien, you are by that means to endeavour to transmit to any of our ships or forces that shall be on that coast an account of what you have done or intend to do. And, lest any such intelligence should fall into the hands of the Spaniards, we have ordered you to be furnished with a cipher, in which manner only you are to correspond with our admiral or the commander-in-chief of any of our ships that may be in the northern seas of America, or the commander-in-chief of our land forces. As we have determined to send a large body of troops from hence as early as possible in the spring, to make a descent on some part of the Spanish West Indies; and as we shall have a very considerable fleet in those seas, in case it should be thought proper that any part of those ships or troops should go to Portobello or Darien with a design to send the said troops overland to Panama or Santa Maria, you are then to make the best disposition to assist them by all the means that you shall be able in making a secure settlement, either at Panama or any other place that shall be thought proper; and you are, in such case, to supply them with cannon from the ships under your command (if necessary), or with any thing else that can be spared without too much weakening the squadron; and if the land-forces on board our said ships should be wanted to reinforce those that may come overland to the coast of the South Sea, you may cause them to go on shore for that purpose, with the approbation of the proper officers. When you shall have proceeded thus far, it must, in a great measure, be left to your discretion, and that of a council of war (when, upon any difficulty you shall think fit to call them together), to consider whether you shall go further to the northward, or remain longer at Panama, in case the place should have been taken by our forces, or you can any way hear that any of our forces may be expected on that side from the north side. But you will always take particular care to consider of a proper place for careening of the ships, and for supplying them with provisions either for their voyage homeward or for their continuing longer abroad. In case you shall be so happy as to meet with success, you shall take the first opportunity, by sending a ship on purpose, or otherwise, to acquaint us with it, and with every particular that may be necessary for us to be informed of, that we may take the proper measures thereupon. If you shall find no occasion for your staying longer in those seas, and shall judge it best to go to the northward as far as Acapulco, or to look out for the Acapulco ship, which sails from that place for Manila at a certain time of the year, and generally returns at a certain time also, you may possibly, in that case, think it most advisable to return home by the way of China, which you are hereby authorised to do, or to return home by Cape Horn, as you shall think best for our service, and for the preservation of the ships and the men on board them. Whenever you shall judge it necessary for our service to return

with our squadron to England, you may, if you shall think it proper, leave one or two of our ships in the South Sea for the security of any of the acquisitions you may have been able to make, or for the protection of the trade which any of our subjects may be carrying on in those parts."

Among the few survivors of the expedition, "it is remarkable enough that one of the seamen, by name George Gregory, lived to the age of 109 years, having died at Kingston the 13th February, 1804, without having known a day's illness since he went to sea in 1714."

Horace Vernon; or, Life in the West. 3 vols. 12mo. London, 1838. Colburn.

THIS is a very clever book, and written by a man who must have seen a good deal of society. Whether it come within the pale of literature we will not say, but will rather tell our readers what it is. It is a novel of the genus of *Almacks* and others of the same kidney, in which well-known living characters, and some hardly less known circumstances, are displayed in so plain a way, that few people can mistake their application. Thus, a very notorious demirep, under the name of Miltoune, with a deserted daughter, Mary Graham (the issue of a noble amour—see police reports a few years ago), are the principal females, whilst Lord Palmerston, Lord Alvanley, Lord Lowther, Lord Ranelagh, the late and present Dukes of Buckingham, Lord de Roos, Colonel L. Stanhope, and many other persons of rank and fashion, are shown up with impartial malice. A ruined banker, who keeps such company; a villainous attorney, who, like too many of his brethren, disgraces the profession by preying on all who can be made his victims; two vagabond retainers of the lowest stuff; a retired *millionaire* jeweller and his family, together with their associates at Egham, fill up the rest of the *dramatis personæ*. If such publications were allowable, we should be obliged to say that this is one of the best written we have seen, and one shewing more acute observation and talent than, in our opinion, ought to have been so misemployed. It is a scandal to the press; and we avoid every portion of its bitter portraiture and allusions to matters which disgrace human nature. Yet, in fairness to the author, we quote a specimen of his workmanship:—

"Four gentlemen were seated in the respectable parlour of the King's Head as the reunited friends entered, who began to look upon the new comers, and then at each other, with that sort of silent speculative expression which implies a doubt whether strangers are permitted entrance; the awkward circumstance of a public room not being a private one seasonably occurring to memory, and preventing any audible manifestation of displeasure. During the pause that followed, and while the waiter was employed in procuring their 'cold without,' Jeffries and his companion had full leisure to contemplate the personal points of the four taciturn gentlemen. The most imposing of these was Mr. Grayling, a retired city fishmonger, reputed wealthy, and living in the immediate neighbourhood. He was seated in a conspicuous part of the room, in an arm-chair, made purposely for him, lest his inordinate weight should cause its more fragile brethren to crash like reeds beneath its intolerable pressure. A benevolent expression pervaded that small portion of the centre of his face in which his features might be said to be comprised—all the rest consisting of two very immense cheeks, and three or four chins. He was busily engaged in smoking—a duty, as it seemed, of almost sacred

obligation,—for he kept his eye constantly fixed upon the bowl of his pipe, and at intervals slowly protruded his short-looking arm, and, with a fanciful tobacco-stopper, kept the weed in a state of proper coherence. Nearly opposite to him and erect as his own principles, sat Mr. Clarencieux, a private gentleman of the neighbourhood. Extreme, it is said, sometimes meet, and in this instance they had done so; for certainly never were two intimate friends, the one so fat, and the other so lean, as Mr. Grayling and Mr. Clarencieux. This latter gentleman was habited in gray pantaloons and black gaiters, wore a blue coat buttoned close up to his chin, and rejoiced in a skull of such utter desolation of hair, and smoothness of surface, as to convey the idea of its being polished by the housemaid every morning with the furniture. In public company, Mr. Clarencieux delighted to exhibit his acquaintance with the 'Red Book' and Burke's 'Peagee'; and a private source of gratification to him was the conviction that he bore a considerable resemblance to Earl Grey, whose contour and expression he sedulously studied, and committed to memory and practice, as portraits of that nobleman successively made their appearance in the print shops. The other two gentlemen, who sat, so to speak, 'cheek by jowl,' were partners, Messrs. Mottram and Sniggles, the surveyors, both resident at Egham, in the same house, inseparable companions and bosom friends. The former of these was a person of the middle size, and about the average circumference. He had coarse light hair parted in the middle, and brought round on either side into a stiff curl, not unlike a small ram's horn; and a face reminding you of the visage of the king of hearts, more especially when its owner turned his eyes leeringly towards his loquacious partner. As for Mr. Sniggles, he was one of those minute persons who are said to be compelled to employ a stool when they would look over the fender; with a head scarcely bigger than that of a sparrow, and legs which, when clothed in white gaiters, suggested tobacco-pipes. Whether it was that this gentleman constantly wore a green coat, or that his unvarying vivacity invited such an application, we know not; but amongst his familiar acquaintance he was known by the style and title of 'Grashopper Sniggles.'

Another clever sketch:—

"Mr. Hopwood [the retired jeweller] was the most regular man of business possible; he had an account against every hen and every pig in his establishment. The account of each individual was duly charged with the barley and barley-meal consumed; and each hen had credits allowed for eggs laid, and each pig, at his demise, was credited with his pork, when the balance of profit or loss was duly ascertained. No fresh apples ever found their way to Mr. Hopwood's table—not from any spirit of parsimony, but merely from the pure spirit of business. When the apples were gathered, they were always spread in a room for the purpose, and when any were wanted for domestic purposes, those that were 'going' were always first selected. The same system was adopted with the eggs. They were always marked with the date of the day on which they were laid, and the most ancient of date were always used first. These accounts, with occasionally a trip to town, to arrange his numerous money transactions, formed Mr. Hopwood's occupations. But these, though in his opinion highly necessary, were mere mechanical affairs, and subordinate, compared with the still higher objects of his interest and ambition—the education of his daughter, and the ag-

grandisement of his family. The latter had been the principal subject of his thoughts for many a day; but, since his interview with Lord Walgrave, it had assumed something like a distinctness, whilst formerly the idea had merely flitted, as it were, over his dreaming fancy. But now the supposition was no longer airy and unreal; Lord Walgrave had pronounced it possible—nay, even probable; and the man of business confidently looked forward to the accomplishment of his hopes with an earnestness which never flagged. Something whispered to him that these glittering expectations were to be realised through the medium of Lord Walgrave; but in what manner, he hardly dared suggest to himself. And then, again, when he looked, with truly parental pride, on his daughter, and thought of her beauty, the extreme innocence of her character, the result of that system in which he had so scrupulously brought her up, some vague notion crossed his mind, that she might, by a splendid alliance, elevate her family to the position, the daily contemplation of which, even afar off, had become a positive necessity to him."

This lord does pay his visit, and

"With a sort of mincing step, and with many a profound courtesy, did Mrs. Hopwood enter the presence. She had been some few minutes in her chamber, as we before observed, for the purpose of adornment; but such had been her haste, that she had hardly time to do justice to her taste. She determined, however, to cover all deficiencies in style by profusion of ornament, and, after having touched her cheek with the slightest possible tint of the 'hare's-foot' (for cheeks will fade with years), she pinned a bunch of flowers here, and another there, till her head resembled a huge bouquet, when unfortunately, as she was about to give the finishing touch, she heard her husband's excited voice to Susan; snatching, therefore, a bunch of full-blown roses, she pinned them hurriedly in their place, and casting but too cursory a glance, the general effect seemed so undeniable, that she rushed down stairs, fearful of driving her husband to despair, by her continued absence. Lord Walgrave rose to receive her, and taking her hand, led her to a seat. 'I need not say how happy I am to make the acquaintance of the wife of my most estimable friend, Hopwood,' commenced the nobleman; but, before he could proceed, he was seized with such a fit of coughing that he was forced to resume his seat on the sofa, and cover his face with his handkerchief. The fact was, that though Lord Walgrave was a man of fashion, and consequently had his feelings and countenance under great control, yet there sometimes occur such unforeseen, such sudden attacks upon our risible muscles, that even the well-trained habits of a man of society, find it impossible to resist them. Unfortunately, as Mrs. Hopwood took her seat, the eyes of Lord Walgrave came upon a level with her head-dress, and there, erect, amidst a profusion of roses and geraniums, stood the identical 'hare's-foot' which had created the bloom upon her cheek, and which, having become entangled amongst the wires of the last bunch of roses, was with them transferred to its present unlucky position, producing, it must be confessed, a most extraordinary and startling effect. 'Dear me! dear me! what a cold your lordship has taken,' said Hopwood, agitated beyond measure, and fidgeting about with the poker in his hand; 'this room is so cold, I'm afraid your lordship did wrong in removing from the fire,' and here he emptied the scuttle

upon the blazing contents of the grate. 'I should never forgive myself if I thought.' 'Now do not disturb yourself, Hopwood,' interposed Lord Walgrave, somewhat recovering from the effects of his surprise, but not daring to turn his eyes in the direction of the lady of the house; 'I must have taken a little cold coming down, but it will pass.' 'Will you let me get you a little broth, my lord?' asked Mrs. Hopwood, 'a little broth with some chopped parsley in it—chopped parsley is a most excellent thing for a cold.' 'No, my dear madam, thank you, it may pass off directly; I am subject—' but here his lordship's cough again became so violent, that he was obliged to take refuge in the folds of his handkerchief. 'Do, my dear, pray fetch the cough-drops we take in treacle,' said Hopwood; 'what can we do? If your lordship would but come a little nearer the fire; and the more his lordship coughed, the more did Mr. Hopwood stir the fire, and the more did Mrs. Hopwood, in her anxiety to aid his lordship, parade before his vision the apparition of the 'hare's-foot,' which was the exciting cause of the mischief. At length his lordship's paroxysms were checked by the opportune arrival of Georgina, who advanced just within the door, half timidly, yet without the slightest approach to awkwardness, and bowing gracefully to Lord Walgrave, went to her mother. 'Ah! Georgina my love, you are come at last; let me present you to Lord Walgrave,' said her father. 'Really!' said Lord Walgrave, rising, 'and is this young lady your daughter, Hopwood?' 'Our only child, my lord,' answered the proud parent. 'Then, indeed, I may say sincerely, that I congratulate you upon your good fortune, in calling so very charming a young lady your own,' said Lord Walgrave, advancing towards her in his usually graceful manner, to offer his hand. Georgina, before she received or acknowledged the compliment of his lordship, had detected the anomaly of her mother's head-dress, and with a rapid and almost imperceptible movement transferred it from its singular position to the fire; while Mrs. Hopwood, thinking she had only arranged a stray flower, smiled her approbation."

It is to be regretted that one who could observe so acutely, and paint so well, should have adopted so objectionable a course.

The Curiosities of Medical Experience. By J. G. Millingen, M.D. M.A. &c. Resident Physician to the County of Middlesex Pauper Lunatic Asylum. 8vo. pp. 566. Second Edition. London, 1839. Bentley.

MEDICINE in sport made instruction in earnest, has obtained for this curious work the deserved honours of a second edition; and the publisher has, in our opinion, judiciously cast it into a single volume, with all its augmentations. Having gone at large into the old matter when it first appeared, we shall now confine our remarks to a portion of the new. On the principal subject, the author observes most truly in his preface, as an answer to the objections, that he had, perhaps, lent too easy credence to some of the strange stories he relates."

"Notwithstanding our boasted progress in scientific pursuits, and our supposed approach to perfection, there never perhaps was a period,

* Not, be it remarked, as if he believed in them, but "to show the fallacy even of experience, and the many dangers that may arise from the most ingenious theories and doctrines, in the very ratio of their apparent plausibility."

since the fanciful days of Paracelsus, Agrippa, and Van Helmont, when more deceitful and fascinating reveries were indulged in than at the present *enlightened* moment, nor more ingenuity and disingenuousness displayed in seeking to give substance to a vision or over-throwing its baseless fabric. It is painful to be obliged to admonish the would-be legislators of our belief, in the words of the sceptical Bolingbroke:—'Folly and knavery have prevailed most where they should be tolerated the least, and presumption has been excused most where diffidence and candour are on many accounts the most necessary.'

'Quale per incertam lunam sub luce maligna
Est iter in silva.'"

Can we cast our eyes round London at the present moment, and doubt the truth of this, when children's cauls are advertised as a protection against drowning, when quackery flourishes in every branch of medicine, and when Homoeopathy and Mesmerism are the leading or misleading wonders of the age?

But, turning from this general topic, we will confine ourselves to one of the added chapters in this edition, upon a subject upon which some of our readers will remember we made a very strenuous and decided stand, when Dr. Magendie's "Experiments on Living Animals" were much discussed by the public. We rejoice to find so able an ally to the cause we espoused, as Dr. Millington here proves himself to be; and we rejoice the more to find him so warm a friend to humanity, because he is at the head of an establishment where humanity is so essential to the well-being of a large number of our fellow-creatures. "The merciful man is merciful to his beast" says the ancient adage; and we may fairly assume that the physician who feels so much for the animal creation, will carry still warmer sympathies into those abodes of ruined reason and prostrate powers, where hundreds of helpless men and women put forth the strongest claims which unhappiness can advance to all the care and kindness which skill and philanthropy can administer to alleviate their grievous sufferings. But to our immediate point. After specifying the grounds taken up in defence of the cruel medical experiments upon animals, Dr. M. says:—

"It is painful to assert it, but all these allegations I consider as not only unsupported by facts and experience, but grounded on speculative sophistry; for, in regard to the injuries which animals in their wild condition may inflict upon each other, they may be the result of the wise provisions of the Creator, with which man, however presumptuous he be, has nothing to do; and even were it in his power to check their furious and destructive propensities, it is more than likely, from what we daily witness, that he would turn them to a profitable or a pleasurable account, as most probably the sight of a combat between a wild elephant and a rhinoceros (provided the spectators were perfectly secure), would attract a greater multitude, and draw more money, than a dog-fight or a bull-bait—a tiger-hunt, were it not attended with some personal danger which requires courage, would prove more delectable than the pursuit of a timid hare. But I now come to a much more important consideration—the benefit to mankind that has occurred, or that may be derived, from such experiments. And here I must give as my most decided opinion, that if any such beneficial results did arise from the inquiries, they were not commensurate with the barbarity of the experiments; nay, I shall

endeavour to shew, that they are frequently more likely to deceive us, by propping up fallacious and tottering theories, than to shed any valuable light on the subject of investigation. I readily admit that there does exist much analogy in the structure of man and certain animals in the higher grades of the creation; that the functions of respiration, digestion, absorption, locomotion, are to a certain extent similar, and that experiments made to ascertain the mechanism of these functions (if I may so express myself) may tend, in some measure, to teach us that which the inanimate corpse of man cannot exhibit; but, admitting to the full extent of argumentation the analogy of these functions, I do maintain that the phenomena of life differ widely between man and animals, and the very nervous influences which we seek to discover are, in life, of a nature totally different. Were it not so, would the senses of different animals, rendered more or less acute or obtuse according to their natural pursuits and protective habits, be so materially unequal? Indeed, the laws of nature that submit every creature to the immutable will of Providence are totally unlike; and each apparatus of life in divers beings seems to be especially calculated for the identical race: what is poison to the one is an aliment to another; and the vivid light which the eyes of one creature can bear, would produce blindness in another; the same effluvia which one animal would not notice, would guide another over trackless wastes in search of friend or foe. I, therefore, maintain, that the mere material examination of the living organs of animals can no more tend to illustrate their vital principle, than the keenest anatomical labours can enable us to attain a knowledge of the nature of our immortal and imperishable parts. I shall enter still more minutely into this subject. In the barbarous experiments to which I allude, animals bearing the strongest resemblance to man (at least in their conformation, for Heaven, in its mercy, did not gift them with what we call mind) are usually selected amongst such as possess a heart with four cavities and double lungs. The dog, the natural companion of man, his most faithful friend in weal and woe, the guardian of his couch and property, the protector of his infants, the only mourner o'er the pauper's grave!—dogs are in general selected for the scientific shambles; and this for obvious reasons,—they are more easily procured, and at a cheaper rate; moreover, they are more manageable and unresisting under the mangling scalpel. Well, thousands of these creatures have been starved to death with butter, sugar, and oil, to prove that they must die in all the aggravated pangs of hunger, pangs producing ulcerated eyes, blindness, staggers, parched up organs, unless their food contains azote. Will any one maintain that a similar nourishment would produce similar effects on man? Certainly not. The one was created by nature to consume animal substances highly azotised; the other, from the transition of life to which he is born to be exposed, is essentially polyphagous. Then, again, millions of animals have had their bones broken, scraped, bruised in every possible manner, to discover the process of the formation of bone, called *Osteogeny*: has a single fracture of a human limb been more rapidly consolidated by these experiments, which fill hundreds of pages in the works of Duhamel, Haller, Scarpa, and other physiologists? Animals will digest substances that would kill a human being; have the experiments in which their palpitating stomach and intestines have been torn from them, lacerated,

pricked, cut, separated from their surrounding vessels and nerves, increased our means of relieving the dyspepsia of the sensualist, the surfeit of the glutton, or the nausea of the disolute? On the other hand, the gin, the ardent spirits in which the drunkard wallows, would soon destroy what we think proper to call a brute! In many animals, moreover, there is a tenacity of life—highly convenient to the physiologist, since it enables him to prolong his experimental cruelties—which man does not possess; and we find the electric fluid acting much longer upon their muscles, even after death, than on a human body or its severed limbs. Another point to be considered is the assertion of the advantages to be derived from contemplating the living viscera in a healthy state. Good God! a healthy state?—what a mockery, what a perversion of language! Behold the dog, stolen from his master—the poor animal hungry, chained up for days and nights pining for his lost master, is led to the butchery. Still he looks up for compassion to man, his natural protector, licks the very hand that grasps him until his feeble limbs are lashed to the table! In vain he struggles—in vain he expresses his sufferings and his fears in piteous howls: a muzzle is buckled on to stifle his troublesome cries, and his concentrated groans heave his agonised breast in convulsive throes, until the scalpel is plunged in his helpless extended body! His blood flows in torrents, his very heart is exposed to the torturer's searching hand, and nerves which experience anguish from a mere breath of air, are lacerated with merciless ingenuity—and this is a healthy state! The viscera exposed to atmospheric influence are already parched, and have lost their natural colour, and not a single function is performed in normal regularity. One only effort is natural until vital power is exhausted—a vain instinctive resistance against his butchers! The heart sickens at such scenes, when cruelty, that would bid defiance to the savage's vindictive barbarity, sacrifices thousands of harmless beings at the shrine of vanity. For let the matter not be mistaken—these experiments are mostly made to give an appearance of verisimilitude to the most absurd and visionary doctrines; and if a proof were required of this assertion, it can be easily obtained by reading the works of various physiologists at different periods, who all draw different deductions from similar facts. For when the mind labours under a certain impression, or a reputation is founded upon the support of a doctrine, these facts are distorted with Procrustean skill to suit the views of the experimentalist. Let us, for instance, consider the subject of digestion, to ascertain the nature of which, thousands—millions of animals have been ripped up alive. This practice has been attributed to coction, to elixation, to fermentation, to putrefaction, to trituration, to maceration, to dissolution, and to many other shades and shadows of similar theories; and were additional millions of living victims sacrificed in further scientific hecatombs, posterity may deem our present vainglorious physiologists as ignorant of the matter as they might consider their numerous predecessors in the same career of groping curiosity. Has the cruel extraction of the spleen from a thousand dogs, to shew that they could live without that viscous, explained the nature of its functions, or enabled us more successfully to control its obstinate diseases? We know nothing of the phenomena of life; all our functions are regulated by an all-wise Power that sets at naught human presumption—and Hippocrates justly called this harmonic organisation a *concertus*,

or a circle, in which we could not discover the commencement or the end.

"In fine, whenever it is not evident that such practices can benefit mankind and increase our means of reducing the sum of human misery—it is a barbarous and criminal abuse of that power which the Creator has given us over the inferior grades of animated beings; and it is deeply to be lamented that no legislative measures can be adopted to restrain it, if it cannot be altogether prohibited. At any rate, professors alone should be allowed the 'indulgence,' but in no instance should such pseudo-scientific practices become a public exhibition or a student's pastime. Brought up in early life, amidst all the complicated horrors of a revolution, I have been sadly convinced that the contagion of cruelty is much more doubtless and active than that of pestilence!"

Earnestly do we trust that these unanswerable arguments, deduced from the knowledge and experience of an able physician, with the practice of fourteen Peninsular battles on his mind, will have their due weight with the profession; and sure we are that the feelings of all the rest of mankind will flow in cordial unison with them.

Geraldine; a Sequel to Coleridge's "Christabel," with other Poems. By M. F. Tupper, Esq. M.A., author of "Proverbial Philosophy." 12mo. pp. 217. London, 1838. Rickerby.

We regret that the author should have subjected himself to a comparison by the side of Coleridge, and that, too, on a subject in which there can but be one opinion, for none but the "old man eloquent" ever could have completed "Christabel." Nay, even he himself feared to put a finishing hand to his work; like a mighty magician he had conjured up a dim and enchanted landscape, enveloping many of its beauties in mist, and leaving the imagination to make out its fair proportions.

"A thing to dream of, not to tell,"—

it is the wondrous work of

"A singing mason building roofs of gold;"

and in such a manner that a life might almost be wasted in studying its mysterious architecture; but "not a few days," nor even years, could add a turret to it in the same wild and irregular style, to be in keeping with its grand and supernatural order. It is a "beauty and a mystery," and as such we would ever wish to see it remain. Passing, then, altogether by *Geraldine* (which, after all, is a clever production), the volume will be found to contain several poems of considerable merit: some of them, indeed, not unworthy of the hand of the great master, for a share of whose laurels Mr. Tupper has so daringly ventured to step up as a competitor.

Several of the sonnets, in particular, are excellent, although we cannot call to mind many instances of the author's addressing them to their own works after the manner of the three put forth on his own "Proverbial Philosophy." It may not be intended, but it carries the look of a concealed puff about it; and the work possessed too many beauties to need any thing of the kind. In almost every page we find evidence of great powers of thought and beauty of expression, occasionally, however, marred by what to us appears neglect, as if the composition had been hurried along hastily, and without having that attention bestowed upon it which it deserved. We give the following little poem complete; there is a right feeling about it.

"Wisdom's Wish."

Ah, might I but escape to some sweet spot,
Oasis of my hopes, to fancy dear,
Where rural virtues are not yet forgot,
And good old customs crown the circling year;
Where still contented peasants love their lot,
And trade's vile din offends not nature's ear,
But hospitable hearths, and welcomes warm,
To country quiet add their social charm;
Some smiling bay of Cambria's happy shore,
A wooded dingle on a mountain-side,
Within the distant sound of ocean's roar,
And looking down on valley fair and wide,
Nigh to the village church, to please me more
Than vast cathedrals in their Gothic pride,
And blest with pious pastor, who has trod
Himself the way, and leads his flock to God,—
'There would I dwell, for I delight therein!'
Far from the evil ways of evil men,
Untainted by the soil of others' sin,
My own repeated, and clean again:
With health and plenty crown'd, and peace within,
Choice books, and guiltless pleasures of the pen,
And mountain-rambles with a welcome friend,
And dear domestic joys that never end.
There, from the flowery mead, or shingled shore,
To cull the gems that bounteous nature gave,
From the rent mountain pick the brilliant ore,
Or seek the curious crystal in its cave;
And learning nature's Master to adore,
Know more of Him who came the lost to save;
Drink deep the pleasures contemplation gives,
And learn to love the meanest thing that lives.
No envious wish my fellows to excel,
No sordid, money-getting cares be mine;
No low ambition in high state to dwell,
Nor meanly grand among the poor to shine:
But, sweet benevolence, regale me well
With those cheap pleasures and light cares of this life,
And meek-eyed piety, be always near,
With calm content, and gratitude sincere.
Rescued from cities, and forensic strife,
And walking wild with God in nature's eye,
Blest with fair children, and a faithful wife,
Love at my board, and friendship dwelling nigh,
Oh, thus to wear away my useful life,
And, when I'm called in rapturous hope to die,
Thus to rob heav'n of all the good I can,
And challenge earth to shew a happier man!"

In conclusion, the author has our best wishes; we are certain that he possesses much power as an original thinker; and if he will but bestow an equal proportion of care upon his productions, we doubt not but that he will stand high amongst the poets of the present day.

Tales and Legends of the Isle of Wight. With the Adventures of the Author in Search of them. By A. Elder, Esq. Part the First. 12mo. pp. 198. London, 1839. Simpkin, Marshall, and Co.

THIS is a small volume, but an extremely pleasant one. The tales and legends have a most genuine appearance (notwithstanding the mysterious and fanciful personations with which they are introduced), and they are told with great liveliness, point, and humour. "The Hermit's Cave," the longest, is a capital story of glamour; and the "Stoned-cased Well," is a striking exposition of Druidical rites, made interesting by the appearance on the scene of Christian apostles, Welsh bards, and other actors, Cimri, men of Galedin, and giants of Coranied.

As we cannot, however, conveniently separate part of these for quotation, we must select from the shorter pieces.

"The Old Church of St. Helen's."—"Waiter, bring me another glass of brandy and water; and now," continued the old gentleman, "I shall tell the story about the old church-steeple." The old church of St. Helen's was built so close to the shore, that in the course of time the greater part was undermined and washed away by the sea. The steeple, however, had become so valuable a sea-mark, that it was determined to preserve it; so it was built up with bricks in the inside, and its foundations defended from the sea by additional masonry. It was next directed to be whitewashed to make it more conspicuous, and some men were sent over

from Portsmouth for this purpose. They erected their ladders against the tower, and one of them went up to commence operations. Upon looking over the top of the building, he was very much astonished to see a little old-fashioned gentleman in light leather shorts and black worsted stockings, apparently fast asleep there. The whitewasher burst out into a loud laugh, and his comrades came up to see what was the matter, and they all joined in laughing at the old gentleman and quizzing him. "It's a fine day, old gentleman," said one. The old gentleman, who looked very cross, replied, "Wait, and see what the evening will bring, before you call it a fine day. I remember, when the first stone of this tower was laid, the masons came over from Portsmouth in a boat, and were drowned going back, and so it will be with the last that touched it." "Why, this tower has been built at least two hundred years," said a mason; "it's quite impossible that you can know anything about it." "It is very difficult to say," said the old man, dryly, "what is possible, and what is not possible." Here the conversation ended, and the whitewashers went on with their work—dab, splash—dab, splash. At length one of them said he would just take a peep to see how the old gentleman got on. He went up and looked, but found nobody there. "How did he get down?" "Nay, how did he get up?" said the other. It was altogether very odd. When they had finished their work they got into their boat to return to Portsmouth, but at Portsmouth the boat never arrived. They were all drowned."

We like the whole so well, that we cannot deny ourselves the pleasure of another neat and piquant narrative, the sly under-current of humour in which will, no doubt, be readily appreciated.

"The Mysterious Egg."—There used to be a cottage somewhere on the hill as you go up towards the Needles—a very poor concern, more like a pig-sty than a Christian's house, in which lived an old woman, who was known by the name of Alice Puckery. She was of a very unsocial nature, and had ways and habits peculiar to herself; always muttering as she hobbled along, no one could hear what. She used continually to place an egg on the ledge over the door. There was something very mysterious in this, but as there are always many to be found who say there's no such thing as witchcraft, it was thought by them that the only reason the old hag had for doing this, was to discover whether in her absence her house had been entered or not; for when the door opened, the egg sometimes fell to the ground. I am rather inclined to believe, from the words which she muttered over the egg when it fell, that there was some spell in it; because occasionally, when it was observed to fall, a sulphurous smoke and smell arose. Many were the speculations as to why she placed the egg there; no one had ever been known to keep an egg in that particular way before—over a doorway; why should it be over a doorway? It was thought by many, that it was placed there to bewitch any person she might take a dislike to. It was supposed by others, that the influence of the egg was varied, according to whether it was placed with the broad end, or the narrow end, or the side, towards the wall. How its influence affected people, no one could make out exactly; some were suddenly taken ill immediately, or soon after passing under it; to others, good luck happened. One man, of the name of Theophilus Browning, shortly after passing

under it, had the extraordinary luck of finding a red silk purse, containing twenty sovereigns, on the road as he went home. It is believed that on that day the egg was placed crossways, a thing which had not been known to be done before or since. A young woman, of the name of Sarah Primrose, called at the old hag's cottage, and passed under the egg; she had not proceeded half a mile from the door before she was met by a person, who told her that the young man to whom she was going to be married was dangerously ill: he died that night. Though the old hag kept four or five speckled fowls, it was very generally believed that the eggs were not laid by any of them, or were, indeed, the produce of any other bird. Sometimes the egg appeared to be longer in shape than at others, sometimes shorter. It was thought that the egg which was placed there on Friday was longer shaped and thinner like, perhaps a little trifle smaller, than those on a Monday and Tuesday, which were rather, as a body might say, short and dumpy ones. This was observed to be the case for three successive weeks, during which they had been watched. She had been repeatedly asked why she placed the egg on the ledge over the door, to which she always replied, 'that she put it there because she chose to put it there; no one had any business to question her right to put it there. The shelf was her own shelf, put up by John Stubbins the carpenter, at her own expense, and she would tell nobody why she put the egg there.' One day—a Thursday afternoon—a tabby cat was seen sitting on the ledge over the door, beside the egg: that night the clergyman of the parish died!

There are some droll and appropriate illustrations from the pencil.

Janet; or, Glances at Human Nature: the Second of a Series of Tales on the Passions.
By the Author of "Misrepresentation."
3 vols. 12mo. London, 1839. Saunders and Otley.

A WORK of imagination, and by a young authoress. We should be stern critics, indeed, were we to point out the slight faults of the volumes before us; the more especially as they are greatly outweighed by the merits. The authoress has chosen Miss Austen as her model in both her previous work ("Misrepresentation") and the one now pleading by its moral tendency and pleasing execution for encouragement and support. Judging by the decided improvement of style in the tale of *Janet*, we may fairly look for the same in succeeding volumes, and with more of hope than fear for the ultimate success of the writer. We finish our notice with a short extract.

"The heavy eyelids slowly rose, he cast towards his sister one fond, never-to-be-forgotten look—a faint and happy smile—and then the countenance was darkened, yet so calm and placid, Charlotte thought he slept. In truth, he did—the dreamless slumber of the grave! There is no task more mournful than to search amongst the papers, books, and other familiar things of one whom we have loved, and lost. Can we unlock the writing-desk, or escritoire, and not reflect whose hand has often turned the key before? What a host of thoughts and feelings, too, come rushing on the mind as we unfold the different memoranda, so carefully preserved! Often we learn more of the deceased from these sad reliques than we ever knew before: thoughts, feelings, and affections, till now never even guessed, are all at once made known, until there would seem something almost sacrilegious in a quest which

thus unfolds the treasured secrets of the dead. By Maurice's desire, this painful duty had devolved upon his favourite sister; and it was with heavy heart, and trembling fingers, and eyes bedimmed with tears, she set about the trying occupation. On opening the escritoire where Maurice had been accustomed to keep his private papers, she found little of any moment. A few bonds for trifling debts that were now cancelled; the letters he received at different periods when away from home, and other articles of that description. One drawer was double locked and sealed, it had remained so since the night preceding George's marriage. Need I say what that drawer contained? Must I describe the tress of glossy raven hair that once had clustered round her open brow, the silk purse she had netted for his birth-day gift, the book on whose blank page her hand had traced his name—the note—the bunch of faded flowers? Charlotte burst into an agony of tears: she had never known till now how deep had been her brother's love."

Hoffman's Wild Scenes, &c.
(Concluding notice.)

WE have now, agreeably to our promise, to match the story of hunting at the sources of the Hudson, with that of more remote and yet wilder scenes. Mr. H. tells us,

"The hunters of the far west, who trap for beaver among the defiles of the Oregon Mountains, regard no part of their long journey, from the borders to their savage hunting-grounds, where the fur-bearing animals are still found in the greatest profusion, with more aversion than that which leads over the great desert, where the tributaries of the Padouca, the Konzas, and the Arkansas rivers, are half absorbed by the arid sand. Lewis and Clarke, Major Long, and other scientific explorers of this desolate region, suffered much from the want of water while passing through it on their way to the Rocky Mountains; and they often mention the disheartening effect it had upon their followers, when, after traversing the scorching plain for weeks, it still lay stretched in unbroken and monotonous vastness before them. This portion of country, which extends along the base of the Rocky Mountains as far as we have any acquaintance with their range, is said to have an average width of six hundred miles. In the north, the surface is occasionally characterised by water-worn pebbles and hard gravel, but the predominant characteristic is sand, which, in many instances, prevails to the entire exclusion of vegetable mould. At the south, the arid plains are profusely covered with loose fragments of volcanic rocks, amid whose barren bosom no genial plant has birth; and, indeed, throughout the whole region, large tracts are often to be met with, which exhibit scarcely a trace of vegetation. In some few instances, sandy hillocks and ridges make their appearance, thickly covered with red cedar, of a dwarfish growth; but, in general, nothing of vegetation appears upon the uplands, but rigid grass of spare and stunted growth, prickly pears profusely covering extensive tracts, and weeds of a few varieties, which, like the prickly pears, seem to thrive the best in the most arid and sterile soils. The Indians, who inhabit this extensive region, are composed of several roving tribes, who, unlike the nations to the east and west of them, have no permanent villages, nor hunting-grounds which they claim as peculiarly their own. They hunt the buffalo and antelope, and, dwelling only in tents of leather, migrate from place to place in pursuit of the herds of those animals; and so extensive

is their range, that while they exchange their skins for blankets and strouding, with the British traders on the Cheyenne river of the north, they also trade their mules and horses, for vermilion and silver ornaments, with the Spaniards of Mexico on the Colorado of the south. The Arapahoes, Kaskais, Kiaways, and Tetaus, which are the chief of the desert hordes, are ferocious and predatory in their habits, and are continually at war with various tribes of the Missouri Indians, who inhabit the fertile countries which lie between them and our western frontier. The grizzly bear, the king of the American wilds, shares these dreary domains with the savages, hardly less ferocious than himself, and roams the west in quest of living prey. Here, too, the illusive mirage of the desert cheats the parched traveller with its refreshing promise, and the wanderers in these solitudes often tell of those monstrous shapes and unnatural forms, which, like the spectre of the Brocken, reflected on the heated and tremulous vapour, are magnified and distorted to the eye of the appalled and awe-stricken traveller. Strange fires, too, are said to shoot along the baked and cracking earth, and the herds of wild horses that can be seen trooping along the horizon, seem at times to be goaded on by gigantic and unearthly riders, whose paths are enveloped in wreaths of flame. The scientific explorer readily calls philosophy to his aid in examining these strange appearances; learning explains the phenomena of which he is himself a witness, and reason rejects the preternatural images, which he only knows from the representation of others. But the nomadic tribes, who make their dwelling upon the desert, or the uneducated adventurer, who wanders thither from some more smiling region, are differently affected. The monstrous shades and unearthly appearances that present themselves to his excited vision, are regarded through the medium of superstitious awe. The wild imagination of the Indian, and the credulous fancy of the Creole and Canadian hunter, people these mysterious solitudes with actual beings; while the grotesque figures, drawn upon the mocking mirage, after presenting themselves frequently to the eye, assume at length an individuality and a name; and it is said that the Indians and Canadian wanderers become at last so familiar with the images represented, as even to pretend to recognise the features, and swear to the identity of shapes, which are continually changing, and which probably never present themselves more than once to the same person."

This is the introduction to the "Ghost-Riders," a marvellous tale; but not so curious as one (an Ojibbeway legend) of Nannabozho, a sort of terrene Jove, of whom it is handed down, that being pursued by the waters raised in revenge for the murder of some of his spirits by Mibanaba, the Manitog of the water, he thus created the earth:—

"Now that the deed was done, Nannabozho found himself surrounded by dangers, and nothing but his swiftness of foot gave him any chance of escape from his revengeful foes, who were immediately in full cry after him. But soon, the spirits finding they could not overtake him by running, adopted a new device for getting Nannabozho in their power. They commanded the water to rise and flow after him; and straightway the lake began to swell until its waves rushed along his path so rapidly that it seemed impossible to escape them. Nannabozho did not know what to do in this emergency; but, at last, just as the water was about overwhelming him, he saw a crane, and deter-

ruined to claim his assistance. 'My brother,' said Nannabozho, 'will you not drink up this water for me?' The crane replied, 'What will you give me in return?' 'I will give you the skin of one of the chiefs that I have killed,' answered Nannabozho. The crane was satisfied with the promise, and he commenced drinking up the water. He drank, and he drank until he had nearly drunk it all, when he was unable longer to stand up. His body had swollen to an immense size, and as he went toddling along on his thin shanks with his long neck, bobbing about, he presented such a ludicrous appearance that Nannabozho burst out a laughing to see brother crane make such a figure. Nannabozho, indeed, must have been mad with merriment, for when he saw the crane's body become bigger and bigger, while his skin was stretched so, that he could not bend his legs as it tightened around his joints—he could not withstand the temptation of pricking the bloated mass. He drew his bow, and the arrow went through the crane's body. But quickly was he punished for his wanton sport. At once the waters began to rise again, and so fast did the big waves increase, that Nannabozho was compelled to ascend the highest mountain he could find, and still the waters followed him there. He then climbed the highest tree on the mountain. But the flood kept rising and rising; the branches on which he stood were soon dipping in the waves, which at last rolled completely over his head. Just as they swept finally over him, Nannabozho chanced to look up, and saw the shadow of an object floating near him; he stretched out his arm and seized it. It proved to be a piece of wood buoyant enough to sustain him, and he placed himself upon it. Nannabozho now floated about for some time. The water encompassed him on every side. It had covered up every thing. The rocks, hills, and trees, had all disappeared. The flood seemed to ripple against the sides of the sky all around, and whichever way he looked, there was nothing to be seen but a never-ending succession of waves, that had nothing but the wind to play against. At last he saw a musquash swimming about alone, and he asked him to go down to the earth, and bring him a little of it. The animal obeyed, and plunged towards the bottom, but it was soon seen on the surface of the water perfectly dead. Nannabozho, however, did not yet despair. He immediately after saw a beaver paddling toward him, and as soon as the beaver got near enough to hear, he said to him, 'My brother, will you not dive and get me some earth?' The beaver dived, but did not appear for a long time. The beaver, it seems, when he dives, can carry down so much air entangled in his coat, that, when compelled to stay long under water, he can thrust his nose into his fur and breathe for some time. At last, he appeared again upon the surface, nearly dead with exhaustion; he brought up a very little piece of mud on the flat end of his tail, which he gave to Nannabozho. Nannabozho scraped every particle of it carefully together, and placed it in the palm of his hand to dry. When it had become perfectly dried he blew it out into the water, and straightway a portion of the earth upon which we now live, was created. The dust, too, in the hand of Nannabozho, kept increasing the longer he blew; until more and more of the earth was made; and at last the whole world was finished just as large as it now is."

The Noachic analogies, and the beaver's origination of the diving machine (so lately made patent in England), are curious enough; but

here we must conclude, recommending the touching story of the "Missionary Bride," and the rest of the strange Indian traditions, to the perusal of our readers.

One word at parting with the author who has entertained us so much: What is the meaning of "cavorting?" (p. 36, vol. i.)

MISCELLANEOUS.

The Object and Effect of the Oath in the Roman Catholic Relief-Bill Considered, with Observations upon the Doctrine of certain Irish Authorities with respect to Tithes; and on the Policy of a Concordat with the See of Rome: with an Appendix. By the Right Hon. Sir Robert Wilmot Horton, Bart. G. C. H. 8vo. pp. 96. London, 1839. Murray.

THE subject of this able pamphlet is out of our literary line; but its importance entitles it to notice as the production of one who has for years deeply considered it; who took a prominent part in its parliamentary discussion in 1829, &c.; and who now casts the review of a statesman over it in all its bearings. The introduction states what these bearings are; and we copy it, earnestly recommending all the arguments to the attention they so well deserve from the public.

"In the first section of this publication I have endeavoured to demonstrate that the securities suggested by me in the year 1829, for the protection of the Church against the possible danger of Roman Catholic legislation, did not deserve to be characterised as impracticable. In the second section, that no justifiable accusation or even imputation of perjury can attach to a Roman Catholic Member of Parliament from his voting for any resolution or measure which any body of Protestants may deem necessary for the preservation, or at least ultimate benefit, of any Church Establishment. In the third section, that if it can be proved that a Catholic Member of Parliament unequivocally proposes to subvert the present Church Establishment, according to the fair and equitable import of the term, such an attempt is not in accordance with the oath which he has taken within the walls of Parliament. In the fourth section, that as Roman Catholics are now admitted into both houses of the legislature, it is a most necessary act of state policy to negotiate with the head of the Catholic Church on Catholic matters, and that from such negotiation good and not evil is to be anticipated, that any measures connected with Catholic interests should be considered after the establishment of a concordat with the papal see, and that one of the principal measures that ought then to be considered should be the payment of the Roman Catholic clergy. It will be perceived that whatever conclusion may be come to by readers with respect to the first section, the reasoning in the three remaining sections is in no degree affected."

The Ladies' Flower Garden of Ornamental Annuals. By Mrs. London. 4to. No. I. London, 1839. W. Smith.

THE first blush of what promises to be a most beautiful bouquet of the brightest flowers. There is not a lady in the land, who has access to five feet square of garden ground, or even who loves the rearing of these sweet companions in stands, pots, or glasses, that should not take this publication. Nay, if in smoky city "close ypent," still they should procure it for its own gracefulness and beauty; since the coloured plates of the *Ranunculaceae*—the flos adonis, the larkspur, the fennel-flower, the garidella, and the platystemon, in all their varieties—give promise of a work of great taste and interest. The letterpress is equally excellent.

Hints to Mechanics, on Self Education and Mutual Instruction. By Timothy Claxton. Pp. 226. London, 1839. Taylor and Walton.

THIS is a most meritorious work; a work full of good sense and useful information. After introducing the author himself, far better than a portrait, it treats of the desirableness of a sound education, of the habits, faults, and vices incident to mechanics, and their reform and improvement; of the evil effects of ignorance,

and the beneficial effects of knowledge; of the application to business; of the employment of time; and, in short, of every subject of interest to the mechanical orders and value to the community to which they belong, and in which they form so important a part. There is a degree of solidity and applicability in the whole that deserves our highest praise.

The Economy of Vegetation; or, Phenomena of Plants. By a Fellow of the Linnæan Society. Pp. 176. London, 1839. Relfe and Fletcher.

"SEE the lilies—how they grow," says an epigraph upon the title-page, but the vignette is of roses and other flowers, and nothing like a lily among them to "see." In its general merits this is a pretty volume, and pleasingly illustrates many of the habits, &c. of plants and other botanical matters.

A Portrait of Geology. By a Fellow of the Geological Society. Pp. 214. London, 1839. Same Publishers.

SIMILAR in appearance and in merit, this neat volume gracefully develops many portions of the sciences of geology.

A Sketch of the Geology of Fife and the Lothians, &c., by C. Maclean, Esq., F.R.S.E. (Edinburgh, A. and C. Black; London, Longman and Co.)—As a contribution to the geological knowledge of our island, this volume is valuable; for few parts possess so much interest as those where the local measures extensively prevail. The text, where the map and sections are clear, intelligent, and instructive. The geology of Arthur's Seat, and the Pentland Hills, is particularly worthy of attention.

Principles of the Laws of England, &c. By a Solicitor. 8vo. pp. 388. London, 1839.

APPARENTLY an excellent work for the instruction and guidance of clerks. Every thing seems to be noticed, and all sorts of practice described.

The Life of Mansie Wauch, Tailor in Dalkeith, &c. A New Edition, revised and greatly enlarged. Pp. 384. Edinburgh, 1839. Blackwoods; London, Cadell.

WHAT! old friend Galt with a new face? A new face, indeed, for there are eight illustrations by George Cruikshank, who can put a new face upon any thing. It is gratifying to be thus reminded of so popular a favourite as *Mansie Wauch*; and as Edinburgh seems to be following the example of London, in re-issuing by-gone publications in neat and cheap single volumes, we may fairly anticipate a very extensive circulation for them.

Lights and Shadows of Scottish Life. New Edition. Pp. 400. Same Publishers.

THE foregoing remarks apply equally to this volume, which, while Galt sketched the homely, familiar, and comic with a masterly pencil, gave us a variety of pictures of like fidelity and character where the grave, steadfast, and pathetic in Scottish feeling and manners, mingled finely with the "Lights" of gayer scenes. The vivid truth, the nature, the touching spirit of Professor Wilson as exhibited in these papers, need no eulogy from us. That they have been long out of print has been much regretted by the public, and we are sure there will be much rejoicing at the ease with which they may once more be acquired.

Statistics of the Colonies of the British Empire in the West Indies, South America, North America, Asia, Austral-Asia, Africa, and Europe. From the Official Records of the Colonial Office. By R. Montgomery Martin. 8vo. pp. 602, double columns. Appendix, pp. 304. London, 1839. Allen and Co. THE mass of valuable intelligence collected in this volume is prodigious; and for a single man, it is one of those gigantic undertakings to which we would, *a priori*, suppose no individual

would dare to set his face. But zeal, industry, and ability, when steadily and well directed, can effect much more than would be believed before trial. Like Mr. McCulloch's commercial and statistical works, Mr. Martin's colonial compilations have become national. We wonder how we did without them, and are for ever referring to them for some information or other. In a volume we have a library, as far as the subject is concerned—a library of uncommon merit and utility.

The first map, with the British colonies upon it coloured red, is a remarkable exposition. The world never saw any thing like it since the world was created. When we reflect upon the size and position of our own little island; and cast our eye over those dependent regions studing the habitable globe, we can hardly refrain from laughter—it looks as if a mite had the limbs of an elephant. In our copy, though marked on the scale, the colonies of other nations are not coloured: it would add to the interest of the map.

But, altogether, we have but a word to say on behalf of this volume:—it is a perfect treasury of every thing that can be desired in reference to a knowledge of the colonies of Britain.

An Essay on the Art of Dancing. Pp. 32.
Calkin and Budd.

THE opening of this pamphlet, given to the dancing world by the "Booksellers to her Majesty" has amused us; and, without going over the whole ground of physical education, we quote it in the hope that it may equally entertain our readers.

"As it is (says the writer) no uncommon occurrence to hear the utilitarians of the present day express their doubts as to whether the practice of dancing ought to be classed amongst our intellectual pursuits, a few observations upon this subject may not be unacceptable to the general reader. 'Intellectual,' according to Dr. Johnson, is thus defined, 'Relating to the understanding,—belonging to the mind,—transacted by the understanding.' If by the practice of dancing were merely meant the meeting of persons for the purpose of hustling each other in what is called a quadrille, or of bumping each other in a waltz, the doubt as to the intellectuality of such practice would be a reasonable one, and every argument advanced in its favour must at once fall to the ground. But this is the abuse of dancing; and it would be just as consistent to state that the practice of dancing has nothing to do with the mind, merely because there is a want of taste in the fashionable dancing of the present day when executed as a recreation, as to raise a similar doubt in reference to the practice of music, merely because people sometimes sing out of tune, and occasionally play out of time."

This is good sound reasoning, for if intellect belong to the understanding, it is literally true that so does dancing: if intellectual matters are *trans-acted* by the understanding, so is dancing! Our author, we are afraid, speaks too disparagingly of quadrilles and waltzes—instead of *hustling* in the former, the performers always look to us like so many automata; and instead of *bumping* in the latter, like persons coupled and entwined for life in one loving embrace, as if they were the double stars of the rotatory system.

A Historical View of the Results of Vaccination, as unfolded in Dr. Baron's Life of Jenner.
By Vigoriniensis. Pp. 105. London, 1839.
Livingtons; Worcester, Stratford.

TRULY does the able author describe this to be one "of the most important of topics;" for what can be more important than the health and safety of a whole people? The present small volume is a vigorous review of the history and progress of vaccination; and the author, who must have devoted great attention to the subject, as his practical remarks evince, earnestly enforces the necessity for legislative enactments to restrict the propagation of small-pox in the country. Recent visitations of that disease, with very fatal consequences, in many

districts of England, add much to the force of these arguments.

Political Discourses. By George Ramsay, B.M.
Trin. Coll. Cam. 8vo. pp. 383. Edinburgh,
1839. Black; London, Longman and Co.

THESE are very able discourses; and we would particularly refer to that on the vote by ballot, as an example of the whole, and one of the most convincing arguments that has appeared on the question in any shape, either in or out of parliament.

Emigration Fields: North America, the Cape, Australia, and New Zealand. By Patrick Matthew. Pp. 237. Edinburgh, 1839.
Black; London, Longman and Co.

THE information contained in this volume will be found valuable for emigrants, and is not without its interest for the politician. On the subject of Mexico, the author holds that emigration thither (especially of Irish Roman Catholics) should be encouraged, to prevent the country falling under the power of the United States or Russia; but New Zealand appears to be the land which he deems most favoured by nature for British settlement.

The Hand-Book for Australian Emigrants, by S. Buller, Esq. Pp. 240. (Glasgow, M'Phun; London, Cotes; Edinburgh, Whyte.)—Another publication of the same class, with information compiled from many sources.

ARTS AND SCIENCES.
GEOLOGICAL SOCIETY.

JANUARY 23. Rev. W. Whewell, president, in the chair.—A notice, by Mr. Lyell, 'On the Occurrence of Graptolites in the Slate of Galloway,' was first read. On examining some specimens of slaty sandstone lately collected by Mr. John Carrick Moore on the shores of Loch Ryan, Mr. Lyell recognised the distinct remains of graptolites; and, as fossils are exceedingly rare in the great range of slaty sandstone and shale extending across the south of Scotland, from St. Abb's Head to Galloway, he conceived the discovery of this zoophyte, characteristic of strata more ancient than the old red sandstone, to be important. The beds containing the graptolites are nearly vertical, and their strike is W.S.W. and E.N.E.—The reading of Mr. Daniel Sharpe's paper 'On the Neighbourhood of Lisbon,' was then resumed and concluded. The district described in this memoir is bounded to the north of Lisbon, by a line extending from Torres Vedras by Sobral to Villa Franca, and to the south, by the coast from Cape Espichel to St. Ubes. The formations of which it consists are arranged by Mr. Sharpe in the following order, the local names being derived from the points where the strata are best displayed. *Tertiary.*—Upper tertiary sand; Almada beds, consisting of sands, limestones, and clays; lower tertiary conglomerate. *Secondary.*—Hippurite limestone, red sandstone, Espichel limestone, slate-clay and shale, San Pedro limestone, older red conglomerate. *Igneous Rocks.*—Basalt and granite. The composition, range and extent, organic remains, mineral contents, and physical phenomena of each deposit, were described in considerable detail. In the "upper sands," which constitute nearly the whole of the area belonging to the tertiary class of formations south of the Tagus, and included within the author's range, no organic remains have been noticed, and the strata are quite horizontal, except at the edges of the basin. A mine of quicksilver was profitably worked in the lower beds at Coyna during the last century; but it was abandoned in 1801, in consequence of all the quicksilver having been extracted which the miners were enabled to

reach. The gold dust, for which the sands of the Tagus have been so long celebrated, Mr. Sharpe conceives, is also derived from the lower beds of this division of the tertiary series. The only spots where workings have been carried on regularly, and to any extent, are near Adica, on the coast of the Atlantic, about ten miles south of the mouth of the Tagus. The gold dust is obtained from sand washed down from the cliffs; but it is only after the lapse of considerable intervals of time that the works can be successfully pursued. The washings were carried on in the fifteenth century, until they were found to be no longer profitable, and they were renewed in 1814 and continued till 1826, when they were again abandoned. The Almada beds occupy the greater part of the tertiary district on the Lisbon side of the Tagus, and they form the cliffs on the opposite side, from Trafaria to Almada; also, a zone which ranges from St. Ubes to Palmella, and thence south-west nearly to Aldea do Meco. They are principally interesting on account of the fossils with which they abound; but sufficient attention has not yet been paid to these remains to enable their being accurately compared with the fossils of other tertiary districts. In few countries can the separation between the tertiary and secondary formations be more strongly marked than in the district around Lisbon. The rocks of the latter class were disturbed and denuded before the commencement of the tertiary epoch, and a vast mass of basalt, covering an extensive district to the west and north of Lisbon, is interposed between the youngest of the secondary and the oldest of the tertiary strata. The hippurite limestone consists in the upper and middle parts of marls and argillaceous limestones, containing layers of flints, and, in the lowest, of a beautiful hard marble. It occurs, within Mr. Sharpe's tract, only on the Lisbon side of the Tagus, where it forms considerable districts, and apparently underlies the greater portion of that occupied by the basalt. The most characteristic fossils are several species of sperulites, and other remains of the family of Rudista. Shells are also abundant. The hippurite limestone is underlain conformably by a thick deposit of sandstones, grits, marls, and limestones. Lignite occurs in it at several places, and occasionally in sufficient quantity to have led to unsuccessful researches for coal. A thick efflorescence of sulphur coats many of the beds, and gypsum has been worked to some extent not far from Santa Anna, near the southern limits of the district. This red sandstone formation occupies the greater part of Mr. Sharpe's district to the north-west of Lisbon, and south of the Tagus; it constitutes a band from Palmella to the coast, a little north of Cape Espichel. The strata are much disturbed both north and south of the Tagus. In the sandstone strata, vegetable impressions and seed vessels are found; and in the calcareous, corals and shells, some of which the author has identified with fossils of the English secondary series. The Espichel limestone is composed of alternations of shale and gray limestone. It constitutes the Cape, after which it is named by Mr. Sharpe; also the flat outer zone which surrounds the Cintra Hills; and the mass of calcareous beds forming the Serra d'Arrabida is considered by him to be most probably of the same age. The fossils found in this formation are for the greater part casts, and are not easily separated from the matrix. They are also referable to the English secondary series. The deposit of shale and slate-clay occurs only in the neighbourhood of Cintra, forming the middle

zone surrounding those granitic hills. The uppermost and lowest divisions consist principally of shale, and the middle of indurated shale, alternating regularly, and without any appearance of disturbance, with various igneous rocks. The whole of the strata dip from the granite nucleus. The San Pedro limestone forms the inner zone around the Cintra Hills. Near the village of San Pedro, the following series of beds is displayed:—

Dark gray compact limestone, several hundred feet thick.	Feet.
Gray limestone, with slight traces of crystalline structure	200
Coarse crystalline marble white, or white gray	100
Coarse marble, usually gray, but towards the bottom bluish white granite	100

The same gradual change may be traced wherever the limestone can be seen resting upon the granite. The lines of stratification are always distinct, and the dip varies from 40° to 70° from the central nucleus. The older red conglomerate occurs only near St. Ubes, forming the highest ridge of the Serra de Covoens, the eastern end of the Serra de San Luis, and the higher parts of the Serra de Vizo. The true geological position of this rock Mr. Sharpe could not determine, as it occurs only south of the Tagus, and in contact with no deposit anterior to the red sandstone and the Espichel limestone; but it is older than either of those formations. On concluding the description of the sedimentary deposits, the author expressed his regret at his inability to draw any accurate comparison between the Lisbon deposits and those of the more northern portions of Europe. That the hippurite limestone is the representative of the chalk, and the subjacent formations the representatives of the middle secondary series of England, he has little doubt; but he hesitates to point out definitively to which of the oolitic rocks they ought to be assigned. The tertiary beds he considers as probably of the same age as those of Baza and Alhama, in the south of Spain, described by Brigadier Silvertop. **Igneous Rocks.**—The geological position of the great mass of basalt was alluded to in noticing the break between the tertiary and secondary formations. The surface occupied by this rock is calculated to be equal to eighty square miles; but its boundaries are so irregular that they cannot be followed on an ordinary map. The basalt varies considerably in characters, and is sometimes columnar. It generally rests upon hippurite limestone, and sometimes upon the red sandstone; but, to the west of Louvres, it cuts through those formations, and it has apparently thrown up the beds lying to the south of the line of intersection. From this circumstance, Mr. Sharpe was induced to conclude that the basalt was intruded near Louvres. Basaltic dykes and associated disturbances were described in the bay of Cascaes. On the beach near Cazimbra, to the east of Cape Espichel, some masses of basalt have been intruded between the beds of sandstone, and have produced considerable disturbance. This is the only point south of the Tagus at which an igneous rock was noticed by the author. Although Mr. Sharpe had innumerable opportunities of observing the junction of the basalt and the formation below it, yet he did not notice a single instance of the subjacent deposit being altered. The only point near Lisbon where granite occurs is the well-known district of Cintra. This rock is generally a true granitic compound, but it passes near the western end of the range of hills into syenite. The great central mass is coarse-grained, and breaks into large irregular blocks; but that which constitutes the outer edge of the formation

is finely grained, splits into rhombs, and might be mistaken for a sandstone. Patches of coarser granite are, however, included in the latter variety, and veins of fine-grained traverse the central masses. A detailed account was given of the disturbances which occur on the flanks of this granitic region, and effect the sedimentary deposits; and a minute description of the dislocations between Palmella and Cape Espichel. The paper concluded with some observations on the earthquake in 1755; and it was shown that its effects were entirely confined to the surface composed of tertiary strata, not a building having been affected which stood upon the secondary rocks, or basalt.

STATISTICAL SOCIETY.

THE Right Hon. Holt Mackenzie in the chair. —The paper read was exceedingly long, exceedingly diffuse, and, it may be added—learned. It was by Mr. Guy, the Professor of Forensic Medicine, King's College, London. It is entitled, 'On the Value of the Numerical Method as Applied to Science, but especially to Physiology and Medicine.' The chief object of the paper is to establish a more complete system of averages in medical science. Thus, to take a familiar instance:—the duration of human life may extend from a moment to upwards of a century and a half, and any attempt to predict the duration of the life of an individual by the use of the average would be regarded as in the highest degree preposterous. Another illustration of a totally different kind is afforded by the pulse, which, in persons of the same age, and in a state of rest, has a range of about forty beats; and, in the same individual, under different circumstances of excitement, a range at least equal to its frequency in a state of rest. Any attempt, therefore, to supply an average frequency to a particular case must be regarded as unreasonable. In this respect, the application of the numerical method to dead matter may often be made with much greater confidence; for it frequently happens that the extreme are not very remote from the mean results. For instance, the engineer knows that the friction produced by the contact of iron, or of any other material employed in his machinery, is different for different specimens of that material; but he finds that the mean quantity of friction produced differs little from the extreme, and he applies the average value with a certainty that no very great practical error will take place in the working of his machines. Such cases as these rarely occur in the study of physic;—and so forth. Professor Balbi, Paris; M. Moreau de Jonnés, also of Paris; Colonel af Forsell, Sweden; and Professor Bache, Philadelphia (Benjamin Franklin's great-grandson), were elected foreign members.

BOTANICAL SOCIETY.

FRIDAY, Jan. 18. Mr. J. E. Gray, president in the chair.—Garden specimens of *Aspidium rigidum*, sent to Mr. G. E. Dennes by the Rev. T. Bree, from a root brought from Ingleborough, Yorkshire, in 1815, were exhibited.—Read, the continuation of Mr. Cooper's paper, 'On the Dispersion of Plants in the Environs of London, and the Formation of Plants exhibiting the Distribution of Species over Localities'; also, a paper, by Mr. J. F. Sidney, 'On the Botany of Morpeth, Northumberland.' The vicinity of the town of Morpeth does not produce many of our rarer British plants, as much is under cultivation, the soil argillaceous, resting upon freestone rock, and the surface, though undulating, nowhere of any considerable elevation.

Nevertheless, on the banks of the river Wansbeck, in Chapel or Bothel Wood, and in some other of the neighbouring woods and plantations, specimens that are seldom met with in any other parts of the county, are found in the very spots marked out as their habitats by Dr. W. Turner in the sixteenth century. Of *Orobranchia major*, which may still be found on the banks, near "Our Lady's Chapel," in Bothel Wood, he writes: "Orobranchia is so rare an herbe in England, that I never saw it in all England but in Northumberland, where it is called *New Chapel House*;" and, again, of another plant, "This *Lepidium* growth plentifully about the waterside that syneth thorow Morpeth, in Northumberland, in such places as great heape of stones are casten together with the might of a great sprat of floods." The rarer plants met with by Mr. Sidney are *Galanthus nivalis*, in a truly wild state; a variety of *Myosotis sylvatica*; also, of *Veronica montana*, with white flowers, *Bromus squarrosus*, &c. The list contained fifty-six species, and one hundred and ninety-two varieties.

ROYAL INSTITUTION.

FRIDAY, Jan. 18.—The first "weekly evening meeting" of the fourteenth season of these social, philosophical, and popular assemblies. Mr. Faraday lectured to a numerous audience 'On the Gymnotus and Torpedo.' Our report of the Royal Society, when the conclusion of Mr. Faraday's paper, entitled 'Experimental Researches in Electricity, Fifteenth Series,' was read (*Lit. Gaz.* No. 1143), will have communicated to our readers what had been done in identifying the powers of the gymnotus and torpedo with those of common electricity, and Mr. Faraday's recent experiments on the gymnotus at the Adelaide Gallery. Our notice, therefore, of this interesting lecture will be brief, confined to a slight description of the gymnotus, the wonder of physiology, and the probability of future experiments developing the nature of nervous influence. The gymnotus, or electric eel, has a large bull head, with a long tapering body, underneath which are most beautiful fringes or abdominal fins. By these are obviated the tortuous progress of the common eel, and the movements of the gymnotus are rendered exceedingly graceful. The essential organs of this creature, those requisite for vital functions, are situated immediately behind the head (within a short space of which the alimentary canal begins and ends), and are very small in proportion to the electrical organs. The latter occupy the whole remaining length. They consist of four separate organs; a large one on each upper side, and smaller corresponding ones underneath. Their structure is cellular, intersected with horizontal laminae, and composed of matter different from any other in the body of the fish. The nerves that lead from the brain and spinal marrow to the electrical organs, are enormous in comparison with those that supply the fluid, or force, or influence, necessary for vitality. They may be cut through, and thus the electrical organs separated from the vital parts; the creature still lives and flourishes, and becomes even more lively than when in its natural state, and when it may be said to be inconvenienced by the large demand of the organs for the nervous fluid, or the something which is doubtless used, worked up in them to produce electrical effects. In proportion to the using up of this nervous influence is the exhaustion of the eel after every electrical discharge. Now, in all common electrical phenomena the converse can

be obtained. For instance, heat from electricity, electricity from heat, chemical action from electricity, and *vice versa*; light from electricity; but the opposite, it is to be regretted, is as yet more an assertion than an established experimental fact. However, enough is known to support the axiom above stated. Neither can be named as the original cause; each is cause and effect; the thing produced can be converted into the thing producing; they all may be the effects of one common cause, but to the knowledge of this, experimental philosophy has not yet come. Upon this principle of reconversion, then, will future investigations be conducted; and the expectations are, that, after having completely exhausted the fish, by passing a current of fluid through its electrical organs, and in a contrary direction to that in which it flows in the fish, experimenters will be able to bring back this nervous influence, to reconvert electrical fluid into nervous fluid, or natural substance, and thus arrive at a knowledge of the nature of that wonderful agent. Mr. Faraday, in the commencement of the lecture, observed that every remark he might make would be applied only to matter in relation to animal life, not to the principle of life—not to the immaterial spirit. And throughout he ably treated cause and effect in the true spirit of an experimental philosopher.

MEDICO-BOTANICAL SOCIETY.

THE ordinary general meeting was held on Wednesday. Dr. Sigmund in the chair.—Two papers were read by the Secretary: one 'On the Treatment of Apoplexy,' in which the author insisted on the necessity of the employment of different modes of treatment, according to the constitutional habits of each patient; and the other 'On the Cariaco, or Amara, of South America,' or 'Maiz de dos Meses,' and its dietetic and medicinal properties, in which the importance of the particular species of maize, or Indian corn above named (which has been hitherto unknown either in Europe or North America), was brought under the attention of its members. The learned author, Dr. Hancock, states that it yields ripe grain in the short period of two months from its sowing, as well in the cold and elevated plains of Meido, and the still colder regions of the Pampas, as in the hot and sultry parts of the Orinoko and Caracacas, and might, doubtless, be cultivated with great advantage and profit to the agriculturist in this country, and supply the place of deficient crops of ordinary grain in unfavourable seasons. It was formerly known amongst the Indians of Venezuela by the names of carriaco and amara; and the Spaniards and Creoles give it several appellations; as "maiz cariaqueto," "maiz de ses meses," and "pan de proviador." It is, however, very doubtful whether the plant is a distinct species, or only a variety of the Indian corn; but it is much more slender and diminutive than the latter. The produce of each is nearly equal, viz. from about fifty to sixty bushels to the acre. The learned author observed that, from the extreme indolence and apathy of the natives, much less of the corn is produced than might be yielded by a proper tillage, and that the different kinds of grain are allowed to become mingled together; and thus, from affinity of species, produce, even on a single ear, a diversity of distinctly coloured kernels. The plant has also the great recommendation of not impoverishing the soil, like most other vegetables of the kind, although as many as three or four crops should be taken off in a year, which are often obtained. Its growth might, he states, be ensured in this

country during the summer months, as the temperature of this season is by several degrees warmer than that of the Pampas. At the conclusion of the discussions to which these papers gave rise, the learned chairman announced the arrival in England of their respected president, Earl Stanhope, and his intention to take the chair at the next general meeting of the Society.

NUMISMATIC SOCIETY.

THE ordinary meeting was held on Thursday. Dr. Lee, president, in the chair.—Mr. Hamilton presented a medal of the Queen by Signor Pistrucchi; Mr. Nightingale, a coronation medal of the Emperor Nicholas of Russia; and Mr. Rolph, several coins found in the Isle of Thanet, and other parts of Kent: amongst which was a penny of Alfred, with some of the Edwards; and another, supposed to be a counterfeit one struck in the reign of John. The president announced the progress of the labours of the committee appointed to examine the collection of coins brought over by Lord Prudhoe from Egypt, and presented to the Society, and stated, that amongst them were several rare and almost unique coins of the Antonines.—Mr. Holroyd exhibited three curious iron coins of African money from Cordovan, and read an interesting paper upon them. The form of these was very rude, being not unlike the section of a mushroom, and they were but of recent introduction; for, when the country was under the dominion of Darfour, the only medium of barter or exchange was grain. On its conquest by Ali Pasha, he introduced the Egyptian coins; but, on account of the low rate at which every article of life was sold, they soon found it necessary to procure some lower medium of circulation. Iron ore being very plentiful in the neighbourhood, was employed in the fabrication of these coins, forty of which were worth one Egyptian piastre, or 2½d. sterling. A similar instance of this coinage is recorded by Major Denham at a village in Africa, where the value of the coin, however, varies, and is settled by the proclamation of the chief. This excites considerable stir and excitement, which the bulls and bears, as on the London Stock Exchange, take every advantage of; but a very great cause of its fluctuation is when the chief gives a feast.—The remainder of a paper was read from Mr. Tudor, 'On the Light which Coins throw on the History and Progress of Civilization.'

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD.—In a congregation held on Monday last, being the first of Hilary, or Lent Term, the following degrees were conferred:—

Bachelor in Civil Law.—Rev. William Bendon Heathcote, Fellow of New College.

Masters of Arts.—Rev. William Seyer London, Christ Church; David Melville, Thomas Henry Allen Poynder, Brasenose College; Rev. William Hunter, Rev. Frank Burges, Fellows of St. John's College; Rev. James Jones, Jesus College.

Bachelors of Arts.—William Currier, Christ Church; John Hawksley, St. Edmund Hall.

ROYAL ASIATIC SOCIETY.

JAN. 19. Professor Wilson, the Director, in the chair.—The first paper read to the meeting was a short memoir of Dr. Rottler, who died on the 24th June, 1836, in his eighty-seventh year. He had been sixty years a missionary of the Society for the Propagation of the Gospel in Foreign Parts, and a fellow-labourer with Schwartz and Gericke. The whole of that time he had actively employed, not only in faithfully discharging the duties of his office, but also in cultivating the science of botany, and in the preparation of a

valuable Tamil Dictionary. In these labours he had been occupied until within three or four days of his death; and in each department he has left behind him valuable results.—A paper, by Mr. E. Solly, was then read, 'On the Preparation of Caoutchouc.' After describing the different processes now employed for the preparation of this very curious substance, Mr. Solly stated that in all these the extraneous soluble matters contained in the sap were allowed to remain with the caoutchouc, and become incorporated with it as it solidified. He considered that these impurities probably exerted considerable influence on the strength, elasticity, and consequent value of the article; and described the kinds of caoutchouc in which these impurities were most abundant, and also those in which their deteriorating influence was the greatest. The want of perfect adhesion between the layers of caoutchouc which composed the India-rubber bottles, he attributed to the presence of a very thin layer of these impurities between them. Mr. Solly then detailed some experiments undertaken by him on the recent sap, with a view to ascertain in how far these impurities might be separated by any improvement in the process now employed for preparing caoutchouc, so as to give it increased strength and elasticity. He concluded with some remarks on the importation of the sap of the caoutchouc trees into this country; the probable causes of the repeated failure of almost all attempts, and on the means most likely to succeed, in attaining so desirable an object. Professor Royle, secretary to the Committee of Commerce and Agriculture of the Society, read a letter from the Horticultural Society of Calcutta, which accompanied a small bale of cotton, the growth of India, from American seed, requesting the committee would obtain the opinion of competent judges in England as to its staple and price, compared with that of the Indian and American cottons. The letter further stated that the culture of American cotton had not yet been established in India on an extensive scale, owing to several causes; but that their Society was still auguring, that by a steady perseverance, and the example of several gentlemen of the civil and military service who had shown its superiority, the natives would be induced to spread it extensively over all the districts favourable to the growth of indigenous cotton.—Dr. Royle then read a letter from Mr. Malcolmson, 'On the Cotton grown near Pastum, in the Kingdom of Naples,' a small quantity of the seed of which he had forwarded, with a request that it should be sent to the Horticultural Society of Bengal. Mr. Malcolmson entered into details respecting the soil and climate of that part of Italy, and alluded to the remarkable petrifying stream which runs near Pastum, and which caused a considerable calcareous deposition on the soil which it irrigated, a mixture which had been supposed essential to the cultivation of cotton. There were two kinds of cotton cultivated in the kingdom of Naples, the best of which was grown at Castellamare. Mr. Malcolmson had procured some of the soil from one of the richest cotton fields of that place, of which he intended to forward an analysis. Dr. Royle stated that he had, at the same time, received a note from the Hon. Fox Strangways, containing an extract from a paper of Professor Tenore, on the very cotton spoken of by Mr. Malcolmson. The extract stated that the usual cotton grown in the kingdom was the *Gossypium herbaceum*; but that the cotton of Castellamare, which had been cultivated from time immemorial in Calabria, was very probably the same as the American

cotton described in the "Orto Romano." For the cultivation of this cotton in Castellamare, they were indebted to the French, who had brought it from Calabria. Dr. Royle observed that the cotton was most probably the *Gossypium hirsutum*, or Upland Georgia cotton. As a mail was to depart for India to-day, he had been enabled, by the kindness of Mr. W. B. Bayley, to despatch, through the India House, the seed sent by Mr. Malcolmson, and it would reach India time enough for the sowing of the coming season.—Two papers were afterwards read, 'On the Cultivation of the Bourbon Cotton in the South of India.' The first by Mr. Hughes, of Tinnerly, who had grown that plant largely, and with great success, twenty years ago; and the other by Mr. Heath, who had followed the plan of Mr. Hughes, when commercial resident of Salem and Colimbatore, with equal success. The paper of Mr. Hughes went into minute details on the soil and climate; on the planting, pruning, gathering, and cleansing the cotton; and on its value in the market. If published in full by the Society, as it probably will, this paper must furnish a very useful body of information to cultivators of cotton. An abridgement of it was made in India by Mr. Heath, who caused it to be translated into the Tamil language, and a copy to be given to any farmer who made a trial of the seed. The experience of Mr. Heath generally agreed with that of Mr. Hughes, except that the former gentleman found he was able to grow cotton successfully at a distance of 180 miles from the sea, while Mr. Hughes found the coast to answer exclusively. Mr. Heath also found the natives more ready to adopt improvement than could have been expected from the paper of Mr. Hughes. At the conclusion of this paper it was observed, by Mr. W. B. Bayley, that so far as he understood, the manufacturers of Glasgow and the North of England considered the defects of Indian cotton generally to arise rather from want of care in gathering and cleansing than from any deficiency of staple; and that, consequently, more attention should be paid to these points than to the introduction of new plants.—The director stated to the meeting, that Sir James Rivett Carnac, who is nominated to the governorship of Bombay, has kindly offered to promote, by any means in his power, the objects of the Royal Asiatic Society; and that the council had, in consequence, resolved to prepare lists of desiderata to be furnished to him. He, therefore, requested that any member of the Society, who might have any suggestion to make bearing on the matters in which the aid of Sir James Carnac might be valuable to the Society, would, either now, or at an early period, communicate such suggestion to the secretary of the Society, by whom it would be brought before the council.

ROYAL SOCIETY.

MR. BAILY in the chair.—A communication was read relative to certain experiments made to obtain silver from a quantity of quicksilver saved from the Lady Charlotte, wrecked last year: the quantity of quicksilver obtained was about 55 lbs., by pressure, which gave it the appearance of dry mortar, and exposure to the fire, the decrease in eight days was 4 lbs. Another paper was read 'On the Conversion of the Chlorates,' &c., by Mr. Penny. This communication is insusceptible of analysis: we can only present one or two of the author's results. After mentioning the steps by which Mr. Penny found his equivalents, he gives an account of many experiments with oxygen, nitrate of potassa, nitrogen, chlorate of soda, nitrate of soda,

and other substances: he points out the discrepancies which exist between Thomson, Turner, and himself, which appear to be in some instances considerable. The experiment by which he effected the conversion of silver into chlorate, presented, for 100 parts of the former, 167.441 of the latter; and 100 parts of nitrate presented 84.374 of chlorate. Oxygen is the only substance on the equivalents of which chemists are agreed.

SOCIETY OF ANTIQUARIES.

MR. HAMILTON, V.P. in the chair.—Mr. Bruce communicated a contemporary account of a comet which appeared in 1472, in which the comet and its course were described much more scientifically than is usually met with in writings of that period. The account was extracted from a MS. preserved at Peterhouse College, Cambridge, about to be printed by the Camden Society. A further portion was read of Mr. Baits's 'Account of Occurrences previous to, and at the Battle of Cressy,' and the remainder postponed.

ROYAL SOCIETY OF LITERATURE.

THURSDAY. Dr. Spry in the chair.—After transacting the routine business, Mr. Hamilton exhibited the drawing of a remarkable gem (green jasper), unfortunately destroyed in the burning of Sir Robert Gordon's residence, when ambassador at Constantinople. The figures upon it are very curious. Mr. Hamilton also read an extract of a letter from Mr. Berton, a Swiss traveller, giving an interesting account of his researches upon the site of Tyre. Mr. Berton had occupied himself with an examination of the desert between the Dead and the Red Sea, and had ascertained that there was a fall of 1800 or 1400 feet; so that there might have been in ancient times, as had been stated, a water communication across that tract of country. His further researches induced him to believe that the first Tyre was situated on the continent, and afterwards connected with the islands by causeways. That the greater part of the island, on which stood the city when besieged by Alexander (that on the peninsula having been destroyed by Nebuchadnezzar), was now under water; otherwise it was impossible to account for its extent and population. In the same manner Mr. Berton traced two immense submarine banks, stretching on the north and south, like two mighty arms into the sea, and supposes them to have formed the great harbours of Tyre, where the numerous vessels, engaged in her prodigious traffic, found accommodation and shelter. If these can be proved to be artificial, it will settle this question; and Mr. Berton proposes to employ a diving-bell for that purpose. No inscriptions have been found, but some immense blocks of gray granite; and so perfectly are all remains of mighty Tyre obliterated, that the prophecies concerning it are fulfilled to the letter. *It is sought, and cannot be found!*—Mr. Cattermole, the secretary, then commented reading a paper, 'On the Latin Versions of Scripture supposed to be written by Dr. Woraley,' mentioned in Wood's "Athenensis."

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Entomological (Anniversary), 8 P.M.; Royal Geographical, 3 P.M.
Tuesday.—Civil Engineers, 5 P.M.
Wednesday.—Society of Arts, 7½ P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.
Friday.—Royal Institution, 8 P.M.; Botanical, 3 P.M.
Saturday.—Royal Asiatic, 3 P.M.

SKETCHES.

SANDWICH ISLANDS.

(From the "Hawaiian Spectator," No. 1.)

"Notice of the remarkable Phenomena in the Tides of the Sandwich Islands, on the 7th November, 1837. By T. Chas. Byde Rooke, F.R.C.S.

"On the evening and night of the 7th Nov. a most remarkable commotion of the sea was witnessed at Honolulu, in many respects similar to that witnessed at these islands in May 1819. One inch and a half of rain had fallen during the previous twenty-four hours; the wind was fresh from the N.E. equally at intervals. The atmosphere was clear and cool. Therm. 74.5. The barometer had gradually fallen during the four previous days, but this evening had again risen to 30.06, at six o'clock, when the alarm was given that the sea was retiring. The first recession was the greatest, something more than eight feet; but being unprepared to make observations at the moment, the exact fall was not measured. The reefs surrounding the harbour were left dry, and the fish aground were mostly dead. The sea quickly returned, and in twenty-eight minutes reached the height of an ordinary high tide; scarcely remaining stationary, it again receded and fell six feet. This was repeated at intervals of twenty-eight minutes. On the third rising it was four inches above ordinary high-water mark, and fell again six feet four inches. After the fourth rising, the length of time occupied by the rise and fall varied, and the rise and fall diminished gradually but not regularly. At eleven P.M. the thermometer stood at 74; barometer, 30.04; wind freshening and frequent showers; the ebb now occupied twenty minutes, and the flow ten. At eleven, 30, it became calm with constant rain. Therm. 73.5; bar. 30.06. The ebb and flow still continued occupying the same space of time, but the rise and fall decreasing. This continued during the forenoon of the 8th. The rapidity with which the water fell varied in different parts of the harbour. On the east side, the greatest rapidity noticed was six inches in a minute; but on the north, at one time during the third recession, it fell twelve inches in thirty seconds. At no time did the water rise higher than a common spring tide; but the fall was about six feet below low-water mark. The same occurrence is related to have taken place in 1819, when the tide rose and fell thirteen times in the space of a few hours. On neither occasion was there any perceptible motion or trembling of the earth, or unusual appearance of the atmosphere. Since the above was written, distressing accounts have been received from Maui and Hawaii of the damage done to property and loss of life. On the leeward side of Maui, the same rise and fall took place as at Honolulu, but on the windward part of the island, the sea retired about twenty fathoms and quickly returned in one gigantic wave, sweeping every thing before it—houses, trees, canoes, and every movable object exposed to its fury. At a small village called Kahului, in the district of Waialuku, on the sea retiring, the amazed inhabitants followed it as it receded, eagerly catching the stranded fish, shouting and hallooing with pleasure, when suddenly the sea rose perpendicularly before them like a precipice, and, rushing to the beach, buried the assembled multitudes in the flood, and, overflowing the shore, swept away every house in the village but one; the canoes and property of the natives were all destroyed. Happily, owing to the amphibious education of the people, but two lives were lost here, but as the

same occurrence happened all along the sea-side we shall probably hear of more deaths.

"At Byron's Bay, on Hawaii, the same phenomenon took place. An unusual number of persons were collected together attending a protracted meeting, consequently every house was crowded. At half past six, the sea retired at the rate of four or five knots an hour, reducing the soundings from five to three and a half fathoms at the anchorage, and leaving a great extent of the harbour dry. Hundreds of curious souls rushed down to witness the novelty, when a gigantic wave came roaring to the shore at the rate of six or eight knots an hour, rising twenty feet above high-water mark, and fell on the beach with a noise resembling a heavy peal of thunder, burying the people in the flood, destroying houses, canoes, and fish-ponds, washing away the food and clothing of the inhabitants, large quantities of animals, fire wood, and timber collected on the strand for sale. The cries of distress were horrible; those in the water, unable to swim among the wreck of houses and pieces of timber, struggling for their lives, and those on shore wailing for their friends and relatives. The British whale-ship, Admiral Cockburn, was at anchor in the bay, and to the timely aid and humane exertions of her master (Lawrence) and crew many are indebted for their lives; but for the assistance rendered by their boats, many who were stunned and insensible would have been carried out to sea, and perished, as the natives had not a single canoe left that would float. Every thing was destroyed; those who escaped with their lives had neither food nor raiment left. In Kanokapa and Kaahelu alone, sixty-six houses were destroyed, and eleven persons lost their lives, four men, two women, and five children; at Waiolama and Hauna, a woman and child were drowned; at Kauwale, one woman lost her life. The amount of damage done has not yet been ascertained, nor is it known how many times the sea rose and fell. There was no shock of an earthquake felt at Hilo, or elsewhere, although it is ascertained that the volcano of Kilauea was unusually disturbed the previous evening,—the fires were suddenly quenched, and yawning chasms burst open in previously tranquil places, accompanied with violent explosions. Inquiries have been made of masters of vessels who were to the north and to the east of the islands on the 7th, at various distances, but none of them noticed any thing unusual in the sea or atmosphere. That this apparent submarine volcanic action has taken place at some distance from the islands is proved by the wave striking the different islands simultaneously and, apparently, in the same direction; but at what distance we have no means, at present, of determining. Perhaps the internal fires have found a new vent, which may be laying the foundation of a new group of islands in our neighbourhood. It is now nineteen years and a half since a similar phenomenon occurred here, but not so violently as the last, nor was it attended with any loss of life. On the second day after, an affecting scene was witnessed at Wailuku (Maui). The bodies that had been recovered from the sea were conveyed together to the church, followed by a great multitude; a funeral sermon was preached on the occasion: this solemn warning made a deep, and, it is to be hoped, a lasting impression on those who witnessed it of the uncertain tenure by which we hold our lives."

[We have copied the foregoing from the *Ceylon Chronicle*.—Ed. L. G.]

VARIETIES.

British Association.—On settling the accounts of the British Association at Newcastle, notwithstanding the liberal and handsome manner in which the whole was conducted, the local committee found a balance of 187l. 4s. 11d. out of 4563l. 1s. 10d. receipts: and it was agreed, that 100l. should be given towards the purchase of a valuable collection of shells, and the remainder to be divided between the Literary and Philosophical Society, Natural History Society, Mechanics' Institute, Medical School, and the Society for the Promotion of the Fine Arts.

The Fine Arts.—Our last page gives the first intimation we have seen, of the production of one picture at least, if not of several more distinctly connected with it, which may indeed be deemed of great national importance. The room in which the banquet in commemoration of immortal Waterloo is given, every thing on the table, every accessory, is, as it were, a part of the principal event; and then the glorious actors themselves, Wellington and his paladins! What Briton but would long to possess a faithful resemblance of the place and of them? Mr. Moon's good fortune in obtaining access to such a subject is much to be envied: and yet it is a pleasure to rely on his acknowledged skill, exertion, and liberality, for an engraving which will do it justice, and reflect honour upon our School of Arts.

Mori and Lindley's Quartett Concerts we are glad to see announced to commence the musical season. Their classical character is a great charm, and of much value as a corrective to our rather vagrant school, as well as pleasing to those who attend them.

Vesuvius.—On New Year's morning an eruption of Vesuvius took place, which at one time threatened Naples; but the wind shifting, the smoke and ashes were fortunately borne to the shores of Portici. On the 2d, detonations were heard, and the earth was tremulous under feet. The phenomena continued for another day or two, with considerable violence and dangerous aspects; but, except fears from the fiery glowing of the mountain, the invasion of Naples with cinder-showers, and periods of extreme darkness, no harm was done.

Science in the East.—Captain Wade, political agent at Loodianah, has submitted the subject of a scientific committee to accompany the field army in Afghanistan, to Lord Auckland.

The Weather Guide (London, Longman and Co.; Tilt; Ipswich, Pawsey) is a very good and useful index to the barometer through every month in the year. It is on the face of a sheet of card-board, of a very convenient size for reference, as the eye readily takes in the whole distinctly at a glance.

Prahl's Travelling Compendium.—As a friend to useful inventions and improvements, and having tried this excellently arranged convenience during a pretty long tour, and over pretty wild and rough roads, our travelling friends will thank us for telling them there is such a thing patented, which will save them much trouble, and add greatly to their comforts *in transitu*. What we liked much, was not merely the convenience for the arrangement of necessities, but those for papers, &c. &c.

Himyaritic Language.—Himyar and Ophir (says our learned correspondent Mr. Goodhugh), mean *red*. Edom is the Hebrew word for *red*; and it is a singular coincidence, that the Egyptians are always painted *red* in the tombs. If [quare, Himyar? Mr. G.] also means a man, as Adam.

The last Cab Comendrum.—Why are the hackney-coach drivers, cabmen, &c. now much better off than ever? Because they have always got a *plate of Wittles before them!*

LITERARY NOVELTIES.

Reminiscences of Paris, Political, Literary, and Anecdotal, for the last Twenty Years, are announced by J. W. Lake, whose literary talents and opportunities for observation, we need hardly notice, are of a very high order.

Mr. Bent announces the London Catalogue of Books, thoroughly revised, corrected, and brought down to December 1838, which will contain upwards of 6000 additional new works since the publication of the Catalogue in 1834.

LIST OF NEW BOOKS.

Dr. Hooper's Medical Dictionary, 7th edit. revised, corrected, and enlarged, by K. Grant, M.D. 1 vol. thick 8vo. 30s.—The Philosophy of the Human Mind, by J. Douglas, 8vo. 9s.—Sermons, Parochial and Family, by the Rev. J. Calthrop, 2 vols. 8vo. 21s.—Emigration Fields, by P. Matthew, post 8vo. 3s. 6d.—C. MacLaren's Sketch of the Geology of Fife and the Lothians, 12mo, 7s. 6d.—Young Gentlemen of the Nineteenth Century, square, by The Curresey, its Influence on the Trade of the Country, by J. Harley, 8vo. 9s.—Robertson's Letters on Paraguay, Vol. III. (Francis's Refuge of Terror), post 8vo. 10s. 6d.—The Little Book of Knowledge, square 3s. 6d.—Portrait of Geology, 12mo. 7s.—The Economy of Vegetation, 12mo, 6s.—Plain Discourses on the Church Catechism, by the Rev. W. Hutchinson, 8vo. 10s. 6d.—Murchison's Silurian System, 2 vols. 4to. 8l. 3s.—The Law of Gaming, Wagers, &c., by F. Edwards, 12mo. 5s.—Goethe's Correspondence with a Child, 3 vols. post 8vo. 18s.—The Universal Calculator's Pocket Guide, by R. Wallace, 32mo, 1s. 6d.—Fairy Tales in Verse, square, 2s. 6d.—Lectures in English History, by H. Neele, 3d edit. 12mo. 4s. 6d.—History of California, by A. Forbes, with Plates, 8vo. 14s.—Statistics of the Colonies of the British Empire, by R. Montgomery Martin, 1 vol. royal 8vo. 42s.—The Hand-Book for Australian Emigrants, by S. Butler, 18mo. 2s. 6d.—Sowerby's Conchological Manual, 8vo. 25s.—Tales about the Mythology of Greece and Rome, by Peter Parley, square, 4s. 6d.—Letters to Mothers, by Mrs. Sigourney, 3d edit. 32mo. 2s.—Lights and Shadows of Scottish Life, new edit. fc. 8vo. 6s.—Life of Manie Waugh, new edit. fcap. 8s.—Legend and Romance, African and European, by Lieut. Johns, 3 vols. post 8vo. 24s.—Tredgold on the Steam Engine, by Woolhouse, 2 vols. 4to. 4l. 4s.

An aurora borealis, very bright, with coruscations, extending from N. to N.W. from about eight to ten on the evening of the 19th.

Rain fallen, .45 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

We can only thank "L. C. C. R."

We are resolved against suffering the lamented death of L. E. L. to be made the subject of poetry in our columns, that we must refuse a place even to the beautiful tributes of Mary Ann Brown, E. Burton, and other sweet writers.

We have to acknowledge the "West of England New Magazine," No. 1, which seems to be a various and amusing miscellany, and one likely to draw out the talent of our western contemporaries, heretofore so fertile in literature and the arts.

We will endeavour to procure the information sought by "F. C. H."

We must see the work to which "A Subscriber" refers. It is quite against our principle to offer an opinion upon an accessible and unexamined production of any kind.

ADVERTISEMENT,

Connected with Literature and the Arts.

THE MODEL of the BATTLE of WATERLOO is now open for exhibition at the Egyptian Hall, Piccadilly, by brilliant Artificial Light. Constantly illuminated from 7 o'clock in the Afternoon, and throughout the Day in dark and favourable weather.

Open from Ten in the Morning until Nine in the Evening, without intermission.

Admission, One Shilling each.

PRIVATE TUTOR.—A Clergyman, for some years Tutor to a Nobleman, and subsequently receiving Six Pupils into his House, a moderate distance from London, would be glad to fill a Vacancy with a Gentleman's Son, whose Education or Health may require more than common attention.

Letters, addressed to the Rev. J. C. C., Post Office, Hampton Court, Middlesex, will be forwarded to him.

Just published, designed not only for the Profession, but also for the instruction of Deaf Pupils.

CURTIS'S MAP of the ANATOMY of the EAR, with the Principal Nerves and Blood-vessels. Price 5s. 6d. each.

2. **Curtis's Chart of the Diseases of the Ear**, with their Cause, Order, Heat, Symptoms, Cause, and Treatment. Price 5s.; usually, 1s.

Longman, Orme, Brown, Green, and Longman.

TO ADVERTISERS.—The Stamp Office Returns, for the Year ending the 30th September last, show that the Number of Stamps supplied to the "Newcastle Chronicle," during that time, was 105,000, being an average of 2800 Copies for each Publication, and 60 per Week above that of any other Newspaper published in the four Northern Counties. The "Newcastle Chronicle" circulates in the Town of Newcastle upon-Tyne, and the Counties of Northumberland and Durham, in nearly equal Proportions, and consequently guarantees to Advertisers a greater Publicity throughout that District than any other Journal can afford them.

MESSRS. LONGMAN and CO.'s ANNUAL SCHOOL CATALOGUE for 1850, containing many important Announcements of New Works in preparation, among which may be mentioned an extensive series of Works, by the Professors of King's College, London, is now ready, and may be had (gratis) of all Booksellers.

It will be sent, free of postage, to any gentleman in the country who may apply for it by letter, post-paid.

25 Paternoster Row, Jan. 24, 1850.

New ready, price, Prints, royal 4to. 12s.; India Proof, large paper, 51s.; and plain Proof, 16s., Part XI. of

MUSIC.

In 1 large vol. 4to. pp. 400, price 3s. 6d. uniform with the Publications of the Banquet and Midland Clubs.

ANCIENT SCOTTISH MELODIES, from a Manuscript of the Reign of King James VI. With an Introductory Inquiry, illustrative of the History of the Music of Scotland.

By WILLIAM DAUNY, Esq. F.R.S. Scotland.

"We can now refer to an authentic national collection of a comparatively early date, in which a number of our Scottish Melodies are to be found, and among these some of those which have been most dearly treasured, and which are here presented, as we conceive, in even a more engaging form than that under which they are popularly known." "The preliminary dissertation is written with much ease and elegance, and with equal judgment and learning." "Blackwood's Magazine."

"It is a production of great learning and research, entering much more fully and deeply into the subject than any other essay on ancient and Scottish music and song that has appeared. No man can there be any doubt that it (the collection) is more accurate, by a century at least, than any other collection of Scottish melodies now extant."—*Spectator*.

Smith, Elder, and Co. 65 Cornhill.

NEW MUSIC.
Just published, elegantly bound in cloth, Vol. III. of a new Edition of

THE VOCAL MELODIES of SCOTLAND.

Edited by FINLAY DUN and JOHN THOMSON.
The Work to be completed in 3 Volumes.
Published by Paterson and Roy at their Music Saloon, 37 George Street, Edinburgh.

Paterson and Roy have the honour to announce, that their Majesty Queen Victoria has derived so much gratification from a perusal of the two first volumes of the new edition of their "Vocal Melodies of Scotland," that she has been graciously pleased, through her Librarian, to command a complete copy of the work for the Royal Library at Windsor.

Advertisement.
Paterson and Roy beg to thank the subscribers and the public for their kind patronage of the Third Volume, which, they trust, will answer the favourable expectations which the success of the former volumes seems to warrant.

In the present volume will be found, besides the Standard Melodies, many hitherto unpublished, which, however, have been obtained from authentic sources; and several original Songs, by the celebrated Depts, and others of eminence.

The Songs may be had separately; and also selections from the volumes can be made up to suit the taste of the purchaser.

Sold by Cochrane and Co. 30 Prince Street, Hanover square; Duff and Hudson, Grafton Street; and Oliver and Bond Street, London; where may be had Vols. I. and II. of the same work.

The Three Volumes will form a splendid New Year's Gift.

Edinburgh, December 1850.

BOOKS IN THE PRESS.

In a few days, post 8vo.

DOMESTIC SCENES in RUSSIA; in a Series of Letters, describing a Year's Residence in that Country, chiefly in the Interior.

John Murray, Albemarle Street.

BALL'S GRAPHIC LIBRARY FOR DOMESTIC INSTRUCTION.

On the 26th of January will be published, Part I. price 3s. 6d. of

THE LIFE of CHRIST ILLUSTRATED.

The text will consist of the words of the authorized version of the Sacred Narrative, with a commentary of the choicest and most beautiful passages selected from the writings of about one hundred celebrated Divines; and the Cuts, taken from the greatest works of the ancient and modern masters, will be drawn, engraved, and printed in the highest style of art. The complete work will contain eighty-four Engravings; thirty-six representing the grand incidents of "the Life," and forty-eight, head and tail-pieces. "The Life of Christ Illustrated" will thus, for the first time, associate the noblest productions of fine art with the brightest gems of Sacred Literature, and together form a family book, equally adapted to the drawing-room, the closet, and the sick chamber of the Christian.

To be completed in six parts, forming one handsome volume.

Contents of Part I.
The Exaltation of Christ.

1. The Adoration of the Shepherds and of the Wise Men;
2. Jesus honoured by Heaven and Earth;
3. The Transfiguration;
4. Jesus proclaimed as the King Messiah at Jerusalem;
5. Messiah glorified in the Redemption of the Gentiles;
6. The Resurrection and Ascension of Christ.

List of Engravings to Part I.

1. Adoration of the Shepherds.....	Spagnoletto.
2. Annunciation and Crucifixion (Ornamental Head-piece).....	Sargent.

THE BOY'S COUNTRY BOOK; being the real Life of a Country Boy, written by Himself; exhibiting all the Amusements, Pleasures, and Pursuits of Children in the Country. Edited by W. Hewitt, Author of "The Rural Life of England," &c. fcap 8vo. with above 40 Woodcuts, by S. Williams, &c. cloth.

"A delightful book—full of enjoyment and information, anecdote and adventure, such as boys like, told in a simple and hearty way, as one schoolfellow would talk to another."—*Spectator*.

FEMALE IMPROVEMENT. By Mrs. John Sandford. 3d edition, 1 vol. fcap 8vo. price 7s. 6d. cloth lettered.

By the same Author, &c.

Woman in her Social and Domestic Character. 5th edition, fcap 8vo. 6s. cloth.

"We could wish to see these useful volumes in the hands of every young lady on her leaving school."—*Evangelical Magazine*.

THE HUGUENOT: a Tale of the French Protestants. By G. F. R. James, Esq. 8 vols. post 8vo. 11. 11s. 6d.

"We may safely pronounce 'The Huguenot' the most stirring, vigorous, and carefully elaborated of Mr. James's works of fiction."—*Metropolitan Conservative Journal*.

LOVE'S EXCHANGE: a Tale. By Charles J. Boyle, Esq. 3 vols. post 8vo. 11. 11s. 6d.

"In 'Love's Exchange' there is much of reflection upon the world, or rather upon the feelings with which we begin, pass through, and finish life's eventful history. These all speak a refined mind—a mind that loves the pure and good, and hurries by the impure and worthless."—*Literary Gazette*.

PALEY'S WORKS:
The only Complete Edition, with Life, by his Son.
A New Edition, with a New Preface, by the Rev. EDWARD PALEY, A.M.
Vicar of Easingwold.

THE WORKS OF WILLIAM PALEY,
D. D.; and an Account of the Life and Writings of the Author.

Hodgson; Fawcett; Mackie; Templeman; Whittaker; and Booksellers. Also for Parker, Oxford; Deighton, Cambridge; and Robinsons, Liverpool.

With Two fine Engravings, price 10s.
HILL and VALLEY; or, Hours in England and Wales.
By CATHERINE SINCLAIR.

"The work is a fund of gaiety and gravity, of shrewd and discriminating observation of life and manners."—*Scottish Guardian*.

"The whole work breathes a healthy, fertile, and polished intellect."—*Saturday Post*.

"Her style is characteristic of her mind—transparent, piquant, and lively."—*Christian Instructor*.

"The present work is simply a tour in Wales, and afterwards in some parts of England, wherein the author describes the places she has visited in a series of familiar letters, written with great cleverness and taste; and a travelling companion possessed of more good feeling and pleasant qualifications than Miss C. Sinclair, could hardly be found for a tour in Wales, even hill and valley. Her former publications have met with deserved success, and convey lessons of good sense in the most agreeable manner. With a solidity of understanding, they combine an sweetness of conversation and liveliness of illustration, drawn from much various reading, which renders them as pleasant as they are instructive, and we take this opportunity of cordially recommending them to the public, and particularly to domestic circles."—*Literary Gazette*.

Seventh Thousand, 7s.
Modern Accomplishments; or, the March of Intellect. By Catherine Sinclair.

"We have been highly pleased with the volume, and deeply affected by some of its parts, and we choose, that if extensively read, that it is adapted to be extensively useful."—*Christian Instructor*.

Fifth Thousand, 7s.
Modern Society; or, the March of Intellect.
The Conclusion of "Modern Accomplishments."

"Some of the after-dinner conversations remind us strongly of the sparkling and wild wit of Sheridan."—*Saturday Evening Post*.

"The dialogue is sustained with remarkable vigour and spirit, and gives eminent proof of a mind not only well regulated, but highly cultivated."—*Scottish Guardian*.

Edinburgh: William Whyte and Co. London: Longman, Orme, and Co.

BY AUTHORITY.
In 1 large vol. royal 8vo. price 21. 2s.

THE COLONIES OF THE BRITISH EMPIRE IN THE WEST INDIES, SOUTH AMERICA, NORTH AMERICA, ASIA, AUSTRALASIA, AFRICA, AND EUROPE; comprising the Area, Agriculture, Commerce, Manufactures, Population, Military Force, Colonies, and Wealth, Land, Rates of Wages, Prices of Provisions, Banks, Colonies, States, Population, Education, Religion, Crime, &c. &c. of each Colony; from the Official Records of the Colonial Office, by permission of the Secretary of State; with Maps, Plans, Charts of Ports, and other Documents.

On Saturday, January 5, was published, price Three Halfpence, Number I. of the Second Series.
John Johnston, Edinburgh; Nisbet and Co., and R. Greenbridge, London.

2d edition, in small 8vo. price 7s. cloth boards.
THE LAST OF THE PLANTAGENETS;
a Historical Narrative. Illustrating some of the Public Events and Domestic and Ecclesiastical Manners of the Fifteenth and Sixteenth Centuries.

"This is an extremely well-conceived and well-wrought legend of the olden time. The interest of romance has seldom been more happily combined with the veridicality of history. The supposed autobiographical narrative is assigned to Richard Plantagenet, the son of Richard the Third; and we are not sure whether the touching story of King Richard's death, and sympathy with his unfortunate offspring, may not have wrought more powerfully upon our feeling in favour of the much traduced monarch than even Mr. Sharon Turner's clear and dispassionate vindication of his character."—*Electric Review*.

Smith, Elder, and Co. 66 Cornhill.

Price 12s. only, complete in one volume, 8vo. with a Portrait by Dean, a new edition of
THE PLAYS OF WILLIAM SHAKESPEARE, accurately printed from the Text of the corrected Copies, left by the late George Steevens, Esq., and Edmund Malone, Esq. With a Sketch of his Life, and a Glossary.

MR. MOON,

HER MAJESTY'S PUBLISHING PRINTSELLER, HAS THE HONOUR TO ANNOUNCE HIS INTENTION
TO PUBLISH

THE WATERLOO BANQUET AT APSLEY HOUSE,

From a Picture by WILLIAM SALTER, Esq. M.A.F. which he has had the high privilege of painting,

BY THE ESPECIAL PERMISSION OF

HIS GRACE THE DUKE OF WELLINGTON,

From the actual Scene in Apsley House, and has since been honoured with Sittings for their Portraits,

BY THE DISTINGUISHED GUESTS.

This most interesting of NATIONAL SUBJECTS represents the Annual Banquet, at which the surviving Heroes of that glorious Victory meet to commemorate on the 18th of June—

The most celebrated Event in the Annals of our Country.

THE GALLERY OF THE HEROES OF WATERLOO.

PORTRAITS OF THOSE DISTINGUISHED COMPANIONS OF THE IMMORTAL WELLINGTON, WHO WERE
FIELD-OFFICERS AT THE BATTLE.

Accompanied by Sketches of their Military Memoirs, from the Original Portraits by W. SALTER, Esq. M.A.F.

This interesting Work Mr. MOON proposes to publish in Parts.

THE UNITED SERVICE.

REPRESENTING

THE ONLY INTERVIEW OF THE HEROES NELSON AND WELLINGTON.

From a Picture by W. SALTER, Esq. M.A.F.

The above most interesting NATIONAL WORKS are in preparation, and further notice will shortly be given of the Mode and Period of Publication.

GRACE DARLING,

AND THE

WRECK OF THE FORFARSHIRE.

MR. MOON has to announce the speedy publication of a highly finished

MEZZOTINTO ENGRAVING,

By the distinguished Engraver, DAVID LUCAS (as a Companion to STANFIELD'S "WRECKERS") most faithfully delineated by the combined Talents of

MR. CARMICHAEL, THE MARINE PAINTER,

AND

MR. H. P. PARKER, THE PORTRAIT PAINTER,

Both of Newcastle, and both eminent in their respective Departments, who, immediately after the Storm, repaired to the Spot, where they painted the Portraits of the

FATHER AND DAUGHTER,

And made such Sketches of the Wreck, as have enabled them to give a perfect Representation of the awful Calamity, and of the beautiful and affecting Incident which threw a veil over its horrors.

To Subscribers, Prints, 11. 1s.; Proofs, 21. 2s.; Before Letters, 31. 3s.

EARLY APPLICATION MUST BE MADE TO

F. G. MOON, Her Majesty's Publishing Printseller,

20 THREADNEEDLE STREET.

REVIEW OF NEW BOOKS.

Ancient Scottish Melodies, from a Manuscript in the Reign of James VI. With an Introductory Inquiry illustrative of the History of the Music of Scotland. By William Daune, Esq. F.S.A. Scot. 4to. pp. 390. Edinburgh, 1838. The Edinburgh Printing and Publishing Company; London, Smith, Elder, and Co.

2. *A Collection of National English Airs, consisting of Ancient Song, Ballad, and Dances Tunes. Interspersed with Remarks and Anecdotes, and preceded by an Essay on English Minstrelsy. The Airs harmonised for the Piano-forte,* by W. Crotch, Mus. Doc., G. A. Macfarren, and J. A. Wade. Edited by W. Chappell. Part I. 4to. pp. 60. London, 1838: Chappell; Simpkin, Marshall, and Co.

"THE food of Love" well deserves the investigation of all ages. What did our grandfathers and grandmothers live on in this carnivorous, farinaceous, or herbiferous way; and on what did their grandfathers and grandmothers feed? Timbrels, and sackbuts, and pipes, and virginals, operated upon them as organs, and violins, and flutes, and piano-fortes, operate upon us; the instruments are different, but the chords of the human heart and the sympathies of the human passions are the same. The harp which twanged to a Cleopatra produced similar emotions among the dark beauties of Egypt which it excites in the royal and fair bosoms of England: the lyre of Timotheus and the fiddle of Paganini are only separated by a space of some two thousand years.

It is extraordinary, that a science, the source of so much pleasure to mankind, so universal, so adapted to all circumstances, the delight of peace and the stimulant in war, the solace of the college and the palace—of all ranks and degrees; it is, we say, extraordinary, that so much obscurity should hang over it, and to so late a period, that what may be called the Antiquities of Music are absolutely modern,—almost within the memory of man!

Of Greek music we know nothing; of Roman, no more. Of the middle ages' troubadours and minstrels, hardly a certain trace remains. And here, in Mr. Daune's volume, we have the vestiges of two centuries ago justly hailed and expounded as valuable and curious illustrations of an art which has charmed every year since the creation. Mr. Daune's work is, indeed, a very interesting and important one in the annals of sweet sounds: and it is honourable to the modest estimate of his services that he thus humbly describes them:—

"Mistakes and fallacies are common to all historical inquiries, and the example of the wisest of those who have gone before us has sufficiently shewn that they are peculiarly incident to the topics which we have here brought under the notice of the reader. It is only by a careful examination of our statements along with those of others, that the public can ultimately be disabused of error, and clear, distinct, and satisfactory information obtained. What we have endeavoured to do has been merely, as we professed at the outset, to collect materials for a history of Scottish music; and these have not yet been fully emassad. More research

must be applied, more manuscripts recovered, and much more information, historical and traditional, be brought to bear upon them. We should rejoice if the Skene MS. should, in the end, be the precursor of such a work; but, until all the requisite facts are brought to light, its execution need not be attempted."

Of the MS. thus spoken of, and which exists in the Advocate's Library in Edinburgh, it is truly said, that it throws more light upon the history of Scottish music than all the disquisitions of Tytler, Beattie, Gregory, Campbell, Kames, Franklin, &c. &c.—so much have plain facts of a hundred years antecedent, when restored to day, the advantage over the ablest and most acute investigations and hypotheses. Treating of the Skene notation, Mr. D. observes—"It may occasion some surprise when it is asserted, that it is at least one hundred years older than the earliest compilation of the kind which has ever issued from the press. This was Thompson's 'Orpheus Caledonius,' the first volume of which appeared in 1725, and the second in 1733. In the former of these years, Allan Ramsay had published about seventy Scottish melodies with basses, as a sort of musical appendix to his 'Tea-Table Miscellany,' which, in like manner, with respect to the poetry, formed the first complete collection of Scottish songs. It is not meant that our Scottish melodies had not, prior to this, found their way into other printed collections. In Tom D'Urfey's 'Pills to purge Melancholy,' originally published at the end of the seventeenth and the beginning of the eighteenth centuries, and of which an enlarged edition appeared in 1719, there are some Scottish airs; and among these we recognise 'Dainty Davie,' 'The Lea Rig,' 'My Mother's eye glowrin' o'er Me,' 'Over the Hills and far away,' 'Bonny Dundee,' &c. Along with them, we have such precious morceaus as the following:—'A Scotch Song, by Mr. Robert Brown'—'A Scotch Song, the words by Mr. John Hallam, set to music by Mr. John Cottrell'—'Bonny Scotch Lads that kens me weel, the words by Mr. Peter Noble, set by Mr. John Wilford,' &c. These are, no doubt, ludicrous caricatures, both of the Scottish music and phraseology, and are merely referred to in order to shew, that, about this time, the Scottish style of melody had begun to be very generally appreciated by the English public."

At the same time it must long have been the delight of its native land, of its warlike predatory bands, of its pastoral population, and of its court, several of whose sovereigns were so far in advance of the rude eras in which they lived—the patrons and writers of poesy, the companions of bards and their rivals in song. How sweetly has Lover embodied the idea; how touching are these lines!

Oh! Native Music, beyond comparing,
The sweetest far on the ear that falls,
Thy gentle numbers the heart remembers,—
Thy strains enchain us in tender thralls.
Thy tones endearing,
Or sad or cheering,
The absent soothe on a foreign strand,—
Oh, who can tell
What a holy spell
Is in the song of our native land!

The proud and lowly—the pilgrim holy—
The lover kneeling at beauties' shrine;

The bard who dreams by the haunted stream—
All, all are touched by thy pow'r divine!
The captive cheerless,
The soldier fearless,
The mother—taught by nature's hand,
Her child, when weeping,
Will hush to sleeping,
With some sweet song of her native land!

And old Scotland felt and appreciated this. "Although (the author remarks) the custom has been for many years in disuse, inasmuch as scarcely to have left a vestige of its former existence, music, both secular and sacred, unquestionably formed a branch of ordinary education in Scotland, upon the same footing as it now does in Germany and other parts of the Continent, not only during the sway of the Roman Catholic Church, but for many years after the Reformation."

The banishment of organs, called by the severe and rigid Presbyterians "the devil's box o' whistle-pipes," no doubt checked the progress of the art; but still it flourished in other places than the church, and if Harmony was left uncultivated, Melody remained. Some of the particulars connected with these airs are interesting to literature.

"The air, 'If floods of tears,' which we have in the Skene MS., is here (in Forbes's 'Cantus,' edit. of 1686) associated with two different sets of words; but the most interesting coincidence we observe is a sonnet of Montgomery, 'Away, vain world, bewitcher of my heart,' the air of which is that of

'Farewell, dear heart, since thou must needs be gone;
'My eyes do shew my life is almost done;

with which all our readers are familiar, being the sonnet which Shakspeare puts into the mouths of Sir Toby Belch and the Clown, in the scene where their midnight orgies are interrupted by the unwelcome presence of Malvolio. In Montgomery's Poems, the song, 'Away, vain world,' is mentioned as having been composed to the 'toon' of 'Sal I let her go,' part of the burden of 'Farewell, dear heart'; and if any doubt might at first have existed as to their identity, the fact is now satisfactorily established, the editor having recently discovered the sonnet itself in a MS. of the year 1639, belonging to the Advocates' Library, set to the very tune which appears in Forbes's 'Cantus.' Dr. Percy has given the words of this song; but it has not hitherto been known that the air to which it was sung was lurking unobserved in this curious volume. We have the further satisfaction of introducing a still older version of this air than that contained in Forbes or the above-mentioned MS. in the Skene collection, under a different name from any of the preceding—"O allie soul alace."

The moralising of popular ballads for religious effects gave rise to some strange mixtures of sacred and profane.

"It is alluded to by Shakspeare in the 'Winter's Tale,' where he speaks of a puritan who sings psalms to hornpipes; and, what we could scarcely have looked for, it has been carried down so near our own times as till within these sixty or seventy years: a religious sect, denominated the Bereans, having signalled themselves by the production of a volume similar to that from which the above extracts

are made, and of which the following are specimens:—

'Wat ye what I met yestreen
Lying in my bed, mauna?
An angel bright,' &c.
'Haud awa, bide awa,
Haud awa frae me, Dettie!'

The following extract throws a light on many an old tune.

"The ludicrous vernacular poem, called 'cocklebie Sow,' written rather before the middle of the fifteenth century, in the following passage contains several allusions to the ballads, songs, and dances, that were popular at that time:—

"And his cousin Copyn Cull,
'Foul of bellis ful ful,'
Led the dance and began,
Play us 'Joly Lemmane,'
Sum trotet, 'Tras and Trenas,'
Sum balloit, 'The Banis,'
Sum, 'Perdolly,' some, 'Trolly lolly,'
Sum, 'Cokkraw thou qli day,'
'Twybank and Terway,'
Sum 'Lincolne,' sum, 'Lindsey,'
Sum, 'Jolly Lemmane dawis it not day,'
Sum, 'Be yone woodsynd' singit,
Sum, 'Lait lalt in evynyngis,'
Sum, 'Joly Martene with a moek,'
Sum, 'Lulalow lute cok,'
Sum bakkit, sum blingit,
Sum crakkit, sum cringit,
Sum movit meit mak reveli,
Sum, 'Symon Sonis of Quhynefell,'
Sum, 'Maister Peir de Cougate,'
And uyr sum 'in Cougate,'
At leser drest to dance.
Sum, 'Ourfate,' sum 'Orliance,'
Sum, 'Rusty Bully with a bek,'
And every note in vyeris nek.
Sum usit the dancis to dance
Of Cipres and Boche,
Sum the fatit full yarre
Of Portugal and Navarre;
Sum counterfuitt the gyle of Spayne,
Sum Italy, sum Almaine;
Sum noist Napillis anone,
And uyr sum of Arragone,
Sum, 'The Cane of Tartary,'
Sum, 'The Soldane of Surry,'
Than all arrayit in a ring,
Dansit 'My deir derling,'

"No more vestiges of this branch of our literature are traceable till the commencement of the sixteenth century, when we turn to the poems of Douglas and Dunbar, for an addition to our catalogue of empty names. But, amidst these shadows of the departed, we are happy to have in our power to present our readers with

"Full of bellis, ful ful, that is to say, all hung round with bells. In the lord high treasurer's accounts for 1513, we observe the following entry: 'Item, to thirty dosen of bellis, for dancess, delyverit to Thomas Boswell, Hjt lb. 12s.'

"'Jolly Lemmane,' and 'Tras and Trenas,' must have been dances."

"'Perdolly,' and 'Trolly lolly,' were probably the chorus, or burden of popular songs. See Ritson's 'Ancient Songs,' p. 92. 'Trolly Lolly Lemman doe,' in 'Complaynt of Scotland.'"

"'Twybank,' Leyden considers to be the same with 'When Tayls bank was blumyt brycht,'

in the Bannatyne MS. p. 229."

"It is probable that the names here given referred to productions popular in England. In Ritson's 'Ancient Songs,' p. 30, there is a song on his mistress, whom he admires as the fairest maid between Lyncolne and Lyndseye, Northampton and Lounde, (i. e. London.) It is copied from a MS. of the reign of Edward II."

"Mentioned in Constable's 'Cantus.'"

"'Ourfate and Orliance' are also mentioned in a poem in the Bannatyne MS. on 'the laying of a Ghaist,' which begins—

'Listis, Lordis, I sall you tell.'

And similar to these, in all probability, are Platfute and Backfute, dances still known in some parts of the country. They take their names from the particular motion of the feet by which they are distinguished. In 'Christ Kirk on the Green' Platfute is referred to.

'Platfute he bobbit up with bende.'

Also in Sir David Lindsay's 'Complaynt of the Papingo,' along with another, called fute before.

'To learn her language artificial
To play platfute and quihusel fute before.'

"This must be intended for 'Syria.'"

"Supposed to be the same with 'My dayis darling,' mentioned in Constable's 'Cantus.'"

something more substantial, which never before reached publicity. These are two metrical performances, at least so they may be termed, although one of them is a mere fragment, and it may occasion some surprise when we mention the place where they have been discovered, viz. the 'Minute-book of Burgh Sasines of the city of Aberdeen!'" To what they owe their insertion in this inauspicious volume, whether to the truant propensities of some incorrigible youth, whose poetical aspirations were not to be restrained by the dull routine of legal drudgery, or whether they had been entered, along with other public documents, for better preservation (as it is technically called), we know not; but certain it is, that they appear there 'duly recorded' (1503-7) along with some verses by Dunbar."

We will not intermeddle with the author's dissertations on musical instruments, minstrels, &c., but recommend them to every reader, as extremely valuable to musical history generally.

For instance, on the word "Choro."

"Dr. Solander told Mr. Pennant, that in the oldest northern songs in the Hebrides, the bagpipe was mentioned under the name of the soeck-pipe; and we have already seen, that Giraldus Cambrensis, towards the end of the twelfth century, speaks of it as one of the instruments in use both in Scotland and in Wales. His words are as follows:—'Hibernia quidem duobus tantum utitur et delectatur instrumentis—cythara scilicet et tympano: Scwallia vero cythara, tibiis, et choro.' It will be remembered, that the same word 'chorus' is used by Bower, in his enumeration of the musical accomplishments of James I. (of Scotland); and in rendering that word by bagpipe, we are quite aware that we have entered upon debateable ground. Mr. P. F. Tytler, in his history, has faltered as to its meaning, and substituted for it (as he himself admits, somewhat rashly) the word 'cornu.' That he should have hesitated as to the proper signification of the word 'chorus,' is not to be wondered at. Pinkerton did not comprehend it; Leyden, Ritson, and Jones, misinterpreted it: and the Reverend Mr. Macdonald, who was one of our best informed writers on Scottish music, proposed it as a sort of enigma for the solution of the Scottish antiquary."

"In Scotland, the use of the bagpipe seems to have gradually superseded that of the harp; but this process, we should think, must have taken place chiefly within the last two hundred years,—previous to which, we doubt very much whether the natives of North Britain were more distinguished for their partiality for the bagpipe than their southern neighbours. Even Shakspeare, although he talks of the 'drone of a Lincolnshire bagpipe,' and of 'a Yorkshire bagpiper,' has nowhere associated that instrument with the Scots; and when we go back several centuries anterior to this, we find it

"This and an unlooked-for discovery of music, which we shall afterwards have occasion to mention, may serve as examples of a truth well known to antiquaries, viz. that rarities of this description are often to be found where they are least of all to be expected. Sir John Graham Dalyell ('Scottish Poems of the Sixteenth Century,' p. 8) mentions a poem as having been found at the end of a manuscript of the Regiam Majestatem in the Advocates' Library, with two blank staves for music subjoined."

"The Highland Society of Scotland has been much and justly applauded for having, by annual premiums, kept up the great military instrument of the Highlanders; but why should they have allowed to sink into oblivion their great musical instrument—that for which all their oldest and most exquisite airs were composed? Why has there been no attempt to revive these, and along with them the recollection of the time when 'the shell went round, the bards sung, and the soft hand of the virgins trembled on the strings of the harp?'"

used in both countries by the same class of persons. Chaucer's miller played upon it,—

'A bagpipe wall couth he blowe and sowe'

and 'Will Swane,' 'the meikle miller man,' in our 'Pebilis to the Play,' calls for it to assist in the festivities of the day,—

'Gif I sall dance, have doume, let se
Blaw up the baggyt than.'

Indeed, although we are justly proud of our ancient proficiency on the harp, and adhere unhesitatingly to our claims to supremacy on that head, we are much disposed, upon a candid consideration of the facts, to resign to the English the palm of superiority in this less refined description of music, about the time to which we refer. The pipers who are mentioned in the lord high treasurer's accounts seem almost uniformly to have been natives of England. Thus, 10th July, 1489, there is a payment of eight pounds eight shillings 'to Inglis pypparis that com to the castel yet and playit to the king.' Again, in 1505, there is another payment to 'the Inglis pipar with the drone.' It should be added, that, while the 'bagpiper' formed part of the musical establishment of the English sovereigns and noblemen, during the sixteenth century, we find no such musician retained at the Scottish court. Our monarchs had probably not much relish for this sort of pipe music, and although the result of our investigation of the word 'chorus' has had the effect of clearly convicting our first James of being a performer upon that most unprincipally instrument, (for which, the only precedent we can find in history is that of the Emperor Nero*), we should remember that he had most probably acquired that, as well as his other accomplishments, in England, where he received the rest of his education. We do not conceive, upon the whole, that the bagpipe has ever been a very popular instrument in Scotland, except in the Highland districts; and we may state this with some confidence, as to one part of the country,—a royal burgh, which we have already had occasion to name, and where the magistrates actually prohibited the common piper from going his rounds, in terms by no means complimentary of the instrument. Our readers will be less surprised at the superior refinement here exhibited, when they are informed that these were the 'musical magistrates' of the city of Aberdeen, whose praises have been so loudly trumpeted by Forbes, the publisher of the 'Cantus,' in his dedication of that work. '26th May, 1630. The magistrates discharge the common piper of all going through the town at nycht, or in the morning, in tyme coming, with his pype,—it being an incivill forme to be usit within sic a famous burgh, and being often fund fault with, als weill be sundrie nightbouris of the town as be strangeris.'"

"We are now amply fortified against the attacks of Mr. Ritson's scepticism; and our readers will recollect that these MSS. are merely such as have fallen within the scope of our personal observation. In a letter which Mr. Ritson addressed to Mr. Walker, the author of the 'Memoirs of the Irish Bards,' in 1791, several years before the publication of the 'Essay on Scottish Song,' after noticing the apparent want of all direct evidence of the existence of our favourite airs, prior to the Restoration, he puts the question, 'Upon what

"It is mentioned by Suetonius, that when the Emperor Nero heard of the revolt by which he lost his empire and his life, he made a solemn vow, that if it should please the gods to extricate him from his difficulties, he would perform in public on the bagpipe."

"Aberdeen Town Council Register. See 'Analecta Scotica,' vol. ii. p. 322."

foundation, then, do we talk of the antiquity of Scottish music?" Indeed, we have been taunted on this subject in more than one quarter. Jones tells us that we have 'no such thing as an ancient and authentic MS. like what the Irish or the Welsh have.' Now, although we have no inclination whatever to provoke a national contest upon this or any other point, or to challenge the antiquity of many celebrated Welsh and Irish airs; yet, believing, as we do, the real state of the fact to be this, that neither the Welsh nor the Irish can produce any authentic collections of their national music of so old a date, and containing so many popular melodies, as the MSS. of Scottish airs which we have above described, we cannot allow the observation to pass unnoticed. We are not aware that Mr. Morris's MSS., said to be of the eleventh century, but which Dr. Burney thought much more recent, though filled with harp music, arranged in harmony or counterpoint, contain any Welsh air known at the present day. In Jones's Collection, two or three airs are copied from MSS.; but of these the age is not mentioned; and the editor expressly styles his work a 'Collection of Welsh National Melodies,' which 'have been handed down by tradition,' and which he collected 'from hearing the old musicians or minstrels play them on their instruments, and from their being chanted by the peasantry.' In the same way, the first collection of ancient Irish airs was formed by Mr. Bunting, being noted at the meeting of harpers in 1792, at Belfast, and afterwards taken down from their performance, and from the singing of the people in different parts of the country. In short, the authentication of these airs by MSS. is a thing which appears never to have been dreamt of either in Wales or in Ireland.

"We have now before us direct and incontrovertible proof that many melodies which have come down to the present day are two hundred, and, in some instances, upwards of two hundred, years old; and, further than this, we are enabled to ascend many years beyond the commencement of the seventeenth century, upon grounds which, though circumstantial and presumptive, are, in some respects, not the less satisfactory and convincing.

"It is not to be presumed of any collection of national airs that they are coeval with the period when the collection was formed. An individual who sits down to a task of this nature, has no inducement to give the preference to such as have been most recently composed. On the contrary, he rather looks back to former ages. It is 'the voice of years that are gone that roll before him with their deeds,' the airs which are endeared to him by national and family association, and embalmed in his memory by the consecrating power of time, in which he chiefly delights, and which he is most anxious to secure from oblivion. To suppose, therefore, that the greater part of the Scottish melodies contained in this MS. are not of a much earlier date than the reign of James VI., would be, to say the least of it, a gross violation of probability. Further, a document has transpired, in the course of our researches, from which it distinctly appears that the Scottish music most highly appreciated at that time was not the composition of that age, but of a period long anterior to it. This is a paper styled 'Information touching the Chappell-Royall of Scotland,' the original of which is deposited in the General Register House. It is dated at Whitehall, 24th January, 1631, and ears to be signed by Edward Kellie, who, as

appears from a writ under the Privy Seal, was appointed 'Receiver of the fees' of the said chapel, 26th November, 1629.

"It appears that the musicians of the chapel-royal were 'kept at daily practice' in all sorts of vocal and instrumental music, including English, French, Dutch, Spanish, Latin, Italian, and Old Scottish Music. There can be no doubt that this last expression referred to the popular national music of Scotland. That sacred music was here not meant is sufficiently obvious; the metrical psalmody of the Reformed Scottish Church was not old, and the music of the church in Scotland before the Reformation was identical with that of Rome, and, therefore, not Scottish.

"Before closing our notice of the ancient Scottish music, perhaps it is not too much to deduce another observation from the memorable critique, by Giraldus Cambrensis, on the Irish and Scottish music of the twelfth century. He has represented its style as lively and rapid, and contrasted it with the dull, heavy spirit of the English airs. Is it not probable, therefore, that our oldest tunes were of the lively sort, and our slow airs (and these possess the most decided ecclesiastical peculiarities) of more recent origin? We merely start the conjecture, and yet it is one which we have sometimes thought strengthened by other considerations. We have the evidence of Tassoni that, at the beginning of the seventeenth century, Scotland was distinguished for its plaintive melodies; but, at this time, or anterior to this, we scarcely find any other instance where this part of our music is mentioned with approbation, or commented upon in any kind of way, while the dance tunes appear to have been very much in vogue.

"We are now no longer at a loss for a standard by which we can test the genuineness of our national music, distinguish the true from the false, and separate the pure ore from all admixture of baser metal. Whether or not they come from 'the well of (Scottish) genius undefiled,' we cannot say; but they are a distance of one hundred years nearer the fountain head than any with which the public have previously been acquainted. And it is also worthy of remark (we speak here of the principal Scottish airs), that they are not cast in the formal and elaborate mould which characterises the artificial compositions of the age when the collection was formed. They are animated, chaste, and simple in their style and expression, and though 'old and plain,' and more remarkable for spirit and originality than for elegance, it may be said of them, as of the poetical relics of ancient minstrelsy,

'With rough majestic force they move the heart,
And strength and nature make amends for art.'

We have only been able to glance at some of the leading features of this truly national and interesting work; and very many incidental but curious matters are, of necessity, passed over. As for example:—

"We reckon the old favourite country dance, 'Roger de Coverly,' which Hawkins gives in the page immediately following that now referred to (p. 470), another Scottish tune with an English name. It has been long known in this country under the title of 'The Maltman comes on Monday'; and, as such, now lies before us in a MS. collection belonging to Mr. Laing, dated 1706. The date of Sir John Hawkins's copy is not given.

"*Port Ballangowne.*—To the wandering harpers (says Mr. Tytler, in his 'Dissertation on Scottish Music') we are certainly indebted for that species of music which is now scarcely

known—I mean the port. Almost every great family had a port that went by the name of the family. Of the few that are still preserved are Port Lennox, Port Gordon, Port Seton, and Port Athole, which are all of them excellent in their kind. The port is not of the martial strain of the march, as some have conjectured; those above named being all in the plaintive strain, and modulated for the harp. 'Port Ballangowne,' therefore, may be regarded with some interest, as by much the oldest recorded copy of this very rare description of music which has hitherto been published."

We should say that these were clan or family tunes played at the gate, as by the Welsh harpers of the present day, or at the board where master and servant, lord and vassal, sat down, above and below the salt, to their ample provisions. We conclude with a notice which will remind the reader of one of Moore's most beautiful and popular melodies.

"In regard (says Mr. D.) to No. CXI. 'Lyk as the dum Solesequium' (or Sun-Flower), no one who has seen the melody to which it was sung will have reason to regret its non-appearance in this publication; but as the words, by Alexander Montgomery, possess considerable merit, they are here subjoined:—

"*The Solesequium.*

Lyk as the dum Solesequium, with cair o'rum,
And sorow, when the sun goes out of sight,
Hings down his head, and droups as dead, and will not spread;

Bot looks his leaves, thro' languor of the night,
Till foolish Phaeton ryes, with vaip in hand,
To clear the cristall ayeis, and light the land:
Birds in their bower lulls for that hour,
And to their Prince are glad good-moon givis;

Fra thyn, that flour eist not to leav,
But laughs on Phoebus lousing out his leaves:
Se fairis with me, except I be vhair I may se
My lamp of light,—my Lady and my Love.
Fra echo departs, ten thousand dairs, in syndric airts,
Thirlis throu my hery hart, but rest or rove;
My countenance declares my inward grief;
Good hope almost depairs to find relief.
I dya,—I dya,—play does me pyn,—
I loth on euir thing I look,—alas!
Till Titan myne vpon me shyne,
That I reviv throu favour of his face.

Fra she appeir (into his speir), begins to cleie,
The dawning of my long desyrit day;
Then Courage crys on Hope to ryse, fra he espyis
My noysome night of absence wome away.
No wo, when I aualk, may me impesh;
Bot on my staitly stalk, I flourish fresh.
I spring,—I sprout;—my leavis ly out;
My color changes in ane hartsum hew.

No more I loat, but stands vp stout,
As glade of hit, for whom I only gow.
O happie day! go not away. Apollo! stay
Thy chair from going down into the west:
Of me thou mak thy Zodiak, that I may tak
My plesur, to behold whom I love best.

Thy presence me restores to lyf from d'ath;
Thy absence also shotes to cut my breath.
I wish, in vain, thee to reuano,
Sen primum mobilis sayis aliusis nay;
At leat thy wane turn soon agane,
[Farewell], with patience perforce till day!"

We are sorry that our form does not enable us to insert any specimen of the music in this venerable and delightful collection; but the volume itself must be referred to for that, and it will amply repay the seeker. It rejoices us to see so charming a resurrection of undoubted song; for it should be remembered, that the productions of such men as Ramsay ("Tea-Table Miscellany," 1794.) and Burns, by entirely engaging the popular mind, are but too well calculated to bury for ever the voice of earlier melody. The present suffices, and we forget the past.

We have but one other remark to make. We think Mr. Dauney might, with some advantage, have availed himself of the writings of those German critics who have endeavoured to prove the analogy between the Scots' system and that of the Chinese and Hindi. But we must end by acknowledging that his book is the

most important one on musical antiquities which has appeared for many years; and, in regard to Scottish music, the most important that has ever been published.

We must reserve our second head for another notice.

Excursions in the Interior of Russia, &c. &c.

By Robert Bremner, Esq. 2 vols. 8vo. London, 1839. Colburn.

THIS ample and able work, the production of a man of sense, and an acute and impartial observer, has reached us too late to do more than make upon us a general impression of its merits. The author has departed from the common roads, and made a good use of his time during his Russian travel; and to illustrate this alone (leaving St. Petersburg, the Emperor, and his Politics, for the present, at least, out of the question), we merely select two or three notices of matters within the compass of our page, and possessing the greatest novelty.

"The laws of the empire requiring that all those condemned to exile, in whatever part of the country they may have received sentence, must pass through Moscow on their way to Siberia, the traveller has here the best opportunity that can be afforded in any part of European Russia, of learning something of the treatment and prospects of those unhappy men. On reaching this city, they are allowed a brief rest in the convict prison; their daily journeys being so calculated that the separate bands all arrive here, from the opposite corners of the empire, each Saturday night. After resting throughout the ensuing week, during which they are relieved from their chains, they are despatched in one common band on the second Monday after their arrival; on which occasion government allows some member or members of the committee of prisons to be present, to control the harshness of the jailors or the guards, and to see that none suffer any unnecessary degree of restraint. They are even empowered to hear any statement which the prisoners may make, and, in most cases, to grant immediate redress; or if the application be not of a nature to be granted on the spot, to pledge themselves that it shall be duly attended to after their departure. This, it will at once be seen, is a great indulgence to the prisoners; and the government, so far from thwarting the benevolent visitors, complies with almost every suggestion. These interferences do not, of course, extend to the quashing of legal proceedings, but merely to the prisoner's comforts, his health, or his wishes regarding his family."

After mentioning the philanthropy in this respect of a Dr. Hazy, the author describes his having obtained leave to witness the departure of a train from the log huts near the city, where they were assembled for that purpose.

"On being admitted, which was done with great caution, and after a strict scrutiny, we found the first court occupied by a file of prisoners already chained for their dreary journey. Poor wretches! with those heavy fetters on their ankles, they were to walk every step of a journey which lasted only a few days less than six months! They were all, men and women, in the convicts' dress, a long loose kind of great-coat, made of coarse lightish gray cloth. The men have one side of their head shaved; but to distinguish soldiers more readily from the others, they have the whole fore part of the head shaved, in place of the side. All are permitted to retain the enormous beard, in which they take much delight. Each is allowed a low felt cap; but they always remained uncovered when any visitor

came near: in fact, the whole time we remained in the prison, the manner of all we saw was not only respectful, but becoming. There was something of composed resignation amongst them, which touched us more than clamorous grief would have done. Of what is still more shocking in such places—levity—there was also none—not a single instance of the swearing and attempted tricks generally seen in such places at home. Leaving the court, we entered a large prison-room, most frightfully crowded with men, women, and children, who were to depart that morning. Dr. Hazy and another member of the committee were seated near the door, and by them stood the principal keeper, who had the long list of names in his hand, to each of which was added a brief notice of the crime and history of the individual. Always, as a new name was called, the person came forward from the crowd, and, before passing out to have his chains put on in the yard, was asked whether he had any application to make. Many of them had nothing to ask; others had petitions about wife, or child, or relations, which were almost invariably granted. If the request be of a kind which cannot be fulfilled without a short delay, the visitors' powers go so far as to entitle them to defer a prisoner's departure for a week.

"The applications were, of course, of very different kinds. One man, for instance, a Jew, came forward and begged that he might be granted eight days' delay, as his brother, also a convict, would arrive the following week, and it would be some consolation to them, even in disgrace, to travel together. Would this very natural prayer have been granted in England? Here it was instantly complied with; and the poor man—he had been condemned for a species of forgery—drew back overjoyed into the throng. A female who had volunteered to accompany her husband, and had an infant in her arms, wished that they might be allowed to remain a little, to give time for receiving an answer to an application which they had made to see whether the parish would allow their other child to accompany them. This also was conceded. In explanation of this case it may be stated, that by the law, if a prisoner wish to have his wife with him, and she is willing to go (she cannot be compelled, banishment to Siberia cancelling the bonds of marriage), government pays all her expenses on the journey, but she must assume the convict uniform, and go along with the train—not tied, nor in it, but behind it—in one of the carts for infants and baggage. With children the case is different—they belong to the parish, not to the parents. Each parish and each proprietor having an interest in keeping their population as high as possible, parents are not allowed to claim any above five years of age when boys, nor above seven when girls. Boys in particular, parishes are very unwilling to part with; as may be expected in a country where the numbers to be drawn for the army in each parish depends not on the amount of population at the moment of drawing, but on the amount a short time before; so that the conscription falls more heavily on those who remain, if they part too readily with youngsters. Sometimes, however, great indulgence is shown, both by proprietors and communities; hence, even in this place of misery, we saw several happy families—yes, happy, for they were all together, father, mother, and three and four children. To such groups exile was but a name. [A sad and horrid one though.—Ed. L. G.] There were other rooms full of con-

victs going away. Amongst them were some interesting prisoners, a few of whom will be mentioned below. The ceremony just described was gone through with all, and by the time we returned to the principal court, fetters had been placed on nearly the whole band. It is a cruel operation. The fetters consist of a couple of heavy iron rings, one for each ankle, united by a chain generally two feet long, or rather more, and made of links each four or five inches in length. The chains are not placed on the naked skin, but over the short boot. Instead of being fastened by a padlock, however, so as to be easily removed at night, the prisoner is never relieved of them till he reach his journey's end: the chains are riveted by the executioner, who drives an iron bolt through the ankle-rings, and, by strong hammering, flattens it at both ends, in such a way, that nothing can take it out—it must be cut through by main force. While the chaining is going on, the serjeant who is to take charge of the prisoners on their journey stands by all the time, to see that all are secured to his satisfaction; that is, in such a way as he thinks will justify him in answering for their safe keeping with his own life. Of the whole band, only one remained still standing by the block. He was pained by the tightness of the ring on one ankle. There was some hesitation about removing it, but the doctor interfered, and it was taken off. Then came the hammering anew—a barbarous sight; every blow went to the heart. The prisoner puts his foot on a block, in the middle of which stands a small anvil, the height of the ankle. The strong executioner, clad in a short coarse great coat, seemed to have little pleasure in his task. There was confusion in his looks and manner; his dishevelled hair, partly concealed by a ragged covering, hung wildly about his face; but though there was something savage about him, he looked, on the whole, shy and timid, as if unwilling to be seen in such work. The whole band being now fettered, they were again mustered in the yard, after which a new chaining commenced; they had still to be linked four and four together by the wrists. At the head of the line a little table was standing, covered with copper coin, from which every man was receiving, in advance, a certain part of this daily allowance, government giving each, for his maintenance, forty-eight kopecks, or a fraction less than five-pence a-day. To each woman who accompanies her husband, half that sum is allowed, and for each child something in proportion. As the moment of starting approached—the moment when for them the world—our world—should cease to have any interest, for when once these gates are passed they are considered as dead, cut off from society—we were more than ever struck with the calm bearing of the troop. So far from being sad or repining, they looked almost cheerful and willing to go. This feeling is inspired by the general leniency of their treatment. Some of the officers employed about them may be harsh, but the system, as was remarked by one of our party, well acquainted with the prison discipline of England, is in many things much more indulgent than our own. They are warmly clothed, provided with strong shoes for the journey, and plentifully fed. If sick, they are also cared for. All being now ready, the final scene was gone through, by the doctor asking—it is the last chance they have of making their wants known—"Whether they were satisfied, or had any request still to make?" All replied, "We are contented; we have nothing to ask."

"Each day's journey is from twenty-two to twenty-five versts (from fourteen two-thirds

to sixteen two-thirds miles English), but never more than the ordinary military march, and there are houses of shelter for them over-night. The escort is always relieved at short intervals.

"There was one case in which even his benevolence could scarcely say a word: it was that of a murderer, who pleaded hard for release. He had assassinated his wife, his dreadful crime being aggravated by circumstances of unusual atrocity. For this he had received sentence of death, as we should say in England, though the term will not apply in Russia, where, as formerly stated, the punishment of death is now almost unknown. But though his life had been spared, it was to be a life of suffering. Besides being condemned to constant labour in the most deadly occupation within the bounds of Siberia, he had been punished with the knout, branded with hot irons on each cheek, and had the word 'murderer' stamped on his brow. These disfiguring stains added to the sinister expression of his countenance; and there were some beside him with looks fully as forbidding.

"Among the prisoners who most attracted our notice, was a black-moustached, powerful-looking man, still young. His manly and handsome, though fierce countenance, would have excited interest, even if seen in company of a very different stamp; but he stood alone, and, to our surprise, seemed to be shunned by his companions. Think who he was—the executioner of Moscow, now loaded with chains, and on his way to Siberia! And for what? The poor wretch's crime shewed him to have still something good about him, notwithstanding his terrible office. It is the law, that when this situation becomes vacant, any one condemned to Siberia may have his sentence commuted, provided he accept the unenviable post. He is still a prisoner, but is allowed to live by himself, and to go about free within the walls of the prison. Some time before, this man had accepted the office, but was soon so disgusted with the bloody task, that he made his escape; was caught again, and now irrevocably banished.

"Two of the convicts had been condemned for returning from Siberia. They were detected on reaching their native districts. One of them was so old, that it was impossible he could stand this second journey; yet, old as he was, he could not forget his home: he had trudged through a thousand dangers, and across a thousand wastes, to see it but once ere he died—all this, too, with the certainty that he would be discovered and sent back, under worse circumstances than before, besides receiving severe corporal punishment. We were much moved to find a Polish nobleman in one of the rooms, undistinguished from the lowest thieves and horse-stealers. His pale and wasted appearance told how much his degradation was preying upon him. Conversation with him was, of course, not permitted; but we were told that he had been guilty of falsifying some government papers. The sight of this unhappy individual induced us to try whether we could obtain information about the way in which prisoners of rank were treated; but we learned little on this unwelcome subject. It was admitted, however, that they are compelled to march the whole way on foot, the same as the others, and along with the others; this, too, whatever their offence may have been—whether the charge be of a political or of a criminal nature, no distinction is made. The only indulgence we could hear of, and even of this we are doubtful, is, that they are lodged at night

in a less crowded place, and, though they walk with the rest, are not chained. To this latter part of a nobleman's indulgences, however, we accidentally discovered an exception, in the very case of the individual now mentioned. Forgetting what he had just been told about no nobleman being fettered, one of us asked whether he had chains on like the rest. 'Oh, no,' at once answered the doctor; but shortly after the poor man happened to move aside his long prison-coat, when it was seen that he was loaded like those we had left. The doctor, though indignant at the abuse, was yet overjoyed at the discovery, as it gave him an opportunity of ordering that the chains should instantly be removed, having been imposed in direct violation of the law. It is highly probable that, whatever the rules may be on this subject, the keepers take the law in their own hands when once out on the march; for, unless here, there is no place where a prisoner's voice is heard—there is none to take the smallest interest in them: in fact, they are not heard of more than if dead."

We hasten to drop the curtain over this dismal scene.

From the tone of our extracts, it will be seen that Mr. Bremner takes a very favourable view of the character of the emperor, as well as of the government and people of Russia.

Memoirs of John Bannister, Comedian. By John Adolphus. 2 vols. 8vo. London, 1839. Bentley.

JOHN BANNISTER was born in 1760, and died in October 1836. He was the son of Charles Bannister, a very popular actor; and, under the patronage of Garrick, made his first appearance on the stage at the age of eighteen, and continued to adorn it during thirty-seven years. He retired from it, in 1815, admired, esteemed, and regretted; and lived respected and beloved to the close of his honourable career. Neither the public boards, the social circle, nor the domestic hearth (having married Miss Harper in 1783 and had a numerous family), ever boasted of a man more deserving of all the good that attended him than John Bannister.

And even after his death he has been fortunate! He has been fortunate in a biographer. The sound and manly sense of Mr. Adolphus has been well employed upon a sound and manly subject. There is no stage trickery in either, no puffing, no hollowiness, no exaggeration, no straining for effects—but only simplicity, nature, and truth. We delight to see such a work on a dramatic biography; for it is, to us, a perfect novelty to find, instead of the usual tinsel and frippery, sterlingness and solidity.

Let us be candid however; it was only when we had concluded the latter half of the second volume that we entertained these opinions. The previous portion, though abounding with excellent criticism, and reviving the memory of nearly all the pieces which had been performed during the period, as well as of the performers who strutted their hour in them, seemed to us too much of a *catalogue raisonné*, and therefore more dry than we anticipated in a memoir of Bannister. Valuable as a *résumé* of the stage, we hankered after more personal and anecdotal illustration, and this was not gratified till we came to the later pages.

The whole is, as might be expected from the known talent and reputation of the author, extremely well written; and it will now be our pleasant task to show that there is also no lack of very agreeable matter.

Up to 1797-8, Bannister lived in Frith Street,

which he quitted for Gower Street, where he passed the remainder of his days; and Mr. Adolphus tells us:—

"An anecdote is recorded concerning this change: it may not range in the first line of wit, but it shews at least the advantage derived from ready good-humour; a quality which gains so many friends, where wit creates so many enemies; which strews the path of life with the sweet and innocuous violet, instead of the fragrant but thorny rose. He threw out balconies from the front of his drawing-room windows; a projection not known in any other house in the street, in violation, perhaps, to some clause in the building lease. The parish authorities, having no authority at all, came to remonstrate, alleging that it was contrary to an act of parliament; Bannister dumb-founded the dignity of the churchwarden by saying, 'Sir, I have studied acts of plays, but I never meddled with acts of parliament.' The spiritual and temporal officer (for such is a churchwarden) retreated; and as the Duke of Bedford, or his agent, never took up the important question, the balconies remain even unto this day."

Here is a like anecdote of his father's ready wit:—

"While he was under examination as a witness in the Court of King's Bench, the lord chief justice retiring, caused a temporary suspension of the proceedings. One of the learned counsel, by way of pleasantry, asked Charles for a song. 'With all my heart,' he answered, 'if I can have an accompaniment.' The barrister replied that he had no music there. 'I wonder at that,' said Charles, 'for you seem to have the band under your nose.'"

In 1807-8, Bannister's famous "Budget" was brought out, and we gladly avail ourselves of an opportunity to recall it to notice by quoting from it, which we shall endeavour to do next week.

This "Budget" was amazingly successful; but, indeed, all Bannister's theatrical course was one success. It was most deserved, and we never can forget the genuine testimony to his great powers and worth which we witnessed when he took his farewell. Touching this event, Mr. Adolphus relates some interesting particulars. Thus—

"In anticipation of this event, he received many gratifying testimonials, although one was not unmixed with disappointment. He had solicited and depended on the aid of his natural ally in the field of comedy, Mrs. Jordan; but she wrote him a letter, in which whatever of bitter there might be in his failure to obtain the boon he requested, was amply compensated by the warmth and undoubted sincerity of the kindness which accompanied the refusal.

"May the 3d.

"My dear Sir,—Your letter came at the time Sir Gilbert Blane, my physician, was with me, or I would not have sent your servant away without an answer, for it was my intention to have written to you at all events this evening. I am very ill, and, in the sincerity of my good wishes, request you to give up all thoughts of me. My health is in so very precarious a state that I have not been two days together out of my own room since my return home: so situated, I have been obliged to refuse many applications, including one very pressing one from the Caledonian Society. I have been obliged to give up one of considerable advantage, that was to have commenced at this very time; and I have too much reason to fear that I shall be under the necessity of forfeiting one still more so; that, too, was to have begun at the end of this month, and to have

concluded the middle of June. You perceive how unfortunately I am situated, for if I should be well enough to play on the 1st of June in London, I should be able to fulfil my engagements in the country; and if not, the consequence would be that I must disappoint you. Added to this, my friend and medical adviser is very anxious that I should give up every idea of playing this summer, and, as soon as I am able, to repair to the sea-side, from which I felt much relief last year. Do me the justice to believe, that, independent of my own sufferings, it is a real mortification to me to be deprived of the—what shall I say, pleasure or pain?—of witnessing the last exertions of one of the most genuine performers of the age. May every happiness attend you!—Yours, sincerely,
‘DORA JORDAN.’

The conclusion is to our minds perfectly beautiful: it reminds us of one who was not only the comic muse in all accomplishments, but in being all nature and kindness of heart. But we are further informed:—

“Tom Dibdin, who officiated as prompter on the occasion, relates an anecdote, which, for its whim, is worthy to be preserved. ‘At the conclusion,’ he says, ‘Mr. Bannister made me a present of his own book, from which I had prompted, as a souvenir, on which I wrote, or rather made, the following impromptu:—

‘In early age,
To tread the stage,
Jack would have given the world (receive it
As genuine truth);
When past his youth
He gladly gave ‘The World to leave it.’”

{We should observe, that the play acted on the occasion was “The World.”}

Mr. Adolphus thus sums up his theme, and gives a lesson to the profession in the pattern he justly paints:—

“As a servant of the public, his conduct was most eminently exemplary. No youthful irregularity, or habitual propensity, even, for a single night, kept him from the performance of his duty, subjected an audience to disappointment, laid the manager under the necessity of tendering an apology, or placed him in the degrading position of soliciting pardon for the past, or forbearance for the present. Whatever gusts, or even storms, might be excited by popular feeling, his behaviour, far from being subject or cringing, was always firm and manly, yet respectful; and when public justice decreed the condemnation of any piece, there always appeared a reluctance to inflict pain on him, a sort of executive amnesty for honest Jack Bannister. In addition to his great zeal for the pleasure of the public, he always evinced, without ostentation, a true regard for the interests of the house, a total forgetfulness of all personal feelings, and a determination to exert all his powers in promoting the general welfare. Thus, when he had been celebrated in any character, if it was essayed by another player, he evinced neither envy nor dissatisfaction; but retired from the piece, or accepted a different character in it, as might appear necessary. His descent from the lover of Ophelia to her grave-digger has recently been noticed; so, when he was called upon to play Francis, he never demurred because he had performed the Prince of Wales in the same piece; when Dowton was brought forward in *Shen*, or *Elliot* played the three Singles, Bannister displayed not the slightest discontent, but was acknowledged by both performers as an intimate and excellent friend. In his whole career, his effort was to win the great prize of public favour by vigorously pressing forward, not by keeping others back. His powers were

obscured and his efforts restrained many years, because other performers retained a sort of chartered property in parts which he shewed himself able to play with consummate ability; but his pretensions were never so urged as to impede the progress of any other individual.”

“There is a sort of midway character, uniting the pathos of tragedy with the hilarity of comedy, in which he was peculiarly great, and, if the expression may be used without offence, unrivalled. Let those, and they are still many, who recollect him in a long line of characters—in *Sadi*, for example, *Le Glorieux*, *Schneebach*, or *Walter*—speak their feelings, and I am certain they must accord with mine on this subject. His power over the audience was derived from the simple, though not very usual means of appearing to be unconscious of their presence. He not only laid no traps for their applause, used no gestures, looks, or efforts to obtain it, but when it was given spontaneously, and even tumultuously, he was never driven from the business of the scene; if his voice could not for a time be heard, his action never was suspended, and the character in the play was never for a moment set aside to shew the contented, the overjoyed, the elated individual, Bannister. He acquired fame by deserving, not by courting it, and while he enjoyed the public approbation with all the sensibility of his excellent heart, he never in public or in private shewed an affected complacency or an overbearing pride.”

Towards the close, we have selections of correspondence, parts of diaries of occasional towns, &c., and a list of about four hundred characters in which Mr. Bannister had appeared. From these and recollections (for some of which the author expresses his obligations to our old friend Pyne, the author of “*Wine and Walnuts*,” who can so well furnish plans for any work belonging to any of the fine arts during this period) we select the following:—

“Bannister, it was observed, possessed the most imagination: he was richly illustrative, interspersing his stories with lively episodes invented for the occasion, always striking and apt. Munden, without any considerable portion of his impromptu wit, compensated by his grave, dry humour, the intelligence of his eye, and the droolery of his look. Among other pleasures which they exhibited, but in parties extremely private, were imitations of the look, speech, and gestures, of their sovereign, George the Third. In these efforts it was doubted which had the superiority. Neither attempted to make the king an object of ridicule, but each exhibited him as he was shewn by Gilray in caricature engravings, which the king himself delighted to examine; with all his peculiarities, but free from any thing which could be construed into ridicule or disrespect. In the preceding reign, the Jacobites, at the Cocoa-tree, engaged a player, who could mimic George the Second, regularly to attend their meetings, and to represent the king in his tent at the battle of Dettingen, at the levee, or on the throne in the house of lords, delivering his speech, that they might enjoy the pleasure of seeing him vilified, if they could not hope for the satisfaction of seeing him dethroned. Had such a club still existed, the members would never have opened their doors to Bannister or Munden; and if they had, they would have closed them again in anger and disappointment; but certainly neither performer would have accepted their invitation. When apprised of Munden’s decease, which happened on the 6th of February, Bannister recorded his regret, describing him as one of the best comic actors that ever trod the stage.”

Speaking of the loss of many old acquaintances and friends, Mr. A. records the death of Mathews.

“In noticing the event, Bannister, says, ‘One of my most valued friends, Mathews, died last Friday, in his fifty-ninth year. He was a really good fellow, and has not left many better behind. I was very much attached to him, and he knew it.’ These calamities were followed by one more near to him, when four fine youths, connected with his family, were drowned in one morning. But these losses, which the lapse of years or the unexpected visitations of Providence brought on him, although they powerfully affected his feelings, did not produce an unmanly dejection of spirits, or any thing approaching to general gloom or sourness of temper. His conversation with a friend, in which he expressed his natural regrets, without foregoing his characteristic gaiety, but which probably occurred a few years before all these causes of grief had accumulated around him, is deserving of notice. ‘You may perhaps think it rather odd,’ he said, ‘but there are few circumstances that have so strong a tendency to make me melancholy as the recollection of Foote’s theatre, for such I remember it in my early days, when in the snug corner of Suffolk Street, with just light enough in the passage to make darkness visible.’ I used to go there with my father, and get my pocket well stuffed with oranges: ah! none are so sweet now! nor is the laugh so loud, or the mirth so gay. After one-legged Foote came the elder Colman, and then my esteemed friend, George Colman the younger, as he still persists in calling himself. I was Mr. Bannister, junior, and Young Bannister, in those days, though now, as Squire Groom says, ‘Stiff as a turnpike.’ I (who’d have thought it?) have lived to see three generations of tom-fools, laughing, singing, ranting, ‘strutting their hour upon the stage, then heard no more,’ while here am I, alive, and leaping, I was going to say, but for the twinge in my heel, which reminds me that I, too, am descending into the grave. I was thinking of these things this morning, as I crept, or rather crawled along, and began to fancy myself like the wandering Jew, who had outlived I don’t know how many generations. Yes, an old decrepit, wandering smouchey.’ Just at the moment, an Israelite passed the window, crying ‘Old clothes!’ he relapsed from the melancholy moralist into the Jack Bannister of the olden time, adapted his countenance to the character, and began, in exact imitation of the itinerant, to cry, ‘Old clothes—clothes sell—clothes,’—in a tone which would have allured to their doors any servants who had to dispose of superannuated apparel.”

We have only to add that two capital portraits illustrate these volumes; one as a private gentleman advanced in years, after *Clint*; and the other after J. Russell, R. A., as “Dr. Lentive,” from a picture by G. F. Harding, in the Garrick Club.

Hood’s Comic Annual is at last published. The joke against other Annuals has been that they would anticipate Christmas by Midsummer; but our prince of punsters seems to like reversing the feat, and if he goes on at this rate, he will soon reach Lady-day for the New-Year’s-day preceding. But no matter when published, his is a book for all seasons. His wit is all his own, and no imitation comes near him. His very quaint, grotesque, and most oblique views of things and of words, are not mere whim and *verbiage*: there is always an under-current, not

alone of humour but of good feeling, both as regards individual conduct and the public interests. Like Dickens, in his "Oliver Twist" and "Nicholas Nickleby," all the diversities of scene, character, and writing, tend to a general benefit—there is the starved pauper to be rescued from workhouse oppression, the miserable orphan to be saved from Yorkshire education, or (it may soon be) the overwrought factory child to be made the object of human sympathy and compassion. Thus, Hood's Corresponding Club is enough to convert stormy political passions into a laugh; and, in short, all his sentiments, however playful or ludicrous, tend to the promotion of kindness and benevolence.

The Electric Eel.

Wild Sports of the West: with Legendary Tales and Local Sketches. By the Author of "Stories of Waterloo." Pp. 387. London, 1839. Bentley.

THIS new edition for "Bentley's Library" of one of the most stirring and spirited works of the class of which it is an ornament, again claims our notice and praise. Sports healthful, and many of them adventurous, have always, when well described, possessed great interest, not only for those who have enjoyed them, but for the town-confined and sedentary. See the hunt cross a country, and labour leans on his spade, his plough, or his scythe, to watch its progress, if he does not throw them for the excited moment aside, to join in the chase and the shout. The feeling is common to mankind. There is something belonging to the primitive state of nature in the pursuit and capture of the wild denizens of earth and air; and all take delight in it. Lucky are those who, debarred the pleasure in the field, can, in a volume like the present, enjoy it with Mr. Maxwell in the closet.

On a sporting subject, we may here notice No. 94 of the "New Sporting Magazine," which, taking a more general range than is usual with periodicals of its class, besides being animated and amusing on matters connected with its staple, thus, for instance, speaks of the late Captain Morris:

"How quietly has the death of Captain Morris been permitted to be passed over, by thousands, to whom his exquisite songs have contributed hours upon hours of harmony and joy! The sin of ingratitude lies at the door of all those who are *bon-vivants* in the highest and most refined sense,—who *thirst* after the prosperity of pure English lyric poetry,—and who feel an honouring respect for departed genius. Why sleeps the name and fame of this extraordinary man?—Connected as he was so long,

from his vast, refined, and social powers, with royal and noble circles—relished as his charming songs are by the hearts of 'all circles,' how is it that 'silence wraps the suffering clay,' and that relatives are apathetic—publishers dull and quiescent—and the lovers of the clarinet-jug—the mahogany and the sweet verses 'married to immortal time,' silent and uncomplaining? English Literature—particularly English Poetical Literature—has a sound right to demand the publication of the lyrical compositions of Captain Morris; and it is an imperative duty on his descendants or representatives towards the living and the dead, to comply at once with the demand."

There ought to be a race amongst the publishers of the day, as important and as fleet as that for the Derby or St. Leger,—to secure the invaluable prize of the MS. Murray should make play at the start, and lead them up the hill with Bentley close at his heels, and Colburn in a good place. The ruck should keep well together until the cross-roads—when Saunders and Oiley should draw upon the leading rank; Colburn and Bentley should then die away at the stand; and Murray, after a short struggle with Churton and that 'little Red Rover,' Tilt, should win easy by a length—Mosen, a good second. But, seriously and earnestly to speak, we envy that publisher whose name is destined to live upon the title-page of so precious an addition to our literature, as the works of Captain Morris."

MISCELLANEOUS.

Greece, Pictorial, Descriptive, and Historical. By Christopher Wordsworth, D.D., Headmaster of Harrow School, &c. &c. &c. 8vo. pp. 32. London: Orr and Co. Edinburgh: Chambers.

WELL, the age when *Numbo* authorship was considered to be *infra dig.* must now surely be considered as having passed away. Not when a principal publisher thereof, Alderman Kelly, reached the supreme city dignity of Lord Mayor, did the system receive so great an accession of honour as now when we see a scholar so eminent as Dr. Wordsworth become the editor of a monthly publication. The public orator of Cambridge, the Master of Harrow, the author of "Athens and Attica," and the member of many learned bodies, has ennobled our craft, and henceforward, though only weekly, we shall hold our heads at least a quarter of an inch higher than ever. This, however, is a beautifully embellished work; and, we need hardly add, as far as the letter-press as yet enables us to judge, one likely to do credit to our literature, nor disparage the name of its author.

The Pilgrim's Staff, and Christian's Daily Walk; a Series of Meditations, Illustrations of Holy Writ, Occasional Prayers, &c. By Henry Smith, of King's College, London. 12mo. pp. 376. London, 1839. Ball and Co.; Rivingtons, &c. &c.

THIS is a very Christian volume, evidently the result of much reading, and containing many excellent quotations from the works of numerous eminent men, from the period of the Fathers of the Church to the present time. Besides being welcome to the religious world in general, we think it may draw the attention of some of the clergy themselves, especially such as are young in their ministry, to valuable writers, with whom they may be less intimately acquainted than it is desirable they should be.

Poetical Volumes.—In spite of the anti-taste for poetry ascribed to the public, these volumes seem to accumulate upon our table faster than ever; and we must remove a

few of them.—*Hours of Solitude*, by H. J. Daniel. Pp. 800. (Lothwhitell, White.) A young aspirant's delings: how could the vulgarity (p. 183) escape either himself or his printer?—*Fragments in Verse, chiefly relating to Southern Africa*. Pp. 176. (London, Pickering.) Too crude and mediocre to have deserved publication.—*The Tahitians: or, Christianity in the South Seas*. Pp. 108. (London, Wright.) A sort of dramatic, blank verse version, of the effects of missionary labours in Tahiti: better in plain prose.—*England, an Historical Poem*, by John Walker Ord, Esq. (London, Routledge). As this is a third edition, we may leave the sanguine production of a young poet (for it was written at the age of twenty-one) to the encouragement the public have accorded to it.—*The Antediluvians: or, the World Destroyed*, by J. McHenry, M.D., author of the "Pleasures of Friendship," &c. 12mo. pp. 272. (London, Craddock.) The fortunes and catastrophes of the antediluvian world. These are here made the subject of a narrative poem in ten books, which, from its epic character and extent, ought, perhaps, to have received from us a longer and separate review. But though it is in subject well chosen, in design good, and in execution respectable, yet it is so much more of rational sensible writing than of poetry, that we think we may do it justice by saying no more than we have said. We will not hazard the opinion of the title-page, that it is "the antediluvian world destroyed by J. McHenry."—*Poems, longer and shorter*, by Thomas Burbridge, of Trin. Coll. Cam. Pp. 356. (London, Pickering.) Youthful effusions—poetical aspirations. They want definiteness, distinctness, polish, and application. Dreams must be made like realities to be interesting, and so must poetry be invested with life, intenseness, and truth—not vague, meaningless, and shadowy, to reach the imagination or touch the heart. Mr. Burbridge has the well within him, but he must take care how he pours out its waters.—*The Poetical Works of Vincent Bourne*. Pp. 350. (Washbourne, Cambridge, Giant.) A new and new edition of this elegant Latinist. In English, though classic in all, he was but one of those gentlemen who wrote with ease. *State Trials: Specimens of a new Edition*, by N. T. Mollie, Esq. of the Inner Temple, Special Pleader. 8vo. pp. 402. (London, Simpkin and Marshall.) Into the head of what living man, except a special pleader, could it have entered to put state trials into verse? Here are the trials of Anne Ayliffe, for heresy; Sir William Stanley, for high treason; and Mary, Queen of Scots, all done into metre; blocks, shocks—racks, axe—head, dead, &c. &c. The notes are curious; but we cannot entertain the author's opinion, that such subjects are most fittingly discussed and described in rhyme.—*The Temple: Sacred Poems and Private Regulations*, by George Herbert. Pp. 350. (Washbourne.) Quaint and curious. What a number of ideas are scattered over these pages, the product of a contemplative and overflowing mind.—*Gilbert*. Pp. 23. (London, Groombridge.) A little poem to point out the evils of intemperance—undeniable, but not so well done as "Will and Jean."

ARTS AND SCIENCES. GEOGRAPHICAL SOCIETY.

MONDAY 28. Mr. Hamilton, president, in the chair. Read, extracts from the following papers:—1. 'A Letter from J. B. Pentland, Esq.' dated La Paz, 20th July, 1838. "I start in two days for an exploratory tour along the eastern shores of the lake Titicaca, having already examined the opposite side; on my return to La Paz, I shall proceed to Cochabamba, *via* Yungas. I have obtained from General Santa Cruz, a promise to employ a young Englishman who has resided some years in Bolivia and Peru, in the exploration of the course of the Apurimas and other rivers descending from the eastern Cordillera to the Marañon. This young man has health, zeal, and courage, a very fair knowledge of the use of mathematical instruments, and draws well. My plan for him is, first, to explore the course of the Apurimac to its junction, and then to descend the Purus to where it joins the Amazons. He will probably descend the Apurimac, from near Abancay, and follow the great water course, into which the latter empties itself, to Surayacu, where Smyth's exploration began, and subsequently embark on the Purus, or its upper affluents. I have recently discovered the bones of the mastodon near the lake of Titicaca, at a height of 13,000 feet, and fossil shells in the Nevado de Antakana [?], in latitude 16° 21', at an elevation of 17,800 feet, above the sea. In November I hope to visit the Cordillera of Carangas [?], remarkable for its active volcanoes, and, on my return to Europe, to give you, at the Geographical So-

ciety, a good account of this part of the world." —2. 'Notes on a March from Zoháb, at the Foot of Zagros, along the Mountains to Khuzistán (Susiana), and from thence through the Province of Luristán to Kirmánsháh, in the year 1836,' by Major Rawlinson, of the Bombay army, serving in Persia. From Zoháb, which lies about 100 miles N.E. of the city of Baghaddá, Major Rawlinson travelled to the S.E. along the foot of the Zagros mountains, through Gilan, Zarnah, the plain of Chardawer, Sirwan, Seimarráh, Dizful, the ruins of Susa, Shuster, to Mangasht, on the river Jerahi, in Khuzistán, returning thence to Dizful, he continued to the northward to Khorremábád, Bisitán, and Kirmánsháh, a journey of about 600 miles—some of it through an almost unexplored country; in the course of which Major Rawlinson visited the ruins of several ancient sites—copied numerous inscriptions, and otherwise carefully investigated the comparative geography of Susiana, respecting which there is great confusion in even our best maps. The pashalik of Zoháb is a district of considerable extent, lying at the foot of the ancient Zagros. It is bounded on the N.W. by the course of the river Diyáláh, on the E. by the mountains, and on the S. by the stream of Holwán. It formed one of the ten pashaliks dependent upon Baghaddá, until about thirty years ago, when Mohammed 'Ali Mirzá, prince of Kirmánsháh, annexed it to the crown of Persia. The town of Zoháb was built about a hundred years ago by a Turkish pasha, and the government continued to be hereditary in his family till the conquest of the pashalik by the Persians. The capital was surrounded by a mud wall, and may have at first contained about 1000 houses. From its frontier position, however, it has been exposed to constant spoliation in the wars between Turkey and Persia, and is now a mass of ruins, possessing scarcely 200 inhabited houses. There are about twenty families of Jews here, and the remainder are Kurds of the Sunni sect. At the northern extremity of the district of Zoháb is the little plain of Semíráf, a natural fastness of the most extraordinary strength, which is formed by a range of lofty and precipitous mountains, extending in a semicircle from the river Diyáláh, here called the A'bi-Shirwán, and enclosing an area of about 8 miles in length, and 4 in breadth. The A'bi-Shirwán is only fordable in this part of its course for a few months in the year; and the passes of the mountain-barrier of Semíráf may be defended by a handful of men against any numbers that can be brought against them. The name of Semíráf could not fail to call to my recollection the Assyrian queen, Semiramis, whom the ancients believed to have adorned Persia with many magnificent works of art. I therefore searched eagerly for ancient monuments; and though I failed to discover any in the plain itself, yet, across the river, at the distance of about 12 miles, on the road to Suleimáníyah, I heard of sculptures and statues which would well merit the attention of any future travellers in this country. The place is called Fáí K'al'ah, the foot of the castle, or But Khánah, the idol temple. From the hills above Semíráf, the plain of Shahrí-zúr, with its numerous villages, is distinctly visible, and on a clear day the town of Suleimáníyah may be seen bearing N.W., at the distance of about 50 miles. The western boundary of Semíráf is formed by a prolongation of the chain called Kars-tágh, through which the river forces its way by a narrow and precipitous cleft; to the south of the river the mountains rise up most abruptly, and to a very considerable elevation, probably about 5000 feet above the plain, and from hence

the range stretches in a succession of rocky heights for about 60 miles, in a southerly direction, till it is lost in the sand-hills to the west of Zoháb. These heights compose detached hill-forts of great strength. From Sheik'hán to Zoháb the distance is 6 farsakhs; the road recrosses the range by a very easy pass called Sar-Kal'al, and from thence traverses an open country to Zoháb. The distance from Semíráf to Zoháb by this route, through Hershel, Húrín, and Sheik'hán, is about 60 miles. Gilán has been laid down by Major Rennell, as the representative of the Boeotian colony of Celonæ, and has been adopted as such, without further discussion, in all subsequent maps; but this I believe to be incorrect; for the march of Alexander on Ecbatana, which suggested the verification, should be drawn from Susa instead of from Opis, as Major Rennell supposed; and it will be found upon this line that Celonæ was much too near to Susa to coincide with the position of Gilán. Neither does the route across Mount Zagros by Gilán appear ever to have been generally followed. The passes between Gilán and Hárún-ábád are very difficult; and the intervening country is most indifferently furnished with supplies; so that, had the march of Alexander commenced from Opis, he would certainly have followed the high-road by the gates of Zagros rather than this difficult and barren track. At Zarnah are found the ruins of a large city. There is a tapah, which I conceive to mark the site of the citadel, little inferior in size to the one at Gilán; and the foundations of buildings, now nearly levelled with the surface of the ground, extend over a space of perhaps five miles in circumference. The series of valleys which extend along the great chain of Zagros to the confines of Susiana, and are divided by a line of parallel ridges from the plains of Assyria, form one of the least known, and, at the same time, one of the most interesting countries of the East. Here was the original seat of the Elamites, when they migrated from Babylon; and from hence they spread their conquests over Susiana, and the adjoining districts to the eastward, which thus assumed the title of Elymais. The Elymeans are distinctly specified by Strabo, in numerous passages, as inhabiting along Mount Zagros, on the southern confines of Media, and overhanging Babylonia and Susiana. The most ancient name of the country appears to have been the plain of Arioch, from whence the King of the Elymeans came to the assistance of the Assyrian monarch at Nineveh. His capital I believe to have been the very city of Zarnah, the ruins of which I have just mentioned; for I have discovered that as late as the thirteenth century of Christ it actually retained the name of Ariyúhán. I also suspect that this same place represents the Hara of the captivity, which must certainly be looked for in the vicinity; and further, there can be no doubt that it is likewise identical with the Arian of Benjamin of Tudela, where he states himself to have found 20,000 families of Jews.—Mr. Ellis exhibited a newly drawn map of the world, as known to the ancients, and gave some account of the authorities he had consulted in its compilation. He noticed, among other points, that the positions of Nelynda, Mundiris, and Barace, have been mistaken, and that he has little doubt but that they will be found to correspond respectively with the modern sites of Antapoly, Yellarpuly, and Cochin, on the western coast of Hindoستان. With regard to Meroe, it is highly probable that Strabo designates the position north of Shendy as Meroe, from the circum-

stance of its being the capital city at the time in which he wrote, and Ptolemy has fixed upon Maraweh as that of his later time. The distances in stadia, as given by Strabo from Eratosthenes, are almost minutely correct, and the distances between Maraweh and the stations on the Nile round the bend northwards, till we reach the junction of the Nile and Tacazze, are the same as those laid down by Ptolemy with erroneous latitude and longitude.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, January 24.—The following degrees were conferred:—

Bachelor and Doctor in Divinity, by Accumulation.—Rev. T. Rowley, Christ Church, Grand Compounder.
Doctor in Medicine.—H. Powell, Exeter College.

Masters of Arts.—J. Smith, Exeter College, Grand Compounder; W. Adams, Fellow of Merton College, Grand Compounder; Rev. A. Gatty, Exeter College; Rev. R. J. Mac Pherson, Queen's College; Rev. G. Hulme, Balliol College; G. D. Miller, Wadham College; F. Faber, Fellow of University College; A. Kenington, Fellow of Trinity College.

Bachelors of Arts.—J. H. Mahony, Grand Compounder; M. I. Brickdale, G. E. H. Vernon, W. Barnes, Student; W. L. Darrell, E. H. Linzee, O. P. Owen, H. S. Lawford, Christ Church; E. P. Price, Lincoln College; F. C. Trower, Scholar, W. Hulme, Balliol College; C. S. Ross, Magdalen Hall; W. Brewster, Trinity College.

CAMBRIDGE.—*Smith's Prizes.*—Dr. Smith's annual prizes to the two best proficient in mathematics and natural philosophy among the commencing Bachelors of Arts, were adjudged to:—1st. Percival Frost; 2d. Benjamin M. Cowie, St. John's College; the second and first wranglers. (*Cambridge Chronicle.*)

SOCIETY OF ANTIQUARIES.

MR. HAMILTON, V.P. in the chair.—Mr. John Frost communicated copies of two letters found by him in Holland; one written, in 1664, by James, duke of York, to the King of Adra, making proposals for trade and commerce, and presenting the king with a crown, which the duke tells him is, in his own country, a badge of pre-eminence and sovereignty. The vessel, however, never reached its destination, being taken by the Dutch, who still possess the letter and the crown; the latter having a velvet cap, and the jewels imitated in glass. The other letter was from the Duke of Monmouth to the Prince of Orange.—The reading of Mr. Beltz's communication of particulars relative to the Battle of Cressy, was concluded; and Mr. Beltz further communicated a letter from Dr. Bromet, with a drawing of a cross remaining at Cressy, in memory of the King of Bohemia, who fell in the battle.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Entomological, 8 P.M.; British Architects, 8 P.M.

Tuesday.—Linnean, 8 P.M.; Horticultural, 3 P.M.; Civil Engineers, 8 P.M.; Electrical, 7 P.M.

Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; Artists' and Amateurs' Conversations, 8 P.M.

Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Zoological, 3 P.M.

Friday.—Royal Astronomical (Anniversary) 3 P.M.; Royal Institution, 8½ P.M.

Saturday.—Guy's Hospital, 8 P.M.

FINE ARTS. THE NEW ART.

THE great sensation created by the new discovery in the fine arts, which our friends on the other side of the Channel have, with national and personal characteristics, chosen to call *Dagueroscope*, but which our unpretending countryman, Mr. Talbot (rather than *Talbotoscope*), has denominated *Photogenic*, has induced us to bestow further attention upon the subject, which we had the pleasure of first making known to the public. What is done in the *Literary Gazette* to-day will be important, as settling the claim to originality

in regard to all parties concerned in this interesting discovery. The favour of a letter from Mr. Talbot (a gentleman so justly honoured in the scientific circles), puts on record the unquestionable dates of his experiments; and we have seen and examined the exquisite specimens which mark his progress and demonstrate his success. The statements are corroborated by the usual Reports from the Royal Institution and Royal Society; which we have not been anxious to give so much in detail, in consequence of our possessing Mr. Talbot's own lucid and unassuming account of what he has achieved. In order to complete the matter, as far as present circumstances admit, we have also, at the risk of repetition, procured the most accurate details of M. Daguerre's process, and the opinion of the French philosophers thereon. As he is recommended to be more secret than Mr. Talbot has been, in order that he may treat with government for his sufficient reward, we cannot, of course, speak more plainly than the somewhat flowery description we have received enables us. But we think enough appears to render it palpable that there is a very considerable difference between the materials employed, the means used, and the results. Thus, at the Royal Institution, on Friday evening, were exhibited a variety of specimens of a process invented by Mr. Talbot, but which appears to differ from that of M. Daguerre, especially in this, that Mr. Talbot reverses the natural effect, representing dark objects light, and light objects dark.

Different preparations of silver seem to be adopted—nitrate, chloruret, and probably others; but whoever attains the object most effectually, it is a generous rivalry, and will, we trust, be continued to the end. Mr. Talbot's method of fixing his drawings, so that the sun can effect or alter them no more, is of the utmost value. His copying of engravings (there is a sweet one of Venice), by first getting them with the lights and shades reversed, but then copying from the reversed impression, as before, is singularly ingenious. Figures painted on glass are exquisitely rendered; and an oriel window of many feet square is reduced to a picture of two inches, in which every line is preserved with a minuteness inconceivable until seen by the microscope.

At present we will not dilate any further on this memorable topic, but beg to suggest experiments with the hydro-oxygen powers of light, or such lights as Lieut. Drummond's—and with this hint alone, request our readers' attention to—

1. Mr. Talbot's Letter.
2. The account of the French Invention.
3. Report of the Royal Institution; and,
4. Report of the Royal Society.

PHOTOGENIC DRAWING.

To the Editor of the Literary Gazette.

DEAR SIR,—I have great pleasure in complying with the wish which you have expressed to me, that I would go into some details respecting the invention which I have communicated to the Royal Society; viz. the art of photogenic drawing, or of forming pictures and images of natural objects by means of solar light.

I do this the more readily, on account of the interest with which the scientific public have read the accounts which have recently appeared respecting the discoveries of M. Daguerre, of Paris, in some respects identical with mine—in others, I think, materially different.

Although I am very far indeed from being of the opinion, that

"Chance rules supreme in the affairs of men;"

yet I cannot help thinking that a very singular

chance (or mischance) has happened to myself, viz. that after having devoted much labour and attention to the perfecting of this invention, and having now brought it, as I think, to a point in which it deserves the notice of the scientific world,—that exactly at the moment when I was engaged in drawing up an account of it, to be presented to the Royal Society, the same invention should be announced in France.

Under these circumstances, by the advice of my scientific friends, I immediately collected together such specimens of my process as I had with me in town, and exhibited them to public view at a meeting of the Royal Institution.* My written communication to the Royal Society was, from its length, necessarily deferred to the week following.*

These steps I took, not with the intention of rivalising with M. Daguerre in the perfection of his processes (of which I know nothing, but am ready to believe all that Biot and Arago have stated in their praise), but to preclude the possibility of its being said hereafter, that I had borrowed the idea from him, or was indebted to him, or any one, for the means of overcoming the principal difficulties.

As the process of M. Daguerre is at present a profound secret, even at Paris, it is evident that no one could imitate him here, or exhibit pictures formed in the same way, or depending on the same optical principles, who was not already fully acquainted with a secret, not, indeed, the same, but similar or tantamount to his.

That M. Daguerre's pictures will stand the effect of time, is, I suppose, the fact, though I do not find it expressly mentioned in the report of M. Arago (*Comptes Rendus*, 7th January). My own have stood between three and four years. I therefore consider that the principles of the art are firmly laid.

Many instruments have been devised at various times for abridging the labour of the artist in copying natural objects, and for insuring greater accuracy in the design than can be readily attained without such assistance.

Among these may be more particularly mentioned, the *Camera Obscura* and the *Camera Lucida*, which are familiar to most persons; certainly very ingenious and beautiful instruments, and in many circumstances eminently useful, especially the latter. Yet are there many persons who do not succeed in using them, and I believe that few are able to do so with great success, except those who, in other respects, are skilled in drawing.

Up to a certain point, these inventions are excellent; beyond that point they do not go. They assist the artist in his work; they do not work for him. They do not dispense with his time; nor with his skill; nor his attention. All they can do is to guide his eye and correct his judgment; but the actual performance of the drawing must be his own.

From all these prior ones, the present invention differs totally in this respect (which may be explained in a single sentence), viz. that, by means of this contrivance, it is not the artist who makes the picture, but the picture which makes ITSELF. All that the artist does is to dispose the apparatus before the object whose image he requires: he then leaves it for a certain time, greater or less, according to circumstances. At the end of the time he returns, takes out his picture, and finds it finished.

The agent in this operation is solar light, which being thrown by a lens upon a sheet of prepared paper, stamps upon it the image of

* Both noticed elsewhere.—Ed. L. G.

the object, whatever that may chance to be, which is placed before it.

The very foundation of the art, therefore, consists in this—eminently curious—natural fact, viz. that there exists a substance so sensitive to light as to be capable of receiving even its faint impressions. The whole possibility of the process depends upon this; for if no such substance existed in *rerum naturâ*, the notion of thus copying objects would be nothing more than a scientific dream. Moreover, it is not sufficient that the paper should be so sensitive as to receive the impressions of external objects; it is requisite also, that, having received them, it should retain them; and, moreover, that it should be *insensible* with regard to other objects, to which it may be subsequently exposed.

The necessity of this is obvious, for otherwise new impressions would be received, which would confuse and efface the former ones.

But it is easier to perceive the necessity of the thing required than to attain to its realisation. And this has hitherto proved a most serious obstacle to those who have experimented with this object in view.

This was one of the few scientific inquiries in which Sir Humphry Davy engaged, upon which Fortune did not smile.

Either his inquiries took a wrong direction, or else, perhaps, the property sought for was of so singular a nature, that there was nothing to guide the search, or perhaps he despaired of it too soon; however this may be, the result undoubtedly was, that the attempt proved unsuccessful, and was abandoned. As Sir Humphry Davy himself informs us, "No attempts have as yet been successful."

These words are quoted from his own account in the "Journal of the Royal Institution for 1802."

The subject then dropped, and appears to have been no more spoken of for upwards of thirty years.

When, in 1834, unaware of Davy's researches, I undertook a course of experiments with the same object in view, I know not what good star seconded my efforts; but, after various trials, I succeeded in hitting upon a method of obtaining this desideratum. By this process, it is possible to destroy the sensibility of the paper, and to render it quite insensible. After this change it may be exposed with safety to the light of day; it may even be placed in the sunshine: indeed, I have specimens which have been left an hour in the sun without having received apparent deterioration. A fact, therefore, is thus established which is not without its importance in a theoretical point of view, besides its more immediate application to purposes of utility.

With this kind of paper, eminently susceptible of being acted on by light, and yet capable of losing that property when required, a great number of curious performances may readily be accomplished. The most remarkable of these, is undoubtedly the copying the portrait of a distant object, as the façade of a building, by fixing its image in the *Camera Obscura*; but one perhaps more calculated for universal use is the power of depicting exact facsimiles of smaller objects which are in the vicinity of the operator, such as flowers, leaves, engravings, &c., which may be accomplished with great facility, and often with a degree of rapidity that is almost marvellous.

The Specimens of this art which I exhibited at the Royal Institution, though consisting only of what I have happened to have with me in Town, are yet sufficient to give a general idea of it,

and to shew the wide range of its applicability. Among them were pictures of flowers and leaves; a pattern of lace; figures taken from painted glass; a view of Venice copied from an engraving; some images formed by the Solar Microscope, viz. a slice of wood very highly magnified, exhibiting the pores of two kinds, one yet much smaller than the other, and more numerous. Another Microscopic sketch, exhibiting the reticulations on the wing of an insect.

Finally: various pictures, representing the architecture of my house in the country; all these made with the Camera Obscura in the summer of 1835.

And this I believe to be the first instance on record, of a house having painted its own portrait.

A person unacquainted with the process, if told that nothing of all this was executed by the hand, must imagine that one has at one's call the Genius of Aladdin's Lamp. And, indeed, it may almost be said, that this is something of the same kind. It is a little bit of magic realised:—of natural magic.

You make the powers of nature work for you, and no wonder that your work is well and quickly done.

No matter whether the subject be large or small, simple or complicated; whether the flower-branch which you wish to copy contains one blossom, or one thousand; you set the instrument in action, the allotted time elapses, and you find the picture finished, in every part, and in every minute particular.

There is something in this rapidity and perfection of execution, which is very wonderful. But after all, what is Nature, but one great field of wonders past our comprehension? Those, indeed, which are of every-day occurrence, do not habitually strike us, on account of their familiarity, but they are not the less on that account essential portions of the same wonderful Whole.

I hope it will be borne in mind by those who take an interest in this subject, that in what I have hitherto done, I do not profess to have perfected an Art, but to have commenced one; the limits of which it is not possible at present exactly to ascertain.

I only claim to have based this new Art upon a secure foundation: it will be for more skillful hands than mine to rear the superstructure.—I remain, Dear Sir, Yours, &c.

H. FOX TALBOT.

44 Queen Anne Street, January 30, 1839.

FRENCH DISCOVERY.—PENCIL OF NATURE.

Who has not admired the splendid and wonderful representations in the camera obscura?—images so clear, so full of life, so perfectly representing every object in nature. These living pictures, by traversing the lens and mirrors, are thrown down with double beauty on the table of the camera obscura, by the radiant finger of light. The new art has been discovered to fix these wonderful images, which have hitherto passed away volatile—evanescent as a dream—to stop them at our will, on a substance finely sensible to the immediate action of light, and render them permanent before our eyes, in traces represented by tints in perfect harmony on each point, with different degrees of intensity.

We must not, however, believe, as has been erroneously reported to the public, with respect to these [Parisian] experiments, that the proper colours of objects are represented, in these images, by colours—they are only represented, with extreme truth, by light, and every grad-

ation of shade;—as an oil-painting is given by a perfect engraving, consisting of black lines; or, perhaps, more akin to a design made with mathematical accuracy, and in aqua tinta; for there are no crossings of lines in the designs by the pencil of nature. Red, blue, yellow, green, &c., are rendered by combinations of light and shade; by demi-tints, more or less clear or obscure, according to the quantity of light in each colour. But in these copies, the deficiency of the design—the purity of the forms—the truth and harmony of tone—the aerial perspective—the high finish of the details, are all expressed with the highest perfection. The formidable lens, which often betrays monstrosities in the most delicate and aerial of our master-pieces, may here search for defects in vain. The creations of nature triumph. Far from betraying any defect, the highest magnifier only tends to shew more clearly its vast superiority. At each step, we find new objects to admire, revealing to us the existence of exquisite details, which escape the naked eye, even in reality. Nor can this astonish us when the radiant light, which can only act according to the immutable laws of nature, substitutes its rays for the hesitating pencil of the artist.

M. Daguerre has represented, from the Pont des Arts, and in a very small space, the whole of the magnificent buildings on the right bank of the Seine, including that part of the Louvre containing the grand gallery of pictures. Each line, each point, is rendered with a perfection quite unattainable by all means hitherto used. He has also reproduced the dark mass of Notre Dame, with its immense draperies and Gothic sculptures. He has also taken the view of a building, in the morning at eight o'clock, at mid-day, and at four o'clock in the afternoon, during rain, and in sunshine. Eight or ten minutes at most, in the climate of Paris, is sufficient; but, under a more ardent sun, such as that of Egypt, one minute will suffice. To artists and seamen who travel, and who often find it impossible to prolong their stay at interesting places, this process must be most welcome.

The French journals, and reports of proceedings, however, admit that these admirable representations still leave something to be desired as to effect, when regarded as works of art. It is singular, they observe, that the power which created them seems to have abandoned them; and that *these works of light want light*. Even in those parts the most lighted, there is an absence of vivacity and effect; and it is allowed, that amidst all the harmony of their forms, these views appear subjected to the sober and heavy tone of colour imparted by a dull northern sky. It would appear, that by passing through the glasses of the optical arrangement of M. Daguerre, all the views are uniformly clothed with a melancholy aspect, like that given to the horizon by the approach of evening. Motion, it is obvious, can never be copied; and the attempt to represent animals and shoeblacks in action, consequently failed. Statuary is said to have been well defined; but, hitherto, M. Daguerre has not succeeded in copying the living physiognomy in a satisfactory manner, though he does not despair of success.

It could not have escaped chemists, that various chemical products are sensibly affected by light. Some gases may remain together in the dark, without any effect, but a ray of light will cause instant explosion. Other bodies, such as the chloruret of silver, are modified in colour. It at first takes a violet tint, afterwards becomes black. This property would, doubtless, have suggested the idea of applying

it to the art of design. But, by this method, the most brilliant parts of the object become discoloured, and the darker parts remain white: this produces an effect contrary to the fact. And again, the continued action of light tends to render the whole dark. Mr. Talbot's method would seem to be based on the use of the salts of silver, with the addition of some substance, or covering, to prevent the further action of light, after the design was complete.

This discovery will doubtless make a great revolution in the arts of design; and, in a multitude of cases, will supersede old methods altogether inferior. The temporary interest of many may, at first, be affected; but whatever has the true character of good, cannot essentially do mischief. The invention of printing soon gave employment to many more than were employed as copyists. Even in our own time, the substitution of steel-plates for engraving, instead of copper, although fifty times as many copies may be taken from them, has, by the substitution of good engravings for indifferent ones, so extended the demand, that more steel-plates are now required than were formerly used of copper.

We must add a few words with reference to science. This newly discovered substance, so easily acted upon by the rays of light, opens a wide field for photometric experiments, which hitherto have been hopeless, more particularly on the light of the moon. M. Arago recalls to our attention some experiments made by himself, jointly with other philosophers, by which the light of the moon (300,000 times less than that of the sun), concentrated by the most powerful glasses, gave no indication of chemical action on the chloruret of silver, nor any sign of heat on the most delicate thermometer. We should be glad to know if any experiments have yet been made with the concentrated light of the moon on the thermo-electrical apparatus, which may be constructed of extreme delicacy. The substance used by M. Daguerre is evidently sensible to the action of lunar light, since, in twenty minutes, he can represent, under the form of a white spot, the exact image of this luminary.

M. Biot, who, from the nature of his labours in the fields of science, takes a lively interest in the discovery in question, and anticipates much from the means afforded by it to carry out the analysis of some of the most delicate phenomena of nature. M. Daguerre has, it is asserted, already discovered some new properties of light, and is still carrying on the investigation.

ROYAL INSTITUTION.

FRIDAY, 25th Jan.—Mr. Woodward, 'On a new Apparatus for the Public Demonstration of the General Properties and Laws of the Polarization of Light.' After a brief outline of the undulatory theory of light, Mr. Woodward proceeded to exhibit with the old oxy-hydrogen apparatus, fitted with lenses, the splendid phenomena of polarized light, using tourmaline as the analysing plate. The new apparatus (Gedard's) with which he also illustrated nearly the whole phenomena, is of a more simple construction, and much cheaper. The light is polarized by plate glass; for the expensive tourmaline, mica is substituted; and for the lens, a metallic reflector. This arrangement will tend much to make more generally known the beautiful wonders of this important science. At the conclusion of the lecture, Mr. Faraday directed attention to drawings in the library, sent there by H. F. Talbot, F.R.S., and by him named "Photogenic Drawings."

They were of the same character as those of M. Daguerre. The two processes, he observed, of M. Daguerre and of Mr. Talbot, effecting the same objects, may be different, or may be the same. As yet neither is known; and each has been perfected by two scientific experimenters in different countries, without a knowledge of each other's pursuit. The principal object of the exhibition of the photogenic drawings, on this occasion, was meant (as was understood) to establish a date, in order, that should M. Daguerre's discovery be made public previously to the reading, before the Royal Society, of Mr. Talbot's paper detailing his process, no charge of imitation could be brought against Mr. Talbot, in case of identity of process. And that each discovery should be thus proved to be original. No human hand has hitherto traced such lines as these drawings displayed; and what man may hereafter do, now that Dame Nature has become his drawing mistress, it is impossible to predict.

ROYAL SOCIETY.

Mr. LUBBOCK in the chair. — A highly interesting paper by Henry Fox Talbot, Esq. was read. It detailed the author's discovery upwards of five years ago, of the new process of delineating objects. From the first volume of the Journal of the Royal Institution, it appears that the late Mr. Wedgewood had some idea of the discovery; that ingenious gentleman, in conjunction with Sir H. Davy, made many experiments, but they found all their endeavours to obtain success ineffectual: so much so, that it discouraged them, and would have discouraged the author of the present memoir had he read the remarks of Sir H. Davy, contained in the Journal alluded to, prior to the experiments which ultimately led to his invention. At first it consisted in laying the nitrate of silver on paper, and by the means of the camera obscura and the solar ray acting on the paper, a perfect impression is obtained of any object in half a second; it was found, however, that the image thus obtained, by exposure to the light faded, and after awhile disappeared. By repeated experiments, and the most devoted attention, Mr. Talbot, by what he calls sensitive paper (a great improvement upon that which he originally employed), has overcome this great drawback; pictures he has had in his possession for years are now as vivid as they were when first produced. The image obtained is white, but the ground is beautifully coloured, and readily obtainable, either sky-blue, yellow, rose-colour, or black, — green is excluded; these variations of colour Mr. Talbot considers as so many chemical compounds. Objects the most minute are obtained, — the delicate hairs on the leaves of plants, — the most minute and tiny bivalve calyx, — nay, even a shadow, the emblem of all that is most fleeting in this world, is fettered by the spell of the invention, and remains perfect and permanent long after it has been given back to the sunbeam which produced it; in short, to use Mr. Talbot's own words, the picture is "ended as soon as began." The extent of the value of this invention cannot at present be anticipated; already the author has applied it with perfect success to the copying of sculpture, engravings, hand-writing; and in every case so complete has been the image, that it has been mistaken for the original. The value of it even now to naturalists and others travelling abroad, many of whom are ignorant of drawing, must be immense. Lord Brougham was present, and paid profound attention to Mr. Talbot's paper.

BRITISH INSTITUTION.

We have been favoured with a glance at the Exhibition of the Works of British Artists about to open on Monday, and of which the private view takes place to-day. It rejoices us to say that it is among the best we have ever seen; and not only in general honourable to our Native Arts, but possessing Pictures which no other living school in the world could equal. Among these we may mention *The Fountain of Falacy*, a gorgeous specimen of Turner on an imaginative subject, and two incomparable dogs looking out from a window, by E. Landseer. They are as living as any dogs alive; and the terrier (shall we say), more so! The walls of the three rooms are covered with 427 paintings, and there are ten pieces of sculpture. Among the landscapes, some of Stark, Lee, Cooke, Cresswick, attracted our eye, by their rural and pastoral beauties. A Dutch Family, by W. Simson, is truth itself. Inskip, one charming female figure. Mrs. Carpenter, Miss Corboux, Mac-lise, Rothwell, Stone, A. Fraser, Clater, Webster, J. Hollins, Cooper, Lance, Holland, Howard, Mr. Scrope, Lady Burghersh, J. Severn, Copley Fielding, Hilton, Buss, Reinagle, Mrs. C. Pearson, C. Landseer, Hoffman, Eddy, J. P. Knight, J. B. Pyne, Linton, Rochard, Kidd, &c. &c. (we give the names as they occur in the Catalogue, without order or preference), all contribute productions which reflect honour upon their various talents; and we again repeat that, as a whole, this is a very satisfactory exhibition.

NEW PUBLICATIONS.

Dramatic Sketches. By R. J. Lane, A.R.A. Nos. V. and VI. Mitchell.

THE Illustrations in these numbers consist of eight of the principal characters in Mr. Rooke's opera, "Amilie, or the Love Test." They are equal in spirit and beauty to their predecessors. We are especially charmed with the piquante and truly feminine whole-length portrait of Miss Shirreff, as "Amilie."

BIOGRAPHY.

SIR WILLIAM BEECHEY, R.A.

THIS veteran artist died at Hampton, on Monday, the 26th of January, aged 86. He was born at Burford, in Oxfordshire, in the year 1763, and at the proper age was placed under an eminent conveyancer at Stow. He afterwards repaired to London, and articulated himself for a given period to a gentleman of the same profession, who died before the expiration of his time, when he made a second engagement with a Mr. Owen, of Tooke's Court. His talents, however, were not of the kind suited to the law; and having accidentally made the acquaintance of several students of the Royal Academy, he became so enamoured of the fine arts, that he prevailed on Mr. Owen to receive a young man whom he had procured as a substitute, and, in 1772, was admitted as a student, at Somerset House. Sir Joshua Reynolds was then in the zenith of his fame; and his works were diligently studied by the young aspirant. He soon, however, applied himself to nature. Dr. Strachey, archdeacon of Norwich, and his family, the Chevalier Ruspoli and his family, and the Duke and Duchess of Cumberland, were among his earliest productions. The Ruspoli family was, we believe, the first picture that he sent to the Exhibition of the Royal Academy. From London, Mr. Beechey went to Norwich, where he began with painting small conversation pieces, in the manner practised first by Hogarth, and afterwards

by Zoffany. On his return to the metropolis, after an absence of four or five years, he took the house in Brook Street, which had formerly been the residence of Vanderghucht; and was gratified by general celebrity. He afterwards removed to Hill Street, Berkeley Square; thence to George Street, Hanover Square; and ultimately to Harley Street, Cavendish Square. To enumerate the portraits which he painted during his long career, would be to give a list of nearly all the members of the *beau monde*. At a comparatively early period of his practice, he attracted the favourable notice of the royal family, was appointed portrait-painter to Queen Charlotte; and, by George the Third's command, painted a whole-length portrait of her Majesty, and portraits of all the princesses. He subsequently produced a grand composition, representing the King at a review, attended by the Prince of Wales, the Duke of York, &c.; which became so popular as to be repeatedly engraved. Of Sir William Beechey's powers as an artist, no adequate judgment can be formed by those who have seen only the works of his declining years. His female portraits, especially, were distinguished by elegance and delicacy of character, and beauty of colouring. Sir William was elected an associate of the Royal Academy in 1793, and a Royal Academician, on the death of Mr. Hodges, in 1797. He was the first member of the Royal Academy on whom the honour of knighthood was conferred after the death of Sir Joshua Reynolds. Sir William had a large and highly accomplished family. Lady Beechey herself formerly practised as an artist, and produced many charming miniatures. Sir William Beechey's youngest daughter was some years ago married to Lord Grantley.

Of the amiable and endearing qualities of this excellent man in private life, and of his superior talents as a painter, we have not, at present, time to say more. To the extent of the former we, in common with all who had the good fortune to know him, can bear most feeling testimony — a better or more worthy man did not exist. The latter are best evidenced by the innumerable productions of his easel, in which colour the most beautiful and stable, taste the most easy and refined, execution of the highest order, and in short, every thing which could rank him with the most distinguished competitors of his age, were perpetuated with a master's hand. In his family, as in his fame, Sir William Beechey was, as we have already stated, happy. Captain Beechey, and his brother, the traveller, have reflected back to him reputation and public honours similar to his own.

JAMES LONSDALE, ESQ.

ON Thursday, January 17th, died, aged 62, James Lonsdale, Esq., of Berners Street; an artist of long and justly established reputation. Mr. Lonsdale was a native of Lancashire, but came to London at an early period of his life. He was one of the founders and chief supporters of "The Society of British Artists." For many years he had confined his practice to male portraits. We transcribe the following comprehensive character of Mr. Lonsdale from "The Morning Chronicle": — "Combined with an enlarged and masculine understanding, he possessed a straightforward honesty of purpose, which never vacillated before rank or station, and ever secured to him the regard and esteem of those with whom he associated; amongst whom may be numbered many of the most distinguished men of his time for wit, talent, and high birth. He had a prompt, discrimi-

nating, and just perception of character; and his works shew that he carried that quality, with unusual force, into the subjects of his pencil. His manners were cheerful and bland in the highest degree, and his conversation was replete with sagacity, rich in anecdote, and always impressive from justness of thought, clearness of judgment, and undeviating veracity. He died, as he lived, with the calm and unruffled confidence of an honest man, leaving a blank in the enjoyments of his friends not easily to be supplied." Mr. Lonsdale has left a widow and family, in very easy circumstances. One of his sons pursues his father's profession, has visited Italy, and promises to become a distinguished artist: the *Literary Gazette* has repeatedly spoken of his merits with due praise.

THE DRAMA.

THERE has been no novelty in the theatres. Tuesday Her Majesty went in state to Drury Lane; and last night to Covent Garden. From the wild beast show at the former, and the play commanded at the latter, the jokes have christened our youthful Queen "The Lady of Lions." We wish we could see the great cause of the national drama patronised as it ought to be by the crown, the government, and the higher orders of society. That cause has been nobly vindicated, and its vindicator deserves every support in his still arduous undertaking.

Haymarket Theatre.—A good audience assembled at this theatre on Wednesday evening, to witness the performance of *Fra Diavolo* and *High Life below Stairs*, by amateurs. The music of the opera was very well executed, and several encores rewarded the efforts of the actors. The farce also was applauded, and seemed to amuse much. We should select from the *dramatis personæ*, Lord Allosch, the two brigands, and my lord duke's servant, as possessing talents worth cultivating for the stage.

The *St. James's* theatre, under Mr. Hooper, opens on Monday with an effective company, and some more wild beasts; "a forest of them," say the bills.

Sadler's Wells.—*Oliver Twist* and the capital pantomime have done wonders at Sadler's Wells: but a still greater attraction was produced on Monday; it is called *The One Crime*, and is adapted from the play in which Mlle. Rachel is said to be thrilling the hearts of the Parisians. Mrs. Honner is very touching as the *President's Daughter*, and, we fancy, no bad substitute for the extraordinary original.

VARIETIES.

H. B.—The prolific humour of H. B. entitles him to our continual notice; not as party writing, but as chronicling good jokes, at which we know the principal persons caricatured laugh as heartily as any of the public. Here are no fewer than five novelties (No. 568 to 572), to greet the meeting of parliament. *First*, "A Deserter;" Lord Durham in handcuffs, marched between the grenadiers, Wellington and Melbourne, with Brougham as rear guard, in light-infantry equipments. The various expression of the countenances is admirable. *Second*, "The Disowned;" John Bull, a beadle, bringing a child labelled "Letter to the Queen," to Lord Brougham's door, who confesses to "misfortunes of the kind," but disclaims. Two ladies (perhaps the queen and one of her court) perceive a strong likeness, and exclaim, "Oh, the naughty man!" Whoever wrote this said letter, it has been a lucky hit for the author to have it attributed to so high a name, for it

has sold it largely. *Third*, "A Coachman wanted—Candidates for the Place." John Bull is the looker-out; Brougham, Durham, Wellington, and Melbourne, the candidates. Here, also, the attitudes, expression, and label-conversation of the candidates, are excellent. *Fourth*, "The Dis-Organist;" Lord Durham at the organ, singing, "Fury! Rage! Despair!" Lord Melbourne, with the Queen on one side, shocked at the discord; Lord Brougham and Mr. Roebuck on the other, blowing the bellows, and rejoicing in putting the player's pipes out of tune. There is not so much in this, as in *Fifth*, "Comic Pantomime and curious Metamorphosis," one of the most ludicrous compositions of the series. The Queen, at the door of Windsor Castle, changing, under Harlequin's wand, into the Crown Tavern, and House of Call for Cabinet Makers, is surrounded by Lord Melbourne as Harlequin, Lord J. Russell as Columbine, Lord Palmerston as Pantaloon, and Lord Morpeth as the Clown. The whole scene is most grotesque; and the characters executed with infinite drollery.

Blagrove, Gattic, Dando, and Lucas's concerts, we observe, begin on Thursday; the second announcement of the concert season. The opera will not open till near the end of February: about the 22d is mentioned.

Nelson Tribute.—The designs in competition for the Nelson monument will, we hear, be placed together in some spacious hall or chamber, and submitted to the judgment of the committee and public criticism.

The Mackenzie Manuscripts.—The Rev. Mr. Taylor is still progressing in his labour with these manuscripts. He is evidently most indefatigable, and prosecutes his task of examination and collation with a zest that overcomes all its irksomeness.—*Oriental Herald*.

Growth of the Sugar-cane.—The schooner *Ulitea* had arrived from the Society Islands, having brought up a cargo of sugar from Otahite. This beautiful little island, last year, produced one hundred tons of this article, and this year it will be nearly double, as the growth of the cane is in its infancy: the sugar is said to be of a very excellent quality. When the settlement at Moreton Bay is thrown open for location, we entertain little doubt but that we shall be able to cultivate sufficient cane, in the warm latitudes to the northward of that place, as will in a few years supersede the necessity of sending to a foreign port for a cargo. The canes imported from the Mauritius by a Mr. Mayo, and planted at Moreton Bay by that gentleman, are said to thrive well, and will, no doubt, at a future day, be the germ of vast fields of this valuable article of domestic consumption.—*Ibid*.

Another Seasonable Con.—Why is Mr. Murphy, the almanac-maker, the most hardy man alive?—Because he is out in all weathers. May we not add, after this, that Murphy is the most weather-beaten man in the world?

Encore.—Why is a pilot-coat not like Murphy?—Because the one is *weatherwise*, and the other is *otherwise*.

Another.—Why is a man who drives fast up hill, like a man who makes a young lady a present of a young spaniel?—Because they both give a gal-a-pup.

LITERARY NOVELTIES.

In the Press.

Mr. Colburn has announced, *inter alia*, the Life of Petrarch, by Thomas Campbell, Esq.—Diary of the Rev. J. Ward, A. M., Vicar of Stratford-upon-Avon, from 1648 to 1678. From the Original Manuscript in the Library of the Medical Society of London. Edited by Dr. Charles

Severn. [This is the MS. which contains the notices of Shakspeare; and which, having seen, we can state to be very curious and interesting.—Ed. L. G.]—Private Correspondence of James Vernon, Esq., Secretary of State to King William III. With Charles Talbot, duke of Shrewsbury, from 1696 to 1708. Edited from the originals by G. P. R. James, Esq.—Memoirs of Queen Henrietta, consort of Charles I. From Original Manuscript—David Garrick and his Contemporaries. By Theodore Hook, Esq.—Memoirs of the Life of M. G. Lewis, Esq.—Political Portraits. By Sir Henry Lytton Bulwer—Woman and her Master. By Lady Morgan—Travels in Egypt, the Holy Land, &c., in 1835. By Prince Puckler Muskau—Personal Adventures of Captain D. O'Brien, R. N., during the late war. Written by himself—The Two Baronets, a Novel. By Lady Charlotte Bury—Tahna and his Theatrical Contemporaries—The Romance of Fair Rosamond. By the Author of "Royston Gower" (T. Miller).

TO CORRESPONDENTS.

We have to acknowledge No. I. of "Argus, or All my Eye," which seems bitter enough upon the individual who has advertised a new journal under the first name.

We have to acknowledge a small plaster bust of the composer of "Guillaume Tell" (published by L'Almanac and Co.), which seems to us to be a very good likeness, with, as might be expected from the art, the organ of music prominently developed—the lower portion of the countenance being, however, fat and sensual.

A Subscriber will find a packet at the *Literary Gazette* Office; the Editor having perfectly satisfied himself, and being always happy to aid a just literary object.

We have this week devoted so much to the one subject of the new art of painting, that many other matters must be excused for "mained rates."

ERRATUM.—P. 60, 9 lines from bottom, col. 2, for "convenience," read "inconveniences."

Admission, 1s. Catalogue, 6s.
WILLIAM BARNARD, Keeper.

BRITISH WATERPROOF. — 432 West

Strand. — Waterproof Cloths, Camlets, &c. rendered Waterproof without impeding the degree of perspiration.

To the Directors of the British Waterproofing Company.
Gentlemen, — Having impartially tested the merits of your process as applied to the goods I sent you for that purpose, I now, agreeably with my promise, state the result, — which is a confirmation of the decided superiority of your system. To this invaluable discovery of waterproofing I have, for a long period, devoted great attention, and was the first who publicly introduced it; since which I have had great practical experience in connection with it, and having fully ascertained the relative merits of the various systems, now before the public, I feel no hesitation in stating, that the result of my experiments and experience is decidedly in favour of your process. I make this avowal that so valuable a discovery may not, at the onset, get into disrepute through the introduction of any of the comparatively inefficient substitutes that others may be inclined to make.

I am, Gentlemen,

Yours respectfully,

WALTER HERDOE, Tailor,

60, Newmarket Street.

January 1864, 1865.
Agents — Mr. Willis, 178 Strand; Mr. Mitchell, 40, Newmarket Street; Mr. Everett, 18, King's Cross; Messrs. Wall and Son, 10, Whitehall; Messrs. Beck and Fraser, Ipswich; Mr. J. J. Owen, 10, Newmarket Street; Mr. Slater, Bishop's Cleeve; Mr. E. Blicher, 10, Newmarket Street; Mr. G. Frank, Newcastle and Gateshead; Mr. F. Cherry, Walsford; Mr. W. G. Smith, 10, Newmarket Street; Edinburgh, Messrs. Wm. Farne and Co. Tailors by Appointment to Her Majesty.

ANDREW'S BRITISH AND FOREIGN

LIBRARY, 107 New Bond Street. — This Library contains an extensive Collection of Works in English and Foreign Languages, in every department of Literature; also, all the Reviews, Magazines, &c.; which, together with every new Publication of interest, are supplied in sufficient numbers to ensure Subscribers to the first classes the immediate perusal of them. The Proprietor does not profess any new plan or system of circulation; five and thirty years' experience having satisfied him that the only way to ensure the approbation of Subscribers is to continue that liberal supply of all new works which has obtained for him the extensive and distinguished patronage he now enjoys.

Terms of Subscription.

William Blackwood and Sons, Edinburgh; and Thomas Cadell, Strand, London.

In 1 vol. small 8vo. price 7s. neatly bound in cloth.

SELMA; a Tale of the Sixth Crusade.

"The author not inaptly designates this a novel in rhyme, and it has merits in both respects. As a tale it has much to rivet attention; it is told in a superior mode, and the character and incidents are naturally and skilfully evolved. The language throughout is remarkably easy and graceful; the rhyme, which, combined with the natural flow of the verse, is a good test of facility in execution, is of singularly uniform correctness; and there are passages which, for poetic fancy and genuine feeling, would do credit to some of our best poets."—*Literary Courier.*

Smith, Elder, and Co. 65 Cornhill.

THE SPEECHES

OF

HENRY LORD BROUGHAM,

AT THE BAR AND IN PARLIAMENT,

UPON QUESTIONS RELATING TO

PUBLIC RIGHTS, DUTIES, AND INTERESTS, WITH HISTORICAL
INTRODUCTIONS,

AND A

CRITICAL DISSERTATION UPON THE ELOQUENCE OF THE ANCIENTS.

"A work which ought to be possessed by every free-minded man in the British empire, who can afford to add any books at all to his library stores. The smaller the collection the more valuable will be such an addition to it, for it discusses almost all the political, legal, and economical questions—the nearest to 'men's business and bosoms'—that have arisen and been mooted within the last forty years."—*Edinburgh Review*.

Adam and Charles Black, Edinburgh; Longman and Co., Ridgway and Sons, and
Charles Knight and Co. London.

Price 6s. neatly bound in cloth.
**THE EXTENT AND OBLIGATION OF
HUMANITY TO BRUTES,** and principally considered
with Reference to our Domesticated Animals.

MR. COLBURN'S NEW PUBLICATIONS.

I.

**A LIFE OF HIS GRACE, FIELD MARSHAL
THE DUKE OF WELLINGTON.**

Embracing his Military, Civil, and Political Career, to the present Time. Each Department of the Work by Writers most conversant with its several Heads.

THE WHOLE EDITED AND REVISED

By CAPTAIN C. ROCHFORD SCOTT, Author of "Travels in Egypt, Spain," &c.

The Work will be completed in Twelve Monthly Parts, at 2s. 6d. each, beautifully embellished with Portraits, Views, Battle Scenes, Plans, Maps, &c.

THE FIRST PART TO APPEAR ON THE 15th OF FEBRUARY.

No period of modern History lays claim to more absorbing interest, or is susceptible of richer illustration, than that of the celebrated wars in which the great Captain of his age has shone with such distinguished lustre. As the leader of armies, the character of the Duke of Wellington was known to all the world; but his disposition, his qualities as a man, his conduct as a statesman and a diplomatist, remained yet to be portrayed. To supply this desideratum is the object of the biography here announced, which, not confining its scope to the display of that genius which conceived and executed the plans that were crowned with lasting success at Waterloo, and decided the future destinies of Europe, endeavours to bring into fuller view all the most striking points of the character of the individual. To treat with success the numerous important matters essentially connected with the career of such a man, required the combined efforts of several writers; of writers most conversant with those branches of the subject, in regard to which, only accurate and extensive knowledge could produce a satisfactory result. This plan of co-operation has accordingly been adopted, and the entire work, thus fully prepared, from exclusive as well as from open sources—having been submitted to the judgment and revision of a military officer, whose connexions give him access to the first authorities—the Publisher trusts that he is not too sanguine in his expectation of presenting to the public one of the most comprehensive, interesting, and popular works of its class.

II.

NEW WORK BY MRS. TROLLOPE, IN SHILLING PARTS, FOR UNIVERSAL CIRCULATION.

On the 20th February will be published, Part I. price 1s. to be continued Monthly, and completed in Twenty Parts, printed and embellished uniformly with the "Pickwick Papers," "Nicholas Nickleby," &c.

REVIEW OF NEW BOOKS.

Dissertation on Subjects of Science connected with Natural Theology; being the concluding Volumes of the New Edition of Paley's Work.

By Henry Lord Brougham, F.R.S., &c.
2 vols. 12mo. London, 1839. Knight and Co.

LORD BROUGHAM is an extraordinary person. With a mind of almost unparalleled activity, what were severe labours to other men seem to be but amusements to him, and the toils of philosophy only agreeable relaxations. Dr. Mayo observes,

"It is often important, that the individual should be furnished with a collateral pursuit; an object, independent of his calling. And this consideration points to an advantage of unprofessional education, often too little considered. To bring up a young man exclusively to the pursuits which his active tendencies point out as appropriate, is often to leave him without any resource against the terrible shocks to which his character exposes him. But the operations of the intellect may be made available here, provided it be cultivated in those studies which are remedial to his peculiar failings. Thus a classical or scientific pursuit kept open in his closet, has often beguiled the anxiously ambitious statesman out of the regrets, the dependencies, and the disappointments, which his moral temperament involves."

This strikes us to be eminently illustrated by all Lord Brougham's various publications,—in *belles lettres*, in criticism, in severe science, and in none more than the present production, a very curious and interesting inquiry into subjects of extreme nicety and difficult investigation. The fine bounds which divide (if they be divided) Instinct from Reason are examined in the first volume; than which, one more pleasing and instructive it has seldom been our lot to peruse.

Animal Instinct and Human Reason! Such is the theme; but with all his acuteness, with all his ability, with all his powers, who is it that discusses the question? A man! If lions were to paint human beings, Van Amburgh would not, perhaps, strut his hour upon the stage such a hero as he now shines forth in the journalism of the day. And this is worthy of note. We apply reason to the investigation of *instinct*; and hence a multitude of errors, misconceptions, and false conclusions, are likely to result. It is like trying one language by another; the drama by geometry. Suppose animals were capable of bringing their instinct to the consideration of human intellect; there would probably be a very different view of the matter. The eagle, darting his glance from near the blazing sun over five hundred miles of the earth's surface, would laugh to scorn the visionary visions of man,—his experiments on light, his cribbed topography, and his aerostatics. The vulture or the pointer would ask, What does he know of the sense of smell; can he scent the carcass from afar, or can he track his food or his foe with unerring certainty through the intricate windings of a tainted region? The poor little fly would deride his highest microscopic efforts: and, in short, the brutes would

hold that, with the possession of his senses in so imperfect and inferior a degree, it were impossible that his reasoning faculties could carry him to any thing like the accurate knowledge which belonged to their more gifted natures. Providence endows no living creature with qualities which are not for necessary and useful purposes. Look, then, at the pig, the groveling and despised. We will not assert (as others have done as well as Hudibras) that it sees the wind; but endeavour to impress on our readers an idea of what must be the great extent of its attributes, of its occasions, and of its powers, from a reflection upon the extent of its voice. From the deepest base to the shrillest treble in the diatonic scale, and far beyond any scale that ever music attempted to measure, that animal, between the grunt and the squeal, must express a countless number of emotions or ideas. Else would not such compass have been given to it. And yet Reason can form no estimate of the Instinct thus indicated, no more than the instinct of the pig can inform it what man has learned in mathematics or astronomy.

This may be somewhat of the *ad absurdum*, but it does not affect the validity of our position, that Reason may not be the surest medium to apply to for the sake of understanding the strange phenomena and inexplicable wonders of Instinct.

But we must not dwell on fancies of our own, especially when we have so captivating a task before us as that of exhibiting a few (and regretting that they must be so few) examples of Lord Brougham's work.

It is in the shape of a dialogue between his lordship and Lord Althorp; and will, in this respect, remind classic scholars of one or more of the finest models of ancient literature. The first book sets out with facts (we are not quite sure that they are all sufficiently authenticated) relating to Instinct; and the second treats of consequent theories. The third rises higher into animal intelligence (facts, as before); and the fourth theorises thereon. Notes on these dialogues and on the glowworm, and observations upon the cells of bees, conclude this volume. Of Instinct, we are thus told:—

"A. You have been speaking of instincts in the plural; of course you do not mean to be taken literally, as admitting more kinds of mental instinct than one.—B. Certainly not; any more than when speaking of the mental faculties I admit of more minds than one, or more parts than one of a single mind. This last form of speech has been so used, or rather abused, especially by the philosophers of the Scottish school, accurate and strict as they for the most part are, that they seem to treat the mind as divided into compartments, and to represent its faculties as so many members, like the parts of the body. But it is one thing or being perceiving, comparing, recollecting,—not a being of parts, whereof perception is one, reasoning another, and recollection a third; so instinct is one and indivisible, whatever we may hold it to be in its nature, or from whatever origin we may derive it. This thing, or being, is variously applied, and operates variously. There are not different instincts, as

of building, of collecting food for future worms, of emigrating to better climates; but one instinct, which is variously employed or directed. I agree with you, however, that we have now done something more than merely clearing away the ground. We have taken a first step, or, if you will, laid a foundation. We have ascertained the peculiar or distinctive quality of instinct, and that which distinguishes it from reason. It acts without teaching, either from others, that is, instruction, or from the animal itself, that is, experience. This is generally given as the definition or description of instinct. But we have added another peculiarity, which seems also a necessary part of the description; it acts without knowledge of consequences; it acts blindly, and accomplishes a purpose of which the animal is ignorant."

Such are Lord Brougham's broad opinions; and though we pause and doubt, we cannot enter into a controversy about any of these arguments. For instance, whether Instinct does or does not act without teaching either from others; that is, instruction, or from the animal itself, that is, experience. To be sure, if you go further, you call it something more than instinct; and something more than instinct can be but little less than reason, if it be not identical. Again, can what we choose to denominate instinct be cultivated? We do not doubt it for a moment. All domesticated animals prove it. The association with man converts instinct into something so nearly resembling reason, that we can call it simple, natural, common instinct, no longer. There is memory—there are imagination and dreaming—there are adaptations of means to ends, which, when compared with the acts of the same species in wild and (if we may use the word) uncivilised conditions, shew such an advance both in instruction and experience, that it is very difficult to believe all to be one and the same instinct.

These, however, are very desultory thoughts (as, indeed, this notice must, with our limits, of necessity be); and, to vary it, we will extract a specimen of the political humours with which the author has thought fit to enliven his inquiry.

"B. Beginning with laying aside those actions of animals which are either ambiguous or are referable properly to reason, and which, almost all philosophers allow, shew a glimmering of reason; and confining ourselves to what are purely instinctive, as the bee forming a hexagon, without knowing what it is, or why she forms it; my proof of this, not being reason, but something else, and something not only differing from reason in degree, but in kind, is from a comparison of the facts, an examination of the phenomena in each case—in a word, from induction. I perceive a certain thing done by this insect, without any instruction, which we could not do without much instruction. I see her working most accurately without any experience, in that which we could only be able to do by the expertness gathered from much experience. I see her doing certain things which are manifestly to produce an effect she can know nothing about; for example, making a cell, and furnishing it with carpets and with liquid, fit to hold and to cherish safely a tender grub, she never having seen any grub, and

* In a little volume just published, entitled "Elements of the Pathology of the Human Mind."

knowing nothing, of course, about grubs, or that any grub is ever to come, or that any such use—perhaps, any use at all—is ever to be made of the work she is about. Indeed, I see another insect, the solitary wasp, bring a given number of small grubs, and deposit them in a hole which she has made, over her egg—just grubs enough to maintain the worm that egg will produce when hatched; and yet this wasp never saw an egg produce a worm, nor ever saw a worm—nay, is to be dead long before the worm can be in existence; and, moreover, she never has in any way tasted or used these grubs, or used the hole she made, except for the prospective benefit of the unknown worm she is never to see. In all these cases, then, the animal works positively without knowledge, and in the dark. She also works without designing any thing; and yet she works to a certain defined and important purpose. Lastly, she works to a perfection in her way; and yet she works without any teaching or experience. Now, in all this she differs entirely from man, who only works well, perhaps at all, after being taught—who works with knowledge of what he is about—and who works, intending and meaning, and, in a word, designing to do what he accomplishes. To all which may be added, though it is rather, perhaps, the consequence of this difference, than a separate and substantive head of diversity, the animal works always uniformly and alike, and all his kind work alike; whereas no two men work alike, nor any man always, nay, any two times, alike. Of all this I cannot, indeed, be quite certain, as I am of what passes within my own mind, because it is barely possible that the insect may have some plan or notion in her head implanted as the intelligent faculties are: all I know is the extreme improbability of it being so; and that I see facts, as her necessary ignorance of the existence and nature of her worm, and her working without experience; and I know that, if I did the same things, I should be acting without having learned mathematics, and should be planning in ignorance of unborn issue; and I therefore draw my inference accordingly as to her proceedings.—A. Come, come, Master B., I begin to surround you, and drive you from your original position, maintained both now and last summer, about the impossibility of defining. Have you not, as nearly as possible, been furnishing a definition? At least, are not the materials of definition brought together which you deprecated, and would have us reserve to the last?—B. Patience, good man, patience! What is this to what you have gone through? Fancy yourself once more in the House of Commons, on the Treasury bench, listening to———A. God forbid!—B. Or suppose yourself again in Downing Street, with Drummond announcing a succession of seven deputations, or of seventeen suitors.—A. The bare possibility of it drives me wild. Why, to convert you to the most absurd doctrine I could fancy, to make you swallow all the Zoonomia whole, and believe that men derive their love of waving lines and admiration of finely moulded forms from the habit of the infant in handling his mother's bosom, or even to drive you into a belief that the world was made by chance, would be an easy task, compared to the persuading any one suitor, at any one of the offices, that you had any difficulty in giving him all he asks, or convincing any one of those seven deputations that there exists in the world another body but itself.—B. Or to convince any one man, who ever asked any one job to be done for him, that he had any one motive in his mind but the public good, and

which he was sacrificing his private interest. I remember M. once drolly observing, when I said no man could tell how base man are till he came into office, 'On the contrary, I never before had such an opinion of human virtue; for I now find that no man ever drops the least hint of any motive but disinterestedness and self-denial; and all ideas of gain or advantage is the only thing that none seem ever to dream of.' But now compose yourself to patience and discussion, take an extra pinch of snuff, walk about for five minutes, a distance of five yards and back, with your hands in your breeches pockets, and then return to the question with the same calmness with which you would have listened to a man abusing you by the hour in parliament, or with which you looked an hour ago, in the Castle farm, at the beast you had bred, and which by your complacent aspect I saw you had sold pretty well."

Of the *Facts*, too, we will quote an example:

"B. In the forests of Tartary and of South America, where the wild horse is gregarious, there are herds of 500 or 600, which, being ill prepared for fighting, or indeed for any resistance, and knowing that their safety is in flight, when they sleep, appoint one in rotation who acts as sentinel, while the rest are asleep. If a man approaches, the sentinel walks towards him as if to reconnoitre or see whether he may be deterred from coming near—if the man continues, he neighs aloud and in a peculiar tone, which rouses the herd, and all gallop away, the sentinel bringing up the rear. Nothing can be more judicious or rational than this arrangement, simple as it is. So a horse, belonging to a smuggler at Dover, used to be laden with run spirits and sent on the road unattended to reach the rendezvous. When he descried a soldier he would jump off the highway and hide himself in a ditch, and when discovered would fight for his load. The cunning of foxes is proverbial; but I know not if it was ever more remarkably displayed than in the Duke of Beaufort's country; where Reynard, being hard pressed, disappeared suddenly, and was, after strict search, found immersed in a water-pool up to the very snout, by which he held a willow-bough hanging over the pond. The cunning of a dog, which Serjeant Wilde tells me of, as known to him, is at least equal. He used to be tied up as a precaution against hunting sheep. At night he slipped his head out of the collar, and returning before dawn put on the collar again, in order to conceal his nocturnal excursion. Nobody has more familiarity with various animals (besides his great knowledge of his own species) than my excellent, learned, and ingenious friend, the Serjeant; and he possesses many curious ones himself. His anecdote of a drover's dog is striking, as he gave it me, when we happened, near this place, to meet a drove. The man had brought 17 out of 20 oxen from a field, leaving the remaining three there mixed with another herd. He then said to the dog 'Go, fetch them;' and he went and singled out those very three. The serjeant's brother, however, a highly respectable man, lately sheriff of London, has a dog that distinguishes Saturday night, from the practice of tying him up for the Sunday, which he dislikes. He will escape on Saturday night and return on Monday morning. The serjeant himself had a gander which was at a distance from the goose, and hearing her make an extraordinary noise, ran back and put his head into the cage—then brought back all the goslings, one by one, and put them into it with the mother, whose separation from her brood

had occasioned her clamour. He then returned to the place whence her cries had called him.

"A. The 'Letters on Instinct' mention a cat which had been to the West Indies, and on the ship returning to the port of London, she found her way through the city to Brompton, whence she had been brought.—B. That is a work I have often wished to see, and never been able to get. Dr. Hancock quotes it for one of the most remarkable proofs of sagacity and resource in the goat, and this operation has been, it seems, observed more than once. When two goats meet on a ledge bordering upon a precipice, and find there is no room either to pass each other or to return; after a pause, as if for reflection, one crouches down and the other walks gently over his back, when each continues his perilous journey along the narrow path."

Returning once more to the more essential matter contained in the volume before us, we must, for the present at least, conclude, with one of the most comprehensive passages we can pick out as a general specimen of the *Dissertation*.

"B. First of all, be pleased to observe that many philosophers altogether deny, even to man, the power of forming abstract ideas. The dispute of the Nominalists and Realists, so well ridiculed by Swift, or rather by Arbuthnot in 'Scriblerus,' is as old as metaphysical inquiries, under one name or another. They consider it impossible for us really to form these abstractions, and hold that we only are using words and not dealing with ideas, just as you seem to think we do in algebraical language. Mr. Stewart is among those who conceive that we think in language. My opinion, if against such venerable authority I may venture to hold one, is different. I think we have ideas independent of language, and I do not see how otherwise a person born deaf, and dumb, and blind, can have ideas at all; which I know they have, because I carefully examined the one of whom Mr. Stewart has given so interesting an account. Indeed, he has recorded the experiment of the musical snuff-box, which I then made upon this unhappy but singular boy. But, next, I am to shew you that abstraction independent of algebra, or metaphysical reasoning altogether, is neither difficult nor painful. Without abstraction we cannot classify in any way, or make any approach to classification. Now, I venture to say, that no human being, be he ever so stupid, is without some power of classification, nay, that he is constantly exercising it with great care, and almost unavoidably, and acting upon the influences to which it leads. He can tell a man from a horse. How? By attending to those things in which they differ. But he can also tell a stone from both, and he knows that the stone is different from both. How? By attending to those things in which the two animals agree, and to those things in which they differ from the stone. So every person, having accurate eyes and the use of speech, can call a sheet of paper and a patch of snow both white; a piece of hot iron and of hot brick both hot. He has, therefore, the idea in his mind of colour and of heat in these several cases, independent of other qualities, that is, abstracted from other qualities; he classifies the white bodies together independent of their differences; the hot bodies independent of theirs; and he contrasts the white metal with the white snow, because they differ in temperature, without regarding their agreeing together in colour. All this is abstraction, and all this is quite level to the meanest capa-

city of men. But is it not also level to brute intellect? Unquestionably all animals know their mates and their own kind. A dog knows his master, knows that he is not a dog, and that he differs from other men. In these very ordinary operations, we see the animal mind at one time passing over certain resemblances and fixing on differences; at another time disregarding differences and fixing only on resemblances. Nay, go lower in the scale. A bull is enraged by a red colour, be the form of the body what you please. A fish is caught by means of a light, be it of any size or any form.

"A. I think we may go a step further; have not animals some kind of language?" At all events they understand ours. A horse knows the encouraging or chiding sound of voice and whip, and moves or stops accordingly. Whoever uses the sound, and in whatever key or loudness, the horse acts alike. But they seem also to have some knowledge of conventional signs. If I am to teach a dog or a pig to do certain things on a given signal, the process I take to be this. I connect his obedience with reward, his disobedience with punishment. But this only gives him the motive to obey, the fear of disobeying. It in no way can give him the means of connecting the act with the sign. Now, connecting the two together, whatever be the manner in which the sign is made, is abstraction; but it is more, it is the very kind of abstraction in which all language has its origin—the connecting the sign with the thing signified; for the sign is purely arbitrary in this case as much as in human language.—B. May we not add that they have some conventional signs among themselves? How else are we to explain their calls? The cock grouse calls the hen; the male the female of many animals. The pigeon, and the fieldfare, and the crow, make signals; and the wild horse is a clear case of signals. All this implies not only abstraction, but that very kind of abstraction which gives us our language. It is, in fact, a language which they possess, though simple and limited in its range.—A. As to the power of comparing, what is commonly called reason, *par excellence*, comprising judgment and reasoning, this needs not detain us very long. The facts here are not well liable to dispute. There is no possibility of explaining the many cases which we began by going over without allowing this power. They all prove it in some degree. Several of them show it to exist in a very considerable degree. The acts of some birds and monkeys cannot be accounted for by instinct; for they are the result of experience; and they are performed with a perfect knowledge of the end in view; they are directed peculiarly to that end; they vary according as the circumstances in which they are performed alter, and the alteration made is always so contrived as to suit the variation in the circumstances. Some of these acts show more sagacity, according to Mr. Locke's observation, than is possessed by many men. The existence of a comparing and contriving power is, therefore, plain enough. And, on the whole, I conceive that a rational mind cannot be denied to the animals, however inferior in degree their faculties may be to our own.

"The whole question is one of relations and connections. Adaptation—adjustment—mutual dependence of parts—conformity of arrangement—balance—and compensation—every where appear pervading the whole system, and conspicuous in all its parts. It signifies not in this view whether we regard in-

—We beg to refer to our theory on the pigs.—*M. L. G.*

stinct as the result of the animal's faculties actuated by the impressions of his senses, or as the faint glimmerings of intelligence working by the same rules which guide the operations of more developed reason, or as a peculiar faculty differing in kind from those with which man is endowed, or as the immediate and direct operation of the Great Mind which created and which upholds the universe. If the last be indeed the true theory, then we have additional reason for devoutly admiring the spectacle which this department of the creation hourly offers to the contemplative mind. But the same conclusion of a present and pervading intelligence flows from all the other doctrines, and equally flows from them all. If the senses so move the animal's mind as to produce the perfect result which we witness, those senses have been framed, and that mind has been constituted, in strict harmony with each other, and their combined and mutual action has been adjusted to the regular performance of the work spread out before our eyes, the subject of just wonder. If it is reason like our own which moves the animal mechanism, its modification to suit that physical structure and to work those effects which we are unable to accomplish, commands again our humble admiration, while the excellence of the workmanship performed by so mean an agent impresses us with ideas yet more awful of the Being who formed and who taught it. If to the bodily structure of these creatures there has been given a mind wholly different from our own, yet it has been most nicely adapted to its material abode, and to the corporeal tools wherewith it works; so that while a new variety strikes us in the infinite resources of creative skill, our admiration is still raised as before by the manifestation of contrivance and of expertness which every where speaks the governing power, the directing skill, the plastic hand. Nor is there upon any of these hypotheses room for doubting the identity of the Great Artificer of nature. The same peculiarity every where is seen to mark the whole workmanship. All comes from a supreme intelligence; that intelligence, though variously diversified, preserves its characteristic features, and ever shines another and the same."

Bremner's Excursions in Russia, &c.
(Second notice.)

THIS work will be in the hand of the majority of readers throughout the empire, and, not improbably, throughout Europe also. We have undoubtedly some, and very excellent, accounts of Petersburg already, but the observations of Mr. Bremner are in themselves so interesting, and in general so accurate, while the information they convey is upon subjects so important to the present and future position of England, that the slightest details of his book will be perused with avidity. The personal character of the Emperor Nicholas has never before been so fully laid open to the public, and the elaborate views of the Russian army and navy—points of such vivid inquiry at the moment—are given with a scrupulous care and fulness of detail, to which we are surprised to think any stranger, however acute and laborious, could have arrived in so short a time.

We do not intermeddle with politics certainly; but while such matters are on the tapis, we are induced to subscribe our quota of information in the shape of extracts.

We must premise, however, that the short period of Mr. Bremner's stay in Russia, and the difficulty of procuring intelligence upon various

matters, upon which he himself so strongly remarks, seem to have led him at times into error, especially in his political views.

Assam and its tea produce have recently occupied the public attention. In Russia they are supplied with an admirable article.

"The Russians are the most inveterate tea-drinkers out of China; and with such excellent tea as they have, the passion is quite excusable. Tea in Russia and tea in England are as different as peppermint-water and senna. With us it is a dull, flavourless dose; in Russia it is a fresh, invigorating draught. They account for the difference by stating that, as the sea-air injures tea, we get only the leaves, but none of the aroma of the plant, which left Canton; while they, on the other hand, receiving all their tea over-land, have it just as good as when it left the celestial empire. Be the cause what it may, there can be no doubt of the fact, that tea in Russia is infinitely superior to any ever found in other parts of Europe. Englishmen are taken by surprise on tasting it; even those who never cared for tea before, drink on during the whole of their stay in Russia. Like every thing else here, however, it is very expensive: the cheapest we saw even at Nishnei-Novgorod, which is the greatest mart in the empire, cost from 11 to 12 roubles (about 10 shillings) a pound; and when a bearded Russian wants to give a feast, he will pay as high as 50 roubles (2*l.*) for a pound of some high-flavoured kind of bohea. The difference between these and English prices, arises from the same cause as the difference in the quality—the long land-carriage, which is tedious and very expensive, through regions where there are neither roads nor resting-places. It should be stated, however, that, in travelling especially, no price will be thought too high for this, the only comfort of the wanderer in Russia. It banishes many a headache, and cheers under all the annoyances of a country which, by universal consent, is the most troublesome and fatiguing to travel in that can be visited. Tea may always be had at the inns in large towns, but being too dear an article for most of the country post-houses, every body should carry a stock for himself: we once paid 6*s.* 8*d.* for the tea necessary to make breakfast for four; but such a charge is rare. The Russian seldom eats with his tea; he never adds cream to it like the English; nor does he disgust people by making tea-drinking an excuse for tipping, like the Germans, who half fill their cup with brandy when they can get it. The only thing the Muscovite mingles with his tea is sugar, and sometimes a thin slice of lemon; and these being duly added, he sips the brown draught, not from a cup, but from a common drinking-glass, slowly and seriously, with all the solemnity of a libation."

Of the Emperor the account is well worthy of attention. Mr. B. says:—

"Before proceeding to state some facts illustrative of the character and policy of the Emperor Nicholas, it is but fair to confess that, like most of our countrymen, we repaired to his dominions with strong prejudices against him. All the accounts of his character current in other parts of Europe, are so universally unfavourable, that we regarded him as a cruel, relentless tyrant, with few redeeming qualities of any kind; and this, probably, is the idea entertained of him by ninety-nine out of every hundred foreigners who ever heard his name. Truth, however, compels us to avow that we found reason to modify our opinions concerning him. We will not acquit him from the charge of tyranny, but are now inclined to believe that

he is a tyrant from circumstances more than from disposition. He is the slave of a vicious system—tied to a course from which, as yet, he has not been able to break loose. The worst excesses he has been guilty of arise from an ungovernable temper, which, by nature sufficiently strong, has been further strengthened to such a degree by the long exercise of unchecked, uncontrolled authority, that now it often bursts out in the most fatal ebullitions. His defenders assert, however, that when the passing madness has subsided, he is the first to regret, and, if possible, to atone for what has been done. They will not allow that the stern, we might say the cruel system of discipline, which prevails in the fleet and the army, and extends to officers as well as privates, can with justice be attributed to him; for it is not of his creating, but has been handed down from the time when Russian officers were really as barbarous as Russian privates; and he continues it, because, from his military education, he believes it to be the best. In fine, those who know him most intimately assert, that, however violent he may be under the fits of passion alluded to, he is not tyrannical on system, or from innate fierceness of disposition.

“What is aimed at in these pages, is simply to communicate a few facts illustrative of the character of the man on whom the eyes of all Europe are at this moment fixed,—on whom the peace and welfare of the world are more dependent than they ever before were on a single individual, at any period in the long history of human society. The Emperor of Russia has but to say the word, and the flames of war shall burn more universally than they have ever done even in our warlike day—in Europe, in Asia, in America—wherever there is a right to acquire, or a heart to defend. In all parts of the earth, the elements of discord are lying prepared, with a profusion only too unsparing and too ominous; nothing is wanting but the reckless hand to place the torch to the pile, and in one short month the blaze shall be as wide and as fierce as the fellest enemy of our race could desire.

“There is nothing either in the attainments or measures of the czar, to justify his admirers in holding him up as a man of extraordinary, nay, almost superhuman talent. That he possesses restless activity of mind and body—and in a degree which in a monarch may be not unnaturally mistaken for genius—no one will deny; but we have never discovered in him any other qualities that entitle him to be considered as much above the ordinary average of human character, and certainly none that can entitle him to be pronounced, as he has sometimes been, the greatest genius, the master spirit, of our age. His most prominent qualities, we should say, are decision and firmness; quickness in devising expedients to meet the unforeseen emergencies of the moment, and steadiness in enforcing them. Next to these is the excess of his passion for reducing every thing to military uniformity. This propensity degenerates almost to a weakness: it is his great aim to give the whole empire the appearance of an encampment. This passion is so well known, that the very children in the streets are made to affect the air military, strutting about in a white cap with red band, *à l'empereur*. On entering a school, the boys and girls rise in files, to salute you after the military fashion, and march out as if wheeling to the sound of life and drum. In the very prisons a dash of the corporal's discipline is visible; and, even in the hospitals, you would say the old nurses ape the imperial guard.

The emperor's private habits and general style of living are extremely simple; and the delight which he takes in the society of his children is boundless. Those who have seen the imperial family in their private moments, when free from the constraint of pomp and ceremony to which princes are slaves before the world, speak of them in terms of rapture. An English gentleman who was honoured with many opportunities of entering the august circle, says, that more happiness, more affection, more simplicity, it would be impossible to conceive. The unconstrained and innocent amusements of their evenings, contrasted delightfully with the notions usually formed of imperial family scenes. In short, from all that he beheld, it appeared that a kinder husband or a better father than Nicholas does not exist. The emperor, too quick not to perceive what was passing in the mind of his guest as he mused on the scene before him, said one evening, stamping his foot and grinding his teeth, as the unpleasant thought rose to his mind, ‘I know that I am unpopular in England. They hate me, because they think me a tyrant; but if they knew me, they would not call me so. They should see me in the bosom of my family!’ The way in which the imperial family live at some of the country palaces, is also extremely unostentatious; as may appear from the following anecdote:—A stranger, who was rambling on the shores of the bay near Peterhof, entered the grounds of what he took to be the villa of some nobleman employed in the neighbouring palace. Meeting with no obstruction in the beautiful walks, he explored them in every direction, and was at last proceeding to get round to the other side of the mansion, to a position where he expected to enjoy an extensive sea-view. In order to effect his object, it was necessary to come nearer the windows than he had intended. At one of them, which was open, with a rich flower-plot before it, sat a lady dressed in the simplest white, and holding in her hand a book, which fortunately engrossed her attention so deeply, that he was able to withdraw without disturbing her. Until he came on the sentinel, whom he had not previously seen, he never suspected that the lady on whom he had been allowed to intrude, and whom he had seen surrounded with as little pomp as a private gentlewoman, was none else than the empress herself. In person the emperor is tall and well made. Few men of his height (six feet two inches) display such grace and freedom of carriage. In fact, his appearance is so superior, that many have bestowed upon him the wide and not easily disputed compliment of being ‘the handsomest man in Europe.’ Being one of the best horsemen of the time, he is never seen to more advantage than when mounted on his favourite steed. Accustomed to command, and to see his commands obeyed with crouching submission, he has acquired the air and mien of majesty more completely than any sovereign of the age. His eye has a singular power: its fierce glance can awe the turbulent, and, it is said, has disarmed the assassin. His manners, however, are far from those of the despot; nothing can be more winning than his attentions, where he wishes to please. No man ever seemed to possess more strongly the power of removing, from those who have access to him, the prejudices which may have been previously entertained against him. The Russians, it is said, see little of his fascinating powers; towards them he dare not be familiar without exciting jealousies which would be fatal to the empire. It is on strangers, passing visitors, that he

lavishes his amiability, for with them it can be done without danger, and he is too anxious to stand well with the rest of Europe to allow a foreigner to leave him under an unfavourable impression. Never was even imperial flattery more successful in attaining its aim: the raptures with which his condescension, his frankness, his courtesy, are spoken of by all who come near him, would indicate that it is not merely the emperor but the man who triumphs.

“With the common soldiers he is highly popular; but it is, above all, among the *moosiks*, the good-hearted fellows with the beards and sheepskins; in other words, it is by the great body of the people that he is most beloved. He never appears in public without being greeted by rapturous welcome as soon as he is discovered: until our own fair queen ascended the throne, there was no sovereign in Europe whose appearance was hailed with such joy by the people. Individual cases of oppression are overlooked in his general kindness. His anxiety to find out, and generosity in rewarding, humble merit, go far in reconciling the poor to his political measures. He is also kind and familiar with them on all public occasions: at the great summer *fête* of Peterhof, where thousands of the people are assembled, he dances and capers amongst them, as merry and free as any goat of them all.

“His health is of the most robust kind; being, doubtless, greatly aided by the activity of his habits. He thinks nothing of accomplishing in a couple of weeks a journey which ordinary people would take months to perform. Indeed, generally, among Russians, distance is never taken into calculation when there is question of travelling. In setting out on a five-hundred miles' excursion, therefore, as if it were but a drive to dinner, the emperor is but doing what most of his subjects would do. The people of St. Petersburg always know when he is in the capital, by looking whether the flag be flying on the palace or not; it is hoisted only when the emperor is there. Some mornings, when it has unexpectedly disappeared, they will be told that he is already many hundred miles away, having started in the night in consequence of some sudden intelligence. After the reviews of Kalisch, he posted off through Silesia and Bohemia, and was in the chambers of the imperial family at Vienna before a courier could have arrived to announce his visit. About the time we were leaving Russia, he accomplished a tour to Moscow and Nishnei-Novgorod; then, after visiting Kasan and many of the eastern provinces, came to Little Russia, holding reviews and levees at a great many places by the way; yet he was back again in the capital, from this three or four thousand mile survey, within a few weeks. He is the only Russian emperor whose travelling habits ever corresponded with the extent of his dominions: he drives literally *centre à terre*, and seldom fails to accomplish twelve miles an hour, even on the unmade roads of the south. His path is generally marked by dead horses. On these occasions he never encumbers himself with retinue or escort: his own light droschky, with six horses, and a similar vehicle following with an aide-de-camp, ready to be sent off right or left, constitute the whole of the imperial train. For such an impetuous traveller, railroads are the only suitable path. He has, accordingly, already got one formed between St. Petersburg and Tzarkoie-Celo (opened since we left Russia), and talks of continuing it all the way to Moscow. There being already, however, a beautiful macadamised road

on this long line, it is not likely that he will actually attempt a railroad also; but it is highly probable that the first roads which will ever be established in the other parts of the empire, especially to the south and east of Moscow, where there are now no roads worthy of the name, will be railways, for which the level nature of the country makes it highly suitable. Russia sometimes gains by being behind her neighbours. She has waited long for roads; but may now, at once, get the very best. Notwithstanding the parade made in Germany and France about railroads, there have been greater wonders than that Russia, though she talks less about it, may still get before them in the march of iron. The emperor's habits in travelling, as, indeed, at all times, are extremely simple. He eats but little, and always of the plainest. The bed carried with him on these occasions is far from being too luxurious. It is similar to those seen in his bedrooms in the palaces, consisting simply of a hard mattress, on a light iron frame, exceedingly narrow. He carried the same kind of bed all through England. Though sufficiently small and uninviting, it is not quite so uncomfortable as the short fir-wood crib of his good father-in-law, the King of Prussia.

"The emperor's personal interference in almost every kind of business, though in general productive of good, occasionally does harm: it paralyses those who act under him. When any sudden emergency arises, they never know how far to go.

"He is so apt to be carried away by passion in debate, that words often entirely fail him. He has a way, however, of filling up the pause: in an interview with the French ambassador, the discussion became so warm that his majesty, chafed by opposition, at last, in the agony of unwilling words, summed up his arguments very intelligibly, by striking his hand with great violence on the table—a most impressive figure of speech. On another occasion, when hard pressed for a good argument, he rushed to the window, threw it open, and, pointing significantly to some regiments exercising below, clenched his reasoning with the words, '*Voilà ma garde; ce n'est que la vingtième partie de mon armée!*' The emperor knew well that, after all, force is the best *ultima ratio* of kings. Though not an enemy to literature nor to literary men, he is not distinguished by any particular taste for letters. His attainments, however, in all useful branches of knowledge—history, science, languages—are highly respectable. The only one of the imperial family spoken of as being at all literary, is the Grand-duke Michael, who is said to have written some able remarks, chiefly political, suggested by a visit to Naples many years since. So far as can be judged by mere outward acts, the emperor's respect for religion is very great. His devoutness while in church is extreme. Some say his part is here overacted; for there is no end to the bowings and salutations between him and the officiating clergy when the service is over. No saint's day, or formality of the church, is ever neglected by him; and in travelling, he never passes a steeple without crossing himself as devoutly as the yemitchik who drives him. The fervour of his superstition, if not of his devotion, is well shewn by a recent act, which is spoken of with great applause by the priests. He has added a new saint to the calendar. It appears that some holy man who lived a hundred years ago, had left this earth in all the odour of sanctity, but amid the more exciting subjects which occupied men's minds at that time, his fame was soon forgotten. Lately, however, wonderful things had been performed

near the place where he lies interred, in the government of Voronezh: a talk went forth of the sick being cured, the lame restored, merely by visiting the favoured spot. All this, in due course, came to the ear of the emperor, who forthwith canonised him: and now, to the great edification of the ignorant, his bones are performing miracles every day among the thousands who are flocking to the shrine.

"In nothing is the vigilance of the emperor's police more actively displayed, than in its severity in all that concerns the press. Books, and publications of every kind, are under the strictest censorship. Not a line can be printed, not even the prices of tallow and sugar, without the permission of government. As to any thing like free discussion in the newspapers, it is out of the question in a country where, as already mentioned, few newspapers are allowed except the official organs of the ministry. In regard to the admission of foreign journals, however, there is more liberality than we were prepared for. All the German newspapers of any repute are to be seen at the clubs.

"The only French newspaper which we met with was the '*Journal des Débats*;' and the only English one permitted in public places is the '*Morning Post*.'

"Knowing that the stage is also under a strict censorship, we were not a little surprised to see a piece performed, which, though we could not understand the dialogue, was evidently very severe on the malpractices of some government functionaries. It is called the '*Reviser*,' and is meant as a satire on the practice of taking bribes, which is so prevalent among Russian functionaries. A young spendthrift, reduced to his last sixpence, is mistaken in a provincial town, to which he had removed, for the important personage sent down to revise the accounts of tax-collectors, government contractors, &c. No sooner has this misapprehension become general, than his prospects are completely changed. Wealth, in the shape of bribes, pours in upon him so fast, that he knows not how to dispose of it. One person offers him a hundred pounds to let his books pass unexamined. Another brings double the sum, to purchase his silence about an acknowledged deficit. A third great man puts his castles and horses at his disposal, and a fourth gives him his choice of his daughters in marriage, with the promise of a rich dowry to increase the charms of the favoured fair. In short, all goes so prosperously, that our hopeful youth, from being the most despairing, begins to be the most arrogant of men. Yet such things, it appears, are too common in Russia not to be understood and relished by the poor taxpayers, at whose expense all this is done. Now all this freedom on the part of a dramatist, surprised us greatly in a country where we did not expect to hear the smallest allusion on the stage, at least in the way of censure, to any thing connected with government; but the mystery was solved, when we were assured that, numerous and powerful though they be, the class alluded to in this piece had not been able to procure its suppression, for the very good reason that it had found favour in the eyes of the emperor, who comes to laugh at it as often as any grumbling liberal in all St. Petersburg. He patronises it because it aids him in a part of his policy, which will be discussed after we have offered a few remarks on the influence which the example of the court exercises on the nobles of the empire."

Here, for the present, we must stop.

Our Wild Flowers familiarly Described and Illustrated. By Louisa Anne Twamley, author of the "*Romance of Nature*," "*Flora's Gems*," &c. The Plates engraved after the Author's Drawings. 12mo. pp. 312. London, 1839. Tilt.

THIS is a singularly beautiful volume, both for illustrations, prose, and poetry, and whimsically graceful. We take the following as sentimental:—

"*The Daffodil.*"

I wandered lonely, as a cloud
That floats on high o'er vales and hills,
When all at once I saw a crowd,
A host of golden daffodils,
Beside the lake, beneath the trees,
Fluttering and dancing in the breeze.
Continuous as the stars that shine
And twinkle on the milky way,
They stretched, in never-ending line,
Along the margin of the bay:
Ten thousand saw I at a glance,
Tossing their heads in sprightly dance.
The waves beside them danced, but they
Outdid the sparkling waves in glee:
A poet could not but be gay
In such a joyful company.
I gazed—and gazed—but little thought
What wealth to me the show had brought.
For oft when on my couch I lie,
In vacant or in pensive mood,
They flash upon that inward eye
Which is the bliss of solitude.
And then my heart with pleasure fills,
And dances with the daffodils.

The following is of a livelier cast:—

"*Pride and the Poppies; their Grandeur and Fall.*"

'We little red-caps are among the corn,
Merrily dancing at early morn,
We know that the farmer hates to see
Our saucy red faces—but here are we!
We pay no price for our summer coats,
Like those slavish creatures, barley and oats;
We don't choose to be ground and eat
Like our heavy-head neighbour, Gaffer Wheat.
Who dare thrash us, we should like to know!
Grind us, and bag us, and use us so!
Let meaner and shabbier things than we
So stupidly bend to utility!
So said little Red-cap, and all the rout
Of the Poppy-clan set up a mighty shout!
Mighty for them, but if you had heard
You had thought it the cry of a tiny bird.
So the Poppy-folk flaunted it over the field;
In pride of grandeur they nodded and reeled;
And shook out their jackets, till nought was seen
But a wide, wide shimmer of scarlet and green.
The Blue-bottle sat on her downy stalk,
Quietly smiling at all their talk.
The Marigold still spread her rays to the sun,
And the purple Vetch climbed up to peep at the fun.

The sun went down, and rose bright on the morrow,
To some bringing joy, and to others e'en sorrow,
But blithe was the rich rosy farmer that morn
When he went with his reapers among the corn.

Forth went they betimes, a right merry band,
The sickles were glancing in each strong hand,
And the wealthy farmer came trotting along,
On his stiff little pony, 'mid whistle and song.

He trotted along, and he cracked his joke,
And chatted and laughed with the harvest-folk;
For the weather was settled, barometers high,
And heavy crops gladden'd his practised eye.

'We'll cut this barley to-day,' quoth he,
As he tied his white pony under a tree;
'Next the upland wheat, and then the oats.'
How the Poppies shook in their scarlet coats!

Ay, shook with laughter, not fear, for they
Never dreamed they too should be swept away;
And their laughter was spite, to think that all
Their 'useful' neighbours were doomed to fall.

They swelled and bustled with such an air,
The corn-fields quite in commotion were,
And the farmer cried, glancing across the grain,
'How those rascally weeds have come up again!'

'Ha! ha!' laughed the Red-caps. 'Ha! ha! what a fuss
Must the poor weeds be in! how they're crying us!'
But their mirth was cut short by the sturdy strokes
They speedily met from the harvest-folks.

And when low on the earth each stem was laid,
And the round moon looked on the havoc made,
A Blue-bottle propped herself half erect,
And made a short speech—to this effect:

'My dying kins-folk, and fainting friends,
The same dire fate alike attends
Those who in scarlet or blue are dressed,
Then how silly the pride that so late possessed

Our friends the Redcoats! how low they lie,
Who were lately so pert, and vain, and high!
They sneered at us and our plain array;
Are we now a whit more humbled than they?

They scorned our neighbours:—the goodly corn
Was the butt of their merriment eve and morn,
They lived on its land, from its bounty fed,
But a word of thanks they never have said.

And which is the worstest now, I pray?
Have ye not learned enough to-day?
Is not the corn sheafed up with care,
And are not the Poppies left dying there?

The corn will be carried and garnered up
To gladden man's heart both with loaf and cup;
And some of the seed the land now yields
Will be brought again to its native fields,

And grow and ripen, and wave next year
As richly as this hath ripened here;
And we poor weeds, though needed not,
Perchance may spring on this very spot.

But let us be thankful and humble too,
Not proud and vain of a gaudy hue;
Ever remembering, though meanly dressed,
That usefulness is of all gifts the best."

The Romance of the Harem. By Miss Pardoe, author of "The City of the Sultan," "The River and the Desert." &c. 3 vols. 12mo. London, 1836. Colburn.

MISS PARDOE assures us that these are tales either truly Turkish, or on the true Turkish model. They are not like some we have seen; but if the plentiful use of Turkish words, "Ne oldou," "Mashallah," "Khoosh geldin," "Khoja," "Taib," "Bahastun," "Ajaib," "Alhemdallelah," "Ne istersiniz," "Inshallah," "Ne apatum," "Yavash," "Hai hai," "Chok chay," &c. &c. &c., mixed with English dialogue, make Turkey patter and character, we have surely enough to satisfy the Grand Seigneur himself. The stories themselves are not without interest, though occasionally rather wire-drawn; and we give the conclusion of one of the best, "The last Janissary," as a sample of the whole.

"The eyes of Yusuf did not close in sleep during that long, long night: but he lay upon his rude cushions, buried in sweet and retrospective thought. All the proudest days of his strong youth passed in array before him, and he remembered the high aspirations and ambitious hopes with which he had been used to colour his existence. Hastily he reviewed the hour which prostrated his fortunes—he could not bear the memory—and with a smile, mingled with a tear which would not be suppressed, the picture terminated with the fair creature who was pillowed on his bosom—the victim of her holy and earnest love! The morning dawned at length—the blessed day was come which was to restore to the heart and arms of Yusuf the friend of his manhood; and the hour was yet early at which the aged Fatma started on her anxious expedition. She tarried long—or it seemed long to the weary watcher whom she had left: but when she came, the tale she had to tell repaid him for all his suffering. Kindly and courteously had the Bey received her; again she had eaten of his pilkash, and drank of his cup; he had listened to all the story of Yusuf's sufferings, and vowed on the Koran to terminate them. Already had he asked a boon of the sultan, who had smiled upon his suit: and Fatma felt that the boon could be no other than the pardon of his friend. Affairs of state detained him; but, his duty done, he would hasten to the presence of the captive, soon to be so no longer; and meanwhile a slave had followed the footsteps of the old woman, and then returned to his master, to serve him as his guide. Again and again did the happy Fatma tell her tale; and the theme was still unchanged when a heavy stroke on the door of the house summoned her to receive the expected guest; and, hastily snatch-

ing a shawl from the sofa, and folding it about her face, she descended to draw the bolt. There was the silence of a moment: and the heart of Yusuf beat high as he sprang from the floor to meet his friend; 'He is here, Sairyn; janum—my soul, he is here!' he exclaimed, with a burst of his former joyousness—but his transport was short-lived. A piercing shriek rang from below—it was the voice of Fatma; and in another moment the tramp of many feet sounded upon the stairs! In an instant the yataghan of Yusuf was in his hand, and he stood glaring like a roused tiger, in the direction of the sound. 'Too late!' he shouted in his despair: 'Oh, that you had not tarried, my friend! my friend! Had you speeded, you might yet have saved me!' But as the agonised cry escaped from the lips of the doomed man, the generous dream was at an end; for, on the threshold of the chamber stood Tassin Bey, surrounded by a band of armed attendants. For a moment the arch-traitor paused, in doubt that the wretched object before him could indeed be Yusuf Aga! For a moment he remained paralysed with horror as he gazed upon the gaunt and haggard wretch, who, with elflocks hanging matted upon his shoulders, and a tangled and loathsome beard depending to his girdle, his cheeks sunk and hollow, and his eyes bright with a fierce and blinding light, met him midway of the apartment; his weapon raised over his head, and his blue and livid lips parted above his fast-clenched teeth! Ere he had recovered his horror, Yusuf struck. With a yell like that of a hunted savage, his weapon was buried to the hilt in the heart of one of the party who had advanced a step in front his comrades; and it seemed as though the blow had loosed the spell which had bound the senses of their leader; for ere the desperate Aga could withdraw his weapon, the bey had pronounced the fatal word, and instantly a score of his followers rushed upon their victim. But the soul of Yusuf appeared to have called back its strength in his last moment of trial, and he struggled like a demoniac. Suddenly there was a frightful gushing groan—a heavy fall—and he lay senseless at the feet of his persecutors! Yet no steel had touched—no cord had polluted him—he lay bathed in blood, but it had gushed from his mouth and nostrils! Nature, so long neglected, had been overtaken in this hour of passion, and he had burst an artery. When they raised him up, he was beyond their power. Allah, in his own good time, had taken to himself the last of the Janissaries!"

A Collection of National English Airs, consisting of Ancient Song, Ballad, and Dance Tunes, interspersed with Remarks and Anecdotes, and preceded by an Essay on English Minstrelsy. The Airs harmonised for the Piano-forte, by W. Crotch, Mus. Doc., G. A. Macfarren, and J. Augustine Wade. Edited by W. Chappell. Part I. 4to. pp. 60. London, 1838. Chappell; Simpkin, Marshall, and Co.

THE Scottish music occupied us so largely in our last, that we could not bestow even the few words we proposed upon these English airs, which we hail with pleasure, as a reproduction of some very fine, very old, and far too much forgotten melodies. "That the people of England (say the editors) have in all ages delighted in secular or social music, can be proved by a thousand testimonies. The scalds and minstrels were held in great repute for many ages, and it is but fair to infer that the reverence shewn to them arose from the love and esteem in which their art was held. The Romans, on their first

invasion of this island, found three orders of priesthood established here from a period long anterior. The first and most influential were the Druids; the second, the Bards, whose business it was to celebrate the praises of their heroes in verses and songs, which they composed and sang to their harps; and the third were the Eubates, or those who applied themselves to the study of philosophy. The northern annals abound with pompous accounts of the honours conferred on music by princes who were themselves proficient in the art; for music had become a regal accomplishment, as we find by all the ancient metrical romances and heroic narrations—and to sing to the harp was necessary to a perfect prince, and complete hero!"

Elsewhere it is said:

"It has been too much the fashion with us, to pay little attention to our own tunes; and the last importation has been generally the best received; so that want of encouragement has been justly complained of by our native musicians in all ages, and not less so at the very time when we might have challenged competition with any other nation in Europe. Even the materials of the present work are in some degree drawn from foreign sources, and in particular from two collections of English airs, the one printed at Haarlem,† in 1626, and the other at Amsterdam,‡ in 1634, in which are to be found several melodies, acquiring additional interest from being mentioned by Shakspeare, by Isaac Walton, &c., and might have been sought for in vain at home. The existence, however, of two such collections a century before any published collection of Irish or Scotch, is a proof that, though lightly esteemed by ourselves, English airs must then have been held in considerable estimation abroad; and as public attention has been gradually turning to the old English ballad, since Dr. Percy first led the way,—as madrigals have been recently revived, and heard with pleasure, and even the national country-dance has been again introduced at court,—it is hoped that the present moment may prove auspicious for a publication of this description; more especially since the indifference with which the pursuit has been generally regarded, has caused a difficulty in procuring the necessary works of reference, which would only become greater by further delay."

The following extracts are also interesting:—

"In the year 1338, when Adam de Orleton, bishop of Winchester, visited his cathedral priory of St. Swithin in that city, a minstrel named Herbert was introduced, who sung the song of Colbrond, a Danish giant, and the tale of Queen Emma delivered from the ploughshares (or trial by fire), in the hall of the prior Alexander de Herriard. The fondness of the English (even the most illiterate) to hear tales and rhymes, is much dwelt upon by Rob. de Bruune, in 1330. All rhymes were then sung to the harp: even Troilus and Cresside, though almost as long as the *Æneid*, was to be 'redde, or else songe.' It may not be amiss to remark here, that no poets of any other country have made such frequent and enthusiastic mention of minstrelsy as the English. There is not an old poem but abounds with the praises of music. All our old poets, and Chaucer particularly, seem

* "By Henry Lawes (so highly eulogised by Milton), by Matthew Locke, author of the music in 'Macedon,' and numerous others. Lawes set to music the initial words of a catalogue of books, and, passing them off as a song newly imported, ridiculed the success with which it was received by the public."

† "Neder-Landische Gedenck-clank door Adriaenus Valerius." The words are all Dutch, but the tunes are acknowledged by the title 'Engelsche Stemmen.'"

‡ "Frische Lust-hof, door Jan Jans. Starter." In this collection the words are also Dutch, but the tunes have their names in English."

to have received great pleasure from the music of their time, whatever it was; and never lose an opportunity of describing its beauties and effects. In Adam Davy (or Davie), a poet in the time of Edward II., we find the following lines:—

'Mery is the blast of the stynoure,
'Mery is the touching of the harpoure.'

It is worthy of remark, that in his poem of 'The Life of Alexander,' occurs the well-known rhyme, and which, Warton says, 'is perhaps the true reading:—

'Mery swithe it is in halle,
When the berdes watech all'

And in another place we have:—

'Mery it is in halle to here the harpe;
The mynstrelles syng, the jogelours carpe.'

In the celebrated poem called the 'Vision of Pierce Plowman,' by Robert Langlande, a secular priest, and a fellow of Oriel College in Oxford, about 1360, we find the following reproachful and eccentric lines against some who were ignorant of the minstrel art:—

'They can (know) no more mynstrelsy ne musyke men to glad,

Than Mundle the milner, of mutte fecit Deus'

And further on the following lines:—

'Tham* was I as fayne,† as foule, of faysr morow,
And glader thes‡ the gleman‡ that gold hath to gyfte."

"It will not perhaps be deemed impertinent to observe, that about this period the minstrels were often more amply paid than the clergy. In this age, as in more enlightened times, the people loved better to be pleased than instructed. During many of the years of Henry VI. particularly in the year 1430, at the annual feast of the fraternity of the Holie Crosse, at Abingdon, a town in Berkshire, twelve priests each received four pence for singing a dirge: and the same number of minstrels were rewarded each with two shillings and four pence, besides diet and horse-meat. Some of these minstrels came only from Maydenhithe, or Maidenhead, a town at no great distance, in the same county. In the year 1441, eight priests were hired from Coventry, to assist in celebrating a yearly obit in the church of the neighbouring priory of Maxtoke; as were six minstrels, called Mimi, belonging to the family of Lord Clinton, who lived in the adjoining Castle of Maxtoke, to sing, harp, and play, in the hall of the monastery, during the extraordinary refection allowed to the monks on that anniversary. Two shillings were given to the priests, and four to the minstrels: and the latter are said to have supped in *camera picta*, or the painted chamber of the convent, with the sub-prior, on which occasion the chamberlain furnished eight massy tapers of wax."

To the discussion of the subject of church music we shall only refer the reader, as, indeed, we must to the whole of this brief essay of twenty pages on the rise, progress, and decline of minstrel art. With regard to the tunes here reproduced and preserved, it is, of course, beyond our power to offer any example of them: all we can say is, that we have been greatly moved and delighted by most of them. The association of ideas to which they give rise is of a very gratifying kind. In illustrating them we are often referred to "A Handefull of pleasant Delites, containing sundrie new Sonets and delectable Histories in divers kinds of Meeter, newly devised to the newest tunes, that are now in use to be sung, everie Sonet

* "Then." † "Cheerful." ‡ "Bird."
§ "Than. It is somewhat singular we have reversed the ancient spellings of the adverb *then* and the conjunction *than*."
|| "Harper, or minstrel."

orderly pointed to his proper tune, with new additions of certain Songs to verie late devised Notes, not commonly knowen, nor used heretofore, by Clement Robinson and diverse others. At London, printed by Richard Ihones: dwelling at the Signe of the Rose and Crowne, near Holburne Bridge, 1584."

Of No. XIX. we have the following account, which may serve as an example of the rest, amounting to sixty in all:—

"From our Base Invaders. A sort of Hymn, which appears to have been written at the time of the threatened invasion of the Spanish Armada, and is here given from a manuscript in the possession of — Pearsall, Esq., bearing the date of 1588. The mixture of devotion and defiance in the words forms a curious sample of the spirit of the times.

'From our base invaders,
From wicked men's device,
O God! arise and aid us,
And crush our enemies.
Sink deep their potent navies,
Their strengthen'd spirit break;
O God! arise and help us,
For Jesus Christ, his sake.
Though cruel Spain and Rome
With heathen legions arm,
O God! arise and help us;
We will perish for our home;
We will not change our Creed
For Pope, nor Book, nor Bell;
And if the devil comes himself,
We will drive him home to hell."

Corn-Law Agitation: its Causes and Consequences, by Barnett Blake. Pp. 16. (London, G. Mann, Riley, Southgate, Foster, and Hentall.) A short but pithy exposition, highly Conservative, and strongly anti-ministerial. The writer maintains that all "the masses," whether agricultural or manufacturing, would be deeply injured by a repeal of the Corn Laws.

A Few Facts on the Corn Laws, defending the Agricultural Interest. By Arthur Aschpittel. Pp. 27. London, 1839. Richardson.

ANOTHER strong statement in support of the agricultural population; from which an extract may best speak its character. After noticing all the abuse and obloquy thrown on landowners &c., the writer says:—

"How stands the fact? What is the amount of their extortion? It is easy to make assertions, but let us come to figures. We know nothing of the matter practically, except in buying a loaf. Now out of the money paid for that quarter loaf (about eleven-pence) how much does the landlord get? One would suppose at least three-fourths. A half? Four-pence? Three-pence? No! the abused landlord does not get a penny—no, nor even a half-penny—out of the value of the quarter loaf. I will shew by dry figures the stubborn fact, that if every landlord was to be deprived of his land to-morrow by the confiscation of a committee of public safety, or dragged to the guillotine by a maddened populace, and all rents at once extinct, and the whole land free, the quarter loaf could only be reduced one farthing and a fraction of another. Here are the figures. It is easily investigated. The rent received by the landlords for corn land throughout the whole of England, averages but 15s. per acre. This acre will produce from 3½ to 5 quarters of corn. I have heard of 6, and even in some cases 8 quarters being grown, but this is on superior lands. However, the amounts I just stated are the ordinary crops, and I will call the average so low as only 4 quarters per acre, to keep within the mark. A load of wheat will produce 6½ sacks of flour, and of course taking the 4 quarters we shall have 5½ sacks of flour as the produce of an acre—the sack of flour ought to make, at full weight and without adulteration, 100 4 lb. loaves—and of course, by the common rule of three, you will find that 520 loaves are the produce of an acre. The landlord finds

the acre of ground on which these are grown, and receives 15s. for it; this you will find is only a farthing and about a half-farthing for each loaf. And these are the extortioners, these are the grasping men who squeeze the tenant to the last shilling, and grind the poor till the whole country cries for vengeance!

"I am not one of those who advocate one side, one interest alone. I have already stated that I think it is the duty of a good government to protect all classes within its power. I like the maxim 'Live, and let live.' I know that bread is too dear, and I will now endeavour to point out some of the reasons why it is so. The first cause is that the speculators have the markets in their power. Men who have not a foot of land, and who do not contribute a single energy to the production of a single loaf, get more, far more, than the man who finds the land to grow it on.

"It would be useless to explain the present scale of corn laws; it is well known, that the duty rises as the price falls, and falls as the price rises—an equitable provision as it seems to me—for the public are preserved from the horrors of scarcity, and the farmer shielded from the ruinous effects of what political economists rejoice to designate 'gluts.' It is clear if a person buys a quantity of wheat abroad at a low rate, withholds it from the market till, by manœuvring, he gets up the price, the duty falls on taking the average, and he then can pour his stock into the market at a low duty and high price, and realise a large fortune at the expense of the consumer. I can illustrate this on the best authority—personal experience."

Manufactures and Corn-Growers. Pp. 33. London, 1839, Porter and Wright; Simpkin and Marshall.

ANOTHER pamphlet on the same side, and taking very large views of our condition in comparison with the people in continental nations.

MISCELLANEOUS.

Dr. Ure's Dictionary of Arts, Manufactures, &c. Part VI. London, 1839. Longman, and Co.

DR. URE notices in this part that a very liberal addition of 200 pages of letterpress, and 240 engravings, will be made to this dictionary, without any increase of price. For the ability to do this, he expresses himself obliged to a confidential arrangement with Mr. William Newton, patent agent, and proprietor of the "London Journal of Arts, Sciences, and Manufactures:" permitting him to incorporate in his work many interesting details and illustrative figures of modern patent inventions and improvements. We need not observe how useful and valuable such information must be. The present part contains articles on gunpowder, hat making, hosiery, indigo, iron, Davy's lamp, and other interesting subjects.

The Ladies' Flower-Garden, No. II. By Mrs. Loudon. London, 1839. Smith.

MORE beautiful than, and equally interesting with, the first Number, we have here the *papaveracea* with many a learned name and delicate blossom. The plates are charming, and the descriptions very interesting.

The Prince and the Pedlar; or, the Siege of Bristol. By the Author of the "Heiress," the "Merchant's Daughter," &c. 3 vols. 12mo. London, 1839. Bentley.

THE stirring times of the Cavaliers and Roundheads afford such ample scope for fiction, that we cannot wonder at so many novelists choosing that period of history for the base of their works. The author of the *Prince and the Pedlar* has

referred to the best authorities for the facts with which he has interwoven the romance, and the names of Clarendon, Aikin, Bengier, &c., are attached to explanatory notes. The story is amusing, and the interest well sustained to the end. Although, in truth, we could scarcely hope to see the hero again after he had had a "sword through his body, up to the very hilt."

However, we must not judge of the heroes of romance as of common people; the offspring of the writer's brain, they are, of course, as easily made invulnerable as not; and, in the present instance, we meet Sir Roland at the finale with great satisfaction. The disguised pedlar is a well-drawn character; and between the history and the mystery of these volumes, the lovers of either may pass some pleasant hours in their perusal.

The Naturalist's Library. Vol. VIII. Mammalia, by Dr. R. Hamilton, Conducted by Sir W. Jardine, Bart, &c. &c. Edinburgh, Lizars; London, Highley; Dublin, Curry and Co.

ANOTHER very admirable volume added to this popular work. It embraces the subject of amphibious carnivora, and is replete with scientific intelligence and singular relations of the habits, &c. of these animals. The plates are absolutely superabundant, and Mr. Lizars has treated them with a degree of genius almost unknown to such subjects. The wild northern land and ice-scapes, with turbulent seas and bird-spangled skies and shores, in which he has placed his various seals, walruses, &c., are beautiful. The sea-serpent is a perfect picture, if not a reality in natural history, and the kraken, why? it would make the fortune of a naval piece at any of our theatres. The letter-press also demands our very warmest praise.

ARTS AND SCIENCES.

ELECTRIC EEL.

[Hood's Electric Eel (see our last) ought to have illustrated this interesting subject; but we have given it as large a space as the curious nature of the experiments seemed to us to demand.]

An Inquiry into the Electro-Chemical Properties of the Torpedo. By le Père Santi Linari, Professor of Physics at the Imperial and Royal University of Sienna.*

(Abridged from *La Bibliothèque Universelle de Genève.*)

AMONG the natural philosophers who have investigated the electrical phenomena afforded by the torpedo, le Père Santi Linari holds a distinguished place. The "*Bibliothèque Universelle*" has already published the result of his researches in March 1836, at the port of Talamore; and in September of the same year, at the port of Saint-Etienne, both situated on the coast of the sea of Tuscany. The author, having extended and completed his labours in the same port of Saint-Etienne, during the month of October 1837, has had the goodness to communicate to us the results, from which we extract what follows.

Sect. 1. Electro-chemic currents produced in the body of the torpedo, by contact with oxydable metals.—When the organ of a torpedo, after having been wiped in order to remove the moisture which covers it, is touched or pressed with oxydable metals, electro-chemic currents are produced simultaneously with the usual electric discharge. The intensity of these currents is not capable of diminishing the effects produced by violent discharges, but it influences the appreciation of those occasioned by a

* When our own able investigator, Mr. Faraday, is pursuing his researches on the electric eel we possess in this country, it appears to us interesting to see what has been done where another accurate observer enjoyed so much better opportunities, and obtained such important results.—*Ed. L. G.*

discharge less energetic. These electro-chemic currents affect, more or less, the magnetic needle of a multiplicator of Nobili's, constructed by that celebrated natural philosopher, which le Père Linari has used in all his experiments. They depend on the extent of metallic surface brought into contact with the body of the fish; and on the intensity of the chemical action exercised upon it by the salt water, which always remains commixed with the glutinous humour of its skin. This moisture is the more inevitable, as the animal, at the moment of the experiment, frequently throws out of its gills a viscous liquid, which besprinkles almost the whole of its body. An experiment was made by means of two disks of copper, highly polished, of about three inches in diameter. They were pressed against the dried surface of a torpedo's body; upon which, independently of the discharge, and by the sole effect of the electro-chemic currents which manifested themselves in consequence of the contact, the needle of the galvanometer deviated from 30° to 90° , and even more; especially when the pressure of the disks was accompanied by slight friction. The same effects were obtained by two plates of any other oxydable metals; such as brass, lead, tin, unrefined silver; but it was necessary that they should be larger than the copper disks. On the contrary, le Père Linari could not obtain any deviation of the needle with points of a fork of good silver (of which he availed himself in March 1836, to draw the spark of induction from the torpedo); nor with two sheets of the same metal, very pure, especially when they had only a small surface; nor with sheets of gold; nor of copper gilt, although the points of contact were very numerous. These various experiments induced the author to terminate by two points, or two sheets, of pure platina, the tractors (*réophores*), which he used to draw from the torpedo the discharge, free from all mixture, and from the presence of electro-chemic currents. The needle of the galvanometer remained motionless when, with these two plates, two respective parts whatever of the torpedo's body were touched; or when, one of the plates resting on the surface, the other grazed the brain, touched or lightly pressed the nerves surrounding it, or was introduced into the mouth, and plunged into the œsophagus, or the ventricles of the animal. The result was the same whether the torpedo was living or dead, and whether its skin was dry or moist. Besides the instrument of which we have spoken, le Père Linari employed the following little apparatus, in order to study the effect of the passage of the current of the torpedo through distilled water. It consisted of a glass tube, 8 milligr. in diameter, full of the liquid, and closed at its two ends by a cork covered with Spanish wax. Each cork afforded passage to a platina wire, soldered in the interior of the tube to a plate of that metal, 26 milligr. long, and 5 milligr. broad. The free portions of the wire, which might be at pleasure brought together, or separated, furnished easy means of interrupting or re-establishing the circuit.

Sect. 2. Measure of the intensity of the currents of the torpedo.—To measure the intensity of the currents produced in the strong discharges of the torpedo, le Père Linari made use of M. Becquerel's electro-magnetic balance. For the purpose of ascertaining the relative intensity of the currents of strong and weak discharges, he had recourse to two of Nobili's instruments,—his comparing galvanometer, and his verificator, a thermo-electric pile, formed of 25 elements, and indicating a constant

difference of 36° for a difference of temperature comprised between thawing ice and boiling water. Of the various experiments made by means of these instruments we quote the following:—

Experiment 1st. A voltaic element was plunged, for twelve seconds, into a vessel three inches in diameter, containing seven décimètres of distilled water; the current produced caused the index of the balance to deviate $0^{\circ}.7$. Half the element was withdrawn from the liquid, which reduced the deviation to $0^{\circ}.25$. The corresponding weights necessary to re-establish the equilibrium were, the one 6 milligr., the other 2.25 milligr. For the galvanic current, was then substituted that produced by the discharge of a torpedo, $10\frac{1}{2}$ inches in diameter. The index deviated $0^{\circ}.25$, as above, was brought back to zero by the addition of a weight of 2.25 milligr. These experiments furnish the results.*

$$6 : 2.25 :: 5.35 : 1 \\ 2.25 = 2.25$$

whence it follows, that in comparing the intensities of galvanic currents with those of the torpedo, we have the result of equality in the one case; and 5.3 : 1, or, neglecting the fraction, 5 : 1, in the other. Thus the current occasioned by the discharge of the animal was five times less energetic than that produced by the voltaic element in complete immersion.

The professor formerly obtained different results from torpedoes which gave more intense discharges. This discrepancy may be explained by the fact, that, in the present instance, the animals were not in possession of their ordinary vigour. On the contrary, they were thin, and the state of their stomach shewed that they had frequently wanted food: circumstances attributable to the precocity of the winter, which had frozen the waters of the gulf, and to the northerly and westerly winds which had agitated them.

Experiment 2d. The current produced by a strong discharge from a torpedo, 9 inches in diameter, was made to pass through one of the four wires of the comparing galvanometer, and the index correspondent to that wire deviated 33° . In submitting to the same proof, currents less intense, emitted from a torpedo of smaller diameter, for three successive discharges, deviations of 10° , 8° , 5° , were obtained; the index having every time been brought back to zero. Now, Nobili's tables of the intensity of currents give:

$$\text{For the deviations } \dots\dots\dots 33^{\circ} : 10^{\circ} : 8^{\circ} : 5^{\circ} : \\ \text{The corresponding numbers } 227.09 \quad 12.81 \quad 9.4 \quad 5.2$$

Therefore, the measures of intensity of the currents discharged by the torpedoes experimented upon, are those expressed by the above numbers. Consequently, in comparing the first with the second, that is to say, in writing—

$$227.09 : 5.2 = 43.7 : 1$$

we have the result approximating to 44 : 1. From this it appears, that the intensity of the current of the first torpedo was 44 times greater than that of the last of the three currents given by the second.

Experiment 3d. A battery formed of 9 Leyden jars, presenting a total surface of 94 square inches, caused the deviation, by several successive discharges, of the index of the multiplicator and that of the comparing galvanometer, the one from 40° to 56° , the other from 1° to $1^{\circ}.5$. Small bundles of metallic points were used as exciters, and the discharges were made to pass through the cylindrical mass of distilled water contained in the small tube

* We report the numbers as le Père Linari has given them.

already mentioned. Now, as the galvanometers were placed in identical circumstances pending the instantaneous duration of the discharges; and, as the index denoted equal deviations for the slight shocks given by small torpedoes, or by large torpedoes enfeebled, it follows, that although each kind of current had a different origin, their intensity was equal in the circumstances of the experiment. If then, continues the author, the intensity of these little shocks of torpedoes, either small or enfeebled, or an ordinary electrical discharge which has caused to deviate, by a single degree, the index of the comparing galvanometer, is expressed by the number 277.09 (the number which we have found, in the second experiment, correspond to a deviation of 33°), we shall have, between the intensity of the one of the currents and that of the other, the relation of 1:277.09, or an approximation to 1:277. This reasoning shews that the shock given by the large torpedo, and which was very feeble, compared with that given by animals of its diameter, when they are full of vigour and life, was 277 times greater than the slight discharge given by the small torpedo, or by ordinary electricity.

Sect. 3. Calorific properties of electrical currents produced by the discharges of the torpedo.—In order to ascertain, in a sure and direct manner, the existence of calorific properties, in the currents of the torpedo, le Père Linari conceived the idea of introducing into the circuit a horizontal thermo-electric element, composed of bismuth and antimony, and soldered crosswise to the bulb of a very sensible Leslie's air-thermometer. The instrument was made on purpose, and under the eyes of the author, by M. Bertoni, a skilful mechanic attached to the university. The scale was divided into centigrade degrees. Thanks to the delicacy of this excellent thermometer, the Sienna professor attained the double object which he contemplated. First, to confirm the discovery made by him, in September 1836, of the calorific properties of the circular currents which issue from the upper surface of the torpedo's organ; secondly, to establish the existence of the same properties in the discharges which cause the currents, and direct them from the brain to the lower surface of the animal. The latter manifest themselves, when in order to produce the discharge, the platina *réophore* is applied to some one of the pairs of nerves which belong to the encephalic lobe of Flourens, and especially (which is more remarkable) to that, the ramifications of which are principally directed to the operculum, to the gills, and to the electrical organ. The experiment succeeded with a great number of torpedoes, with which both circles of currents were thus studied. The following is the series of effects which every discharging stroke produced on the thermometer. The terms which are preceded by the signs + or — indicate the temperature, sometimes positive, sometimes negative, produced by the currents, accordingly as they passed from the antimony to the bismuth, or to the bismuth from the antimony. We will adhere to this notation in all which remains for us to say.

Series of temperatures given by the current, which circulates from the brain to the lower surface of the electrical organ.

First series .. +0° 5', +2° 0', +1° 0', +0° 25';

Second series -1° 0' -1° 5' -0° 7' -0° 3'.

The highest temperature is +2°, the lowest -1° 5'.

Series of temperatures of currents which run from the back to the lower belly.

First series,

+0° 5', +1° 0', +1° 0', +1° 1', +1° 6', +1° 2';

Second series,
-2° 0', -1° 4', -1° 0', -1° 5', -1° 1', -2° 1'.
The highest temperature is +1° 6', the lowest -2° 1'.

The remarkable fish subjected to the experiment, having been excited in a continuous manner for about four minutes, frequently gave, one after the other, a certain number of discharges, taking between each of them only brief instants of rest. Le Père Linari, looking at this continued series of electrical jets as a current of an uninterrupted pile, conceived the idea of also comparing the temperatures indicated by the thermometer, of that description of currents, with those of continuous galvanic discharges. For that purpose, and according to the method previously described, he, for four minutes, caused the voltaic currents to pass, sometimes in one way, sometimes in the other, through the thermo-electric element which we have mentioned. The one gave for the maximum temperature +6°; the others, for the minimum temperature, -5°. He afterwards caused to pass, under the same circumstances, the currents of the torpedo, and obtained, for the two discharges, the following series of temperatures, in which every term is the sum of the effects produced on the thermometer by correspondent shocks, effected in the same space of time:—

First series .. +1° 0', +1° 25', +1° 2', +2° 3';

Second series -1° 0' -2° 5' -2° 6' -4° 0'.

The highest temperature is +2° 3', the lowest -4° 0'.

In comparing the highest and the lowest temperatures, produced either by the voltaic currents, or by those of the torpedo, the author deduced the results expressed in the two series of relations following. For the two currents going from the antimony to the bismuth, the relation is :: 6:2.5. For the two currents going from the bismuth to the antimony, the relation is :: 5:4. Thus, the relations between the temperatures produced by the current of the torpedo passing from the back to the lower belly, and by the voltaic current, would be $\frac{2}{3}$ in the one case, and $\frac{4}{5}$ in the other.

Sect. 4. Action of the electrical discharges of the torpedo upon the multiplicator.—The brain of three torpedoes was uncovered in the experiment: one had been dead an hour, the second was still living, and the third was dying, or had died shortly before. First, the electrical current produced by the discharge proceeded always from the brain to the lower surface of the organ. Secondly, the deviations were sensibly indicated by the multiplicator, when, as usual, the platina *réophore* touched the anterior pair of nerves of the encephalic lobe of Flourens. Thirdly, the three torpedoes communicated to the index of the galvanometer different deviations, in emitting a current directed from the same pair of nerves to the lower belly. The dead torpedo gave deviations of 5° to 12°; the living one of 95° to 110°; the third made the needle revolve four or five times.

Sect. 5. Coloured rings obtained on metallic plates by the discharges of the torpedo.—The whole of the observations, above described, made by le Père Linari, and with his own instruments, lead him to think, that the properties of the electrical currents of the discharge of the torpedo approach especially galvanic currents. With the intention of corroborating that opinion, he remarks, first, that there is a great analogy, almost an identity, in the effects which those currents produce on an animal; they benumb the part which receives the shock; secondly, that to estimate those currents, the tension of which is very weak, only a very delicate condensating electroscope must be employed; thirdly, that those currents experience an interruption in passing through distilled and

pump water, like ordinary galvanic currents; fourthly, and finally, that there is also almost identity in the ease with which they pass through galvanometric wires, even not varnished with gum lac. To justify this view of the subject, the author endeavoured to produce with the currents of the torpedo the coloured rings which L. Nobili had obtained with those of the pile. He used an apparatus similar to the one used by that illustrious natural philosopher; and succeeded, not only with large and vigorous torpedoes, but with an animal of small dimensions. The coloured rings, of clear and distinct prismatic colours, were easily obtained with the solution of acetate of lead. When they were produced on oxydable metals, they did not resist friction so well as Nobili's; but they adhered well to *cuteurs blancs*, the friction of the hand, or of cloth, not tarnishing their splendour. These experiments were tried several times, and always with more or less success; and induces le Père Linari to believe, that he shall be able hereafter to obtain uniform colours with strong and well-fed torpedoes. Those which he used in the whole course of his experiments were 44 in number, and of from about 5 to about 11 inches in diameter.

GEOLOGICAL SOCIETY.

FEBRUARY 6. Rev. W. Whewell, president, in the chair.—A paper, 'On a Probable Cause of certain Earthquakes,' by M. Louis Albert Necker, was read. M. Necker is of opinion, that the falling down of the roofs of caverns, made by the solvent or erosive powers of underground bodies of water, may account for some of those earthquakes which have no apparent connexion with volcanic action. The effects, he conceives, may be in part produced by the blow of the detached mass on the subjacent solid strata, and partly by vibrations in the air contained in the caverns. He mentioned, on the authority of M. Virel, an instance of a shock similar to that of an earthquake, felt in a coal-mine by the giving way of some subterranean works at the distance of a quarter of a league. He also noticed instances of effects exhibited on the surface of the ground by the sinking in of ancient mines, and he expressed a wish that records of such events should be preserved and published, for the sake of comparison with other phenomena. M. Necker referred to several printed lists of earthquakes, and shewed that some of them were felt in districts which, on account of their geological structure, may contain vast caverns. Among the documents of this nature, he included that of M. Rizzo. On comparing the dates of the shocks experienced near Nice with those of renewed energy in Etna and Vesuvius, he found that some of the earthquakes preceded, by very short intervals, powerful eruptions; but that in a great many instances they appear to have been quite independent of volcanic action, and that a considerable number of periods of activity, both in Etna and Vesuvius, had no effect on the country around Nice. He therefore thinks it is not improbable that that town may be placed within the influence of Etna and Vesuvius, and may have experienced earthquakes due to volcanic operations, but that standing on deposits which may contain caverns, many of the shocks may have resulted simply from internal subsidences: he is further of opinion, that some of them may have proceeded from a union of the two causes, the undermined surface having rendered perceptible slight volcanic operations which would not otherwise have been felt. M. Necker, from these and numerous similar data, concludes, that there are

three classes of earthquakes: one due to subsidence in the earth, another to volcanic agency, and a third to the union of the other two.

ZOOLOGICAL SOCIETY.

LORD BRAYBROOKE in the chair.—The usual monthly meeting took place on Thursday afternoon. Balance carried to account, Feb. 1st, 1163*l.* 2*s.* 2*d.* Visitors to gardens and museum during January, 2890. The report stated that there was no doubt that the female giraffe in the Society's collection was with young. It further stated that the council had on Wednesday obtained, by purchase, a male chimpanzee. He is from eighteen months to two years old, and appears to be in good health.—Amongst the donations recently made to the Society is a hornet's nest, from Ceylon, presented by the Right Hon. S. M'Kenzie, the governor; it resembles an immense cone, five or six feet in length, and of corresponding circumference at the base: it contains innumerable little cells, like a honeycomb.

BOTANICAL SOCIETY.

FEBRUARY 1. Mr. J. E. Gray, president, in the chair.—After the ordinary business, Dr. H. A. Meeson read a paper 'On the Formation of Leaves,' denying the truth of their origin and nature as described in several elementary botanical works of considerable repute. Dr. M. disputes the stated fact that leaves are expansions of the bark. In exogens, he says, the bark is composed of two portions—an exterior coating of cellular integument, or the epidermis, and of an interior lining of woody fibre, called the liber, or inner bark. If leaves be expansions of the bark, they must either be expansions of the epidermis, of the liber, or of both. They cannot be of the epidermis, because they must then, of necessity, be composed entirely of cellular tissue, whereas they are known to abound in vascular. They cannot be of the liber, because, according to the theory of a plant being formed of a multitude of buds, or fixed embryos, each having an independent life, by the elongation of which upwards new branches are formed, and, downwards, wood and bark, their elongation being a development of leaves; leaves exist prior to the formation of bark, or liber, and, consequently, cannot be expansions of the liber. Nor, according to the other theory, attributing the formation of woody layers, &c. to the cambium, can leaves be expansions of the liber; because they must exist before any cambium can be formed, and of course long before any bark is formed—as by this theory, that substance is supposed to originate from the cambium. Neither in endogens can leaves be expansions of the bark, for if this were the case, that class of plants being destitute of bark, could have no leaves. In relation to this class, the arguments were amplified. In conclusion, Dr. Meeson considered leaves to be the essential parts of a plant; they exist in the embryo, and, by expanding and unfolding themselves, suck up sap through the radicles; and, having exposed it to the action of the air and light, convert a portion of it into "proper juice." A bud is a series of these organs arranged around an axis; and as this axis elongates, the leaves become removed from each other, and in their axilla, other buds are formed. A plant is nothing more than a multitude of buds, or fixed embryos, sending their roots downwards, to form the bark and wood. The leaves then should be considered the most essential part of the plant, from which all its other parts are either directly or indirectly formed; they are not expansions of any thing, but very important organs, having, as it were, a

distinct existence of their own. The reading of this paper led to a long discussion.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

CAMBRIDGE, January 31.—The following degrees were conferred:—

Honorary Masters of Arts.—The Hon. J. T. M. Sutton, Trinity College; Sir J. H. Lightham, Bart., St. John's College; A. L. Melville, Trinity College.
Doctors in Divinity.—Rev. J. W. Worthington, Trinity College; Rev. G. Dodsworth, Catharine Hall.
Bachelors of Arts.—M. S. Cole, Christ's College.
Bryan King, M.A., of Brasenose College, Oxford, was admitted *ad eundem*.

ROYAL ASIATIC SOCIETY.

FEB. 2. Sir George Thomas Stanaton, Bart. M.P. vice-president, in the chair.—The Secretary read an interesting review of the "Mukamat Hariri," with some extracts, translated into English, by Mr. W. F. Thompson, of the Bengal Civil Service. The review entered largely into the difficulty of properly appreciating such a work as the "Mukamat," of which the great beauty consisted in the style, which must necessarily disappear in a translation. The singular state of the literary society of Arabia, as it existed in the fourth century of the Hegira, was described, wherein the learned met in their various tribes for philosophical, religious, and literary discussion, and when men of talent and boldness wandered from city to city, contesting the palm of eloquence in every place they visited, and living upon the rewards lavished upon their merits. This condition of society naturally produced a set of idle and unprincipled, but talented men, who made such a mode of life their only profession; who were by turns saints, philosophers, and impostors; and who sometimes devoted their powers to the greatest, and sometimes to the meanest, of purposes. Such a one is the subject of the "Mukamat," named Abuzeid. This man, one of the most eminent of his line, "is conducted through fifty tales, embodying different scenes, characters, and participators, reappearing in as many different forms at the commencement of each; glimmering through the disguise as the matchless development of imposture proceeds, and revealed to us at the termination in all the dignity of his effrontery, the same unequalled adept in religion as in fraud." The end of the history of Abuzeid is curious, and characteristic of the superstitious creed of the Moslems. He is working on the feelings of the people of Bassora by touching appeals to heaven, and prayers for grace and pardon, all in the way of his profession, in order to reap a more abundant harvest of alms, when suddenly, against his wish, his petition is granted, and he becomes all at once a real saint; his deception is gone, and, with it, his trade. Abuzeid now returns to his native town, where he passes the remainder of his days in the austere and secluded practices of his religious duties. The stories are put into the mouth of Haris ben Hammam, who is the friend, and, at the same time, the dupe of Abuzeid; who admires him, and wishes for his society, and yet who never meets him without suffering in his purse for the pleasure of his company. Haris is himself a man of considerable literary acquirements, but greatly inferior to Abuzeid, who, at the end of each tale, when found out in imposing on his friend, carries it off with ease and indifference, or with a poetical apology which more than atones for the offence. Some extracts were given, translated in the peculiar metre and rhyme of the original, by which alone any thing like an idea of the work of Hariri can be communicated.

These translations are executed in a very spirited style, and evince much talent, as well as an extensive acquaintance both with the Arabic and English languages.

SOCIETY OF ANTIQUARIES.

MR. HAMILTON, V.P., in the chair.—Mr. Doubleday exhibited a figure in *terra cotta* of a recumbent female, about thirteen inches long, found in digging for a sewer in Fenchurch Street, about eighteen feet below the surface.—Mr. Agnew communicated an account of some Greek monumental inscriptions found in a family catacomb in Alexandria, accompanied by a plan of the catacomb, and copies of the inscriptions. They were dated early in the third century of the Christian era, and it was supposed that the persons referred to were Christians, and had shared in the persecution of Diocletian.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Royal Geographical, 9 P.M.
Tuesday.—Royal Medical and Chirurgical, 8 P.M.; Civil Engineers, 8 P.M.; Society of Arts (Illustrations, Mr. J. Savage on centurion's fur Budge, &c.) 8 P.M.
Wednesday.—Society of Arts, 7 P.M.; Medical-Botanical, 8 P.M.; Literary Fund Committee, 3 P.M.; Graphic, 9 P.M.
Thursday.—Royal Society, 8 P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.
Friday.—Geological (Anniversary), 1 P.M.; Royal Institution, 8 P.M.; Botanical, 8 P.M.
Saturday.—Royal Asiatic, 2 P.M.; Artists' Conversations, 7 P.M.

FINE ARTS.

PHOTOGENIC DRAWING.

AN esteemed friend of ours, advertg to the accounts of the New Art in our last, states, that thirty years ago he, in conjunction with two other artists, were earnestly engaged in making experiments similar to those we have described. He says, "Some of the results which we obtained from plaster of Paris casts, and from *lith*, although imperfect, were absolutely startling, and I hit upon a mode (by the aid of diluted nitric acid) of arresting the operation of the solar light, after it had accomplished all required of it. Eventually, however, the fatal circumstance that the effects produced were the reverse of true—that which ought to have been black remaining white, and that which ought to have been white becoming black—added to the pressure of our respective avocations, induced us to relinquish our attempts." . . . "A provoking thought has just struck me, which, if it had occurred in 1809, might, peradventure, have pleased me and my two friends in the position now occupied by Mr. Talbot and M. Daguerre. If, after obtaining an image on the muriate of silver, and preventing the further operation upon it of the solar light, we had exposed *that image* in sunshine, and had obtained *an image of the image* on a fresh field of muriate of silver, introduced into the camera obscura for the purpose, the whole effect of light and shade would have been rectified."

This is exactly what Mr. Talbot has done, as we noticed in the instance of his "View of Venice," from an engraving. And, *à propos* of the subject, we believe that it is the violet ray of light which is the most instrumental in producing the effects peculiar to "the New Art."

BRITISH INSTITUTION.

(Second notice.)

THE vulgar proverb declares that "second thoughts are best." It is a cowardly and pitiful piece of left-handed wisdom; and we have always regarded it with contempt. Nor let a

man's mind be in a healthy and properly disciplined state, and there is nothing like a first impression. So far is the assumption that second thoughts are best from being founded in fact, that we are persuaded the very reverse is the case; and that it might be much more confidently asserted that second thoughts are worst. How many noble and generous sentiments and projects have second thoughts chilled and degraded into grovelling and commonplace feelings and conduct!

Our second thoughts of the present exhibition at the British Gallery are not better than were the first thoughts, which we expressed last Saturday;—for they are the same. We think now, as we thought then, "that it is not only honourable to English art, but possesses pictures which no other school in the world could equal;"—a remark equally applicable to the pictures which have appeared before, and to those which are now, for the first time, presented to the public. For obvious reasons, we shall confine our particular observations principally to the latter.

It is our general usage to begin with the mantel of the North Room; but, while endeavouring to make our way to it, our attention was irresistibly diverted to a picture which we have already named; viz.

119. *Dogs*. E. Landseer, R.A.—In this striking and attractive performance, a fine Spanish bloodhound, and a Scotch wire-haired terrier, are represented looking from the door of their kennel in such perfect relief, as almost to amount to deception; added to which, the contrast between the animals is equally happy: the one gravely conscious of power, the other waspish and impertinent—we wonder he don't bark. As a work of art, it is enough to say that it is equal to any of the highly gifted artist's former productions.

Having escaped from this canine fascination, we shall now proceed more regularly.

2. *The Rival Performers*. J. Callcott Horsley.—Here are, belonging to one person, two names, neither of which we have ever thought of without respect and admiration. Mr. Horsley has illustrated the interesting story of the contest between the bird and the musician in a style of execution that must rank his performance in the first degree of excellence. The canvass represents an interior, which (like the charming picture by the same able young artist that we noticed two years ago), in brilliant colouring, and deceptive light, may vie with the best productions of Da Hooge. In this apartment are seen a beautiful female, and a youth—one of the rival performers, who has suspended his music. Both are attentively listening to the feathered vocalist; who, it is well-known, fell a victim to his honourable emulation;—the sad type of many a high-spirited human being.

1. *Basle, Switzerland*. G. Jones, R.A.—In this, as in similar subjects treated by Mr. Jones, we find the most perfect character of the picturesque, united with the most rich and fascinating style of handling.

11. *Anticipation*. T. Webster.—Of this title (as of some others in the catalogue) we should say to those who have not visited the gallery, "Do you give it up?"—you do! Well then, gentle reader, the anticipation is one which you have no doubt often indulged, and which, we trust, you will often indulge again,—the gratification of a good dinner. The feeling is here expressed, not by the silent though very intelligible twinkling of the eye of a confirmed gourmand; it manifests itself in the hearty glee of a group of young rustics,

who, from the door of their cottage, are eagerly watching the approach of a huge meat pie. While the expression is true to the life, the scenery is equally true to inanimate nature.

23. *Study of a Female Head*. Mrs. Carpenter.—Madonna-like and pensive in its character, the beauty and harmony of this lady's pencil have never been more successfully displayed than in the attractive work before us. Its freshness shows its recent execution; and time will enhance its value.

16. *Filatrice Sorrentino*. J. Inskipp.—Although similar in some respects to the characteristic studies of this artist, we have never seen any by him the flesh of which has been so transparent, and so carefully finished. It is throughout a brilliant and clear specimen of Mr. Inskipp's powers, both in effect and in colouring.

[To be continued.]

VIEWS OF WINDSOR AND ITS ENVIRONS.

We have seen specimens of a volume, preparing for publication by Mr. McLean, to be entitled "Windsor, with its surrounding Scenery, the Parks, the Thames, and Eton College, &c." Drawn in lithography, with the late improvements in the double tint, by J. B. Pyne." Windsor and its neighbourhood undoubtedly present many picturesque, magnificent, and charming subjects for the pencil; and, if we may judge from the specimens before us, the projected work will be worthy of the high reputation as an artist which Mr. Pyne has already acquired.

THE DRAMA.

We expressed a wish, in our last Number, that the legitimate Drama should be supported, as it ought to be, by the higher, and indeed by all orders in society; but we confess that we are not so greatly astonished at such a sentiment being as yet inadequately developed. Public feeling is generally, and, in matters of this kind, which do not appeal at once forcibly to the passions, always slowly matured. The stage had gradually sunk to so low an ebb, that the most strenuous efforts to turn the tide could only hope for a gradual rise. It had ceased to be a national concern, and, like a drowned body in which life is all but extinct, it required a world of trouble and exertion even to revive the lingering spark of existence. But also like the resuscitated corpse, when once again restored to animation, it will naturally assume all its former functions, and move, act, and have a being worthy of its high and important vocation. Thus, thanks to Macready, the personification in himself of the Humane Society, as far as the restoration of the Drama to life is implied, we have a National Theatre; and we have what no other nation can have, we have Shakspeare! Leaving the arena and the amphitheatre to wild beasts and giants (we mean no disparagement to the latter, who is perfectly in his place, and very amusingly employed at the Adelphi), it is, we think, of essential consequence to us, if we really believe what every body says of the Drama, that it should have some place of refuge, some stage, whereon to exhibit its moral attributes, "to hold, as it were, the mirror up to nature; to show virtue her own feature, scorn her own image, and the very age and body of the time, his form and pressure."

Unless this be an almost universal opinion, we have no right to call ourselves a highly civilised people, or, in fact, any other than a people degenerating, as the Romans of old

when they became devoted to cruel sports and spectacles, into dissoluteness and barbarism.

These thoughts presented themselves strongly to our mind on Friday evening, when we beheld our young, gentle, and sweet-looking Queen in her box at Covent Garden Theatre, and heard the shouts of her loyal subjects. All seemed to be order, and gracefulness, and beauty, and splendour, and generous sympathy. The house, thanks to the providence of its management, was not allowed to be crowded beyond its capacity, by disappointed and, consequently, noisy and boisterous spectators. Hence the idea of order amidst the tumults of applause. The sovereign herself won the admiration of all who saw her, by the quiet modesty of her demeanour and the unaffected simplicity of her countenance and looks. Hence the ideas of gracefulness and beauty. Her surrounding state-attendance of high nobility, and the rest of the boxes filled with the rank and fashion of our great metropolis, was grand and imposing. Hence the idea of splendour—of splendour unallied to barbaric pomp, and well befitting a free and wealthy country. And, lastly, the shouts from every portion of the house—from boxes, pit, galleries, and stage (the latter occupied by visitors who were permitted to offer this tribute of respect while the national anthem was sung), were of a kind to warm the coldest heart. Hence the most gratifying and glorious idea of all,—the idea of generous sympathy, between a very interesting Creature, set by Fortune upon the highest pedestal of humanity, begirt with cares and liable to sorrows—hence, we say, the idea of generous sympathy between that fragile form in which all the dangers of majesty are enshrined, and a manly, bold, and (with all their faults) a chivalrous and high-minded people.

If we are to continue witnesses of scenes like this, the Drama in its strength, its poetry, and its purity, must be sustained. No such feelings can be entertained in companionship with savage brutes, or in view of the emblems of that more savage treatment which must have overmastered their natures. Refinement cannot co-exist with brutality, nor amiable manners with rude pleasures, nor benevolence with depraved tastes, nor social happiness with demoralisation. Let us ponder these things, and consider what and how much are due to the Drama as one of the most obvious and popular means to a great and desirable end.

Having penned the foregoing remarks, warm from the pleasure we experienced on the occasion referred to, we cannot tell with how much regret we heard of the visit of her majesty on Monday to Drury Lane, to witness the public feeding of the ferocious animals exhibited there, as thus, with genuine showman slang, announced in the bills: "The Trained Animals, in their natural and most ferocious character, will be fed in presence of the audience." Surely this is ill-advised. It is not only an unequally, but a rude, not to say a vulgar spectacle; and most unfit to be countenanced by the royal presence of a youthful female. What are butchers' boys and bull-baiters to take delight in, if their congenial sports are thus to be made portion of the national drama?

"'Tis true, 'tis pity;
Pity 'tis, 'tis true."

The next step will be combats among the beasts, and then combats between them and men:—

It may be suggested, by-way of a change of attraction, after the new and disgusting course of feeding the beasts has ceased to attract, that the managers and a few biped performers should be put in the cage, and the wild lion let in to make them crouch, jump about, and gambol.

the last signs of a degenerate and brutalised people. What throne can desire subjects of this description; but if not, no sovereign should patronise and encourage such demoralising sights.

At the other house, the noble and affecting tragedy of *Lear* was performed, and we rejoice to say to a crowded theatre. What a contrast was here! The wide range of human passions laid bare by the master-spirit of the world; the deepest of human sympathies excited and exercised. The *Tamer* of human nature here displayed his marvellous powers; and the audience were taught to feel for virtue in distress, for age in misery, for loyalty in adversity, for filial piety, and gratitude, and affection sorely tried. Finally, to witness treachery punished and crime requited. These are lessons fit for the stage, and a rational people.

St. James's Theatre opened on Monday under a new management. There are beasts here also.

Adelphi.—*Jane Lomax*, adapted from Mr. Smith's novel of that name, was produced on Monday. It was well received, and has been played during the week to crowded houses. The principal character, *Jane Lomax*, is sustained by Mrs. Yates: it is a trying part; and it is no small tribute to her talents to find the sympathies of the audience enlisted on her side; the more so as her crime is unrepented of until the death of the object for whom it has been committed. Her acting is most affecting and effective. The conscience-stricken *Lomax* is a part suited to Mr. Lyon; he both looks and acts it well. Mr. Beverley, in a comic part, and Mrs. Keeley, his wife, are very droll. Mr. O. Smith, too, does the utmost he can for a heavy part, not very well drawn for him. Indeed, we regret to see these clever persons wasting so much really good acting upon any thing so nearly approaching pantomime; though we are bound to say it is impossible to resist laughing at them. Mr. Collins sings a good sea song, and Mrs. Keeley a smartly written comic one.

Quartett Concerts.—*Fourth Season.*—On Thursday evening the first of these concerts took place at the Hanover Square Rooms; it was well attended, and the choice of music excellent. A quartett in E flat, by Mendelssohn, admirably performed by Messrs. Blagrove, Gattie, Dando, and Lucas, was deservedly encored. A grand duett of Onslow's was played with taste and execution by the Misses Broadhurst. A romance by Schubert ("In silent Wo") was exquisitely sung by Mr. Balfé. We have seldom heard any thing more beautiful.

VARIETIES.

A Landrail was, it is stated, shot about a fortnight ago near Wareham. It is a remarkable fact in the natural history of this rather delicate bird, if it has wintered with us, though the winter up to the period mentioned, has been generally and unusually mild.

American Newspapers.—The editor of the "Peoria Register," a well-conducted paper in the state of Illinois, Western America, announced on the 1st of last December, "That, in consequence of his being so much occupied in removing, he was only able, on that day, to print half a sheet instead of a whole one. Another editor, in the same hemisphere, informed his readers some time ago, "That his attendance upon his sick wife and children, rendered it necessary for him to suspend the printing of his paper altogether until their recovery; adding, that he had no one to assist him in any department of his establishment."

Ingenious Modes of Reaping.—It seems the opinion of the present age, that we are not only vastly superior in all things to our ancestors, but that mechanical knowledge is the characteristic mark of our advancement. The barbarians, as the Romans chose to term all people save themselves, were, however, in many instances, their masters, and imparted to them many of the arts, on which they sometimes admirably improved. Among the inventions to facilitate agricultural labour, to which it might be thought there was no parallel to the nineteenth century, it is surprising to find a machine which equals any thing which modern mechanism has produced. In Logan's "Scottish Gael," we are told that, "While the Romans reaped their corn with a sickle, the Gauls, whose fields were remarkably large, went to work in a more expeditious manner, and cut down their crops by means of a scythe used with both hands, an implement for which we thus seem to be indebted to these people. They had also another ingenious method of cutting down their largest fields, which shews not a little perfection in the mechanical arts. A large machine, resembling a van, was constructed, in which a horse was yoked so as to push it before him. The aides were furnished with sharp teeth or knives, and this carriage being driven into the field, the ears of corn were cut off, and, at the same time, were thrown into the body of the car, which was made to receive them." It is a pity that Pliny, who describes this mode of reaping, does not more particularly describe the machine.

Rupography.—Mr. James Prinsep, the secretary of the Asiatic Society of Bengal, by whose extraordinary ingenuity, industry, and zeal, so much has lately been accomplished in Indian archaeology, has employed a new method of block-printing, for the purpose of exhibiting facsimiles of coins. Taking the hint from the practice of Mussulmans of rank—who apply their seals, in lieu of signatures, to written documents, not as we do, by an impression on wax, but by smearing the surface of the seal with ink, and printing in the manner of a type, so as to leave on the paper white letters on a black field—he determined to try the experiment of taking from Mohammedan coins (which are almost invariably confined to letter mottoes) a counterpart of the die in sealing-wax or type-metal, and using them for ink impressions along with the ordinary letter-type: the absence of elegance being more than compensated by the scrupulous fidelity of the representation. His success was encouraging, and he has now prepared for the press a vast number of coins from various collections in this novel and simple manner. Specimens of a few are given in the Society's Journal; they are sufficiently clear and distinct to serve the purposes required. Mr. Prinsep has given to this new invention the name of rupography, from *rupa*, 'sealing-wax.'—*Asiatic Journal*.

Navigable Entrance to the Murray.—The entrance to Lake Alexandrina and the River Murray from the sea, had been thoroughly explored by Capt. Gill, and found to be perfectly safe and practicable, there being, at the shallowest part of the bar, more than three fathoms, and about seven both outside and inside the channel.—*Oriental Herald*.

From Meleager.
As on wing of azure hue
Through the ether Cupid flew;
Lesbia caught him; see, he lies,
Happy prisoner, in her eyes!

Anonymous.
In the height of summer's glow,
Sweet is water cooled with snow.

To the sailor, winter bound,
Sweet to see the spring come round.
But the best, the choicest bliss,
Is a lover's thrilling kiss:—
Venus praised be for this!

To a Bee.
(From Meleager, in the "Anthologia.")

Tell me, cruel insect, why,
Leaving all the flowers of spring,
Thou dost choose to flutter nigh
Chloe's ear with curious wing?

Dost thou come to tell her how
Cupid bears a sting for all,
Now in honey dippe'd, and now
Dipp'd in bitterness and gall?

Ay, 'tis true—my guess was right:—
Get thee gone, thou amorous bee,
Wing away some other flight—
'Tis no news to her and me!

LITERARY NOVELTIES.

In the Press.

Sherman's History of Jesus College, Cambridge, written in 1662, edited from the Autograph in the Library of Sion College, by J. O. Halliwell, Esq., of Jesus College, Cambridge.

LIST OF NEW BOOKS.

Rain fallen, 6 of an inch.

Edmonton. CHARLES HENRY ADAMS.
Latitude... 51° 37' 39" N.
Longitude... 3 51 W. of Greenwich.

TO CORRESPONDENTS.

We have to state to Printers and Engravers who do us the honour to send their productions for critical notice, that we seldom receive above one in ten which is not spoiled by carelessness in the mode of transmission. It is grievous to see our cracked and torn specimens of fine works in this way.

ERRATA.—No. 1150, page 65, col. 1, line 30, for "college," read "cottage;" page 73, col. 1, line 30, for "a process," read "the process," and line 31, for "but which appears to differ," read "which evidently differs;" line 30, insert "so," before "continued;" p. 76, col. 1, line 6 of the Drama, for "jokes," read "jokers;" line 15, in Correspondents, for "malwed," read "malwed rite."

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION,
FALL MALL.

BECK'S JURISPRUDENCE.
In 8vo. 6th edit. brought down to the present time, including the Notes of Dr. Dugdale and Dr. Darwall, price 21s.

ELEMENTS of MEDICAL JURISPRUDENCE.
By T. E. HECK, M.D.
Professor of the Institutes of Medicine, and Lecturer on Medical Jurisprudence in the College of Physicians and Surgeons of the Western District of the State of New York, &c.; and J. B. HECK, M.D.
Professor of Materia Medica and Medical Jurisprudence in the College of Physicians and Surgeons, New York; one of the Physicians to the New York Hospital, &c. &c.
"Beck's Medical Jurisprudence," in its present enlarged form, has been rendered quite an encyclopædia on the subject; it is an admirable book of reference, and ought to be in the hands of every member of the profession."
—*Med. Gaz.*
London: Longman and Co.; Whittaker and Co.; S. H. Highley; Simpkin and Co. Edinburgh; Blackwood and Sons.

SIR W. JARDINES NATURALIST'S LIBRARY, VOL. XXIII.
Price 6s. cloth, lettered,
THE NATURAL HISTORY of MARINE AMPHIBIANS, including the Watrous and Reals, also the Membraneous Cetaceans. Illustrated by 25 coloured Plates, with Portrait and Memoir of Peron.
Each Volume of the Naturalist's Library is illustrated by from thirty to forty coloured plates, with numerous Woodcuts and Portraits, and Memoirs of eminent Naturalists. The Work is so arranged that, each volume being complete in itself, any subject may be selected, and taken alone.
"The book is, perhaps, the most interesting, the most beautiful, and the cheapest series yet offered to the public."
—*Athenæum.*
S. H. Highley, 20 Fleet Street, London; W. H. Lister, Edinburgh; W. Curry, jun. and Co. Dublin; and all Bookellers.

REVIEW OF NEW BOOKS.

California: a History of Upper and Lower California, &c. &c. By Alexander Forbes, Esq. 8vo. pp. 352. London, 1839. Smith, Elder, and Co.

A GOOD map and a plain historical account of this great tract of country, yet so thinly peopled, that whatever may become its importance in future years, it strikes us that we shall be long enough dead and buried, before it can require the grave examination of the Critic or Reviewer. Whether Russia or America, or both, may intrude upon these Provinces, the upper one of which is stated to hold out some strong temptations to colonisation, it seems at present difficult to decide. Whatever may be the ulterior objects of either, they have so much territory already unsettled in and about their dominions, that we cannot think distant California in any immediate danger. Such being our opinions on the subject, we shall merely extract a passage or two to illustrate the author. Premising that what settlements have been made are chiefly through Mexican Missionaries, we give the following specimen of their trials, whimsically called "the War!"—

"Having dedicated one of the huts which they had erected as a church, they endeavoured, by presents and affectionate expressions, to bring the natives towards it, who came within sight; but they paid no attention to any thing except to receive whatever was offered them, except provisions; but on no account would they touch any of our victuals; and on a bit of meat being forced into a child's mouth, it spit it out as if it had been poison. This circumstance was considered as a miracle from heaven; for if they had been as desirous of provisions as they were of cloth, they would have left the strangers to have starved of hunger. Their desire for all sort of cloth was extreme, so much so, that the sails of the vessel in the bay were not safe, they having gone one night in their rush canoes and cut a large piece out of one of them. At length precautions were taken to prevent like acts; yet, as no punishment was inflicted, they proceeded to still greater lengths and stole openly, confiding in their numbers, and being armed with bows and arrows, wooden swords which cut like steel, and clubs which are very formidable. And now, finding that they were opposed, they resolved to try their fortune, and by taking our lives possess themselves of all our spoils. This they attempted to do on the twelfth and thirteenth of August, but were obliged to retire. On the fifteenth of this month, after the Father Fernando had gone on board to say mass, with two soldiers, four only remaining on shore, and our venerable president and Father Biscayno having finished mass at the mission, there fell upon them a great number of Indians, all armed for war, who began to rob every thing they could find, taking away from the sick even their sheets. The corporal immediately called out to arms, and when they saw the soldiers putting on their leather armour, and taking their muskets, they retired a little and began to shoot their arrows. The four soldiers, the carpenter, and the blacksmith, also commenced firing with much valour; but par-

ticularly the blacksmith, who, although he had not armour to defend him, advanced, calling out, 'Long live the faith of Jesus Christ, and die the dogs his enemies.' Whilst this was going on, the Father President with his companion went inside the house, recommending all to God, and praying that there should not result any deaths, either among his own people, or among the Gentiles; and that the souls of the latter might not be lost which otherwise would be saved by future baptism. The war, however, still continued, accompanied by the terrible yells of the Indians, when a boy, called Joseph, came running in great haste, and prostrated himself at the feet of our venerable president, saying, 'Father, give me absolution, for the Indians have killed me.' The good father absolved him, and he died immediately, an arrow having passed through his throat, but his death was kept secret. Of the Indians many fell; and the rest, seeing the destructive effect of the fire-arms, retired, carrying with them the whole of their dead and wounded, in order to prevent us from knowing their loss. They were enabled to conceal the deaths, but the number of wounded was soon known, because in a few days they returned in peace, requesting to be cured, which was done by our good surgeon. This charitable conduct on our part, caused them to be somewhat grateful, and the sorrowful experience of their unsuccessful attack created fear and respect, which made them deport themselves differently from what they had hitherto done, and they still continued to resist the mission, but without arms. Of the Christians, four were wounded, viz. the Friar Biscayno, one soldier, an Indian of California, and the valiant blacksmith; but none of them dangerously, so that in a short time all were well, and the death of the boy was concealed."

While California belonged to Spain, the missions were supported by pious contributions, and the Government sent soldiers to protect them; but the Mexican Revolution and the separation of all the Americas from Spain, this state of things terminated, and a new condition was effected, by which

"Upper California was formed into what is called a territory, and Lower California into another, on the ground of their respective population not amounting to the number entitling them to be federative states; these being established on the basis of population. The territories are not entitled to have governors or legislatures, but are allowed to send one member to the general congress. This member is entitled to sit and take a part in discussions, but has no vote. The territories are, from their being deprived of governors or legislatures, subject to the immediate government and legislation of the general government in Mexico. This reduced Upper California to be directed by an agent of the government, who resided there under the denomination of commandant-general. This state of things California has not had as yet much cause to lament; for until wiser legislation is adopted, and greater harmony exists between the general government and the different state legislatures, it is no great misfortune to be deprived of the labours of a provincial popular assembly. The two Californias send

each a member to the general congress, elected by popular suffrage. The first deputy elected for Upper California was a captain of the Californian troops, and a Spaniard by birth; but on his arrival at San Blas he found a law had been passed excluding natives of Spain from congress, and he was obliged to return. A lieutenant was then elected to succeed him, who proceeded to the city of Mexico, where he died. A sergeant of the same corps was then elected, who served out his term of two years in the Mexican congress, and then returned to his native country."

In 1836, a revolution broke out at Monterey, and "They followed up these proceedings by expelling the whole officials of the Mexican government, and all the troops from the country, and transporting them to the Mexican territory. On receiving notice of this revolution, the Mexican government immediately had recourse to their usual mode of warfare, fulminating furious proclamations and addresses to the citizens, appealing to their patriotism, and ordering to be prepared, without delay, a formidable expedition to proceed against such audacious and unnatural sons of the republic, whom it was incumbent on them to put down and chastise as their treason deserved. The first patriotic ebullition, however, soon subsided; no expedition was prepared, California was soon forgotten, and it has remained for nearly two years to do as it pleases, to have a government of its own manufacture, or to live without a government at all. Being thus left to the freedom of their own will, the Californians, true to the spirit which has animated all the Spanish American colonies since their emancipation, immediately began to divide themselves into parties; and although there are only about 5000 Spanish Creoles in the whole country, they had their party of the north, which declared for an entire independence on Mexico, and the party of the south, which adhered to Mexico on certain conditions. The want of frequent communication with Mexico renders it quite uncertain what may at present (June 1838) be the state of the country; but it is, at least, evident now, if there was any doubt formerly, that it is at this moment in a state which cannot prevent its being taken possession of by any foreign force which may present itself."

With regard to the natives of Upper California, we are informed that they "maintain themselves by the seeds and herbs of the field, to collect which, when in season, is the duty of the women. The seeds they grind, and of the flour make gruel; and sometimes a kind of pudding or dough, which they form into balls of the size of an orange. Some of this flour has an agreeable flavour and is very nutritive; that produced from a black seed has the taste of toasted almonds. To this diet they add fish which they catch on the shores of the bay, and which are exceedingly good; they have also shell-fish in abundance. In addition they have the produce of the chase and wild fowl; such as deer, rabbits, geese, ducks, quails, &c. It also sometimes happens that a whale is driven on shore, an event which they celebrate with great rejoicings, as they value its flesh and blubber above all things. They roast the flesh

of this animal in holes made in the earth; and when their first voracity is appeased, they hang up the remainder on the trees, and cut pieces off as they do with the seal, which they esteem next to the whale. In the woods they also find acorns which they grind in like manner and make gruel and balls of. There are likewise nuts of the same quality as in Spain; and on the high ground and sand-hills, strawberries of excellent flavour, and much larger than those of Europe; which ripen in the months of May and June. There is likewise a blackberry which is found in great abundance. In the highlands there is an edible root which they call 'Amole,' about the size of an onion, and which, after being roasted in their ovens, has an agreeable sweetish taste. Another variety of this amole serves all the purposes of soap; but of this the natives have no great need, as their clothing is very scanty. This indeed is exclusively confined to the females; the men going without any except what nature gave them. The other sex, however, even the young girls, have always some covering which is made of the tule, or bulrush, and which consists of one piece before and one behind, in the manner of a petticoat: they have also a piece thrown over their shoulders. The men in the mornings are accustomed to plaster themselves over with mud. This they say keeps out the cold; and accordingly when the sun grows hot they wash it off. These people have their marriages, but they consist of no other ceremony than the consent of the parties, and they are only binding till they disagree or choose to part. They have no other mode of cancelling a marriage than by using the phrase, 'I throw you away.' It is nevertheless true that we found many couples, both young and old, who lived in great unity and peace; esteeming their children, and their children them. Parentage or relationship forms no obstacle to their intermarriages. It is very common for the wife to urge her husband to marry her sisters, and even their mother; and the common custom is, when a man first marries, that he takes the whole of the sisters for wives. These many wives of one husband live without jealousies or disputes, each looking on the whole of the children as if they were their own, and the whole living in one house. In fact the first baptisms made at this mission were of three children all born within two months, sons of an Indian man and of three sisters, to all of whom he was married; as well as to their mother."

With this we conclude.

The Boy's Country-Book; being the real Life of a Country Boy. Written by Himself.
Edited by William Howitt. 12mo. pp. 308.
London, 1839. Longman and Co.

BEFORE proceeding to notice the present volume, we are in duty bound to give the author's account of himself:—

"I was born on the borders of the Peak of Derbyshire. My father was a man of property, who was engaged in collieries, and had besides a fancy for all sorts of mining concerns. In the village which we inhabited there were two or three good families, but, unfortunately for me, there were no children in them. There were several farmers too, but they were exactly in the same predicament, so that my own brothers being so much older as to be at distant schools, or much too young to be field-playfellows, I was thrown in a great measure upon the children of the cottagers for companions; and this was rather a dangerous situation in two respects. I was in a fair way to contract all their vulgarities, without gaining much

information beyond that country knowledge which is the peculiar property of all boys,—knowledge of all sorts of sports, mischief, climbing, rabbit-keeping, birds'-nesting, fishing, and such like things. It was still more dangerous by making me a superior, likely to be flattered and sought after, without any playfellows of equal pretensions, whose self-will would place itself sturdily in opposition to my own, and tend to keep down pride and notions of self-importance. It was a perilous pre-eminence. However, of all this I never thought then, and to me the society of peasants was quite as good as that of princes. They were bold, active lads, full of life and overflowing spirits, and that was enough. Perhaps they were, in reality, rather more agreeable from the secret feeling that they were all my humble servants."

Now, it strikes us forcibly that there is rather too much bounce about all this: are not all poor and industrious families "good families?" or could any other but a proud and vain boy ever think of making his playfellows his "humble servants?" This love of display would alone convince us that Mr. Howitt was the author of the volume, without recalling to our memory that several portions of it have long ago appeared in one of the juvenile *Annals* with his name. But this is not a work to call down any severe criticism; for in spite of a few drawbacks, it is a very amusing volume,—one of the best boy's books which we have seen for some time, and written generally in a plain and easy style, which it requires no great effort of mind to understand. This is great praise, and the volume is deserving of it; and, although Mr. Howitt fancies that he has not of late received the most courteous treatment at our hands, yet we have in every instance, to the best of our judgments, dealt honestly by his works; and never condemned (as we had previously never praised and received thanks therefore), without just cause. There are, even here, many faults of taste, which, if we were to set ourselves the task of pointing out, would not be very favourable; but they are so amply balanced by passages of beauty, and life-like reality of description, that it would be unfair to dwell upon them: witness the following, which makes ample amends for what we have before quoted:—

"I promised to tell my readers how I learned to ride; and I can assure them that the riding-school of a country lad is often a very funny one. The regular riding-master may teach you to ride gracefully, but as to sticking on a horse, commend me to the country lad's riding-school; which is now a common, now a lane, now on ass-back, now on horse-back, now on dog-back, now on cow-back, and not very seldom on the shaggy back of a good thumping mastiff, or the odoriferous chine of a sturdy goat. Anything that has a back, and can move, is a nag for a country lad; and good swinging gates and spinning turnstiles afford him no inconsiderable exercise and instruction in the necessary art of sitting at ease on the ridge of a moving thing, whether with legs or without them.

"My first horse was, of course, a stick; my second, one of those spotted straight-legged steeds already mentioned; my third, a rocking-horse; and of this particular horse it is difficult to say too much in praise. It is wonderful what horsemanship may be acquired on the rocking-horse. It does that for a lad which is the main thing of all, it gives him confidence. He learns to balance himself, to feel at ease, to hold his whip and bridle; and, in fact, he acquires all the chief principles of this popular

science. I have seen children of not more than six and seven years old, on first quitting their wooden horses for their real ponies, mount them with confidence, and gallop them, and leap them across ditches with all the mastery of grown men. My next horses were of that miscellaneous class just adverted to. There was a row of turnstiles between our village and the next, which afforded us many an hour's merry practice; three or four lads sitting on one at once, and one or two others twirling them round. Then, there was scarcely a gate that we could get open, but it was swinging to and fro with all its, or rather our, might for hours together; then there were see-saws, or queveels, as we termed them, made of a long plank laid across a log, where we experienced many ups and downs in the world in a very little time. And, let it be noted that all this was no despicable practice; the twirling round is a good preparation for a similar rotatory motion in a quadruped steed, which it sometimes takes into its head to treat you to; and the swinging and banging of a good active gate is no bad introduction to those sideward motions of a horse, called aying, or starting away from under you, if you are not a pretty good horseman, at the sight or supposition of something supernatural—such as the flutter of a bird out of a hedge, or the rustle of a leaf, or the taking off of a beggar's hat just in the face of you. We rode very actively, too, on any long strong bough that we could pull down in a tree low enough for us to mount upon—not unfrequently even mounted grave-stones, as a troop of soldiers, just as Bewick has described a set of lads. Of course, there was not an ass that could be caught on the common or in the lanes that was not pressed into our service, and be that can set an ass a-going against his will, and stick on his back too, is no mean rider. Every one that has made the experiment knows, and he only, all the cunning and the tricks of that reputedly stupid animal. First, you are saluted as you approach it with the most admirably directed kicks. Whichever way you approach, you find the tail and heels of the animal presented to you; or if there be several lads endeavouring to hem him up in a corner, without which I hold it a moral impossibility to catch a good knowing ass at all, the head and heels seem to present themselves very wonderfully towards three-fourths of the company, and the rest are treated to those side lunges and open-mouthed snatches, that require the quickest eyes and the nimblest heels to get out of the way. But suppose the great act of securing and mounting accomplished, the next great act is to move him. Bewick has shewn you, in a ragged lad standing at the ass's tail with a formidable gorse bush very skilfully applied, the most efficacious of all modes of propulsion; but, this once attained, then indeed is the moment of real difficulty. Off goes the ass for a few paces, then backward he goes as fast, then sideways as rapidly,—this way, that way, and then down goes his head to the ground, and up goes his stern into the air. He that can sit through all these evolutions can sit through anything. And, if he has sate through them, let him still be alive, for the next thing will be for the ass to lay himself leisurely down, and as leisurely begin to roll himself over. This is his last resource, if he does not see a pool that he can run into, where he will remain very quietly for at least half a day with his rider; or, if he does not see a good post or trunk of a tree, or a rough hedge, or a wall, that he can deliberately grind the boy's legs against. Cris Newton will remember his experience of wall-grinding as long as he lives."

All this is very excellent, and written in a right spirit; and the book abounds in numberless passages of similar power and simplicity. We could not, however, help smiling at the author's argument in favour of robbing birds of their eggs, but not of their young: it is throughout very ingenious, but still, we think, not fully "proven." We have an interesting account of the Quakers' school at Ackworth, in Yorkshire, with anecdotes of poor Wiffen, and others; and many painful descriptions of the "little tyrannies" which exist in places of this kind, which, considering the strict reserve under which the children of the Friends are brought up (in general), we read with no small degree of astonishment; especially when we found that our author was compelled to "show fight" in his own defence. The volume is very neatly and appropriately illustrated; and we earnestly recommend it as a present to all book-loving boys, confident that it will furnish them with much useful information and amusement: nor need graver heads be afraid to bend over it, for it will recall pleasant times and happy hours, the memory of which we all fondly cherish.

Goethe's Correspondence with a Child. 3 vols. 12mo. Vol. III. Diary. London, 1839. Longman and Co.

In this volume Bettina Arnim, "the child," who was, we fancy, a well-grown lass, and is a married woman, becomes more truly German, less English, and more grotesque and entertaining than ever. Take the Dedication.

"To the English Bards.

"Gentlemen!

"The noble cup of your mellifluous tongue so often brimmed with immortality, here filled with odd but pure and fiery draughts, do not refuse to taste if you relish its spirit to be homefelt, though not homeborn.

"BETTINA ARNIM."

A Preamble follows this, which explains the causes of the fair author's becoming her own translator, from which we copy a few lines, by way of a droll sample.

"I was not acquainted with the English tongue, therefore relied upon the consciousness of my translators; the recapitulating of their version I tried to follow with comparing it to the German text. Often my ear was hurt by words lack of musical rhythm, that in the German text by their harmonious sounds, and even by the union of their single parts, awake poetic sensation, I must yield to have them supplied by such as want all lofty strain; to all my objections my relentless translator opposed the impossibility of translating it, the rigour against any arbitrariness in that language, and besides its penury that allows no great choice, it consisting but in thirty thousand words—I thought, if I only did know them, to be sure I would find the right. The printing had almost come to end, when, by a variance between the printer and translator, it was interrupted; then, by the inspiration of despair, I ventured to continue translating. I never could have guessed those difficulties that fell more heavily upon me, than upon any knight-errant who tries, with the help of propitious spirits, to overcome impossibilities. What erroneous ways have I hastened through; how often have I ferreted for words that do not exist, or bolted expressions offered in so many diverging shapes that the choice disturbed me highly; how often in the night, the word for which I had pried with despair the whole day in every nook of my head, awakened me in a hurry out of deep sleep, and how felt I delighted when suddenly it was found; I held it between my lips as a pearl or diamond found in the dark, and in the morning I ran to the book to write it down; nay, I was like a

blind man going to work without a guide. What a copiousness of words with their flexure overflowed me; how abundantly gracious seemed to me those varieties of flexions; I would have them all inwoven in my version, and desponded in choosing the finest, the noblest, the most eloquent, and euphonical among all. Often having studied a whole night, when in the morning I would peruse it, I was obliged to study it anew by help of the dictionary. My inquiries led me upon thorns and thistles on a misty path, where I could not see a step before my feet, but where I fell upon so beauteous expressions I would compound with my text, though I did not know how to make use of them; the strange etymologies, even as blossom-dust transported by sedulous bees from foreign lands to their homely field, variegating the flowerage of their words. Vulgar people know not of the treasures upon their lips, by which genius produces the honey-dropping fruit. Then I fell in love with this language that tormented me so much, that I almost got a fever of despair."

All this is very good, and the confession about translating in her sleep lets us into a secret: i. e. that many other translators who have not acknowledged it, have produced their works in the same somnambular manner. Our Bettina proceeds to lament Goethe and entreat Mr. Longman to supply his place of patron and protector to her yearning affections. We trust he will not be so hard-hearted as publishers in general are accused of being; but who could resist this appeal?

"Now as I have no friend yonder, and no connexion, I am like a bird that flies from its nest over the ocean, or a plant, to climate in a foreign land, must dole till it is rivetted in the soil; therefore I beseech Mr. Longman, who grants me the honour of publishing my book, to get this little preamble inserted in the Quarterly or Edinburgh reviews, for informing, that if there are still other Englishmen, who, as Byron would have done, are inclined to preserve in their deep mind and protect such youthfully inspirited feelings, I should like, they seen the pages of my diary."

Though the *Literary Gazette* is not mentioned, we venture to volunteer ourselves instead of the "Quarterly," with which, as far as we have heard, Mr. Longman has little to do. So now for a page of the Diary:—

"Thou hast said it to me then at parting, thou hast asked from me to write thee all, and truly what I think and feel, and I would fain; but, dearest, the strange ways, scarcely enlightened by the dawning torch of sense, how shall I describe them to thee? These dreams of my happiness!—for happy do I dream myself—they are so stormy, so whimsically humoured—it is so slight, what I often find out. My happiness, as I fancy it, how shall I describe it to thee?—see the moonsickle in the cloudless sky, and the broad-boughed, rich-leaved lime; think!—see beneath its whispering foliage, also whispering and embracing one another—these two—how one requires the other, and ardently loving stretches up to him, how yon with friendly will inclines to him, and listens to the hisping of love; and think also, the moonsickle, the stars dare not set, till these souls seated in each other, spread their wings and ascend to higher worlds."

Mem. This is to Goethe and not to Mr. Longman; and is meant, as the writer adds, to "express her happiness in a full embracing sense." She then gets a little more beyond us—a little mystical, as it were, and says:—

"Longing and fore-feeling lie in one an-

other, one forces up the other. The spirit will espousal with sense: I will be loved or I will be felt, is the same."

And dashing hence a hundred pages on we have a sort of context.

"When I behold myself and my doing and my aspiring, then I am instantly struck with thoughts of which I feel, they have a settled reference to a settled appearance within me; as certainly also in the different epochs of the plant's life, their nutriment adopts a diverse spiritual direction; that, for instance, in blooming, their food, which indeed consists in the self-same elements, intends a metamorphosis, enhanced within itself—for this nutriment shews itself in the life of the plant, no longer merely vegetating, but perfuming, fragrant, inspirited with the plant's spirit. Thoughts of this kind bless me, when I make peace with myself, and accept of slumber, as conciliating myself. Thus I felt last night before sleeping, as if my own mind was in love with me, and then I slept tranquillity deep into my soul; and awoke from moment to moment, and became aware of thoughts. Without meditating further on them, or exploring their contents, nay, without comprehending many of them, I wrote them down with a pencil, and instantly I slept on; but soon after they awakened me again; these thoughts were like exclamings of my soul, in the sensations of becalming."

What is Mesmerism or Animal Magnetism to this? These conjurors want some body: here we can do it all without body, by fancy, imagination, and spirit alone. No passes, no traverses, no nonsense, whatever! For

"Love is of a supernal nature the lofty pregnancy; the more pure the fire our spirituous organism will be nurtured with, the more grand and pure the spirituous race will be framed in us."

But to come to what seem to be more tangible affairs, we have the following on the theme that the Poet had told "the Child" to call again in twilight.

"Thou knowest nought—I know all, I am the leaf etched with the remembrance of all blissfulness. Yes, I am of this remembrance the essence, and am nothing else. Nay, I went around thy house waiting for twilight, and when I came to the gate I thought, 'if it might be dark enough already; and if thou mightest deem this to be twilight?'—and fearing to fail thy orders, I went once more round thy house, and when I then stepped in, thou scolded me that I were come too late, since long it were dusky, thou hadst since long awaited me; then thou wouldst ask for a white woollen garment and put aside the day-dress, and say, 'now as night is come down by waiting for thee, we will be quite nightly and comfortable; and most nicely lanuginous will I be to thee, for thou shalt to-day confess to me.' Then I stooped down on the ground between thy knees, and embraced thee, and thou me. Then thou saidst, 'do trust in me and tell me all what offered violence to thy heart; thou grantest that I never have betrayed thee; no word, no sound of what thy passion has raved to me has ever come o'er my lips; now tell me, for it is not possible thy own heart all this time should have been without passion, tell me now who he was?—do I know him?—and how was it?—what hast thou more learned and experienced which made thee forget me?' Then, dear friend, I spoke the truth, when I asserted thee that my heart had been quite at ease, that nought had touched me since then, for in that same moment before thee, all was but a weening, and a pale phantom the whole world, and

in thy presence vanished all what had happen'd to me; in full consciousness I durst avouch me linked with thy beauty, for I looked in thy face. But thou by all means wouldst know the story which in vain I tried to invent, for I was rather ashamed that no love-story had happened to me. Now I thought of one and began: once I walked as in a dream, now I am awake again; here in moon-light on thy bosom I know who I am and what thou art to me, how I belong ever to thee and never to another, as thou fascinatest me! but once—and then I began my love-story. And thou, most glorious one, didst not suffer me to speak on, and criedit: 'no! no!—thou art mine!—thou art my muse, no others!—no other shall dare say, that he was possessed of thee as I am, that thou wast devoted to him as well as to me, that he was so secure of thy love as I was. I have loved thee, I have forborne thee, the bee brings not more carefully and heedily the honey from all the flower-cups together, than I gathered delight from thy lips, from thy thousandfold love-over-pourings.' Then my braids fell down, thou took'st them up, and called them brown snakes, and hid them in thy garment, and drew my head to thy breast, on which I should repose from aye to aye, and disburden myself of thinking and doing; that would be fine, that would be true, that would thus be the right sweet lounge of my existence. That is the fruit of paradise for which I languish: to rest, to sleep with consciousness of being near the most glorious."

And so concludes the *Diary*—Italics and all. There are some letters after Goethe's death, in which pretty much the same tone is preserved, as for instance:—

"Goethe! it is no more sweet, our meeting; it is no caressing, no mirth; the graces around thee no more array, no more shape each love-whim, each sport of wit into poems. The kisses, the sighs, the tears and smiles no more chase and rally each other; it is solemn stillness, solemn solemnity which entirely seizes upon me.

"Behold, amidst this breast, the pure chalice of love filled to the brim with harsh drink, with bitter tears of grievous privation. When the harmonies transmute into each other, then shakes the chalice, then stream tears; they flow to thee who lovest the votaries of death, thou who saidst: 'to be immortal, for awaking again a thousand-fold within each bosom.' Nay! then I weened: within my bosom alone thou shouldst awake; and it is become true, and close after thee and me, life is secluded. Alas, thou wakest, but I cannot cope with thy holy presence. I venture too much and shrink longing for a breast that lives amongst the living ones, that may bear with my secrets and warm me; for to stand before thee, gives harrowing chill."

And so she left the ghost and took a husband; the "*chill*" being different from what she describes in his, the poet's, lifetime.

"All these speeches were electric showers, I shivered at thy words, they flew into my breast as were they birds, and would build a nest there, or they would call my soul a young bird with its fiery wings to soar up—and I durst not utter a word, thy smiling seemed to me so grand, that I was ashamed to let hear my voice; in this stillful breath-stopping pause, I was not thinking, I was only filled with thy presence. Look how in the dubious gloom, all the branches glow and bloom, star on star is playing down, through the bushes emeraldly, fulgurating thousandfoldly, yet thy mind is far from all. 'I will kiss thee,' said I. We went home, at the door I asked: 'shall we part now?'—thou

camest up the stairs with me and enteredst my room; I leaped to the sofa, and there I snugged myself in thine arms, and closed them fast round my neck. Then it was so stillful near thy heart, I heard it throb, I heard thee breathing, then I hearkened to it and had no other mind than to hear thee live.—Oh thou!—my heart pangs;—here, long after midnight, alone with thee in the remembrance of yon hour so many years gone, so penetrated with that love of thine, that my tears must flow, and thou! no more on earth, beyond, where I reach thee not, where my prayers do not resound!—alas! tears! will they flow to the beloved into the other world?"

Surely German Platonism is as warm, in expression at least, as the most ardent passion in other nations!

Domestic Scenes in Russia; in a Series of Letters describing a Year's Residence in that Country, &c. By the Rev. R. Lister Venables, M. A. 12mo. pp. 348. London, 1839. Murray.

THE author, having married a Russian lady, paid a visit to her family, and having resided a year, chiefly in the interior, has communicated to us some pleasant descriptions of the manners and habits of the people. As we have had occasion, however, to call attention to another work upon that great empire,* of a more important character, and cannot afford to have our whole *Gazette* bound in Russia, we must confine ourselves to a desultory rather than an analytical notice of Mr. Venables' volume. In this way our first extract gives an account of the domestic arrangements of a gentleman's dwelling:—

"For the interior arrangement of the houses, the custom is to have as many rooms as possible, opening *en suite*. If the reception-rooms are on the first floor, the ground tier is low and reserved for servants' rooms, offices, &c. The kitchen is generally in a detached building. The bed-room of the master and mistress of the house is usually connected with the drawing-room or saloon, by folding doors, which stand open all day, so that any one who pleases may enter.† Sometimes a folding screen runs across the room, so as to conceal the bed, washing-stand, &c., and sometimes when the lady has a separate dressing-room, the bed is exposed without hangings, but covered by a handsome silk quilt, while the toilette table displays the usual silver boxes and cut-glass bottles, which belong to a handsome dressing-case. The rooms by no means boast the same comfort and luxury of furniture which exists in England; the sofas are stiff and hard, and the chairs and tables heavy and clumsy, castors being seldom used; and the walls, instead of being papered or painted, are in general merely white-washed or coloured. I do not mean to say that elegant furniture is unknown in Russia, but that it is not generally diffused as in England. Indeed its preposterous expense must confine it to the houses, and for the most part to the town-houses, of a very few rich people. Gams, of Petersburg, will fit up a house with the utmost luxury and good taste, but then his charges would be double what would be paid to a first-rate London upholsterer.

* By the census of 1836, published at the end of the volume, the population amounted to 59,133,366, including above half a million of the clergy, their wives and daughters.

† "In the bed-room is usually a little open cupboard, which is filled with images, little black and brown faces set in gold and silver frames; before which a lamp or two is kept burning. In the corner of every room in the house is hung an image. For this reason it is considered extremely disrespectful to keep on a hat for a moment on entering a house, or even a shop."

Refinement cannot be considered as naturalised in any country till it can be obtained at a reasonable price, and can therefore become habitual to the people. To return to Russian rooms. The floors are generally bare, with the exception of a small carpet in one corner; they are composed of neatly inlaid wood, or boards painted in imitation of a parquet. Almost every apartment, without excepting the bedrooms, is a passage: and this is an inconvenience to which the Russians do not appear at all sensible. Since there are no bells, except one sometimes, which communicates from the saloon into the ante-room, the servants cannot live in one part of the house and their masters in another, an arrangement so materially contributing to the comfort of both, nor can the doors be shut on all that ought to lie behind the scenes. Here the footman must be close to the saloon, the valet must be within call of his master, and the maids must be next door to their mistress's bed-room; and each in general sleeps by night where he or she sat by day."

After telling many stories of wolves and bears, the author mentions the following cruel practice, and adds a whimsical anecdote.

"In the government of Novogorod, which abounds in forests, and is much infested by these animals, the peasants have, I am told, a most singular method of ridding themselves of their disagreeable neighbours. They find the young ones in the spring, and, watching their opportunity, carry them off in the absence of their parents. They then fasten them on a raft by nailing their feet to it, and set them afloat on the river. The old bears hear their cries, and follow the raft down the stream; at length the young ones die, and their parents become furious, and attack whatever they meet; but they are now at a considerable distance from their original haunts, so that those who were the authors of their misfortune, are not those who suffer from their vengeance. I was told this story by a lady, who assured me that she herself had seen a raft floating with the young bears dead upon it. The Russians have some singular notions about bears; among other stories they say that a fashionable pair of bears relieve themselves from the troubles of education by employing as a preceptor for their young ones a bear of inferior rank, who is weak and requires protection, and who takes charge of the young family, while their parents go out to catch food. The bear leader, who is called in Russa *peatoon*, or *pedagogue*, takes his charge to play in the sun, on the outskirts of the wood, keeping watch himself, and warning them by a cry, if any danger approaches. This very sensible custom appears not to have been as yet introduced among the Novogorod bears, since it would otherwise prove a great protection to their progeny against the cruelties practised upon them in that part of the country."

Mr. Venables' account of the conscription squares well with Mr. Brønner's military relations. There is something very like Falstaff with Mouldy, Bullcalf, and other worthies of his day, in the existing practice of Russia.

"Bribery often prevails to a great extent in the business of the recruitment; masters paying to have bad characters, who are unfit for soldiers, received; and conscripts who are fit, paying to be rejected. Clerks are sometimes detected in receiving from fifty to a hundred roubles from poor fellows for promised protection, which they have no power to give; and these gentlemen, if delivered over to justice, are punished by being made soldiers themselves. The doctor, too, in examining the conscripts, not unfrequently when he looks at their teeth,

finds, not a silver spoon, but a gold piece in their mouths; this he, of course, is intended to take, and in return to pronounce the man unfit for service. But the system of bribery is not always confined to these petty offences, the roubles are sometimes paid in thousands, and the receivers are neither the clerks nor the surgeons to the board. It is said, that the president, if he manages matters well, may clear, during the two months of the sitting, upwards of two thousand pounds; and when this is the case, of course clerks receive their mites with impunity, and gold pieces are quietly transferred from the mouths of the conscripts to the pockets of the doctor, instead of being publicly laid on the table of the board, as happens almost daily here, under the vigilant eye of a president known to be incorruptible himself, and not inclined to overlook the delinquencies and peculations of others. Having, as I have already told you, attended a sitting of the board of enlistment, I will endeavour to make you acquainted with their manner of proceeding, by giving you some description of the scene. The members, with the doctors and the secretary, are all in uniform, and wear swords; the civil uniform differing little from the military, except in the absence of epaulettes. A standard measure, which can only be lowered to five feet three inches, is placed in the room, flanked on either side by a tall corporal. The ante-room is crowded with peasants, and there are a certain number of soldiers and *gens d'armes* in attendance to keep order. I must premise, that when a man is received as a soldier, a patch is immediately shaved on his forehead to mark him: if he is rejected, a patch is shaved at the back of his neck to shew that he has been examined, and to prevent his being brought forward a second time. At the conclusion of each day's sitting, the recruits, who have been enlisted, are marched in a body to a church, where they take the oaths of allegiance and fidelity before a priest. To return to the proceedings of the board,—we will suppose the business to begin with the examination of the conscripts furnished from the estate of a private individual. At the president's order, one of the corporals in attendance opens the door into an ante-room, and calls out for the peasants of Ivan Petroitch Pashkoff to be in readiness: the president then reads out A.B., the first name on the list of conscripts sent by Mr. Pashkoff. 'A.B. come in,' shouts the corporal, and in walks A.B., stark naked. He is first placed under the standard, the corporal on each side taking care that he holds himself upright, which of course he is not very willing to do. 'Five feet four inches,'* says the corporal. The president enters the man's height opposite to his name in a book; the conscript is then handed over to the doctor, who pronounces him sound and fit for service. The field officer then examines him, to ascertain that there is no peculiarity in his person, such as being very much bandy-legged or knock-kneed, or having an extraordinarily shaped head, which would interfere with his wearing uniform. He pronounces his approval of the recruit; the president enters every thing in his book, and simply calls out 'Lop' (forehead): the corporal instantly shoves A.B. out of the room shouting 'Lop.' 'Lop, Lop,' is repeated in the ante-room, and the man is taken straight into another apartment where his forehead is shaved, and he finds himself a soldier. In the meantime, C.D.

appears before the board: he is either too short (if a sheet of paper can be passed between the man's head and the measure marking five feet three, he is rejected) or the doctor or inspecting officer finds that he is physically unfit to be received. The president calls out 'Zatillac' (neck), C.D. is shoved out of the room, 'Zatillac, Zatillac,' is repeated in the ante-room, the back of the man's neck is shaved, and he is set at liberty. If a man declares himself labouring under any defect, or subject to any complaint unfitting him for a soldier, and the case is such that the truth cannot be ascertained on the spot, he is sent to the hospital for examination, and a report on his case is received the following day. Of course these poor men often counterfeit fits and other infirmities, in order to avoid being enlisted, but if they are discovered, they are liable to severe punishment, and their claim to a discharge after twenty-five years' service, is sometimes taken away. When the turn of the crown peasants comes, three brothers enter together, one of whom is to be selected. They are accompanied by their father and mother, and their wives and children, if they have any; decency being laid aside, for the three young men are stark naked. The board, after referring to the register, and hearing all that the men, as well as their father and mother, have to urge in their excuse, decide that it is justly the turn of this family to furnish a conscript; the three brothers are therefore measured and examined, as in the case which I have described: and the result we will suppose is, that the eldest is tall and healthy, but he has a wife and three or four children; the second measures but five feet two inches; and the third brother is a fine tall lad of eighteen. Of the three, therefore, the youngest is under age, and the second is under size; they, therefore, are legally exempted from the conscription, and the eldest brother must be taken away from his wife and family and made a soldier, unless the lad of eighteen will voluntarily consent to serve in his stead. A scene now ensues, which is at the same time both pathetic and ludicrous. The elder brother and his wife, the father and mother, and the little children, all throw themselves on the ground and prostrate themselves repeatedly at the feet of the young man, beseeching him to have pity on the family of his brother, and to consent to be enlisted in his place. The poor lad looks with a bewildered air from one to another, not exactly knowing what to do, having no fancy to be a soldier, and unable to make up his mind to refuse. However, he is urged on every side, for the members of the board add their exhortations to the entreaties of his family, some bidding him be a good Christian and sacrifice himself for his relations, and others encouraging him with the promise of good treatment in the army. At last, completely overpowered, he musters up courage, crosses himself, and consents to be a soldier. The conscription frequently gives rise to most pitiable scenes, where married men, or the sons of widows or aged parents, are torn away from families, of which they were the chief prop and stay. The recruits often cry and lament bitterly their hard lot when they come before the board to be examined; but the moment they are enlisted and their fate decided, they generally cheer up and recover their spirits, as if they thought it useless to grieve over what could no longer be remedied or avoided."

It is wise to make the best of a bad bargain, either in Russia or elsewhere; and advising our friends to lay the maxim to heart, we take our leave of Mr. Venables and the military philosophers of Russia.

The Revelation of Saint John Explained. By Henry William Lovett. 8vo. pp. 452. Whittaker and Co.

WE certainly live in the restoration of polemical times, and times in which biblical and religious topics occupy more attention than for nearly two centuries before. This is an enlarged and corrected edition of Mr. Lovett's bold attempt to expound the mysteries of Revelation—a subject to be approached with doubt and wonder, and one which has misled thousands of enthusiasts in all ages of Christianity. It is not for us to offer an opinion upon it; but we may say that the author has displayed much learning and zeal in his endeavour to develop the portentous warnings of the Apocalypse. Alarmed, as it appears, from the growing "spread" of the Romish faith, not only in this country, but throughout Europe, and by the Oxford schism in the Protestant Church, in all of which he believes is to be seen the fulfilment of the prophecies, Mr. Lovett contends that *Saint Gregory the Great*, as the founder of papal domination, and of her long train of innumerable corruptions and abominations,—who is fondly and proudly referred to for authority, on every disputed point, by *Papists*, is, nevertheless, an irrefragable authority, for having, in bitter and violent language, in scorn, and indignation, affixed the title of *Antichrist* to whom-ever should assume that of *Universal Bishop*. The same stream, he declares, from the one same fountain, which has poured on the head of Popery all its mysteries and blasphemies in such copious torrents, has, with them, poured forth also its appropriate designation, by which it is so awfully characterised and denounced in sacred writ. The utter depravation of morals in all Catholic countries, exhibits at once the cause and consequence of that debasing religion, monstrous in her ritual, and cruel in her maxims. Mr. Lovett assails these in the unmeasured language of reprobation such as we have repeated in the foregoing sentences (and we desire it to be understood that we are quoting our author, and not offering opinions); and the following passage (p. 181) looks as if it were written for the sole purpose of holding up Mr. Newman, in *all his offices*, to public derision, as one of the swarm of small smokers, who are filling the church with their cloudy nonsense:—

"But the art of printing, by its seductive invitation to the publication of magazines, lectures, tracts, and other pious ephemerals, has prodigiously multiplied the number of small smokers; tens of thousands of sectarian pulpits are incessantly at work; and almost every university not only swarms with divines, but usually has among them some eminently learned professor, the *Ναὺς* of the day, whose powers of funigation might have been deemed by Fronto worthy of a place in his 'Laudes Fumi et Pulveris.'"

The prince of Roman poets had an inspiration of religious sentiment in prophetic warning to his countrymen—

"*Delicta majorum, immeritus lues,
Romane, donec templa refeceris
Ædæque labentes, deorum et
Fœda iligro simulacra fumo.*"

In a number of the "Investigator," which is held forth as having been conducted with talents and learning of the first order, it is acknowledged, that if it can be shewn that the two witnesses of God have been called up by a great voice to heaven, they would be ready to admit, that we are in the *time of the end*. This point of Scripture is the object of Mr. Lovett's labours; and he maintains that every symbol, however recondite, is readily fused and divested

* "This is expressed in Russian in a manner which, if literally translated, would be unintelligible in English. Five feet three inches, it will be remembered, is the minimum height for a soldier."

of its sacred veil, and stands confessed in the full costume of its real character, foreseen 1800 years ago, and revealed to the race of man under mystic symbols, for the wise purposes of Providence sealed up till "the time of the end." This fearful period he goes on to trace to its termination, and declares that the second advent of our Saviour will occur in the autumn of the year 1843; when the great prophetic epoch relating to this astounding crisis will all finally close. Our Saviour, he further contends, declared that he knew not, nor did the angels in heaven know, the day and hour of his second coming; but so far from saying that it never should be known before its accomplishment, he specially directs attention to certain signs of the times, which would immediately precede that great epoch; and for what possible utility were these declared, if not to enable those who hold his faith in purity and sincerity, to understand, since no word he ever used but had its solemn import,—“but my words cannot pass away?”

Relation des Mongols ou Tartares, par le Frère Jean de Plan de Carpin; notice en Tartarie pendant les Années 1245-1247. Première édition complète, publiée d'après les Manuscrits de Leyde, de Paris, et de Londres, et précédée d'une Notice sur les Anciens Voyages de Tartarie en général. Par M. D'Avezac, du Société Géographiques de Paris, de Londres, de Francfort, &c. Paris, 1838. 4to.

EVERY one who has looked into old chronicles knows what a fearful interest every thing connected with the Tartars produced during the thirteenth century. Even in England, the accounts which were daily received of their ravages, and their quick advance into Europe, filled every ear with terror. Various persons were sent at different times, less as ambassadors than as observers, who might ascertain the truth of the varying intelligence which was brought by vulgar report; and they returned with full and accurate accounts of what they had seen and observed; and these narrations afford us nearly all we know of this singular people at the time when their empire was in its greatest power. The two most valuable relations, written during the thirteenth century, are those of William de Rubruc and John de Plan de Carpin; the latter, though little, if at all, inferior to the other, yet much less known to the general reader: indeed, until the appearance of the publication whose title is given above, this narrative had only been published in a very mutilated form. A new edition of the “Voyage of William de Rubruc” has been recently published by the Society of Geography of Paris, in their valuable collection of memoirs and documents. M. D'Avezac's edition of Plan de Carpin is published in the same collection, but a certain number has been printed in a separate form; and on one of these we make our notice. We need scarcely observe that the editor has long vindicated his claim to the character of an able geographer and orientalist by several learned and interesting publications.

In such hands, the documents of the early history of so singular a people as the Tartars of the thirteenth century take a new form. Instead of a dry text, printed from a faulty manuscript, often so corrupt as to be unintelligible, we have a good text formed by careful collations, with a long and learned introductory treatise on the subject, wherein scarcely any point connected with it is left without a satisfactory explanation. We have a detailed account of the different travellers among the Tartars at this early period: a particular notice of John de Plan de Carpin, and his

mission, and of the state of Europe and Asia at the time he went; a commentary upon all the names and things the traveller mentions, drawn up as well from Oriental as European sources. Accounts of the Mongols and their famous leader, Tchenkiz-Khân, from independent authorities; and *éclaircissements* of many curious questions of history and fable connected with the subject. For ourselves, we have seldom read any work of the kind with so much satisfaction. Along with the texts of Plan de Carpin and Rubruc, we cannot doubt but that this essay will form the groundwork, ere long, of an entirely new popular history of the Mongol conquests.

The relation of John de Plan de Carpin, like that of his contemporary Rubruc, interests us by its *naïveté* and minuteness; and we can never for a moment doubt of the truth of what he tells us from his own observation. The curiosity of both these writers had been so great, and it had been exercised with so much success, that they had penetrated even into the privacies of the people whom they visited; and the picture they give of their character, their domestic manners, their superstitions in particular, and their ceremonies and festivals, are interesting beyond measure. Plan de Carpin left Lyon, in France, on his way to the East, on the 16th of April 1245, and passed through Germany into Bohemia. From thence he proceeded on to Cracow, and, after resting awhile there, reached Kiew, the metropolis of Russia, then in the power of the Tartars. On the 23d of February in the year following that in which he set out on his journey, after many hardships, our traveller reached the first Tartar camp, and from thence he was passed on from one station to another, till, on the 4th of April, he arrived at the grand camp of Bâton, the chief in command next to the great Khân himself, and in whose household he first became acquainted with the splendour and power of the Tartar princes. He passed thence through the country of the Comans, and other barbarous nations, until, in the beginning of July, he entered that of the Mongols. On the 22d of the same month, he reached the imperial camp of Kugük-Khân, with whom he remained till the November following; and then returned by nearly the same route till he arrived at Kiew on the 9th of June, 1247, whence he passed through Russia, Poland, Bohemia, and Germany, crossing the Rhine at Cologne, and so to Lyon, the point from which he started.

John Noakes and Mary Styles; or, “an Essex Calf’s” Visit to Tiptree Races: a Poem, exhibiting some of the most striking Lingual Localisms peculiar to Essex. With a Glossary. By Charles Clark, Esq. of Great Totham Hall, Essex. London, 1839. Smith.

It is not our intention to make any critical remarks on this pleasant trifle, but merely to extract a few stanzas to shew what the author calls “the most striking lingual localisms peculiar to Essex.” John Noakes is a farmer’s man, and lives in service; he falls in love with Mary Styles, who also is “out in service,” and is no “slammacks,” but

“A werry nice youn’ common seem’d
This Mary Styles to all;
An’ some—sich eyes an’ cheeks she had—
Har pritty ust to call.”

During their courtship they agree to go to Tiptree races together, and Mary is rather particular about John’s dress; as—

“Sed she,—‘I’d lieve yow’d nut at all
With me that day be found,
If you’re nut drest as smart as I
When in my yellar gown.’”

On their way to the races, they visit Mary’s family, as—

“A dinner nice the oad folks have,
At race-time, ollis’ ood,—
That day they had a toad-in-hole,
A dish that’s deadly gud.
But when oad Styles to gossie it
Bargun, he soon ded cry out:—
‘Missus! I thinks as how, tea-day,
Yow’ve put the meller’s eye out!
The taters, too, they’re nut anuff,—
The meat, ‘tis nearly rear!’
An’, about it, to maake a-tardo
Inclined he ded appear.
His dame rejoind,—‘That mauther, Sall,
I can’t trust to har yit;
The oven—by har baakin’ thus—
She dent hafe rascal it.’
Now, with har daddy, Sall’er seem’d
The favourite all o’er;
Aldoe a harum-scarum slut,
An’ so he jarred no more.
The dinner o’er, soon in the yard
To walk some wor inclined,
To see the flowers—but nut tell they
Had had a glass ov wind.”

They, of course, find plenty of amusement at the races, and the various sights call forth many dry remarks from John; and

“John was a-dry, an’ soon cried out—
‘Goon git some beer we’ool!’
He’d so to wait, it maade him riled,
The booths wor all chuck full.
Whollic waltin’, for a weasit-plee
He’d haggled, tell he swore,
Aldoe his fingers itch’d to haa’t,
He’d give the chap no more.
With waiters, when his beer was broke,
John’s stinginess increased;
He sed, it had bin squiggled tell
‘Twas jes as thick as east.
An’ thrip-pence for such stuff as that—
‘Twas quite out ov the way;
But he drink’d it up; so John, at las,
Down’d with the dabs to pay.”

John fancies that they have stolen his purse, but it turns out differently.

“John, jest arter he’d some ballets bote,
With him, oh, what a fuss!
For I’ll be dash’d if some rip han’t
Bin grabbin’ at his puse.
‘Well, this here is a pritty goo,
If they ha’ nab’d my gold!’
Cried John, who cudn’t tell his lorse
Tell all his cash he’d told!
But John’s puse, his savvins, bobe an’ all,
He found it still contain’d;
An’ his ‘baccar box, an’ muckinger,
Wor all the scamps had gain’d.
Though from him they’d cribb’d but liddle,
John was in sich a cue,—
If the rapscallion he’d a-cotch,
He’d put him in a stew.”

Again:—

“When far they’d trudged, John wou’d that a
New shummaker he’d git;
An’, whole stompin’, cuse’d the shoes he’d on
They ded so crompt his fit.
‘No, though the oad man gives me tuck,
An’, haps, he cobles stronger.
He so perishes my fit,’ said John,
‘I can’t stan’ it no longer.’
‘The las time I was on the heath,
That was a day—my eyes!’
Remember’d John,—‘It snew tolke fun,
An’ lore! how that ded frise!’”

It would be well if the examination of the languages of the different English counties was more closely followed, as many of the words still in use are very expressive, and we doubt not were originally spoken by the Danes and Saxons. Several words, which we have marked in the glossaries to Chaucer and other of the old English writers, are not yet obsolete in the provinces, and bear a very different interpretation to that given by the various commentators.

Bremner’s Excursions in Russia, &c.
[Third notice.]

THOUGH we have given this work its true character—that of containing much more important information on the subject of Russia—

we find that it would cripple us too much in other things, were we to do it that justice, by extracts, which it seems to us to deserve. We must, therefore, be content to refer to it for its general intelligence, and select a few further illustrations for the sake of our own readers. At the celebrated Summer Garden, St. Petersburg, Mr. B. says:—

"We should prefer visiting these gardens on the famous *fête* of the 20th of May, when the girls of the middle classes are brought out to catch husbands. This is one of the most singular usages we have ever met with. The Russians call it the inspection or show of young girls. Regularly as the first days of summer return, all the young women who have not got husbands are paraded here by their parents, each in her best dress and best looks. Bachelors, young and old, enter the alleys, with cautious step and anxious eye—glide in silence through the files of beauty ranged thick on each side—see some one whom they like better than others—stand a while—go away—come back—and take another look; then, if the honoured fair one still please, the victim ends by making proposals. To whom? To the young lady to be sure, guesses some impatient youth, but he guesses wrong. Such indelicacy is never heard of in Russia. A man to make love for himself would be contrary to nature; that is, to Russian nature, which is quite a different thing from human nature every where else. It is to the parents, then, that he addresses himself? No such thing! The unhappy reader is still wide of the mark. They manage these things very differently in Russia. A gentleman who intends taking a wife, employs some old hag from a class of women who live by match-making. He tells her what funds he has, what he is employed in, what he expects from his friends; and, naming the fair one whom his eyes have chosen, begs that she will explain all these matters, not to her, but to her family. This go-between, this most unclassical Proxenetes, whose wages are as regularly fixed as the percentages of a broker, enters on her mission in due form. Explanations are given on both sides; friends are consulted; negotiations of the most formal nature are carried on. Diplomacy is nothing to it. From unforeseen objections about prospects or dowry, the explanations of the high contracting parties often become as tedious as Belgian protocols. Months, in fact, may be spent on these preliminaries; but all this time the poor damsel has had no voice in the matter. She has not seen her intended; they have never met so long as to whisper a stolen vow to each other. There will be time enough for the unimportant process of becoming acquainted, when their fate has been irrevocably fixed. What have such silly considerations as like or dislike to do with marriage? In choosing a wife, it is a beast of burden, a domestic drudge, that the Russian wants, not a rational companion—an equal. Were he to consult his affections in selecting his spouse, could he have the pleasure of beating her whenever he feels inclined? Married women in the middle ranks appear to lead a most listless existence. Without education, and, by the jealous usages of the country, almost prohibited from taking exercise, their chief occupation seems to consist in leaning over the window all day long, with their elbows resting on cushions, and sometimes a poodle dog on each side."

Respecting the Russian Army, we have, *inter alia*, the following statements:—

"Whether the spirit and tone of feeling in

the Russian army are likely to be improved by the experiment now making, of filling it up with Polish Jews, may be inferred, from what an officer told us in describing these reluctant warriors. 'They are so fond of the smell of gunpowder,' said he, 'that each man needs to be put between two Russians, who pull him into action, and have instructions to shoot him if he runs away.' These men, be it remembered, are quite distinct from the real Poles. There are whole villages of them; and it was notorious during the late melancholy war in Poland, that a couple of Russian soldiers had but to appear in a place of some hundred inhabitants, and be allowed to do as they pleased; the people falling on their knees in terror, and granting all they demanded. The Russians, however, are far from sharing in this Jewish want of courage; yet their courage, even at best, is not of a kind that can be much relied upon. In mere looks, and such advantages as good drilling can give, few troops surpass them. The imperial guard is one of the finest corps in Europe. The Finland sharpshooters also, who were of such importance at Ostrolenka, are greatly admired. An English gentleman, who has been long in the Russian service, says, they are among the best ever known; with single ball the men can bring down a crow on the wing with the greatest certainty. The same officer states that, various as is the composition of the Russian army, there is not a single portion of it that will not endure any privation of food and rest, without the slightest murmur. Their power of enduring fatigue he considers quite wonderful.

"The regular period of service is twenty years; but if war be going on at the close of that period, two years more are required for privates. No pensions are granted, but there are regulations compelling the men to give so much of their pay to certain funds, from which, on being discharged, each man has four or five hundred roubles (16*l.* or 20*l.*) to receive, with which he enters on a little farm. Such, at least, was the statement made to us by an officer of great experience; but we are compelled to add, that it was flatly contradicted by another to whom we repeated it, and who insisted that the soldier is dismissed without a farthing. After this, go to Russia for truth! Each proprietor is compelled to furnish annually five recruits out of every thousand of the population on his estates, and pays to government the sum of thirty-three roubles (1*l.* 5*s.* 10*d.*) for the outfit of every man drafted. The nominal pay—near a rouble a-day—is better than in other continental countries; but after paying his rations, &c., the poor fellow has only a kopeck, or less than half-a-farthing, of pocket-money remaining. Small as the pay may seem, he comforts himself on reflecting that it is munificent compared with that of the sailor. In regard to food, the soldiers are looked upon as being very well off, every man getting three pounds of bread daily, as well as a liberal allowance of beef and vegetables. Every time the emperor is present at a review or parade, each man gets a rouble (or rather it is paid to the fund) and a glass of brandy. The best thing connected with the army, however, is that every serf on entering it becomes free.

"So little do the Russians like the idea of becoming soldiers, that all conscripts must be sent to head-quarters heavily chained, to keep them from running away. In the remote villages we frequently met small bands of them marching in this state, and for a long time supposed them to be convicts, so harshly did the emperor's ardent warriors appear to be treated.

The officers are but wretchedly paid. After many years' service, they have not more than 700 roubles (28*l.*) a-year. Without private fortune it is quite impossible to live in the army. Even generals are paid at a rate which seems incredible. Colonels in command have an allowance for table-money, which in part makes up for the smallness of their pay. Not satisfied even with the numerous army already at his disposal, the emperor would seem to intend that the whole of his empire shall be converted into one vast encampment; and with this view, by means of his military colonies, he is planting it with soldiers as people plant cabbages. There is great diversity of sentiment about the success of these establishments; but of the schemes which he hopes to accomplish by them and his numerous army, there is but one opinion."

The author mentions the vast increase of the Russian Navy, and asserts that she has at least sixty steamers in her service; but sees no occasion for alarm in the circumstance. One remark, however strikes us.

"England ought also to look well to the state of her relations with Denmark, and endeavour, by every means, to cultivate a good understanding with a power whose friendship will be of the utmost importance in the event of a war. During a recent visit to Copenhagen, we were sorry to hear from all men of experience, of every shade of opinion, that England has been completely supplanted by Russia at the Danish court."

We now conclude with one home picture.

"At nine o'clock, Yakowbevo yielded us a supper of milk and eggs; while the village-girls, all wearing a kind of gipsy turban, which is common here, treated us with a serenade—the first instance we met with of a custom universal in Little Russia. These damsels are so mad about music, that in the short darkness of summer, they sing literally all the night through. Here they come accordingly, in full force. A band of them returning from the harvest-field, linked arm-in-arm, and with a measured step, are marching past our door, singing a low drowsy air, quite different from that we heard so incessantly among the Muscovites; and in which, though we had occasionally had songs from very young girls, we never heard the grown-up women join. This evening song was not, indeed, quite so sweet as that of Milton's 'sirens three,'

'Who, as they sung, would take the prison'd soul
And lap it in Elysium!'

but it was more tolerable than the singing with which we were so often assailed in other parts of this musical country. The Russian is essentially a singing animal. Scourge him till he howl again, and, be assured, his wonted drawl about grandmother and the goose is resumed before you have turned the corner. Talk of Italy! Russia shall henceforth be the land of song. You may travel from one end of Italy to the other, and never hear a peasant, man or woman, carol a single air. Even in the large towns, unless from some bacchanalian party going home from a glee-club or the theatre, the traveller seldom hears Italians singing. They keep all their notes to themselves, to make us pay dear for them in London. Among the Russians, on the other hand, nothing but singing greets the unhappy traveller's ears, from Cronstadt to Odessa. Wearisome as our postillions' songs had always been, they became even more irksome to us after we learned that the words, if words they can be called, which they consist of, have not the smallest meaning. It would be impossible to draw any kind of sense from their

most favourite songs. In some parts of the country, ballads of considerable beauty may still be heard; but they are now very scarce. Many of these, according to Karamsin, 'are exceedingly beautiful, and especially those of a historical nature. They generally relate to the happy times of St. Vladimir, and were composed during the subjugation of our empire—in those disastrous days when the imagination, weighed down beneath the yoke of the infidel, had no other spur than the remembrance of the eclipsed glory of the country. The Russian,' he most truly adds, 'sings in joy, and even in the midst of sorrow.'

MISCELLANEOUS.

Suggestions for Facilitating the Enfranchisement of Copyhold Property, tending to the Mutual and Equal Benefit of the Lords and Copyholders. By Andrew Vau Sandau, Esq., Solicitor. Pp. 24. London, 1839. W. Stephenson.

UPON this important subject a Parliamentary Report has been made, which Mr. Van Sandau examines, and, contemplating early legislative measures to be called for, points out where he considers its recommendations would be beneficial, and where otherwise. It is not exactly within our province to decide upon his Plan; but it does seem that the giving an option to Copyholders, and making enfranchisement (with certain provisions and restrictions) compulsory on the Lords, would tend greatly to benefit them, the landed interest of the country, and many schemes for national improvement.

The Last of the Plantagenets, &c. Pp. 395. London, 1839. Smith, Elder, and Co.

A THIRD edition speaks the prosperous career of this historical narrative, to which we paid due respect on its first appearance.

Old English Poets. Edmund Spenser's Works. No. I. Double columns. Pp. 48. London, 1839. W. Spiers.

NEARLY nine cantos of the "Faëry Queen" are contained in this shilling No., neatly printed, and on fair paper. We trust that Spenser will henceforward be more read, and less spoken of by those who have not read his treasures of Poetry.

A Treatise on Geology. By J. Phillips, F.R.S. G.S. Vol. II. pp. 308. London, 1839. Longman and Co.; J. Taylor.

No. III. of "Lardner's Cabinet Cyclopædia." This volume completes one of the ablest of its contributions to Science. The professor of geology in King's College (London) is unquestionably one of the best authorities on the subject; and he has treated it in the most clear and luminous manner within these two moderate-sized volumes.

Calandrino, Bruno, and Buffaluccio, in search of the Heliotrope. Engraved by E. R. Whitfield, from a Painting by H. P. Briggs, R.A.

ONE of the short and pleasant tales of the Decameron made "sensible to sight." There is great breadth in Mr. Briggs's style; and his compositions (like those of his early instructor, Opie) are always simple and masculine. He is too apt, however, as in the present instance, to represent his figures in motion leaning forward so excessively, as to give them the appearance of leaving one of their legs behind them. The plate is engraved in a masterly manner by Mr. Whitfield.

Journal of Three Voyages along the Coast of China, in 1831, 2, and 3; with Notices of Siam, Corea, &c. By C. Gutzlaff, &c. Pp. 312. London, 1839. Ward and Co.

A VERY deserved third edition confirms the merits of this publication, to which we had the

pleasure to bear our testimony when it first issued from the press. Since then, new and increased public interest has attached itself to the quarter which is the subject of Mr. Gutzlaff's elucidation, and which, consequently, give added value to the work.

Mr. C. M. Willich's Annual Supplement to the Tithe Commutation Tables for the year 1839 lies on our table, and we desire to point the notice of all persons concerned in tithe matters to this most useful publication; in which the calculations of months are combined in half a dozen clear and intelligible pages.

A Fantastical Excursion into the Planets. Pp. 149. (London, Saunders and Oley.)—"A fantastical excursion into the planets."

The Poetical Meditations of M. Alphonse de la Martine. Translated into English Verse, by the Rev. H. Christmas, A.B., &c. Pp. 268. (London, Parker.)—A fair, perhaps a rather tame, translation of poems, which, even in the original, are more pious than poetical.

Specie in Money Making, No. I. (London, Medwin and Co.)—The greatest spec in this novelty is whether it will be profitable to its author and publishers. It shows some talent in opening; but the principal story is rather point-
less.

The Universal Calculator's Pocket Guide, by R. Wallace, A.M., &c. Pp. 112. (Glasgow, M'Phun; London, Cotes; Edinburgh, Whyte.)—A small, but good, companion to point out the uses, &c., of mathematical tables.

Pain Tracts, No. VI., by a Union of Clergymen. Pp. 58. (London, Smith, Elder, and Co.)—An examination of Dr. Pusey's opinions on baptism and regeneration, and arguing against the new Oxford lights, that the instruction given by the fathers cannot, and ought not, to be a general canon of interpretation.

The Lady and the Saints; in Three Cantos. With Ten Vignettes by R. Cruikshank. Pp. 235. (London, Bull.)—There is no "Hudibras" in our day. This is a sad piece of doggerel, aimed at the low fanatics who usurp the post of saints, or religious teachers.

Gibbon's Roman Empire, with Notes, by Milman, Vol. XI. (London, Murray.)—A map of the Crusades is a very serviceable addition to this, the penultimate volume of the work.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

BENJAMIN ROTCH, Esq. V.P. in the chair.—On Tuesday evening, Mr. Savage delivered an illustration on centering for bridges and domes. He produced models, exemplifying the various modes of construction, and adverted particularly to that of Mons. Perrouet. He entered into the merits of the building of Blackfriars' Bridge, by the late Mr. Milne, and adverted to many important improvements recently made in centerings; clearly shewing the test by which their strength might be ascertained. He referred to a model of his own, which, naturally enough, he considered good, and paid a high compliment to Mr. Alfred Ainger, for one constructed by him, and rewarded by the Society a few years ago. In treating the subject of domes, he evinced consummate knowledge of their construction and comparative value; and alluded to that of St. Paul's, which, he observed, in fact, consisted of three. The lecture was highly interesting, particularly to architects and professional men generally.

On Wednesday, an election for a collector took place. There were seven candidates, one of which was the son of Mr. T. Woodfall, who has been assistant-secretary to the Society for more than thirty years; the excellent feeling which was evinced on the occasion towards him was truly gratifying. Though the candidates stood the ballot, Mr. Woodfall, jun. was elected by a majority of 150 votes. As the worthy vice-president in the chair (Mr. Richard Twining) observed, it was one of the most partial elections he ever witnessed, being all on one side; at the same time it must, he observed, be considered an impartial vote by ballot, as members delivered the name of the favourite candidates unfolded, and open to the inspection of those surrounding them. Indeed,

it was as it should be,—almost a unanimous testimony of the good feeling the members entertained towards an old and efficient officer.

LINNEAN SOCIETY.

MR. FORSTER in the chair.—Professor Carus of Dreden, Dr. Endlicher of Vienna, Dr. Torrey of New York, M. Dutrochet, and M. Milne Edwards, were proposed to fill up the vacancies in the list of foreign members. Read a paper, by Professor Lindley, 'On the Anatomy of the Roots of *Ophrydea*.' Much difference of opinion exists amongst visitors respecting the nature of the substance termed salep, which is well known to be the produce of the roots of certain plants of the orchis family. Most French writers regard it as consisting entirely of starch; but Dr. Lindley has ascertained that the peculiar properties of the roots of the *Ophrydea* are owing to the presence of a gummy substance closely akin to *bassorine*, collected in masses or nodules, which, although apparently homogeneous, are really composed of minute cells. Dr. Lindley has not detected the substance in the roots of the other tribes of *Orobanchaceae*. Read, also, a paper 'On the Botanical Geography of New Holland,' by Dr. Lhotsky. The characteristic vegetation of New Holland, as Mr. Brown has long ago remarked, is in a great degree limited to the principal parallel, that is, between 33° and 36° south latitude; beyond these limits the peculiar features of the vegetation diminish. Dr. Lhotsky observes, that the difference between the interior and coast vegetation of New South Wales is very striking; and he attributes the advantages of the interior districts, such as Argyle and the Mendro Downs, to the prevalence of plants belonging to European genera, which afford an abundant supply of herbage for cattle.

ROYAL GEOGRAPHICAL SOCIETY.

FEB. 11. Mr. Hamilton, F.R.S., president, in the chair.—The paper read was 'A Memoir to accompany a Chart of the South Coast of Arabia, from the Entrance of the Red Sea to Misirat, in 50° 43' 30" east long.' by Captain Haines, Indian Navy; communicated by the Court of Directors of the East India Company. The survey here described took place in the years 1834-6; commencing at the strait of Bab el Mandeb, where the Abyssinian and Arabian shores approach within 1½ geographical miles, it extended eastward for about 500 miles. The most remarkable features in this space are the two lofty peninsular promontories, named Jebel Hasan and Jebel Shamahan, rising respectively 1237 and 1776 feet above the sea, which like two sentinel islands guard the entrance to the magnificent bay of 'Aden, which they enclose. Immediately to the eastward of the latter promontory lies 'Aden, once a populous and thriving town, now almost a heap of ruins, inhabited by about 600 persons, situated on a plain, nearly one mile square, encircled on the land side by singularly pointed hills, with its eastern face open to the sea; while immediately in front is the rocky fortified island of Sirah, which commands the eastern bay and town of 'Aden; this is a triangular rock about 450 feet high towards the southern end, half a mile long by 600 yards broad. Of late years the sand has filled up the small creek which used to separate it from the main-land, consequently at low-water it is now joined to the coast of Arabia. On the summit of the island is an old fort with a wall which reaches down to the round tower on the other side, the only fortification now perfect. But if these were all put in repair, a mere handful of men could defend it; three reservoirs for water

still remain, but one of them is almost entirely filled up with sand and stones. There are several mosques in 'Aden, but the only one kept in repair is that lying immediately to the southward of the town, being the mosque and tomb of Sheikh Idrūs. To the S.W. the Wādī Kubbah, or Tomb Valley, extends among the numerous pointed hills that inclose the plain; to the N.W. a track leads through a pass in the hills, at an elevation of 226 feet, and descends upon the shore of the western inner bay, and on the sandy isthmus which joins this rocky peninsula to the main-land. And here we are indebted to the perseverance of the late Doctor Hulton, our surgeon, and Mr. Cruttenden, of the *Palinurus*, for the discovery that what has hitherto been vulgarly termed a Roman road is in fact the aqueduct of Solymān the Magnificent, extending in a general N.W. direction upwards of eight miles into the interior. It is built of red brick and stone, about four feet six inches wide, and the inclosed water-course measures 19 inches by 16; there are no remains of arches, the ground not requiring them; and its general appearance is that of a mound about five feet high and bricked over. Commencing at the northern extremity of the peninsula, just inside the ruined wall named Dureib-el-'Arabī, which extends from sea to sea entirely across the isthmus, only 1300 yards wide at this part, the aqueduct for the first mile curves slightly to the eastward, whence it assumes a N.W. direction as far as the village of Bir Amheit, a distance of 16,320 yards. Here was the source that supplied the various reservoirs placed at certain distances along its side; the well is 60 feet deep, and near it are the ruins of a small fort. The white tomb of Sheikh Othman is conspicuous on the right side of the aqueduct, about 2½ miles before reaching Bir Amheit, and a bridge is thrown across the north-eastern end of the inlet Khōr Maksa, where it joins a large swamp. The labour and expense employed by the Turks to ensure a plentiful supply of water—one of the prime necessities of life in this arid and burning climate—are highly praiseworthy. Besides the magnificent aqueduct above mentioned, there are numerous hanging tanks, if the term may be allowed, formed by excavations in the limestone rocks, which receive the mountain-stream, and have a deep hollow beneath prepared to receive the surplus water overflowing from that above. There are also several tanks of great size around the town, and about 300 wells lie towards the plain, many of which are hewn out of the solid rock, from 60 to 125 feet deep. Another fine tank, just beyond the before-mentioned wall, was exclusively intended for the use of vessels in the harbour. Such magnificence in works of public utility bears the strongest evidence to the former state of opulence and prosperity of 'Aden; indeed we know that scarcely two centuries and a half ago this city ranked among the foremost of the commercial marts of the East. In the time of Constantine it was considered a Roman emporium, and celebrated for its impregnable fortifications, its extended commerce, and excellent ports, in which vessels from all the then known quarters of the globe might be met with. But now what a lamentable contrast! its trade annihilated, its governor imbecile, its tanks in ruins, its water half brackish—deserted streets, and still more deserted ports—yet these latter remain as Nature made them, excellent, capacious, and secure. The remains of several old fortifications and other buildings are met with along the rugged paths of Jebel Shamshān; in 1838, accompanied by Lieutenant Swan, Dr. Arbuckle, and Mr. Hamilton, officers of the *Pa-*

linurus, I ascended this mountain, and discovered to my surprise that an excellent road had already been made from its base to its summit, built in a zigzag direction, from 10 to 12 feet broad, and in some places raised to the height of 20 feet. Centuries have elapsed, probably, since this great and skilful undertaking was completed; yet it is extraordinary to observe how slightly it has suffered from the destructive consequence of time. Another object here of some interest to the historian is a Turkish cemetery on the S. side of the plain of 'Aden; many of the tombs are constructed of white marble, and the head-stones inlaid with jasper tablets, on which are inscriptions surmounted by the cap and turban. At 'Aden also are three long brass guns, probably relics of Solymān the Magnificent, perhaps brought here by his fleet in 1530. The peninsula of 'Aden bears much resemblance to the rock of Gibraltar, and could easily be rendered as impregnable; but its rocky heights are more elevated and much more peaked in their outline than those of that celebrated European fortress. The present Sultan of the Abdālī territory, in which 'Aden is situated, is an indolent and almost imbecile man, 50 years of age, who resides at Lahij. At 'Aden good water may be procured; fire-wood, vegetables, and fruit are scarce and dear; in August and September, grapes and pomegranates may be had; bullocks and sheep are plentiful, and occasionally poultry. Of its present population of 600 persons, 250 are Jews, 50 Banians, and the rest Arabs: here is a dowlah, or assistant-governor, a collector of customs, and a guard of 50 Bedawi soldiers. The exports consist in coffee and jowar in small quantities; the imports of cotton cloths, iron, lead, rice, dates, and occasionally cattle and sheep from Berbera, Bander Kasim, and Zeylah, which afford the Arabs an opportunity of improving their breed of cattle. The revenue is derived from a heavy duty on both exports and imports, and a land-tax of 25 per cent. (?), and amounts, I believe, to about 12,000 dollars (£2500) annually: yet the dowlah contrives to increase this sum by his extortions on every occasion. The sultan possesses three small vessels. But, as before mentioned, the superiority of 'Aden is in its excellent harbours, both to the E. and to the W.; and the importance of such a station, offering, as it does, a secure shelter for shipping, an almost impregnable fortress, and an easy access to the rich provinces of Yemen and Hadramaut, without the long voyage to Mokha, is too evident to require to be insisted on. The memoir was illustrated by a well-drawn general chart of the coast of Arabia; with detailed plans of 'Aden, Markallah, &c. on a large scale; and accompanied by some spirited and characteristic sketches of the remarkable features of these shores by Captain Haines and the officers of the *Palinurus*.

ROYAL INSTITUTION.

FEB. 1. — Dr. Grant, 'On the recent Discoveries and History of Animalcules,' creatures living, so infinitely small, that the mentioning their size subjects a lecturer, in the minds of many of his hearers, to a charge of inaccuracy, or, perhaps of worse. Still is it not the less true that animated beings of marvellous minuteness exist; that millions of animalcules live in a single drop of water; and that these creatures are of a complicate structure, and closely allied to animals of a higher class. They are various in species, possessing relatively cerebral ganglia, respiratory, visual, masticating organs, &c. and stomachs, to the number of one hundred and fifty in one animalcule.

They abound in pools, in rivers, extensively in the ocean, and in all waters on the surface of the globe; also in waters in mines, in water-percolating rocks, where no ray of light penetrates. Countless thousands inhabit mud; and dust, clouds of desiccated earth, contain their millions ready to resume their living state. They are capable of a torpid existence in earth dried up by a summer sun; and they hibernate frozen in ice. Poisons, if chemically combined with the water, destroy animalcules, otherwise their particles in any mechanical dissolution are too large to be swallowed; but even in the case of chemical combination, animalcules often revive after imbibing the strongest poisons. These powerful agents, therefore, have little effect upon these creatures, and the ordinary means of destruction none; but a shock of electricity bursts their bodies, and kills them instantaneously. What a confirmation to the thinking mind, of the importance of the universal fluid, and of its efficacy and agency in the economy of Nature! We will not follow the learned professor in his anatomical analysis of these animated atoms, but merely lay before our readers the astounding facts of their rapid increase, and of their enormous accumulation. The carcasses of all the whales and elephants that ever lived would only form pigmy hills in comparison with the immense mountains of their invisible unities. From one individual, in four days, one hundred and forty millions of millions would have existed, sufficient to form two solid cubic feet of siliceous rock. It may be necessary here to state, that most of the solid skeletons of *poly-gastrio* animalcules are external siliceous covers which envelope the entire body; they long resist decay, and they exhibit the general form and characters of the species to which they belonged. Both marine and fresh water species abound in the tertiary deposits of all latitudes, forming alone entire strata, or occurring with the remains of other classes; and they are observed, along with the scales of fishes, in the substance of chalk flints, or siliceous poriphera of the newest secondary rocks. Their remains form vast deposits and layers of solid stone. This wonder in some measure ceases when merged in the general view of the tertiary and most of the secondary formations. Testaceous rocks in some instances of more than one hundred and thirty millions of cubic fathoms in bulk are composed entirely of shells, the skeletons of molluscous animals. All the limestone of the globe is formed from animal bodies, and chalk contains myriads upon myriads of cephalopods and others. Animalcules then, are, as before said, the greater portion of siliceous rock; their nature has been revealed by the microscope, and their internal complicate structure fully developed by that instrument, assisted by the patience and ingenuity of experimenters. Substances considered formerly, indeed almost to our own times, mere gelatinous portions of vegetables or of zoophytes, have been proved, by modern accurate observers, to be distinct animalcules. Colouring matter, carmine put into water, was quickly conveyed into the numerous cavities, or stomachs, of the animalcules, and thus their whole interior investigated. The distribution of their species follow, in some respects, the laws of that of the higher classes; but in others present a singular phenomenon. Fresh water species have been identified with those of the sea, and several found in the deserts of Africa have also been discovered in the waters of Prussia. Upon their nature, relative to the colouring of waters, the luminosity of the sea, &c. &c., our limits

check our desire to dwell. One instance only will we state, and with it conclude our notice. Of the polygastric animalcules, the *gallionellæ* contain a very large portion of iron, and compose the rusty appearance of chalybeate springs.

Feb. 8, Mr. Parsey, 'On Natural Perspective.'—The perspective of Dr. Brook Taylor, who, about a century ago, reduced the science to mathematical precision, Mr. Parsey stated is defective, not in its mathematical principles, but in the misapplication of them, the laws of a particular case being made the laws of general cases. After enlarging upon and explaining this position, he proceeded to illustrate the two principal elements of visual science or natural perspective, foreshortening and convergence. He shewed the quantity of foreshortening to be invariably an equalisation of the rays proceeding from each extreme, and that the appearance and the equalised rays always form an isosceles triangle; also, that when surfaces are viewed from a point oblique to the axis of vision, as foreshortening in the length, so convergence in the breadth will take place. "This," he observed, "is a law of nature, from which we cannot depart but at the expense of rationality." Convergence in the breadth has been omitted hitherto with respect to parallel perpendiculars, which he maintained was a departure from natural effects. The old system of drawing perpendiculars by a section of the visual rays vertical to the ground plane, which could be revolved in any horizontal direction, is an error; for by the natural laws, Mr. Parsey argued, the revolution of the head, in viewing objects above or below the level of the eye, is as natural as the horizontal movement; and that in strict science the plane of the picture or the image seen is invariably at right angles to the axis of the eye, and not to the ground plane, which the sight puts into perspective as well as objects upon it. Natural perspective does not admit obliquity of view; upon this all its laws are based: for when objects lie oblique to the vision (which in most cases of observation they do), they are not seen in their places, but in the *planes* of their appearances, where the created *appearances* interpose between the objects and the eye. If the rays proceeding from solid objects to the eye, and forming a pyramidal system, be cut at right angles to the axis, it will always present the natural image seen by the eye. The lecture throughout was illustrated by several ingenious models.

CIVIL ENGINEERS.

MR. WALKER, president, in the chair. — The meeting on Tuesday was numerously attended, and many gentlemen, eminent in practical science, were present. The principal paper of the evening was upon the subject of heat, as evolved from the new material, Turf or Peat Fuel, obtained by compression. Various calculations and comparisons with coal, chemical additions, &c., were stated; and at the close of the reading an interesting conversation ensued, in which Lord Willoughby's successful experiments were described, and the superior manufacture of iron, steel, &c., from the peat and charcoal produced from the machine invented by his lordship was mentioned to the meeting. It was concluded that the subject should be resumed on a future occasion.

ELECTRIC POLARISATION OF SOLID AND LIQUID CONDUCTORS.

It appears, from numerous experiments, that the polarisation of polar wires depends on two circumstances: first, the current of the pile;

secondly, the nature of the liquid in which the wires are plunged." — *Bibliothèque Universelle de Genève*.

NEW THEORIES OF FERMENTATION.

THE "Bibliothèque Universelle de Genève" contains a very detailed and interesting article on the manner in which MM. Cagniard-Latour and Turpin have lately employed their investigations of microscopic vegetables, for the purpose of explaining the phenomena, hitherto so obscure, and apparently so complicated, of fermentation. The following are the principal results:—

1. Yests of all kinds originate in organic tissues, from which they isolate themselves, after a living connexion with those tissues, in the shape of minute globules, frequently invisible by the microscope, endowed with an individual vital centre, susceptible of development, and which may be considered as the seeds of various descriptions of *mucédinées*.

2. These *séminules* do not begin to sprout until, by slow degrees, they have attained to the diameter of the hundredth part of a millimètre.

3. All yests, from whatever organised substance they proceed, are identical; and, consequently, their mode of action, during the phenomena of fermentation, is the same as that of the yeast of beer, which was more especially examined.

4. If these yests, or masses of microscopic *séminules*, are introduced into a sugared liquor, at a proper temperature, the *séminules* which compose them sprout, and develop themselves in as many little *moniliforme* vegetables, having a tendency to ramify. This multiplication takes place at the expense of the sugar, a part of which is converted into alcohol, while carbonic acid disengages itself from the little vegetables, and rises abundantly in the shape of bubbles and froth.

5. The recognised existence of the globules which compose these vegetables, explains, by their disaggregation, and their reduction to the state of new *séminules*, the considerable excess of new yeast which appears at every fermentation.

6. All fermentation being the effect of a vital act proceeding from the development of a considerable number of organised individuals, a development which is the cause of the motion and heat observed in it, it cannot take place without the presence of organic matter, formed of dissociated globules, proceeding from animal or vegetable tissue. The action, entirely physiological, of these infusory globules, begins and ends with their existence, and the total exhaustion of the saccharine and nutritive matter contained in the liquor.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

Oxford, February 17.—The following degrees were conferred:—

Masters of Arts.—H. T. Estridge, New Inn Hall, Grand Compounder; A. R. Campbell, W. Dunlop, Balliol College; Rev. W. C. Lefroy, Christ Church; H. Elphinstone, Merton College (incorporated from Trinity College, Dublin), Grand Compounder.

Bachelors of Arts.—J. B. Maule, J. P. Harrison, Christ Church; E. H. Haslins, Queen's College; W. Pearson, Exeter College; W. J. Upton, Fellow of New College; H. W. Lloyd, E. Smart, Jesus College.

SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen, president, in the chair. — Mr. Gage Rokewood communicated an account of an English convent of the order of the Conception, established at Paris in the time of Cromwell, and to which many English retired

in the reign of James the Second; part of which being read, the remainder was postponed.

ROYAL SOCIETY OF LITERATURE.

ON Thursday, M. L. Hayes Petiet in the chair, Mr. Cattermole concluded the reading of the paper 'On the Latin Version of the Scriptures,' and a further communication was made on the subject of the site of ancient Tyre. Some interesting notices were also given by Mr. Hamilton, from letters of Colonel Leake and Mr. Millingen, in which the early occupation of Italy by the Greeks is curiously illustrated. Col. Leake describes a remarkable tomb which he had discovered at Rome, which was formed like an oven, and appeared, from the inscription, to be erected by a baker for the reception of his wife.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Statistical, 8 p.m.; British Architects, 8 p.m.
Tuesday.—Linnæan, 8 p.m.; Horticultural, 3 p.m.; Civil Engineers, 8 p.m.; Electrical, 7 p.m.
Wednesday.—Society of Arts, 7½ p.m.
Thursday.—Royal Society, 8½ p.m.; Antiquaries, 8 p.m.
Friday.—Royal Institution, 8½ p.m.
Saturday.—Guy's Hospital, 8 p.m.

FINE ARTS.

BRITISH INSTITUTION. [Third Notice.]

35. *The Warren Bank*. F. R. Lee, R.A.—Those who remember a similar subject by the same artist, in the exhibition of the British Gallery last year, may entertain some idea of the truth and simplicity which characterise the present performance. With the addition of colour, and the advantage of chiaroscuro, it must approach as nearly to the camera-obscura effects of M. Daguerre as art can approach to nature.

58. *Fountain of Fallacy*. J. M. W. Turner, R.A.—Certainly, one of the most beautiful and perfect examples of this extraordinary artist's poetical and imaginative genius. The rainbow tints that play in prismatic order about the fountain (which occupies the centre of the piece), are quite enchanting, as well as entirely novel in their character; and, with the Claude-like distance, and classical arrangement, render it one of Mr. Turner's most captivating pictures. As to the lines from an MS. poem, "The Fallacies of Hope," quoted in the catalogue, they seem to us to belong to that order of composition—the unintelligible.

65. *A Dutch Family*. W. Simpson. — In passing from the subject last mentioned to the present, we make a step at once from the imaginative to the real; for a more completely matter-of-fact painting, upon such a scale (the figures are half the size of life), was, we think, never produced. The picture elicits no other sentiment than that which a mother, her infant, and a grown-up child, placed in good composition, are calculated to call forth; but the interior, with its rich and picturesque furniture and accessories, is treated as if every article had been made (as no doubt it has) the object of a distinct and separate study; yet not in such a manner as to interfere with the living portion of the piece. Altogether, we think the performance deserves the "prodigious" of Dominie Sampson.

106. *The Stile*; 107. *Crossing the Brook*. T. Creswick.—To these, and to other productions by the same skilful hand which enrich the gallery, whether we consider the beauty of their composition, or the truth and mastery of their execution, the term "exquisite" may be most properly applied.

131. *The Upper Floor of Rembrandt's Mill*;

132. *Rembrandt's Mill.* E. W. Cooke.—Every thing connected with Rembrandt and with his mill (which, it appears, exists, and is used as a mill down to the present day), claims attention, especially when illustrated by an artist of high, and, in some respects, congenial talents. Each of these paintings exhibits a rich and picturesque variety of materials. The first is, in point of light and colour, the more brilliant; the second is sombre in tone, but admirable for its *chiaroscuro*.

151. *A Study.* "What's in a Name?" R. Rothwell.—If the quotation be put as a general query, we answer, "Every thing." "Get a good name," says the proverb, "and go to sleep." That, however, is not the kind of "name" desired for her lover by Juliet; who would be much dissatisfied if Romeo, on acquiring "some other name," were forthwith to resign himself to slumber. It is not difficult to imagine the reflections which occupy the mind of this charming creation of Shakspeare's genius, as, with downcast and pensive look, she is contemplating the flowers in her hand. The colouring is admirably clear and harmonious.

130. *The Valley of the Bens, Mont St. Gothard, with a Party of travelling Zingari.* H. C. Selons.—Nothing can be more highly picturesque than the character of the scenery, nor more in unison with the wild region than the figures scattered over it. The style and execution of this clever work remind us of Louthborough.

120. *A View of Goodrich Castle, on the River Wyre.* Copley Fielding.—We have long borne testimony to Mr. Fielding's talents in water-colour painting; we have now to express our further admiration of them as manifested in this performance, which especially excels in the character of the composition, the beautiful clearness of the aerial perspective, and the lightness of the atmosphere.

185. *Frosty Morning.* F. Goodall.—We are not sure that this is not the first production of a young artist; but, whether that be so or not, its character and treatment do Mr. Goodall infinite credit. "We take no thought of time, but from its loss," says Young; and the same might be said of water, and many other useful things. This is here happily illustrated in the various groups waiting their turn on the first opening of the plugs after a long continuance of hard weather. Among others is a millman, seated on his pail, smoking his pipe, and no doubt anticipating the profits which he will derive from its projected adulteration; a workhouse-boy with his tea-kettle, a dog lapping, &c. The gloom of a winter's morning is well expressed.

231. *The Banished Douglas.* J. Lilley.—We are sorry to see a picture so finely treated as this is, and belonging to the class which most deserves public encouragement, lung so high that its merits as a painting cannot be fairly appreciated. It has a centre place, it is true; but we can form no idea of its beauty in colour, and only see that the composition is excellent, the head of the banished Douglas noble and dignified, and the fair figure leaning on his knee most graceful and interesting. The artist who, at so early an age, won national admiration by his Portrait of Wellington, as well as by other excellent works, ought to receive every encouragement in the pursuit of his art.

263. *English Fare.* G. Lance.—A picture in three compartments; in which fowl, fish, and fruit are exhibited in all their tempting varieties, and in the artist's best style of execution. Need we say more?

[To be continued.]

NEW PUBLICATIONS.

The Royal Gallery of Pictures; being a Selection of the Cabinet Paintings in her Majesty's Private Collection at Buckingham Palace, Part I. Bohn.

It is well known that the peculiar taste of his Majesty George IV. led him to the especial, although not to the exclusive, admiration of the Flemish School of Painting; and those who recollect, and have been admitted into, Carlton House, must remember the highly finished and exquisite pictures, principally of that school, with which the walls of its comparatively small and domestic apartments were enriched. Many of them have also appeared at the annual exhibitions of the old masters at the British Institution; so that their merits are pretty generally known and appreciated. Having devolved to our present gracious and beloved Sovereign, they are now among the chief ornaments of her Majesty's private collection at Buckingham Palace. Such being the case, the plan of publishing a selection from these *chefs-d'œuvre*, under the superintendence of Mr. Linnell, himself an artist of well-known talents, appears to us to be an excellent one, and cannot fail to be favourably received by the lovers of the fine arts. The work is to consist of four parts, each containing eight plates. In the present part, the very first that meets the eye—Rembrandt's "Wise Men's Offering," engraved by Burnet,—conveys a singularly striking and correct idea of the character of the original picture: the effect of light is perfectly phosphoric. Vandyke's "Marriage of St. Catherine," engraved by Ward; Gerard Douw's "Grocer's Shop," engraved by Greatbach; Isaac Ostade's "Country Inn Door," engraved by Allen; Cuyp's "Landscape, with Foresters and Dogs," engraved by Taylor; Paul Potter's "Milk-maid and Farm Stables," engraved by Greatbach (the terrified cock in which, making the best of his way, with legs and wings, to escape from an approaching danger, must overcome the gravity of the most saturnine spectator); and Sir Joshua's "Death of Dido," engraved by his namesake Reynolds; are also, each in its way, admirably executed.

Scenery of Portugal and Spain. By G. Vivian, Esq. On Stone by L. Haghe. Colnaghi and Co.

We have repeatedly had to notice the very beautiful publications from the pencil of Mr. Vivian, which have, from time to time, made their appearance. Another, and a most charming one it is, now lies before us. It is replete with picturesque character, and the execution of the different views is exquisite. How much of the merit of this is attributable to the draughtsman, and how much to the lithographer, not having seen the originals, we are not qualified to determine; the probability is that it is pretty equally shared between them. However that may be, the result of their united labour and talents is delightful. Among our favourite plates are—"Tower of Belem;" "Lisbon, the Garden of the Mai d' Agua;" "Lisbon, View from the Public Gardens;" "Palace of Cintra, from the South;" "Cintra, the Penta Convent;" "Cintra, from the North;" "Arrabida;" "Leiria;" "Coimbra, from the East;" the several views of "Oporto;" "Scenery of the Donro;" "Villa da Conde;" "Ponte de Lima;" "Vigo;" "Redondela, in Galicia;" "Light-house of St. Sebastian and Coast of Biscay;" "Granada—View from San Cristobal" (would we were gazing at the reality!), &c. &c.

ORIGINAL POETRY.

LAY OF THE LAST SEASON.

DEAR me! dont you know? Bless my heart, how surprising!

Why that star of the gas-house—that dabbler at rising—The monster balloon, has been higher than ever, And touched at a place where balloon had been never! It seems that our Public, that patron discerning Of stage-play, and tight-rope, and tumbling, and learning, Of late years has made up its glorious mind That intelligent people no pleasure can find In a show, though the world had been ransacked in seeking one;

Though the Emperor of China had sent us from Pekin once; Though the Indian Venus should lend us her graces To dance naughty dances and go through their paces (A kind of experiment, thanks to the Fates, To restore proper taste lately thought of by Yates). Unless, just to keep curiosity rife, There's a proper and rational hazard of life. Then desperate men swing the cord *à volonte*; And women walked tight-ropes in petticoats scanty; A fire-king long got his bread by his baking, And drank prussic acid—a grand undertaking; But when 'twas discovered he poured down his throttle Clear water with "poison" 'twas marked on the bottle, While still in large letters 'twas seen on the "bill" A dose he would take that would twenty men kill, The generous public, with vast indignation, Gave poor Monsieur Chabert a smart castigation. Yes, basting the man who had patiently baked Till it was not by poisons his thirst could be slaked, We called him "impostor," and "thief," without measure.

Because he refused to be killed for our pleasure. Well, after a while every art had been tried Within the law's limits, and few men had died For the good of the public; indeed it was hinted That even in hanging our taste would be stunted; And deeds on which souls full of horror might sup Would be only in private theatres got up. The scene an apartment, a field, or a wood, And enter a scoundrel dabbled in blood: Act the second a jury of twelve honest men; The villain is tried for his life—but what then? The judge and the jury,—nine-tenths of mankind, Think "killing no murder"—the man is assigned His share of the colonies! All must be right—Yet 'tis awkward when murderers wander by night, When housebreakers give you a knock on the head, By way of a hint to lie quiet in bed, And not to disturb by your vain agitation A crackman pursuing his usual occupation. When strong men, and children, and maidens, and wives, Are one way or other deprived of their lives; Till of murders each year we may count up a score, And a wonder it is that we don't hear of more; For sympathy's rampant o'er those who've committed them,

And as to the victims, why nobody pities them. Now this is a matter we soon could arrange; Though judges might think such a remedy strange, A commission should sit, formed of men who have known A knife at the throat, when unarmed and alone, In the grasp of a wretch who between every slash, Ere he gives you another, cries "Hand out the cash." Thus "making night hideous,"—'tis all we would ask—We assign to these men of experience the task Of visiting death on the murderer's head.

This done, why a man might feel safe in his bed. And should a commission of half-murdered men Prove hard to collect in a hurry, why the public We've only next "session" the trouble of framing A new act to legalize cutting and maiming. But what, in the name of the man in the moon, Has all this to do with the monster balloon? A great deal, my friends, as excitement's the passion That rules in religion, and morals, and fashion. Why, to feed this excitement and love of the dreadful, The balloon was revived, which it seems had been dead full

Half a century or so since Lunardi and others, All worthy associates aeronaut brothers, Discovered balloons were of no use at all, But to give a man height for a wonderful fall; And owners of places of public resort The means of obtaining more coin than they ought By the peril of life in a manner quite shocking—The fact has been proved from Lunardi to Cocking. Up, up went Graham, and up, up went Green! The public was charmed as no public had been Since the gleaming days of excitement by slaughter, Of bloody land fights, and engagements by water. But, alas! very smoothly the vast machines rose And ladies went up without rumpling their clothes! The people got tired, when just then to save The balloon from returning again to its grave, Where with other extraordinary discoveries unnumbered, Amid mighty useless machines, it had slumbered, Some accident happened so strange, opportune, That nothing would do but a monster balloon, In which just a dozen or two might ascend, Nor people make trips at they used with a friend. Thus if life was lost, why, in case of a Quest, Each lucky survivor could speak for the rest: The *High seas* have laws, but we needs must declare We don't know the laws that apply to *high air*. Now, as it is not our intention to write From the morning of Monday till Saturday night,

We say, once for all, that this wonder of Green's has but every other what?—smithereens! And that ladies and gentlemen choosing a ride, If they can't do like Cocking and choose the outside, Why they can't be more safe than they'd be in the car, Let them loll in a coach, or stay just where they are. Well, now comes our story; again it was found No people got dashed into mummies or drowned: Mrs. Graham went up with more valves than common, And all of them open—a wonderful woman! A gentleman—gone in the country to star it— Ascends on a hoop, like a swinging Poll-parrot; But there's nobody killed, and there's nobody hurt, And balloons and ballooning get cheaper than dirt. "Then, what's to be done? Let us find, if we can, A something more costly than woman or man. Now, hey for a tiger," said bold Mr. Hughes: "I'm sure we'll astonish the town with the news: For never ascent of the kind has been seen As this Messrs. Tiger, Van Amburgh, and Green." And, oh! the sensation at Vauxhall created:— In truth, no description could prove too inflated. Away went the trio, as high as the trees— "Off ropes,"—and away they went high as you please. We didn't see "tiger," but felt quite delighted, Like a man who is fond of a show but near-sighted: We were sure he was somewhere, for two days ago— We think it was Monday, or Tuesday, or so— A bill hit our eye in a "bus," which declared, The tiger was ready and all things prepared. We had taken our lunch in the Gardens that day, And we'd made up our mind one more bottle to stay; So we drank as we looked at the monster, until We found by our glass that 'twas high time to fill. Again we gazed up to the skies—but in vain; We ne'er saw the monster of Nassau again! It was lost in the clouds, or had melted away— "Success to the voyagers—hip! hip! hurra!" And now a glass round, just to make us forget, Though we've had a grand sight, we've had no dinner yet. "No dinner?" "Why yes, sir, no dinner—have you? A man can't eat dinner at half-a-plate!"

Who need now for viands care?
Send the joyous wine around;
Heave no sigh for roasted hare,
Sparkling brimmers here abound.

What is turtle-soup to us?
Green, indeed, the fat may be,
But the greener bottle thus
Ministers to revelry.

Be the glorious haunch forgot,
Let it hang another day;
Who would chase his happy lot,
Or send his glass for plates away?

See! the glittering stars illumine
Our banquet-hall: fresh bottles bring;
Him who talks of care or gloom
From our fairy palace fling.

Now the crash of martial strain
Tells of battle-fields and camps;
Arrack punch and rapture reign—
Wreath our brows with coloured lamps.

Sweet, how sweet, is woman's song!
Melting music—wine—delight—
Joy is fleeting—can't last long—
"Love not"—"Jenny Jones"—"Good night."

Up, up they went: said good Mr. Green,
"Why this is the highest I ever have been;
Confound the valve! won't it open? I say—
Just pull the tiger a little that way."
Mr. Van Amburgh, he hauled at the brute,
For quiet it was as a lamb, and as mute
As an oyster (the simile's borrowed, we think).
"Why, Green, you are troubled; be comforted, drink."
"No comfort for me," cried poor Green very loud;
Van Amburgh said nought, he was blowing a cloud—
And of clouds they had more than enough, to their fright.
For yet the valve stuck, and 'twas coming on night.
"We must cut the balloon," exclaimed Green to Mynheer.
"I wish I had cut it," said he with a sneer.
"What the devil had I got to do with the skies?
Cut away and be d—d—d." And then Mr. Green tries,
After begging Van Amburgh, in spite of his rage,
Would give him his word, and his honour engage,
To keep down the royal Bengal in the car.
But ere Green could say, What a tiger you are!
While mounting the ropes, why he felt a great clasp
Applied to his shoulder, which left it quite raw:
Then into the car with a big bounce he fell,
And the "Tamer" he set up a terrible yell,
For the Bengal had lent him a box on the ears;
When, wonder of wonders! Mr. Green hears
The tiger in Dutch, very gruff but not loud
(Van Amburgh speaks Dutch like a native you know),
Remark "Now, my friends, I'll take charge of the craft;
If I don't, I'm a Dutchman!"—Here the brute laughed.
Then Van Amburgh looked big, for he's strong and he's
brave,
And he rushed at the tiger—the tiger looked grave.
"Hands off, Mr. Man! there's a change in affairs,"
Said the beast with a curl of his whiskers; "Who dares
To touch a free tiger? sit both of you still,
And I'll explain every thing: act as you will,

I'm master in spite of your stick and your damns.
Now don't make me angry." So down on his hams
Bengal, with propriety, settled to talk.
The two men looked on with complexions of chalk
As they saw him take up a cold fowl, which he slid
In the side of his mouth, just by way of a quid.
Then they cried out for snacks, with a terrible racket,
Till the tiger he swore, by the stripes in his jacket,
He'd tip 'em both over; so easing their lungs,
Which breathed very faintly, by holding their tongues,
They listened while Bengal explained how the earth
Had lost all attraction—"For what was there worth
The loss of a twopenny," said he, smiling vastly,
"When Van and I cut the theatre of Astley,
And you, Mr. Green, left the earth for the air
With that wonderful globular gas-house up there?
You see now," continued the talkative beast,
"We have been in ascent some twelve hours at least;
Thus I think it is proved, to our great satisfaction,
That in losing us three the earth lost its attraction.
Now, where we are going I'm sure I can't tell,
But, partly by finding my speech, and as well,
I believe, I may add, in some measure, by smell,
We cannot be far off the Moon I suppose;
For under that planet, as every one knows
—I mean every tiger—a large world exists,
Which no one can see from the earth for the mists
That circle around it—tradition declares
How tigers, and lions, and leopards, and bears,
And other nobles of creation, there lord it
O'er men like yourselves—ay, and you can afford it!
I've tried you, and, truly, I think I may speak
For my kindred and self: bully-man, though he's weak
In his limbs, is a limb of the devil for head.
And now, Mr. Green, I believe I have said
All that strikes me at present; so hand me that pie
I saw you, my friend, put so cunningly by:
I never take wine, so the bottles are yours.
But as to the viands, I'll munch them of course."
The gentlemen muttered, but not very loud,
For they both of them felt most remarkably cowed.
And the supper was laid, and the tiger began it
With such terrible snarl, that they watched for the planet
With eyes full of eagerness, looking for land
Ere their hungry guest might more victuals demand;
And falling in pie, and in bolts, and in roasts,
Mr. Bengal might happen to eat up his hosts.
Now that night—what a terrible night for the skies!
The signs of the sodal swore by their eyes,
They never were taken so much by surprise!
Mankind had arrived in that region before—
Aquarius, Gemini, one or two more;
But the Ram was all but in a passion to see
A tiger go up where no tiger should be—
At least so he thought, but his head was wool gathering,
And so varmint he thought that he broke all his tethering.
The Bull tossed his horns, as if mad to engage;
But soon 'twas all "bellows to mend" with his rage,
As they say in the "ring" when a man's out of breath;
Yet he roared till the Twins were both frightened to death,
And was stopped by a hoarseness—too bad to be cured.
But, Gemini, what the poor boys had endured!
The Crab was quite backward in making a row—
He never talked much, for he didn't know how;
But he said to himself, "I do wish I'd the flippers
Of that nasty beast with rich reach of my nippers."
The Lion alone of the lords of the sky
Expressed himself pleased as the tiger drew nigh;
He thought 'twas his wife from an African wild,
Whom, ages ago, he had left with a child
Who called him papa; and he got quite affected,
Wagged his tail, and cried out, "You have long been ex-
pected."
But, oh! what a rage he was in when he saw
The balloon going down over Thinglecumtaw
(That world where the beasts have the strong uperhand).
He said that his feelings he could not command,
And but that the Virgin was close by his side,
He'd have swollen with rage till he'd bursted his hide.
Meantime Mr. Green, with the tiger's consent,
Over Thinglecumtaw had cut open a vent.
Down went the balloon with a terrible bounce,
In the midst of a pound that belonged to an Ounce:
A sleek little fellow, with nice spotted clothes,
Red eyes rather roundish, and very black nose,
Which he turned up in scorn at the sight of our race,
But welcomed Bengal with a feline embrace.
The balloon rolled about, as balloons often will,
And Mr. Green showed, as was usual, his skill
In getting it properly packed, with the aid
Of some very strange men very decently made,
But then they all jumped, hopped, and scrambled, not
walked:
While out of the lot not a man of them talked.
Mr. Green very properly made memoranda
Of all things around him which seemed to demand a
Particular notice; but poor Mr. Van,
Not knowing exactly, good worthy man!
The use they might be to the wise of our world,
Crushed the paper together, and twisted and curled
The book that had made our philosophy ripe,
And with it unconsciously lighted his pipe.
'Tis said the next night, in an Amphitheatre,
Conducted like Astley's and not a bit better,
Bengal made his master Van Amburgh perform—
And we hear that he took the whole city by storm.
He danced to a whipping, he jumped through a hoop,
And the Ounce, who was manager, said to his troop,
That the best of all lions he'd ever known draw,
Was Van Amburgh who came in the monster Nassau.

And how they got back,—why, we really can't say.
Already we'd slept till the peep of the day,
And a brute of a fellow insisted on breaking
The thread of our dream—we are hard of awaking,
So we begged to dream on: "No, I don't care a farthing;
You must go with the rest—we must shut up the Garden."
R. J.

BIOGRAPHY.

JOHN VENDRAMINI, ESQ.

THIS distinguished artist and engraver died on the 8th, at his residence, the Quadrant, Regent Street, in his seventieth year. He was born at Roncade, near Bassano, in 1769; and to the age of nineteen, pursued his studies under such masters as his native place produced. He then came to London, and completed his professional education under Bartolozzi, with whom he remained till that celebrated artist left England. Upon this event, Mr. Vendramini established himself in Bartolozzi's house at North End, and dedicated himself entirely to engraving and the Fine Arts. In 1802 he married an English lady, of Portuguese extraction, and in 1805 paid a visit to Russia, passing one year at St. Petersburg and another at Moscow. Here his talents were highly and justly estimated, and he enjoyed the uninterrupted patronage of the emperor, who gave him full employment whilst he remained in the country. Nor was this the only cause he had to speak, as he always did, with gratitude and delight of his reception in Russia; for, from many of the most powerful nobles he received great kindness and hospitality, and was almost a constant and fêted guest in the palace of the Great Chamberlain Naritchkin, whose beautiful and accomplished wife occupied so influential a position in the imperial court. Indeed, there has seldom been exhibited a stronger instance of the value attached to the services of an artist than was exhibited in the case of Mr. Vendramini, who was absolutely refused a passport to enable him to leave the country and rejoin his family. On the contrary, the most brilliant offers of emolument were held out to induce him to stay; and it was only through the friendship and seal of his compatriot, the Duke of Sarsapriolo, at that time the Neapolitan ambassador, that he could effect his escape in the character of a courier charged with despatches. On one occasion, the Emperor ordered him to be presented with a diamond ring, worth 5000 rubles; and he was commanded to make a copy of an *Antique* Cameo belonging to the Imperial Collection at St. Petersburg, and esteemed the finest in Europe. It was considered so precious, that the copy was to be executed in the Palace; and it seems that some malicious courtier, desirous of disgracing the artist, contrived, as if accidentally, to throw down his study, and break a laurel wreath which encircled the brow of Alexander the Great. Siberia swam before his vision, but he repaired the injury in so skilful a manner as to avoid any censure; and the curious part of the story is, that, in a conversation with Pistrucci, many years afterwards, he was informed that this wonderful piece of antiquity was, in reality, a production of that artist! It had passed through many hands before it arrived at the honour of being Greek, and vaunted accordingly!—No bad lesson on the subject of *ancient art*.

On his return to England, Mr. Vendramini pursued his career with unwearied diligence and adequate success. Many of his works were much prized, and all of them honourable to his genius. "The Vision of St. Catherine," after Paul Veronese; the "St. Sebastian," after Spagnoletto; "Leda," after Leonardo da Vinci; and others, may be mentioned as faithful and

* This refers to an unobtrusive method of making known Vauxhall nights by throwing "bills" into omnibus windows.

masterly transcripts from these great painters, in which their different styles were admirably preserved. So devoted was he to the grand in his art, that he made, if not the last, nearly the last effort in England, to publish a work in that class worthy of being esteemed a national performance. We allude to his large and noble Engraving of the "Raising of Lazarus from the Sebastian del Piombo," in the National Gallery. In correctness of drawing we never witnessed his superior; for so true was his eye, that, instead of making drawings, he frequently engraved from the Picture at once.

In private life, Mr. Vendramini was as worthy a man as ever breathed—most amiable, gentle, benevolent, and intelligent; and none was ever more generally esteemed by his brother artists, and by all who knew him. He has left two daughters: the eldest, the widow of the late J. Stuart Jordan, Esq., who unfortunately fell a sacrifice to the climate of Jamaica whilst acting as a stipendiary magistrate; and the youngest, the wife of Thomas Grant, Esq. of Chedingsell Grange, Essex.

THE DRAMA.

THERE has been much of novelty since our last, but little to require detailed criticism: at any rate, we have been so thrown out by the Lenten vacancies, as to be unable to bestow it, were it necessary.

Drury Lane.—*Farinelli*, an opera by Barnett, with a libretto of the most stupid kind that ever disgraced even this species of literature, is remarkable for some of the finest instrumentation that has been heard in any theatre. It is, indeed, perfectly beautiful; and if there had been any thing like a proportion of airs and melodies to support the piece, it would no doubt have been most popular. As it is, the music is a great treat for musical ears.

Covent Garden.—A drama, entitled *The King and the Duke, or the Siege of Alençon*, has been produced here, and with success. It is put upon the stage with all the advantages which a liberal management ensures; and being well constructed and well acted, seems destined to that sort of run which rewards productions of its kind, when they please the audience by their splendour, humour, and variety.

Olympic.—Our *Cousin German*, previously known as *Best Intentions* at the Adelphi, has afforded so fine a scope for the exercise of Mr. Mathews' talents, that we may recommend it as a very amusing addition to the amusing performances of the animated Olympic.

St. James's.—During the last week, three new burlettas have been produced with success; they are of a light and pleasing character, and generally amusing. Considering the company has been hastily collected, in the middle of the season, we think much credit is due to the manager. The beasts are as clever and well taught as their neighbours, and jump through hoops, obey, fondle, and do every thing (but eat their master)* to the entire satisfaction of good audiences. The orchestra is excellent.

The Olympic Company migrate to the *Queen's Theatre* in Tottenham Street, and that of the *Adelphi* to the *Surrey*, for the Wednesdays and Fridays during Lent.

Hanover Square Room.—On Monday, Mori and Lindley's second Classical Quartet Con-

* We are told there is one person, more intelligent than the rest of his species, who has gone to the pit of Drury Lane every night since Van Amburgh commenced, lest he should miss the sight on which the beasts will devour him!

cert drew together a room full of fashionables. The programme was attractive, and its promises fulfilled. Corelli's duet for the violoncello and contra-basso, so often played by Messrs. Lindley and Dragonetti, was, as usual, encored, as was Miss Wyndham's delicious aria, "In questa tomba oscura." Beethoven's quartet in E flat was splendidly executed by Messrs. Mori, Moralt, Lindley, and, owing to the indisposition of Mr. Tolbecque, young Mr. Mori. The last quartet was far too long, so much so, indeed, that scarcely fifty persons were left to hear a sweet duet, executed in the purest style, by Miss Wyndham and Mrs. A. Toulmin.

Copyright.—Mr. Serjeant Talfourd has again brought his Copyright Bill into the house, which, with the experience of the past, in objections and parliamentary *ruses*, ought now to stand a better chance of becoming an effective measure.

H. B.'s.—Two novelties have just appeared, and full of animal life. No. 573, "Feeding the Animals—change of Diet." O'Connell as Van Amburgh, with a loaf of cheap bread on a pitchfork, and all the cabinet, as lions, tigers, &c., crouching or growling about him. Lord Melbourne, as the old lion, is superb; and Lord J. Russell and Poulett Thomson, tugging at a roll, "the corn-law question," are equally good. The queen is quietly looking at the feeding, and wondering at their "change of food." No. 574, Lord Brougham and Lord Durham on donkeys, tilting, à la Quixote, to the manifest damage of the latter, is one of the funniest of the series. Both the combatants and their steeds are imitatively ludicrous.

New Art.—The Russian journals announce that Professor Jacobi, of St. Petersburg, can produce in relief, and in the most exact manner, the most minute traits of an engraving on copper, and transverse them to other plates composed with the assistance of galvanism. The Emperor Nicholas has given the necessary funds for carrying this discovery to perfection; and, from the success of the first experiments, it is anticipated that this fine invention will be applied to the art of engraving with results of an extraordinary nature.

David Roberts, Esq.—The lovers of the fine arts will be glad to hear that Mr. Roberts has returned to Cairo, after proceeding above the second cataract, in good health and spirits. He had found some admirable subjects for his pencil in Egypt; and was about to start for Syria, to visit Jerusalem and the Dead Sea, &c.

C. Stanfield, Esq.—We learn also with pleasure, that Stanfield is well at Naples, and has been busily employed in sketching Italian scenery.

Wellington City Statue.—The sub-committee appointed to carry this design into execution, have, we understand, come to a final arrangement with Sir Francis Chantrey. Government having presented the material of cannon taken at Waterloo, of the value of upwards of 1500*l.*—making the whole subscription up to 10,500*l.*—the guns, and the sum of 2000*l.* are immediately to be given to the artist, a second sum when the small model is finished, and the remainder when the work is completed. Sir Francis undertakes that this shall be done by midsummer 1843. The same horse as that upon which Sir Thomas Monro is mounted is not to be employed, but another modelled and cast.

The Nelson Tribute.—The sub-committee upon the models, at Mr. Rainy's rooms, in competition for this monument, have, we hear, been engaged throughout the week in considering so as to make a report to the general

committee and subscribers at large. Rumour speaks highly of designs by Baily, Laugh, Carew, and others.

New Animal Grammatical Exercises (for beginners, and a specimen of Mnemonics).—Q. Why does a spaniel make a period?—A. Because it comes to a point. Q. Why is a pig an interrogation?—A. Because when you ask the question you say *A Sow* (as how?). Q. How can you beat all animals in speed?—A. By putting a little *Coal-on*. Q. What animal most resembles a note of admiration?—A. A cock crowing. Q. What is indicated by Kids at play?—A. *The High-fun*. Q. What by a Cur pursuing its own tail?—A. A circumflex. Q. What by a duck enjoying itself?—A. A Guttural. Q. What by a Lover popping the question?—A. A vowel. Q. What by a Toad in a hole?—A. A parenthesis. Q. What by a frightened Goose taking the water?—A. A dash. Q. What by idle boys throwing stones at frogs?—A. Interjections!

Judicial Will.—At a recent bankrupt examination, it appeared that the Unfortunate had dealt largely in discounts, and on one occasion was obliged to take as part payment, at a heavy price, a fine picture by an old master, of *Elijah fed by Ravens*. "These (observed Sir G—R—, glancing at the ravens) were, I suppose, the first accommodation bills that ever existed."

LITERARY NOVELTIES.

LIST OF NEW BOOKS.

Sixteen Select Idylls of Theocritus, with English explanatory Notes and Indexes, by D. B. Hickle, LL.D. post 8vo. 6s. — A Help to Family Prayer, by C. Watson, D.D. 12mo. 2s. 6d. — Guide to Arithmetic, by T. W. Krummacher, 12mo. 4s. — Explanatory Discourses on the Epistles, by the Rev. J. Hall, 2 vols. 8vo. 21s. — Nature Displayed, by W. Pinnock, 12mo. 3s.

TO CORRESPONDENTS.

J. Harrison Curtis.—We have to acknowledge the engraved head of this zealous artist (whose benevolent efforts on behalf of the Institution for the cure of deafness deserve the distinction conferred by the arts); and as the representation of a medallion likeness, engraved by Frebairn, think it eminently successful.

We are not sufficiently master of the bookbinders' question to offer any opinion upon them.

It is true, Capt. Morris wrote sons of a description not to be defended, but we could not allude to these in speaking of the lyrical beauties of such as might be published.

Our correspondent is right. The remark on Hood's *Electric Eel*, and the note on introducing the interesting experiments on the *Torpedo* in our last, might mislead the unscientific reader into a notion that the *Gymnotus Electricus* of the South American Coast, and the *Torpedo* of the Mediterranean, &c., were of similar species. We trust, however, that the slightest notice will point out the difference between an eel and a ray, though both exhibit these extraordinary electrical phenomena.

ERRATUM.—In our last Number, page 99, col. 1, line 10, for "exercised," read "exorcised."

ADVERTISEMENTS, Connected with Literature and the Arts.

WALKER'S NEW MODERN GENERAL ATLAS, consisting Thirty-four distinct Maps. To which is added a Descriptive Index.
By RICHARD RYAN.
In which is stated the nature of the government; the amount of population; the religion; the nature of the capitals and of the chief cities; together with the produce, exports, imports, and military force of every kingdom; and a summary of their islands, and foreign possessions, &c. &c.
"This work is better calculated to facilitate the study of geography than any other book of the kind we have hitherto seen. The Maps are clearly engraved and well printed, and the Appendix contains, in a few pages, all the information that is to be gleaned from reading through larger geographical works. In fact, the author has availed himself of all such information, and arranged it for the student, in the best possible manner."
London: John Williamson and Co. 12 Warwick Square.

NEW WORK BY THE AUTHOR OF
"MISREPRESENTATION."
Dedicated to Lady Hemiker,
JANET; or, a Glance at Human Nature.
In three vols. post 8vo.

"It does not contain a single sentiment but what is worthy of an English gentlewoman."—*Acropolis*.
"The characters are admirably drawn."—*Spectator*.
Saunders and Otley, Public Library, Conduit Street.

THE RHINE, NASSAU, &c.
In fcap. 8vo. with numerous Engravings by Cook, &c.
price 7s. cloth boards,
TRAVELS of MINNA and GODFREY
in MANY LANDS. From the Journals of the Author.
The Rhine, Nassau, and Baden.
Recently published, uniform with the above.

Travels through Holland, beautifully illustrated from the old Dutch Masters.
"This is truly a delightful and useful little book, abounding in information. It is written for the young; but many who have passed the age of manhood, may read these volumes with advantage."—*Acropolis*.
"A very pretty, sensible book; we should have no objection to travel through every country in Europe, in the mental company of such an original observer, who, though meek enough to esteem little children, has talent sufficient to interest adults."—*Court Magazine*.
"Hardly less entertaining than Tickel's 'Fairy Tales,' or Miss Sedgwick's 'American Truths.'"—*Athenaeum*.
Smith, Elder, and Co. 63 Cornhill.

In 1 handsome vol. price 4s.
SELECT BRITISH BIOGRAPHY; from the rude and warlike Days of Beowulf, to the Victorian Era. MURCHISON'S GEOLOGY.

THE GEOLOGY OF THE SILURIAN REGION, or Border Counties of England and Wales.

By RODERICK IMPEY MURCHISON, Esq. F.R.S.
Vice-President of the Geological Society.
John Murray, Albemarle Street.

Foot 5s.

DOMESTIC MANNERS OF the RUSSIANS.

By the Rev. R. LISTER VENABLES, M.A.
I cannot venture to add another to the numerous books on Russia which have already appeared, without pleading as my apology that I visited that country under circumstances affording opportunities, not usually within a stranger's reach, of observing the habits and character of the people. I am, therefore, induced to publish the following letters under an impression that some account of domestic life in the interior may be, to a certain degree, interesting from its novelty.

Being nearly connected by marriages with several Russian families, I accompanied my wife into that country in the summer of 1837, for the purpose of visiting her relations, among whom we spent twelve months, either in private houses in the interior, or in habits of constant intercourse at St. Petersburg.

John Murray, Albemarle Street.

2. Eight Sermons preached before the University of Cambridge, at Great St. Mary's, in 1820 and 1821. To which is added, a Sermon preached before the University on Commencement Sunday, 1825. 2d edition, 8vo. 7s. 6d.

3. Christianity always Progressive; being the Christian Advocate's Publication for the Year 1829. 8vo. 6s. 6d.

4. The State of Protestantism in Germany described; being the Substance of Four Discourses preached before the University of Cambridge, in 1825. The 3d edition, enlarged with an Appendix. 8vo. 14s.

"A few Copies of the Appendix remain, to be had separately, price 2s. 6d."

5. A Letter to the Lord Bishop of London, in Reply to Mr. Pusey's Work on the Causes of Rationalism in Germany, comprising some Observations on Confessions of Faith and their Advantages. 8vo. 7s. 6d.

6. Brief Remarks on the Dispositions towards Christianity, generated by prevailing Opinion and Pursuits; being the Christian Advocate's Publication for the Year 1830. 8vo. 4s. 6d.

7. Notices of the Mosaic Law, with some Account of the Opinions of recent French Writers concerning it; being the Christian Advocate's Publication for the Year 1831. 8vo. 4s. 6d.

8. The Gospel an Abiding System, with some Remarks on the "New Christianity" of the St. Simonians; being the Christian Advocate's Publication for the Year 1832. 8vo. 4s. 6d.

9. The Study of Church History recommended; being the Terminal Divinity Lecture delivered in Bishop Cosin's Library, March 15, 1834, before the Right Rev. the Dean, the Chapter, and the University of Durham. 8d edition, 8vo. 2s.

10. An Apology for the Study of Divinity; being the Terminal Divinity Lecture delivered in Bishop Cosin's Library, in 1834. 3d edition revised, 8vo. 2s.

By HUGH JAMES ROSE, B.D.
Late Principal of King's College, London.

Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and Daughters, Cambridge.

8 New Burlington Street, February 15th.

**MR. BENTLEY IS PREPARING FOR IMMEDIATE PUBLICATION
THE FOLLOWING NEW WORKS.**

I.

**THE VICTORIES AND CONQUESTS OF THE
BRITISH ARMY.**

By W. H. MAXWELL, Esq. Author of "Stories of Waterloo," "Adventures of Captain Blake," "Wild Sports of the West," &c.
2 vols. 8vo. with Engravings.

II.

BIRTHS, DEATHS, AND MARRIAGES. A NOVEL.

By THEODORE HOOK, Esq. Author of "Maxwell," "Jack Brag," "The Parson's Daughter," &c. 3 vols. post 8vo.

III.

PERU AS IT IS;

A RESIDENCE IN LIMA, AND OTHER PARTS OF THE PERUVIAN REPUBLIC.
CONTAINING AN ACCOUNT OF THE SOCIAL AND PHYSICAL FEATURES OF THAT COUNTRY.

By DR. ARCHIBALD SMITH. 2 vols. small 8vo.

IV.

"HOW DO YOU LIKE OUR COUNTRY?"

OR, AN AUTUMN IN AMERICA.

By CHARLES J. MATHEWS, Esq. 1 vol. 8vo. with Illustrations.

V.

**A WINTER JOURNEY THROUGH RUSSIA, THE
CAUCASIAN ALPS, AND GEORGIA;**

THENCE ACROSS MOUNT ZAGROS, AND BY THE PASS OF XENOPHON AND THE TEN THOUSAND GREEKS,
INTO KOORDISTAUN.

By CAPTAIN ROBERT MIGNAN, H.C.S.

Author of "Travels in Chaldaea," and Member of the Royal Asiatic Society of Great Britain and Ireland.
2 vols. small 8vo. with numerous Plates.

THE FOLLOWING NEW WORKS ARE NOW READY:—

I.
Sam Slick's Bubbles of Canada.
2d edition, 1 vol. 8vo. 12s.

II.
Memoirs of John Bannister, Comedian.

By John Adolphus, Esq. 2 vols. 8vo. with Plates.
"These Memoirs contain the path of half a century's social and dramatic recreation."—*Spectator*.

III.
The Prince and the Pedlar.
By Ellen Pickering,
Author of "The Maidens," "The Squire," "The Merchant's
Daughter," &c. 3 vols. post 8vo. 24s.

IV.
Wild Scenes in the Forest and Prairie;
Or, Sports and Legends of the Far West.
By C. F. Hoffman, Esq. 2 vols. post 8vo. 16s.

V.
The Widow Barnaby.
By Mrs. Trollope. 3 vols. post 8vo. 24s.
"Full of real drollery and humour."—*Times*.

VI.
Legend and Romance, African and European.
By R. Johns, Lieut. R.M. 3 vols. post 8vo. 24s.
"This work elevates the author to an enviable position in the
world of letters."—*United Service Gazette*.

UNIFORM WITH "THE STANDARD NOVELS."

Now in course of publication, in handsomely bound pocket Volumes (every Volume containing an entire Work), embellished with
Engravings, price Six Shillings each,

**BENTLEY'S STANDARD LIBRARY OF POPULAR
MODERN LITERATURE.**

Comprising Voyages and Travels, Popular History and Biography, and Works of an interesting Miscellaneous Character, relating to
Adventure and Enterprise.

The First Volume contains
Maxwell's "Wild Sports of the West."
Complete, with Fifteen Engravings, price 6s.

"This is one of those amusing productions which possess interest
for readers of every class, and particularly acceptable to
those who take delight in sports by deed and field."—*Literary
Gazette*.

The Second Volume contains
Washington Irving's "Astoria,"
Complete, with Portrait of the Author, price 6s.

"The most finished narrative of a series of interesting adventures
that ever was written. 'Astoria' we rate as the chief-
d'œuvre of Washington Irving. It is capitally adapted for pre-
sents."—*Spectator*.

Vol. III. to be published on March 1, will contain
Gleig's "Traditions of Chelsea College."
Complete, with Portrait of the Author, price 6s.

"In this work Mr. Gleig has given us another proof of his
great talent in military narrative. The adventures are to the
last degree curious and entertaining."—*Naval and Military Ga-
zette*.

**RICHARD BENTLEY, NEW BURLINGTON STREET,
PUBLISHER IN ORDINARY TO HER MAJESTY.**

Printed by JAMES MOYER, of Brook Green, Hammersmith, in the County of Middlesex, Printer, at his Printing Office, Number 26 Castle Street, Leicester Square, in the said County: and
published by WILLIAM ARMIGER SCRIPPS, of Number 13 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE
Office, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, February 15th, 1859.

REVIEW OF NEW BOOKS.

The Silurian System, founded on Geological Researches in the Counties of Salop, Hereford, Radnor, Montgomery, Caermarthen, Brecon, Pembroke, Monmouth, Gloucester, Worcester, and Stafford; with Descriptions of the Coal-Fields and Overlying Formations. By Roderick Impey Murchison, F.R.S., F.L.S., Vice-President of the Geological Society of London, General Secretary to the British Association for the Advancement of Science, &c. &c. 2 Parts. 4to. With a Map. London, 1839. Murray.

IN whichever point of view we consider this work, it is alike honourable to its author. As a contribution to geological science, any effort to classify and systematise the older rocks and their organic remains must have deserved a very high eulogium; but when we see this done for the first time, after so vast a field of labour, and with so much skill and ability, we know not in what terms sufficiently laudatory to express the obligations of the public, and of geologists in particular, for the production of so truly valuable a work. It must contribute largely to the advancement of geology; and is, indeed, in our judgment, not only a credit to the individual, but to the national character.

The Silurian system has been brought forward by Mr. Murchison and others on so many occasions, and been so much discussed at meetings of the Geological Society and British Association (of which discussions reports have been given in the *Literary Gazette*), that we do not feel it to be so essentially necessary as it would otherwise have been for us to take up the subject, now that it is so entirely before us, and endeavour to make readers aware of the extent of the service thus performed. So many questions and considerations, too, are involved in the details, that it is utterly impossible for even the largest review to do justice to them; and, confessing our incapacity, we shall beg leave merely to advert to some of the leading points.

On opening the book, we are pleased with a brief dedication to Mr. Murchison's indefatigable fellow-labourer on many a hill and dale, Adam Sedgwick, one of the greatest names known to geological science, and, altogether, one of the most remarkable and distinguished men of the age in which he lives. Simple in manners, unaffected in mind, endowed with the highest talents, eloquent and energetic almost beyond the utmost limits of other men, zealous in the pursuit and promotion of scientific inquiries, and turning all things to the single and absorbing end of teaching his fellow-creatures to look through Nature up to Nature's God;—such is Adam Sedgwick, to whom these volumes are inscribed.

And the offering is worthy of the man; and it is with regret that we again confess our inability to do justice to its merits. We can merely glance at some leading points.

"Having discovered (says Mr. M. in his Preface) that the region formerly inhabited by the Silures, celebrated in our annals for the defence of the great Caractacus, contained a vast and regular succession of undescribed deposits of a remote age, I have named them the 'Silurian System.' The introductory chapter details the

state of the subject when this inquiry commenced, the origin and progress of the work, and the objects to be attained by its completion. The first part, embracing descriptive geology, concludes with a review of the most striking phenomena of the ancient epochs which I seek to illustrate; the second describes the fossil animals which are embedded in the strata. The map, coloured sections, and numerous woodcuts, mark the subdivisions of the surface and the structure of the sub-soil; while the fossil animals are figured in separate plates. Finally, lest some of my readers should imagine, that he whose proper study is the frame-work of the earth, is indifferent to the beauties of its outline, I beg to offer a few pictorial sketches of this fine region, alike eulogised by the poet for its fertility and the valour of its people."

These illustrations are not beautiful, they are magnificent: and the map is one of extraordinary completeness and scientific interest.

As connecting the secondary deposits with the older slaty rocks, the strata investigated by the author appear before us in so perfect a shape as to form a system, and a very important one, in geological science. Mr. M. says:—

"Geologists will determine whether the results now offered to them are worthy of their approval. If it be acknowledged that no sound general views of the early periods of the earth's history can be obtained, without a close investigation of the beds which connect the sedimentary deposits previously known with the oldest stratified rocks, then I may venture to hope, that the endeavour to clear up this difficult subject will be considered a step, however small, in the foundation of the science. We already know that certain deposits, with their organic remains, may be expected to shew themselves (though sometimes under different aspects) in distant lands. Thus the tertiary and secondary strata have been identified over remote parts; while our own island is remarkable for having afforded in great measure the original types of the secondary age which directed that investigation. It appears highly probable, nay, it is even to a great extent already ascertained, that phenomena of the same kind prevail with respect to the system described in this volume; and that Siluria, with its accumulations of remote antiquity teeming with organic remains, presents a table made up of some of the earlier and hitherto undeciphered pages, which the history of the earth in other countries offers to our study. But the Silurian, though ancient, are not, as before stated, the most ancient fossiliferous strata. They are, in truth, but the upper portion of a succession of early deposits, which it may hereafter be found necessary to describe under one comprehensive name. For this purpose I venture to suggest the term 'Protozoic Rocks,' thereby to imply the first or lowest formations in which animals or vegetables appear. That there is a limit in the descending scale of formations, beneath which no traces of life have been discovered, is now pretty generally recognised; and, looking merely to this fact, geologists may agree to use the word 'Protozoic,' however they may differ in their interpretation of the phenomenon. One class

of observers believe that life did not exist when the earliest deposits took place. They hold that the oldest crystalline strata (ancient gneiss, mica schist, &c.) were formed during a period of great heat: and the astronomer seems to strengthen this opinion, by shewing that the planet must have been in a state of total or partial fusion when it assumed its present shape. Such reasoners are led to suppose that the earliest accumulations occurred under conditions which forbade the possibility of any vital organisation; and they are further strengthened in their creed, when, on examining the innermost folds of the earth's covering which have been extruded, they find in them no vestiges of life. They conclude, therefore, that it was only after a long time, and when the surface had to a certain extent been cooled down by succeeding changes and the addition of fresh materials, that animals and vegetables were called into existence. Other geologists contend that as yet we gaze but dimly into the obscure vista of these early periods; and that even if organised beings did live when the first crystalline rocks were formed, we cannot now hope to discover evident traces of their existence, owing to the great metamorphoses which subsequent agencies have produced in these masses—metamorphoses which may be well supposed to have obliterated all traces of primeval creation. Without here attempting to decide this question, I would merely observe, that the term 'Protozoic,' as above interpreted, may be used by the maintainers of either doctrine. In conclusion, I repeat that my chief object is to develop the upper portion of this vast series; its lower divisions belong to the task which has fortunately fallen to Professor Sedgwick."

This general explanation must suffice for our purpose; but we must allude to the pre-eminently useful results of an inquiry which may guide us where to look for, and where to know there cannot be found the invaluable deposit of coal, and also to help the miner throughout all his subterranean toils, in redeeming mineral wealth of every kind from the bosom of the earth. At the conclusion of Part I., Mr. M. thus returns to the theory:—

"We would observe, that abundant proofs have been adduced to shew that the forces employed in dislocating the crust of the globe were of extraordinary intensity. These well-registered phenomena are, we contend, absolutely inexplicable without the intervention of paroxysms infinitely greater than any of which modern times furnish examples; and yet we shall find that such data, though drawn from the opposite extremes of the subject, are not in collision, and will not impede the onward march of our science. Judging from the facts before them, geologists are entitled to look to a deep-seated and widely extended explanatory cause; and hence many have been led to believe, that all the ancient phenomena proving outburst and dislocation, have proceeded from a central heat, of which the volcanic ebullitions of past periods and the present are merely the external signs. Now, if the astronomer has correctly supposed that this planet was originally a semifluid mass,

which by revolving on its axis assumed a spheroidal form; the geologist, examining into the nature of the oldest crystalline rocks, sees in them the clearest evidence of the effects of intense heat, which bursting out at intervals through sedimentary deposits, evolved the sheets of matter which constitute the axes and centres of many mountain chains. He infers that central heat has subsequently been the source and great agent of the mutations he traces, not only from the surpassing grandeur of the phenomena, but also because they harmonise with the probable relative conditions of such periods; for each succeeding accumulation of fresh sedimentary matter would, as before hinted, necessarily tend to repress the power of heat proceeding from within, whether in the form of actual molten matter or of gas and steam. Each great igneous eruption, carrying with it fresh materials for additional deposits to be spread out on the bed of the ocean, would in fact be auxiliary to the repression of similar eruptions in future, by adding new folds to the pre-existing crust which enveloped the central and heated nucleus. The question therefore is, Does Nature teach us, that the most violent dislocations are apparent in our geological phenomena? If (as I firmly believe) she does, and further impresses on us the belief of a former state of paroxysmal turbulence and chemical change, of much deeper rooted intensity and wider range than any to be found in our own period; then the theory of central heat, as propounded by the mathematician, finds its best supporter in the geologist. Nor is this view incompatible with those principles which inculcate the doctrine of the gradual elevation and depression of modern continents. We have recently seen two of our first philosophers maintaining, that a central heat being granted, the necessary result of the increment of fresh matter in one part, and its abstraction from another (as is now taking place), must produce such variations in the conducting media, that the result would be the gradual elevation of some parts of the earth's surface, and the depression of others. Hence, therefore, we infer that those principles which teach us to reason from the operations of the present day, are completely reconcilable with the doctrine of geological catastrophes; for a central heat being admitted, we see in it the source of great former revolutions, as well as of the gradual heavings and depressions of modern times. He who had never extended his research beyond the phenomena of intense violence, so apparent in almost every mountain chain, would scarcely be brought to believe, that the agency by which these changes were accomplished was the very same as that which produces modern vicissitudes. But he who examines the whole range of terrestrial phenomena will acknowledge, that they are all in harmony,—all proceeding from the same source. Geology, therefore, in expounding the former condition of the globe, convinces us that every variation of its surface has been but a step towards the accomplishment of one great end; whilst all such revolutions are commemorated by monuments, which revealing the cause and object of each change, compel us to conclude that the earth can alone have been fashioned into a fit abode for man by the ordinances of Infinite Wisdom."

The Second Part treats of Organic Remains, assuredly the most popular and not the least interesting branch of geology, which, as the author well observes, "reveals to us the extraordinary fact, and without its aid the fact never could have been known, that as the globe

passed from one condition to another, whole races of animals perished, and were succeeded by others with organisations adapted to the altered state of our planet. On this phenomenon is based the fundamental principle of the identification of strata by their imbedded remains; the passage from one deposit to another being marked by a change in the animals which lived and died during the accumulation of each. Thus, although the fossils of any one great series of beds possess a common character, yet those which are found in the lowest and highest strata of a great formation are for the most part dissimilar in species, and often in genera."

Mr. M. goes on to investigate the phenomena connected with the older strata, particularly of the lower carboniferous system, and says:—

"That the fossils of the Silurian system here represented, and amounting in all to about 350 species, are, with the exception of a very few (chiefly doubtful casts), essentially distinct from any of the numerous and well-defined fossils of the carboniferous system; and further, that the old red sandstone which separates these two systems is also characterized by fossils peculiar to it."

He then puts these questions, which explain his position.

"Beginning with the vertebrate, are not the fishes of the old red sandstone as distinct from those of the carboniferous system on the one hand, as from those of the Silurian on the other? M. Agassiz has pronounced that they are so. Are any of the crustaceans, so numerous and well-defined throughout the Silurian rocks, found also in the carboniferous strata? I venture to reply, Not one. Are not the remarkable *cephalopodous mollusca*, the *phragmocones* and certain forms of *Litules*, peculiar to the older system? Is there one species of the *Crinoides* figured in this work known in the carboniferous strata? Has the *Serpuloides longissimus*, or have those singular bodies the *Graptolites*, or, in short, any zoophytes of the Silurian system been detected in the well-examined carboniferous rocks? And in regard to the corals, which are so abundant that they absolutely form large reefs, is not Mr. Lonsdale, who has assiduously compared multitudes of specimens from both systems, of opinion, that there is not more than one species common to the two epochs? If, therefore, it should prove, after all, that a few species of *conchifers* (an order of beings capable, perhaps, more than any other of enduring vicissitude), continued in existence, from the formation of the Silurian rocks to the accumulation of the carboniferous limestone, how can their presence break down the individuality and separation of systems, established upon such a vast preponderance of direct zoological evidence in the other natural classes? Even should a few other *mollusca* in the two systems be considered identical, there is no doubt, that by far the greater number of them which truly belong to rocks rising from beneath the old red sandstone, are distinct from those which inhabit the strata above that system. Such evidences are, therefore, as before mentioned, nothing more than additional supports of the important truth which geology has already established; that each great period of change, during which the surface of the planet was essentially modified, was also marked by the successive production and obliteration of certain races. Let it not, however, be imagined that I wish to inculcate the doctrine of every ancient formation having been tenanted by creatures absolutely peculiar to it. The large natural groups of strata only, or, so to speak, systems, can be thus distinguished. We have,

indeed, ascertained to a great extent, the distribution of organic life in the epochs anterior to our own, and we now know, that with each great increment of newly deposited matter, new animals appeared, and that while some vanished with the lapse of time, others unsuited to sudden changes were destroyed."

With this we are compelled to close these very imperfect illustrations of a very important work, and one which will be found in every scientific library both at home and abroad, in the old world and in the new.

Report on the Geology of Cornwall, Devon, and West Somerset. By H. De la Beche, F.R.S. &c., Director of the Ordnance Geological Survey. Published by Order of the Lords of the Treasury. 8vo. pp. 648. London, 1839. Longman and Co.

THE science of geology has been very fortunate in England, for it has enlisted so many distinguished men in its pursuit that only a few years have sufficed to raise it to a high and prominent place in general estimation. Among those whose labours and attainments have tended most effectually to elevate it to that position stands the name of Mr. De la Beche, than whom a more assiduous, able, and successful geologist, has not appeared in our own or any other country. And high as his name already stood, this volume will reflect still greater honour upon it, whilst, at the same time, it will throw a clear light upon a district of which the mineral wealth is so enormous, that hardly all the rest of the British empire could so well deserve the patient elucidation of its treasures. The maps, plates, and illustrations are admirable, and all the praise we have bestowed upon the preceding work with equal justice belongs to this, which is one of great national and scientific importance.

A Winter Journey through Russia, the Caucasian Alps, and Georgia; thence across Mount Zagros, &c. into Koordistaun. By Capt. R. Mignan, of the Bombay Army, M.R.A.S. author of "Travels in Chaldee." 2 vols. 12mo. London, 1839. Bentley.

KOORDISTAUN, singularly situated between the two most powerful despotic empires of the East, has so largely preserved its independence, and is not only interesting from its connexion with ancient history, but from its present condition, that we shall best consult the tastes of our readers, and the cause of the author, if we very slightly refer to the other matters in this work, and look chiefly to what he tells us of that country.

We accordingly pass through Russia in 1829, and all the notices and adventures which Capt. M. relates in his transit, with his lady, two children, and servants. Neither shall Georgia detain us, nor Persia; for, indeed, we have often, and more recently than the captain, traversed these paths; but come at once to our subject.

Koordistaun presents an immense succession of hill and valley, dells and plains of exhaustless fertility, and mountains towering to nearly the height of Mont Blanc. The top of the great range of Zagros rises upwards of fourteen thousand feet above the level of the ocean. Between the Araxes and the base of this range, high masses of mountain support table-land of greater or lesser breadth, which sometimes widens into broad plains. Where these plains do not occur, the mountains attain their greatest elevation. The Euphrates and Tigris sweep round, and run nearly parallel to these ranges. The great Karducian chain is

cut through by the Tigris, near to the site of the ancient Nineveh, whence both streams enclose the boundless plains of Mesopotamia, or Ull Jezirah, as the Arabs of the country call it, and, uniting at Koorna, or Apamea, fall into the Persian Gulf. The lofty chains which thus traverse and enclose the country of the Karduci, contain many productions of the mineral kingdom. Their treasures still lie buried and unexplored, because this territory is in the hands of barbarians, who are utterly ignorant of the hidden wealth with which nature has endowed it. Many hills contain inexhaustible mines of salt, especially between Van and Ararat. A small lake also exists here, which, during the autumn, is covered with a thick crust of salt. Saltpetre, sulphur, and arsenic, are likewise to be met with, and the soil is deeply impregnated with alum. Near the sources and banks of the rivers and their tributary streams, are mines of auriferous and argentiferous copper; and the rocks in the vicinity of these mines contain veins of the most beautiful and variegated marble and alabaster. The chains are composed of limestone to the north, and granite to the south. Volcanic rocks occur near Aroomia, and there also mineral springs are very frequent. The inferior ranges contain gypsum, coal, iron, and a stratum of white calcareous stone; pumice and whetstones are also met with. On Mount Zagros occurs a stone of extreme brittleness, filled throughout with a blue stratum, which resembles the *firozah*,* or turquoise. Argillaceous earths likewise occur, of various qualities and colours. The mountains are clothed with forests, to an elevation of about six thousand feet; above that height, the country is less covered; though, in some of the recesses, forests exist, even in more elevated spots, and, where they reign triumphant, traces of habitations are 'few and far between.'

The geographical division of Koordistaun is nearly as follows:—Koordistaun Proper, comprising the country lying between the degrees of northern latitude, 34° 30' and 39°, and longitude, 41° and 48° 30'; inhabitants, about 500,000; Ardelan, 300,000; Adiabene, 200,000; total number of inhabitants, 1,000,000. Of this population, four-fifths are Soonite Koords; the remainder are composed of Chaldean Christians, who are in alliance with a Koordish chieftain, by name Mustapha Khan, of whom I shall have occasion to speak presently. They are divided into four tribes, the descendants of those Christians who fled from the persecution of Justinian, who are now established and governed by an hereditary priest, and to this day inhabit the recesses of Mount Jidda-Daug, whose altitude is little less than the Caucasian range. In computing the population of Koordistaun, and taking into consideration the peculiar habits of the people, we may reckon that a very great portion of the superficies of this country is uninhabited; indeed, no very correct estimate can be formed of the number of its inhabitants. The oppression and cruelties they have endured; the vengeance they have inflicted on their Turkish and their Persian neighbours; and, above all, their retention of independence, from the earliest ages up to the present day,—these circumstances combined, invest this country with a

peculiar interest. The mountainous regions have at no period been under subjection, either to the Turks or to the Persians."

Such is the outline of the country; and, "from time immemorial, Koordistaun has been a continued scene of war, turbulence, and robbery."

Yet our travellers were not ill received:—

"Being unable to procure any forage for the cattle, or even refreshments for ourselves, we left Boganan long before the dawn of day. Mirsady, the object of our march, lay about thirty-eight miles distant, over a road which appeared very rugged. About noon, we passed a lovely plain, and through it several small gurgling streams meandered, literally matted over with water-cresses. Our servants were quite surprised to see us eat of them so heartily, for they would not even taste any until I repeatedly declared they were most delicious. Previously to our *entrée* into the village, we were met by its chief, who conducted us to his castle, where he ordered his women to give up to us the best room they possessed in the harem court. They instantly set to work clearing away their domestic utensils with the greatest good-humour, and lighted for us a cheerful fire, before which we spread our *nummuds* (carpets). These women crowded about Mrs. Mignan and the children with the utmost *empressement*, and accosted me with an air of the greatest cordiality: they had no wish, and certainly no reason to conceal their faces, which were fair and handsome, with large black eyes, and dark flowing hair. They went about entirely unveiled, and possessed no *mauvees honte*, though it was considered a mark of rudeness to stare at them. Nevertheless, they were evidently much pleased at exciting our attention, and we clearly perceived that vanity was the characteristic of the sex in this, as well as in other countries nearer home. After being served with some delicious cheese made from the milk of sheep, and several excellent flat muffin-shaped cakes of bread, the chieftain of the village invited me to his own quarters, which were situated across an oblong square court-yard. A sheep was slain; and, having been stuffed full of almonds and raisins, was now roasting before a roaring fire, around which several attendants were crouched. We discussed our meal à l'Arabe, and afterwards some of the party got up and danced around the room with great energy. They then chanted a war cry, which our melmaundar, Seyyud Abdallah, assured me related to their robbing exploits, and to their successes over the Turks and Persians. They also had a regular chorus, in which all occasionally joined, and which pointed at the dishonour of a Koord flying from battle to his tents, where not only the tribe itself, but the very dogs shun the coward—

'None shall wed the flying slave,
E'en dogs shall bay the dastard knave.'

Seyyud Abdallah declared the whole party were marauders, and that some of them actually boasted of the number of Kuzzilbashies they had shot. This chieftain gave us dried fruits of several kinds, with delicious sweetmeats, and some most excellent sherbet. On the morrow I smoked a chibouque with the village chief, and we then resumed our journey towards Soolimaniah, the capital of Koordistaun."

Not so further on, in ascending a mountain, where "the difficulty of this passage was considerably increased by the conduct of a strong body of Koords, who from the top of the mountain had been watching our approach, and now commenced hurling large stones and fragments of rock upon those bearing our baggage. * * * Our old Katurjee Bashee, who had all along

been quaking for the safety of his jaded mules, became seriously alarmed. 'Stakhferullah!' he exclaimed, 'there is enough of them to eat us; may the holy prophet Mahommed (blessed be his name!) soothe their fury; ullah ukbar! God is most gracious! Had we only a dozen brave Kuzzilbashies, we might have a chance with them; but, as it is, I shall certainly become a beggar. Ullah kereem! Ai kumbuckdt! what dust has fallen on my head! oh, miserable man that I am!' By the time we had reached the top of the mountain, the onward progress of the mules had been completely arrested, and our trunks thrown down upon the snow. The fray now began in real earnest with huge club-sticks, sabres, and matchlocks: the latter being surmounted by a double prong, which was made exactly like an English hay-maker's pitchfork. The enemy soon lost the support of four of their party, who had been felled by 'stout crab-tree,' and were conveyed from the scene of action with broken heads; and the remainder would, in all probability, have given way to this *argumentum baculinum*, where so little was to be gained, had it not been for the presence of two or three of the ring-leaders, who possessed a stubborn and determined spirit, urging on the others to revenge their wounded companions. When my family had alighted from the kajavahs, and I had conducted them to a high bank on the roadside, I loaded my pistols and went amongst the assailants, declaring I would shoot the leader if he did not desist. They then shouted out, 'They are gunsmen: they have guns.' This cooled their rage in a marvellous degree; and, on their retreating to the mountain's edge, we pressed them hard, and succeeded in rolling them over its precipitous sides, whilst the snow shelved down upon their heads, and nearly buried them beneath it."

It will be seen that our author has a little *penchant* for French words and phrases; and he is, besides, rather apt to interrupt his own story by classical illustrations: such, for instance, as that we have just quoted, with references to Cyrus, and Cnaxa, and Xenophon, and the 10,000, and Diodorus Siculus, and Marcus Crassus, and Mark Antony!

The descent led them into a lovely country; and the author says,

"To guide us through this sylvan bower, we hired a Koordish shepherd, who appeared to have just returned from the village of Bannah, and who performed his task most faithfully, being allowed no temptation to do otherwise. During the march, we passed a well-mounted troop of suspicious-looking fellows, who, as they greeted our guide, inquired most particularly after our health, and excited something more than my curiosity. I therefore told our servant, Meerza Hoossain, to ask him if these strangers would have relieved the mules of their loads, had we been fewer in number, or less prepared? 'To be sure,' he replied; 'and we (meaning his own villagers) would do the same. Do you suppose that a Koord has any scruples, when a fair opportunity offers?' This frank avowal was uttered with the greatest *sang froid* imaginable, and created a hearty laugh amongst the Katurjees, who remarked that the guide would have no 'fair opportunity' this trip, so we journeyed on together, highly pleased with our new companion, until the necessity of our acquaintance ceased. A very trifling 'bucksheesh,' for having thus profited by his *connoissance du pays*, satisfied him."

The capital is a poor place:—

"Soolimaniah is most romantically situated on the northern bank of the Diak (the Delos),

* "The natives say that the name *firozah* was given to this stone by *firoz-shah*. Anser, near Nishapour, in Khoremsan, is the best turquoise mine in the world. These stones vary greatly in colour; but all, except the azure, are considered of little value. A Persian assured me, that the turquoise of Nishapour changed its colour to green or white, if kept in a box of musk, or if exposed to any great heat."

in a rich, extensive, and well-watered valley, irregularly formed by the base of the surrounding mountains. It is supposed to be on the site of the ancient *Siozuros*, *vel* *Shehrasour*. The city, unlike most Mahomedan towns, is unwall'd; its houses are flat-roofed, low, and well secured against the cold and snows of this elevated region; but its streets, like all Oriental towns, are irregular, narrow, and dirty, though its climate is decidedly fine, and the inhabitants, who approach to the number of twenty-five thousand, are hardy, active, and robust. Their expressions of countenance are, however, harsh, and their complexions dark. The government of Soolimaniah is administered by a pasha, who is by birth a Koord, subject to neither Turk nor Persian. To please the Russians he has occasionally sent a present in cash to the Prince Royal of Persia, and Field-Marshal Paskewitch is desirous of taking him under his especial protection, that in case of need he may be induced to furnish cavalry to harass, by their sudden and repeated incursions, the inhabitants of those countries by which they are bounded.* For such a duty they are eminently fitted. The military force for the defence of the town does not exceed two thousand men. About a fourth of that number are often in attendance at the palace, which is the pasha's residence. It is a mean and dilapidated-looking pile, composed of spacious courts and extensive enclosures. The trade of the place is very inconsiderable, and is entirely in the hands of a few Armenians, who are the agents for some wealthy Bagdad merchants. They send gall-nuts, gum, manna, dried fruits, nuts, tobacco, and many other productions of the country, down to Baghdad, receiving in exchange a few Indian commodities, which are conveyed up by the Tigris from Basorah. They also supply all the wants of the migratory tribes, receiving in payment the produce of their flocks and herds, which they either use, resell on the spot, or export."

We conclude with a few further miscellaneous and characteristic extracts:—

"The women of this country are neither immured within the harem walls, nor compelled to wear the head or face-veil; and, as regards freedom of speech and action, they are on a perfect equality with the ladies of Europe."

"The Koords, like all other nations, differ in their taste regarding the fair sex: with them, as with the Turks, a redundant plumpness is sought after and honoured, and is considered the greatest trait of beauty. It is natural enough, therefore, for the ladies to vie with each other in acquiring a superiority in this particular; they accordingly eat all kinds of sweet meats, dried and candied fruits, bulwab, manna, and several other vegetable substances grated down to a powder, in order that they may attain the utmost amplitude of Koordish ideas. A Koordish chieftain, after describing to me the beauty of his intended bride, as the colour of a thousand flowers, and her charms as the perfume which exhales from the 'attar-gul,' said, with the utmost seriousness, 'She is as large, sir, as an elephant!' He considered this comparison the very acme of perfection. A regulation girdle would be quite superfluous in this country to measure the ladies' waists, though Kempfer mentions an officer among the suite of the shah of Persia, whose duty it was at stated periods to measure the beautiful forms of the ladies of the harem, and if any of them exceeded the regulated size, they were instantly placed on! short

* "A Koordish chieftain assured Fraser, that if a thousand Europeans of any nation made their appearance amongst them, twenty thousand Koords would immediately rise and join them."

commons.' Kempfer calls this 'holder of the girdle,' *forma corporis astimator*. * * * The people are habitually abstemious, subsisting on the coarsest bread and manna, which latter they use instead of sugar; and when meat is introduced at their meals, it has seldom undergone any further culinary preparation than that of boiling in plain water. They are extremely dirty in their habits, and in this particular cannot be compared either to the Turks or the Persians. Their occasional ablutions do not remove the evils attendant on the length of time they wear their clothes. In fact, they scarcely ever change, but permit their garments to drop piecemeal from their bodies. * * * The language spoken at Soolimaniah is a mixture of Turkish, Arabic, Persian, and even Hindoo-stanee. The people profess the religion of Mahomed, but know nothing whatever of its doctrine. Some of them are called 'Yezideah'; but this is a distinct nomadic tribe, living chiefly by themselves, and ranging the whole country between this city and Merdin. These people have a religion in which they do homage to his satanic majesty, as a prince and servant of the Most High God; and, unlike the Mahomedans, they are by no means tenacious of the chastity of their wives and daughters. They maintain that, as the devil exerts great sway on earth, he ought to be treated with every respect, and as they wish to make friends wherever they go, they divide their homage between the powers of light and those of darkness. They lead a pastoral and predatory life, and are, proverbially, the most daring robbers in all Koordistan. * * * The attachment of the Koords to their chieftains is indescribably strong, and the influence of these chiefs over their tribe equally so. If one is ever slain in war, it is never forgiven nor forgotten. They carry on an everlasting feud, never ceasing until they have had their 'blood revenge.'"

And here we close our chapter from Captain Mignan's various and entertaining work.

Lord Brougham's Dissertations, &c.

[Second notice: conclusion.]

HAVING offered a few remarks on the first volume of this work, it might seem careless if we dismissed the second without some passing notice, though the topics it embraces are less apposite to our literary task. It commences with that most difficult of all problems, the "origin of evil," and, after pointing out the mistaken and ineffectual attempts to explain it, proceeds (as we think) only a little way in solving the question. The Manichean doctrine of the world being ruled by two Principles, the one good and the other evil, is certainly untenable; but it was, and is, a very natural hypothesis. Who that ever saw storm and sunshine, winter and summer, night and day, pain and pleasure, but must readily fall into the belief that there were two antagonist powers at work upon the fate of man? But then the argument arises, that if this were true, these powers must be equal, since, if one were stronger than the other, the weakest would be conquered and put down; and if they were equal, says Lord Brougham, "and always acting against each other, there could be nothing whatever done, neither good nor evil; the universe would be at a stand still; or rather no act of creation could ever have been performed, and no existence could be conceived beyond that of the two antagonist principles." His lordship goes on to demonstrate the futility of the *a priori* reasoning, hitherto upheld as the best answer to this theory, by Archbishop King, Bishop Law, Tillotson, and

other high authorities, and shews that they either avoid the question or shew altogether in setting it at rest. In the end, his lordship confesses that the solution only admits of approximation and discussion of limits; and contends that human ignorance, both as regards the natural and moral system of the universe, may render us incapable of distinguishing what is really good and really evil, which we should comprehend if we had a perfect knowledge of the whole.

"The evil which exists (he says), or that which we suppose to be evil, not only is of a kind and a magnitude requiring inconceivably less power and less skill than the admitted good of the creation; it also bears a very small proportion in amount; quite as small a proportion as the cases of unknown or undiscussable design bear to those of acknowledged and proved contrivance. Generally speaking, the preservation and the happiness of sensitive creatures appears to be the great object of creative exertion and conservative providence. The expanding of our faculties, both bodily and mental, is accompanied with pleasure; the exercise of those powers is almost always attended with gratification; all labour so acts as to make rest peculiarly delicious; much of labour is enjoyment; the gratification of those appetites by which both the individual is preserved and the race is continued, is highly pleasurable to all animals; and it must be observed that, instead of being attracted by grateful sensations to do any thing requisite for our good or even our existence, we might have been just as certainly urged by the feeling of pain, or the dread of it, which is a kind of suffering in itself. Nature, then, resembles the lawgiver, who, to make his subjects obey, should prefer holding out rewards for compliance with his commands rather than denounce punishments for disobedience. But nature is yet more kind; she is gratuitously kind; she not only prefers inducement to threat or compulsion, but she adds more gratification than was necessary to make us obey her calls. How well might all creation have existed and been continued, though the air had not been balmy in spring, or the shade and the spring refreshing in summer, had the earth not been enamelled with flowers, and the air scented with perfumes! How needless for the propagation of plants was it that the seed should be enveloped in fruits the most savoury to our palate, and if those fruits serve some other purpose, how foreign to that purpose was the formation of our nerves so framed as to be soothed or excited by their flavour! We here perceive design, because we trace adaptation. But we at the same time perceive benevolent design, because we perceive gratuitous and supererogatory enjoyment bestowed. Thus, too, see the care with which animals of all kinds are tended from their birth. The mother's instinct is not more certainly the means of securing and providing for her young, than her gratification in the act of maternal care is great and is also needless for making her perform that duty. The grove is not made vocal during pairing and incubation, in order to secure the laying or the hatching of eggs; for if it were as still as the grave, or were filled with the most discordant creaking, the process would be as well performed. So, too, mark the care with which injuries are remedied by what has been correctly called the *vis medicatrix*. Is a muscle injured? Suppuration takes place, the process of granulation succeeds, and new flesh is formed to supply the gap, or if that is less wide, a more simple healing process knits together the severed parts. Is a bone injured? A process commences by which an ex-

traordinary secretion of bony matter takes place, and the void is supplied. Nay, the irreparable injury of a joint gives rise to the formation of a new hinge, by which the same functions may be not inconveniently, though less perfectly, performed. Thus, too, recovery of vigour after sickness is provided for by increased appetite; but there is here superadded, generally, a feeling of comfort and lightness, an enjoyment of existence so delightful, that it is a common remark how nearly this compensates the sufferings of the illness. In the economy of the mind it is the same thing. All our exertions are stimulated by curiosity, and the gratification is extreme of satisfying it. But it might have been otherwise ordered, and some painful feeling might have been made the only stimulant to the acquisition of knowledge. So, the charm of novelty is proverbial; but it might have been the unceasing cause of the most painful alarms. Habit renders every thing easy; but the repetition might have only increased the annoyance. The loss of one organ makes the others more acute. But the partial injury might have caused, as it were, a general paralysis. 'Tis thus that Paley is well justified in exclaiming, 'It is a happy world after all!' The pains and the sufferings, bodily and mental, to which we are exposed, if they do not sink into nothing, at least retreat within comparatively narrow bounds; the ills are hardly seen when we survey the great and splendid picture of worldly enjoyment or ease."

We have quoted this passage because it is beautiful, but we cannot, at the same time, assent to its being convincing. Where is the pleasurable expansion of the mental faculties in millions of savages who inhabit the globe? Where is the delicious rest to the millions who toil from the cradle to the grave, without an intermission worthy of a moment's regard? Where is the balmy spring, the refreshing summer, the flower-enamelled earth, and the perfumed air, in the African, Asiatic, and American deserts, and the ice-bound regions of the northern and southern hemispheres? Where are the fruit-enveloped seeds of these sterile lands, occupying so extensive a portion of our world? And then, with regard to the *vis medicatrix*, the closing of wounds, and the knitting of bones, the recovery of vigour after sickness, and the formation of new hinges for our joints; is it not obvious, that it would have been better for us not to have been wounded, not to have had our limbs fractured, not to have suffered the pains of rheumatism, or ague, or fever, nor the pangs of an irreparable injury (though it seems it may be repaired), and that our restoration after all is but an indifferent solace for previous misery, with which, for aught we can tell, we might as well not have been afflicted. It is like what we remember reading in the newspapers of the dreadful loss of a ship of war in the Bay of Biscay, where between six and seven hundred wretched beings met a miserable death by fire, and in agonizing attempts to escape in the overcrowded boats, and the accounts summed up, in the conventicle slang, about the merciful dispensation and providence, which permitted fifty-eight individuals to save themselves from the blazing wreck. Well may Lord Brougham add, "But the existence of considerable misery is undeniable," though, in his opinion, it is much exaggerated by the vulgar and sceptical.

Upon this grand proposition we hardly know what to say. It is not easy to determine the *quantum*, either of evil or of good, throughout the human species; or to tell whether in the life of any man there is a greater proportion of

suffering or enjoyment. If it were not to perplex the matter, we think it might be argued with much plausibility and effect, that, for one hour's real pleasure and actual happiness tasted by any one human being in existence (more blessed than his fellows) out of five thousand, he must, and does, endure many hours of pain and sorrow. But we are not going to contend for the supremacy of a Malignant Principle!!! We would rather not worship Typhon, or Ahrimanes, or Oromazes; and are convinced, were it possible for human beings to cultivate and exercise the benevolent feelings of their nature more, and indulge their wicked and hurtful passions less, we should have greater cause to acknowledge a beneficent creation and continued beneficent superintendence. As it is, all we can do is to abjure the Epicurean dogmas, and look for the solution of the mystery in "another and a better world," "where the wicked cease from troubling, and the weary are at rest!" And, indeed, towards his conclusion, Lord Brougham appears to reason himself into these views, for he writes:—

"Taking both worlds together—for certainly were our views limited to the present sublunary state, we may well affirm that no solution whatever could even be imagined of the difficulty—if we are never again to live; if those we here loved are for ever lost to us; if our faculties can receive no further expansion; if our mental powers are only trained and improved to be extinguished at their acme—then indeed are we reduced to the melancholy and gloomy dilemma of the Epicureans; and evil is confest to checker, nay almost to cloud over, our whole lot, without the possibility of comprehending why, or of reconciling its existence with the supposition of a Providence at once powerful and good."

A short paper on Conflicting Instincts, and Conflicting Contrivances generally, follows that upon which we have made these few comments; and this again is followed by another on the doctrine of Ubiquity: in both of which there is much interesting matter. An Analysis of Fossil Osteology, and the application to natural theology, and an Essay on Newton's "Principia," complete this remarkable publication; which, whether we regard its subjects or the character and endowments of its author, is pre-eminently entitled to the most attentive consideration.

A Defence of Paley's Moral Philosophy, in Answer to the Objections of Mr. Whewell and Professor Sedgwick. By the Rev. Christopher Neville, Trin. Coll. Camb. 12mo. pp. 178. London, 1839. Ridgway.

THIS is a very able defence of some of the opinions of Paley, which, the author maintains (with some degree of truth, we think), have not been quite fairly interpreted, or rather have been carried out, in their supposed consequences, in order to justify the severe reprehension bestowed upon them. Among these, the most prominent is the doctrine of Expediency, certainly a dangerous one, and likely to lead us widely astray; and that other *questio vexata*, whether Conscience or the Moral Sense be innately implanted in the mind of man. As we cannot enter into this discussion, it is enough for us to say that, even against the strong men with whom he has entered the lists, Mr. Neville's treatise resembles a tough spear in the hands of a sturdy and accomplished combatant.

The Zenana, and Minor Poems. By L. E. L. With a Memoir by Emma Roberts. Pp. 297. London, 1839. Fisher and Co.

THIS is a selection of some of L. E. L.'s

sweetest poetry which has appeared in Fisher's Annual Scrap-Book. The memoir by Miss Roberts is rather meagre, but paints a portion of the life of her lamented friend with a just, kind, and good feeling, such as her amiable qualities were so well calculated to inspire in all who, at any time, had the happiness to enjoy her domestic or intimate companionship. Miss Roberts was an inmate in the same house with Miss Landon, for a period, soon after her earlier publications had created a great sensation in the reading world, and, as we have said, describes this part of her career with truth and interest; but there is nothing of her first opening powers, the upspringing of her almost infant genius, and the intoxicating circumstances which attended, but could not spoil, her irresistible progress. Neither is Miss Roberts fortunate in her later statements, though it is not the time to point out what is erroneous, or offer any opinions upon the subject.

As a volume of beautiful poetry, this selection deserves a place wherever true poetry and the better affections of our nature are admired and loved.

The Poetical Works of L. E. Landon. 4 vols. London, 1839. Longman and Co.

THIS is a new and charming edition of the "Improvisatrice," "The Troubadour," "The Golden Violet," and "The Venetian Bracelet," with the numerous shorter poems with which they were accompanied. Embellished by engravings after McClise, J. M. Wright, C. Pyne, and Howard, they embody so much of all that was best of the author's compositions, that till a complete edition of her works can be produced, they must occupy the foremost place in public estimation.*

On the Necessity of Protection to the Agriculturists, &c. By Lewis Kennedy, Esq., author of the "Tenancy of Land in Great Britain." Pp. 64. London, 1839. Ridgways, Wrights.

PARLIAMENT having determined to exclude the laborious and uncertain examination of evidence at the bar of either house, on the subject of the corn-laws, on the ground that all the facts and data are sufficiently known; it becomes the more expedient to direct attention to such publications as the present, where great statistical knowledge is embodied in distinct forms, and the mind of a writer of much practical experience devoted to the elucidation of this important question. Mr. Kennedy contends that not only the agricultural labourer, but all classes of manufacturing operatives (as workmen are now styled), would be deeply injured by the repeal of the protecting duties on corn. He held and published the same opinions in 1828: but as our road does not lie through the intricate mazes of political economy, or the tortuous paths of party politics, we will content ourselves with quoting a single, but, as it appears to us, striking illustration of the writer's arguments:—

"The Consequences and Danger to the Labourers and Working Classes by throwing out of Cultivation any large Proportion of the United Kingdom.—It is endeavoured to exemplify this by a parish with which I am well acquainted, where there are 1573 acres of convertible land at 23s. per acre (on which there has been an average deduction of 20 per cent

* Among other dear reminiscences, we may mention that Mr. Schoss has not only adorned his *Bijou* for the present year with the very minute, but not unfaithful portraits, set in the life of the case in or-moulé, but has formed a delightful case, similarly embellished, in which the four years' *Bijoux* edited by Miss Landon, are framed together.

for several years past); one-half of this is arable, and a proportion of a thin quality, and employs a population in labourers and artisans for making agricultural implements, &c., of at least 262 persons, men, women, and children, actually living in the parish. Now, the loss consequent upon throwing out of cultivation one-third of this arable land, that is, 262 acres (and it is impossible that it could be continued in cultivation without protection), would be a diminution of labour to the extent of 87 persons!! We will suppose 27 to remain for managing the land thrown out of cultivation into rough pasture, leaving 60 persons to be otherwise disposed of or employed:—explaining this by figures, it stands thus:—

Number of acres in the parish 1573, of which half is pasture, 786 acres, and the other half is arable, viz.—
Half the parish 786 acres.

One-third of half being 262 acres, thus become uncultivated land.

One person to 3 acres.. 87 { persons thrown out of employment upon the one-third arable.
Supposing 27 { persons employed on the one-third, when turned into rough pasture.
Leaves 60 { persons, who lose their work on the 262 acres.

It appears, therefore, if in this parish of 1573 acres 60 people are thrown out of employment, of these 12 probably will fall upon the poor's funds, and consequently be chargeable to the parish; 12 probably starved and annihilated; and 36 would be driven out to compete for work with the manufacturing classes, or contend with their already super-numerary brethren upon the cultivated land of the United Kingdom, reduced by eight millions of acres!!! Thus there would be, at least, from the one-third of the arable land of the kingdom not being cultivated as at present, 1,773,680 persons thrown out of employment, and to be otherwise disposed of:—

One-fifth, or 354,736 to be supported by poor funds.
Ditto or 354,736 to be starved, or to emigrate.
Three-fifths 1,064,208 to procure work by manufactures.

Total 1,773,680;

Thereby lessening the number to be employed by nearly two millions, and the land cultivated by eight millions of acres! We ask, then, would not the system of free importation of corn reduce most seriously the number of hands wanted and wages? Secondly,—the farmer will have his capital reduced to value at least one-half, and his profits diminished accordingly. The luxuries in clothes, furniture, and foreign articles of consumption, tea, &c., which have become necessities to himself and family, must be dispensed with, and his payments to the poor, tithe, &c., and his rent, all reduced to the standard of the value of his produce, or, more probably, the farm taken by the proprietor himself. Thirdly, the landlord, who, of course, must have his rent diminished, and if his incumbrances, fixed by the law of the land upon his estates, are not proportionately altered, in many instances he will have little or no income; and where it may be otherwise, he must either live wholly in the country or abroad, and give up those expensive establishments which form a great source of the business, and, consequently, the riches of the tradesmen in the different large towns or capital. The operative and mechanic ought duly to weigh this matter, before he is hurried away headlong by a specious policy, and one most destructive to his interests; for it is clear, by the shewing of the manufacturers themselves, that their great object in the repeal of the protecting duties to the agriculturist, is, by cheapness of provisions, to obtain the power to compete more

effectually with foreign markets. This can only be done by a reduction of wages to the operative classes, and who then would be the sufferers? who the gainers? Let them answer for themselves, if the working classes like to risk such a fearful expedient, and to throw themselves upon the tender mercies of those men who would not even shorten the period of labour to the helpless children in their manufactories, when it was proved beyond contradiction that their healths were destroyed, and they were made cripples for life by such oppressive toil. Let us also ask, for what was the system continued? That a greater quantity of goods might be produced, and their gains be the larger. Let the operatives again look back, and inquire at what periods their distresses were greatest from the want of work and low prices; they will surely find those times to be in the years of cheap corn, or the following years. Let them also inquire into the condition of those countries where corn is cheap and abundant.* First, does the labourer there get commensurate wages, so as to permit him to enjoy better lodging, food, or clothing, than similar artisans, operatives, or labourers, in this country, or even in Ireland? Inquiry will convince him that the contrary is the fact. It is notorious, that the labourers and artisans in those countries are the most wretchedly paid and clothed of any in Europe; it is therefore the regularity of work and good wages which are to produce his comfort and happiness, and this the writer confidently and conscientiously believes, is only to be found in a steady and continually improving home-market. Thus when compared, any other notion is trifling and delusory; as the foreign does not bear above a tenth of the trade of our home-markets; our foreign exports vary from forty to fifty millions per annum, and our home trade is computed at five or six hundred millions."

Thoughts on the Present Crisis of the Canadas, and on the Policy of a Legislative Union between the two Colonies, &c. By the Right Hon. Sir R. W. Horton, Bart., G.C.H. Pp. 13. London, 1839. Murray.

Ireland and Canada, supported by Local Evidence. Pp. 78. The same.

THE first of these is a preface to Sir Wilmot Horton's able and important pamphlet, reviewed in our No. 1149; and the last an almost equally interesting exposition of the beneficial effects, both to Ireland and Canada, produced by emigration from the former and settlement in the latter being properly carried on and encouraged. Well does this deserve the consideration of statesmen and legislators.

With regard to the *Thoughts on the Present Crisis*, all we shall add to our former opinion is that it would have been most fortunate for England and her North American colonies had Sir Wilmot Horton's views been entertained for practical purposes at the time he brought them forward. We might probably have been saved a Rebellion and the expense of Millions. We trust it is not now too late to cure the evil which has arisen.

The Youth of Shakspeare; or, Love and Genius. By the Author of "Shakspeare and his Friends." 3 vols. 12mo. London, 1839. Colburn.

THE talent of the writer has been acknowledged, and we presume the success of his preceding

* "Is it probable that such a quantity of corn as was laying in bond in 1838, under the present graduated scale of duties, and ready at the duty of 1s. to be made use of by the public, will be secured by a fixed duty? where would be the inducement to store it, when the duty was always the same?"

work has encouraged to try back on the same subject, and direct his efforts to an earlier illustration of Shakspeare and his times. With regard to the latter, borrowing the dialect of the drama of the period, the author has acquitted himself pretty much as before; but with regard to Shakspeare, the mind is so accustomed to dwell upon him as a transcendent and super-human being, that no art or skill can make him move, breathe, and act naturally as a common man among common people. We give an example, premising that Mabel, the daughter of Sir Thomas Lucy, has been carried off, in spite of an effort of the youthful poet to rescue her. He is felled to the earth, and found, bleeding and senseless, by Sir T. Lucy and his domestics.

"In the meanwhile, William Shakspeare, with all the lanterns bearing upon his face, was looking upon those around him, greatly bewildered, yet beginning to have some confused ideas of where he was, and what brought him there. Nevertheless, the faces, as far as he could distinguish, were unfamiliar to him. He felt weak, and ever and anon gave a strong shudder, as though his blood was chilled by so long lying in the dew and the night air. 'Methinks he hath on him something of an ague,' observed Dame Lucy. 'Could we get him home with us, now, some of my julep would do him famous good service, I warrant you.' 'Humph!' cried Sir Thomas, gazing upon the stranger with a terrible penetrating look, upon hearing of this hint of the good dame, backed by assurances of its efficacy from each of the serving-men. 'An' it please you, sweet lady,' said the youthful Shakspeare, faintly addressing Dame Lucy, emboldened to it by the evidence he had just heard of her considerateness for him, 'I beseech you tell me, am I not still in the park of his good worship, Sir Thomas Lucy?' 'That are you, beyond all question,' replied she very courteously, for she was well pleased with the civility with which the question had been put to her. 'Ay, you be just upon the very middle of Fairmead Grove, my young master,' added one of the men. 'I thought I could not help being at the same place,' observed the youth. 'But how didst come to that place, and what dost do at that place at so late an hour?' asked the justice, in a style that savoured wondrously of a disposition in him to doubt the honesty of the person he questioned. Thereupon William Shakspeare, without acquainting any with the reason of his visit to the park, told the knight how he had been a witness to the carrying off of Mabel by two villains, and how, when striving to stop one, he was felled to the earth by the other. 'So!' exclaimed Sir Thomas, looking with more severity than ever, 'thou hast got a fine story; but I doubt 'twill do thee any good at assize.' Just as the knight had uttered this, the youth gave a sudden start upon noting for the first time his hands were covered with blood; which discovery, and the manner of his behaviour at that moment, was well observed by the justice. 'Ha!' cried he, 'how didst get thyself so dabbled? Dost tell that cozening tale to me when thy hands and face bear evidence thou hast murdered our Mabel?' 'Murdered her!' exclaimed William, in extreme astonishment. 'Believe me I would much rather have died in her rescue.' 'I believe thee, fellow!' cried the justice, with extreme emphasis. 'O' my life I do believe thee to be a most notorious, horrible villain! But how didst get thyself in so suspicious a way? answer me that. The truth, fellow,—the truth!' 'As for what I see on my hand,' observed the youth, 'I am as much

surprised at it as yourself can be; but, on reflection, methinks 'tis easy to be accounted for.' 'Is't indeed?' replied the knight. 'Marry, I doubt it hugely.' 'Doubtless the blow I received hath made a wound,' continued the other. 'And holding my aching head awhile, hath brought my hand to the state you see.' 'Heart o' me! here be a wound indeed, master!' cried Sampson, closely examining the head of the suspected person by the aid of his lantern. 'By'r lady, and so there is!' added Dame Lucy. 'I would he were where I could apply to it some of my famous julep: 'tis the sovereignest thing on earth for a green wound.' With the friendly assistance of the serving-men, with whom there was not a doubt remaining of his perfect innocence, William Shakespeare stood upon his feet, and presently missed the book he had been studying before he fell asleep under the tree. The justice, somewhat perplexed in his notions, stood regarding him with a most scrutinising look. 'What dost want looking about so?' inquired he. 'A book, an' it please your worship,' answered the other. 'A book of sweet poems I was intent upon studying, before I beheld her you called Mabel being carried away, screaming, in the arms of a villain.' 'I did kick my foot against something not a moment since,' said Dame Lucy; 'perchance that may be it.' Hearing this, the serving-men and keepers looked carefully about with their lanterns. 'Thou saidst nought about her screaming just now,' observed the justice sternly, upon whom this addition came with a very marvellous suspiciousness. 'But tell us who thou art—thy name, fellow,—thy name?' 'My name is William Shakespeare,' answered the youth. 'What! John Shakespeare's son of Stratford?' asked Sir Thomas, quickly. 'The same, an' it please your worship.' 'Then 'tis clear—'tis manifest—'tis most absolute and undeniable, fellow!' exclaimed the justice, with a severity greater than all he had yet shewn. 'Mass, I thought I could not suspect thee without warrantable assurance. Thy name proves it. If thou hast not committed this foul murder, I will be sworn an ass all the rest of my days. Thou hast a most discreditable name, fellow. I know not a name of such ill repute that can be found any where. 'Tis a bad name; and being a bad name must needs be an ill name; and being an ill name cannot help being a name that a man shall chance to go to the hangman with.' 'Here's the book, sure enough,' cried one of the serving-men. 'Book me no books,' said the knight sharply, whose remembrance of what had been told him by Master Buzzard made him careless of this new proof of the youth's innocence. 'Take him away! I will look into this matter with more strictness. God's precious, so notorious a name no man ever had! But let me examine this same book of which he hath spoken so confidently.' Having got it in his hand, the justice had a lantern held to him, and scrutinised it very narrowly. 'Ha! O my life I thought as much!' added he, looking from the book to the supposed murderer. 'Thou hast stolen it! Here is in it the name of Sir Marquiduke de Lergesse.' 'He lent it me, as he hath done many others,' replied William Shakespeare. 'He lent thee, fellow!' cried the knight disdainfully. 'A person of his quality lend books to so horrible low a person as the son of John Shakespeare! How dost dare put so impudent an assertion on a justice o' the peace? Mass, 'tis manifest thou art a most thorough villain by thy name—'tis as clear thou hast stolen this book, and doubtless many others by thy professions—and there is no

doubt thou hast done a foul murder by thy being in the neighbourhood at the time the wench was missing, and found here under such suspicious circumstances. Bring him along, Sampson! Thou art my close prisoner. I charge thee escape on thy peril.' Our young student, to his exceeding astonishment, found himself taken into custody; but to be accused of destroying that exquisite fair creature who had so long been the exclusive subject of his sweetest meditations, appeared to him so unnatural a thing, he could scarce believe it possible it could be thought of for a single moment. Confused as he was by the effects of the blow, and still more bewildered by the behaviour of Sir Thomas Lucy, his apprehensions for the safety of the gentle Mabel completely thrust aside every thing like fear for himself, and all the way to the house he did nothing but think of the possible dangers she might be exposed to in the hands of those desperate villains he had beheld carrying of her off. When he arrived at the mansion, he was led up stairs into a room where there was no possibility of escaping; and Dame Lucy presently came and washed his wound, applied to it some of her famous julep, and put on it a clean bandage; for although, as a wife, she would not for a moment doubt of the correctness of her husband's opinion, she could not allow such an opinion, bad as it was, to interfere with the wounded youth's receiving the advantage of her skill in remedies."

We will not interfere with the story, but leave its intricacies to the lovers of all romantic incidents and mysteries.

The Architectural Magazine; a Journal of Improvement in Architecture, Building, and Furnishing, and in the various Arts and Trades connected therewith. Conducted by J. C. London, F.L.S., &c. Complete in 5 vols. 8vo. with numerous Engravings. London, 1839. Longman and Co.

THERE are three qualities that eminently distinguish all the works written or edited by Mr. London; comprehensiveness, condensation, and a multiplicity of engravings. To none of his works do these characteristics apply with greater force than to the *Architectural Magazine*, which is a miscellaneous assemblage of articles on every subject at all connected with building and furnishing.

This immense variety of subjects, and the number and beauty of the engravings, recommend the work, even as one of entertainment; and though, of course, from the manner of its publication, it is the work of many hands, a unity of purpose runs through the whole. This purpose comprises two points; viz. to make architecture interesting to the general reader, and to induce young architects to think and to regard their art, not merely as an affair of rules and compasses, but as a subject on which their reasoning faculties may be exercised. Some excellent papers by Mr. London himself, "On those Principles of Composition in Architecture which are common to all the Fine Arts," will serve as an example of what we allude to. Our architects too often are mere copyists; and what they copy, though excellent in itself, is often as ridiculously applied as the sailor's trowsers, which the New Zealander, who had obtained them, wore round his neck, as a new species of mantle.

Among the entertaining parts of the work, we may refer to the architectural tour of Mr. Humphreys, in the last volume, which is remarkable for its originality of thought and expression; and to the remarks on the churches

and palaces of Rome, by the same author; to the elegant, but somewhat fanciful papers of Kata Phusin (a lover of nature); and to the clever but caustic remarks of Candidus, which are sprinkled through the volumes, and which, though excellent as a seasoning, would be somewhat too pungent if taken altogether as a meal.

We shall now give a few extracts, though of course they can do little to shew the general style of the work, as it necessarily differs, according to the nature of the topics on which it treats. The following is from an article in the first volume, on the impositions to which gentlemen are exposed who find that they have been overcharged when they come to "settle their builder's account." In these cases, the usual method of proceeding is for each party to call in a surveyor; and the two surveyors meet to make out an account of the works done.

"We will suppose the account that they have to settle is a plumber's bill. The first article is 18 cwt. of milled lead. The plumber's surveyor requires 25s. per cwt.; the surveyor for the opposite party remonstrates, and points out to him that the prime cost was 15s.; the other replies that 25s. is the customary price, and that he cannot take less. To convince his opponent, he opens an old measuring book, and shews that 25s. has been charged in an account that he settled on behalf of Mr. Gettall with Mr. Easy, the surveyor, some years before; and he again repeats that it is the custom to charge 25s., and that he cannot deviate from it. In the same way he charges 1s. per foot for pipe that only cost 4d., and 1s. per lb for solder that only cost 5d.; and so he goes on in the same ratio with all other articles in the bill. After charging so extortionately for the time and materials for making a joint to a pipe, he has the conscience to ask, in addition, 2s. 6d. for that joint, though he cannot tell why he does so, except that it is the custom," &c.

What can the poor client do? He finds no redress is to be obtained from the surveyors, and he goes to law. We shall see what is the consequence.

"Plaintiff A and defendant B are at issue upon an account for works executed. The witnesses of A state that the work is done in a very superior manner. One witness swears that the work is fairly worth 1544l.; and another witness, to support him, swears the fair value is 1630l. Then come the defendant's witnesses, who state that the work is very badly executed, and done in a very improper manner: one of them asserts that the outside value of the plaintiff's work is 930l., and another surveyor says he makes the value 935l. Now, what are the judge and jury, who know no more about a building account than a boy of seven years old, to do in such a case? They are surprised and astonished that respectable men can be so very wide in their values; and what is the result? Why, they take the several amounts as given in evidence, add them together, and divide the amount by the number of witnesses: accordingly, the result in the above case would be, that a verdict would be given for 1257l.!!

We shall conclude by quoting from an article which is continued through all the volumes, and entitled "Architectural Maxims."

"Profusion of Ornament in an elevation, without any simple principle of arrangement being obvious to the eye, produces confusion. This is more or less the case with the exterior elevations of many Gothic cathedrals."

"An ancient Building, known to be beautiful, is often copied and recopied in situations that have no reference to the original locality

and uses of the structure. The architect is pleased with his copy, because his mind is full of the beautiful original; while the public, who do not understand it, conclude that it must be beautiful, because it is placed there by the authority of a man whose taste, from his employment by government, or the nobility, they suppose to be excellent."

"In *Architecture, as in other Arts of Taste*, the eye is frequently pleased without the mind being able to assign a reason. The effect is produced, but the cause is not immediately seen. No architect can be said to understand a building, and no critic to be competent to pass a judgment on it, who cannot refer every effect to its cause."

"In *Judging of Buildings*, the uneducated man speaks from his feelings; and the partially educated man refers to rules. The master, on the other hand, also judges by his feelings; but his feelings are cultivated by study and long-continued observation: the feelings are thus brought to act in unison with the judgment."

"In *Bookcases, Wardrobes*, and all similar articles, the space between three feet and seven feet from the ground is all that ought to be appropriated to shelves; as it is only between these points that a person can conveniently reach any thing. All above and below these points, if used at all, should be cupboards for bulky articles seldom wanted."

"Doors should be hung on the side nearest the fire, whether they are in the same wall, or at right angles with it; otherwise they will draw out the smoke every time they are used."

"*Unity of Forms and Lines*.—In every building, in order to preserve unity of expression, there ought not only to be prevalent the same forms, but the same character of lines. In correctly Grecian architecture, the forms extend in length, the prevailing lines are horizontal; in the pointed style, the forms exceed in height, and the prevailing lines are perpendicular to the horizon."

"If *Blank Windows* are ever allowable in original compositions, it can only be where they form part of a system of windows. To introduce them where they form no part of such a system—that is, where there are no real windows at all in the elevation, as in the exterior elevation of the Bank of England, and in the front of the National Gallery at Charing Cross—is contrary to every sound principle of architectural composition."

"*Pediments*.—There are few things more objectionable in Grecian or Roman architecture than that of placing a pediment where it could not, by any possibility, be on a large scale the end of a roof, or on a small scale the protection to a door or window."

"*Imitation and Invention*.—Architecture, as an art of mere imitation, may be judged of by rules and precedents; but, as an art of invention, it must be judged of by general principles. In imitating an old castle, priory, or abbey, in a modern villa, all the peculiarities, and even faults of the originals, may be copied, in order to keep up the illusion; but in composing an original design in the castle or abbey styles, the general forms, details, and manner of composition, require only to be attended to."

We have now only to recommend all persons who feel an interest in architecture, and more, all persons who desire comfortable dwellings, to procure this work; and we are certain that they will find the money expended in its purchase amply repaid, the first time they have occasion to apply any of the many very excellent passages it contains.

An Essay on the Neo-Druidic Heresy in Britannia. Part the First. By the Author of "Britannia after the Romans." 4to. London, 1838. Bohn.

It was our wish to have noticed in detail the contents of this very original volume, but the impracticability of doing justice to the learning and novelty which it displays, within the limits to which we are necessarily confined, has obliged us to abandon such intention, and confine ourselves to terms of general commendation.

The object of the writer is to shew that the Druidical system which formerly existed in this country was not one of the more ancient pagan systems of Europe; and, in his endeavours to establish this point, he rejects, and obviously with great propriety, many of the wild etymologies of the Welsh antiquaries, and of the theories founded on them.

"If any one," says the writer, "takes upon him to affirm, that either Gaul or Druid had been heard of more than about four centuries before Christ, he has no sort of authority, and, moreover, but little probability on his side. Ireland has a tradition (how preserved, I know not, but modest in itself, and militating against Celtic chimeras), that the Druids first set foot there 700 years before Patrick, or about 270, B.C. It surprises me that theorists should have assumed and imagined so much concerning the remote, and almost diluvian antiquity of Druidism; not only in the face of Strabo, Justin, Pausanias, Pseud-Origenes, Ammianus, and the Irish, some of whom assert, and the others seem to imply, the contrary; but, also (as I believe), without so much as the vague epithet *ancient* being applied to it in prose or verse."

The author, be it observed, too, is here speaking of that original, or as he terms organic Druidism, whose striking similitude to Pythagorism, from which it would seem to have been derived, he has previously shewn, and not of that Neo-Druidism which sprang up among us long after the former, which was not a mere paganism, but a combination similar enough to carbonarism, or any other active and ambitious species of freemasonry, had been extirpated by the Romans.

We would gladly have laid before our readers the author's views of this Neo-Druidism; its connexion with the Mithraic heresy; his examination into the nature of bardism; its date and organisation; and more especially his proofs, that "the Druidists devoted themselves to the cabala of the rabbins, and to various errors of Judaism in its degradation, though without any tinge of its purer theism and sublime devotion," but that it would be impossible to do so with any effect, except at great length. We must, therefore, refer them to the work itself, which will be found fully to justify the character for originality, learning, and persevering research, which was so generally bestowed upon the author for his "*Britannia after the Romans*." Some supplementary matter to which, by the by, is contained in the present volume, which we may remark, in conclusion, is one likely to prove of essential service in dispelling those clouds which have so long overshadowed the history of the Druids.

MISCELLANEOUS.

New Army List. By H. G. Hart, Lieut. 49th Regiment. London: Smith, Elder, and Co. This list, upon an entirely new plan, we hear very highly commended by military officers of all ranks, and by official gentlemen, of competent judgment, in departments connected with the administration of the army. On their au-

thority, therefore, we are called to bear this testimony to its merits. It gives far more information than was ever given before on the subject, and contains original features of importance. Among these are statements of the services, date of commission, &c. of every officer on full pay, including the ordnance and marines; notices of the wounds received in various battles; the honour of medals; and, in short, much other intelligence which cannot fail to be acceptable to the service and public.

Waking Dreams. By C. M. J. With Illustrations, designed and etched on Stone by the Author. Pp. 270. Saunders and Otley. TALES in prose, and legends in verse, of an amusing order—the former are chiefly Irish, and the latter chiefly Germanish. The etchings are congenial to the literature, and the whole a volume of cheerful entertainment.

The Cathedral Bell; a Tragedy, in Five Acts. By Jacob Jones, Barrister-at-Law, author of the "Stepmother," "Longinus," &c. &c. Pp. 64. London, 1839. Miller.

If indefatigable perseverance could "trammel up" success and ensure critical praise, we know no one who would be so justly entitled to both as Mr. Jones. But, alas! the Conscience of our Taste is so decidedly against the *Cathedral Bell*, that we can only speak of it as another of the author's strenuous attempts upon the tragic muse.

Vegetable Organography, &c.; Part I. Pp. 48. London, 1839. Houlston and Stoneman; Houlston and Hughes.

MR. BOUGHTON KINGDOM has here commenced a very acceptable service to the British botanist, by undertaking a translation of De Candolle's celebrated work on vegetable organography. As far as this, the sixteenth portion of the publication, permits us to judge, we have to state that it is executed with a perfect knowledge of the author and his language; and promises to be an indispensable addition to the botanical library. Two plates illustrate the subject of vegetable tissues.

Pelayo: a Story of the Goth. By the Author of "Mellichampe," &c. 2 vols. 12mo. London, 1839. Wiley and Putnam.

THIS is a romance of history, and the period chosen one wrapped in clouds of error; giving a sort of *ad libitum* power to the author, of which we are bound to say he has availed himself. *Pelayo* is, independently of the historical portion, a romance of interest: the author shews great facility of writing, and the characters are well drawn, more particularly the hero, Pelayo; the old Jew, Melchior; the beautiful, devoted Thyrsa; the treacherous Amri; and the abandoned Urraca. Many of the scenes are highly dramatic, though somewhat spun out.

The Young Naturalist's Book of Birds: Anecdotes of the Feathered Creation, by Percy B. St. John. 12mo. pp. 168. (London, Rickerby; Harvey and Darton).—This is an amusing work of the anecdotal class of compilation to which it belongs, and, with its lively woodcuts, will assuredly please and interest the reader. The author (!) says—"I have laid under contribution several authors now like read, from Aristotle, whose history of animals laid the foundations of natural history, down to Le Vaillant, whose contributions to the science are among the most curious and delightful that have ever been made." And he adds, comically enough, "In some cases I have not stated my authorities, being willing that the reader should amuse himself, if he will do me so much honour, in tracing them out, by which means he may also light on facts that have escaped me, or which, though known, were necessarily, for lack of space, omitted." This appears to us to be prescribing a pretty wild-goose chase for the "young naturalist," who would very naturally ask, "But where, sir, am I to look? must it be throughout all the works on natural history, from Aristotle to Vaillant, and from Vaillant to the newspapers of last Saturday?"

Here is a sample of the information: neither grammar corrected, nor misstatement set upon its true footing. "*Birds of Paradise*."—In the Molucca Isles only, according to Herbert, are found those rare and beautiful

birds of the sun, which are commonly called manucardiate, or birds of paradise. He is of the bigness of a parrot; the feathers upon his head are so small, as rather to resemble hair than feathers; his train thick and very long, but variously coloured, in some parts of his body green, in others yellow. Feet he has none; yet his wings be large and of a bright colour. In flying he mounts exceeding high, and continues long in motion. A bird for its rarity much esteemed by travellers, and not without superstition by the natives."

The Mirror, Vol. XXXII. (London, Limbird.)—We can only again welcome another volume of our old and steady contemporary, the embellishments of which, when seen so closely together in this collected form, are really of a very superior interest. Nothing but an extensive circulation could enable so cheap a publication to give them.

The Penny Cyclopædia, Vol. XXII. (London, C. Knight.)—Contains from the word "Intestines" to the word "Llanos," and is executed in a manner worthy of the preceding volumes.

ARTS AND SCIENCES.

LINNEAN SOCIETY.

THE Bishop of Norwich, President, in the chair.—Read, 'Extracts from Letters addressed to Dr. Royle, by Dr. Falconer, Superintendent of the H.E.I.C.'s Botanic Garden at Saharunpore.' These extracts comprised many interesting facts relative to the vegetation of the banks of the Indus, the Punjab, Peshawar, and Cashmere, whither Dr. Falconer had proceeded on a botanic mission in connexion with the expedition to Caubul, under Sir Alexander Burnes. He describes the flora of the Indus as very similar to that about Delhi, the plants of both localities being in many instances identical. *Peganum Harmala*, a plant common to Egypt, Arabia, Syria, Persia, and other parts of Asia and Northern Africa, was abundant everywhere; as well as *Calotropis Hamiltonii*, *Alphagi Maurorum*, the camel's thorn, and the Indian tamarisk (*Tamaris Indica*). At Lahore he met with a new genus of *Asclepiadeæ*, intermediate between *Calotropis* and *Paratropis*, and which he has named *Eutropis*. At Laodiana, he found our native flowering rush (*Butomus umbellatus*), in flower and fruit. On the banks of the Attock, he saw the wild *Oleaster* (*Elaeagnus angustifolia*?); and near Cohart, he found the Egyptian senna (*Cassia obovata*). The vegetation along the banks of the Indus, between Attock and Durbund, however, surprised him most; for there he met with *Grislea tomentosa*, *Rottlera tinctoria*, *Holmskioldia sanguinea*, *Acacia Catechu*, and other plants of a much more southern latitude. What Dr. Falconer says of the flora of Cashmere, we shall notice in a future No. of the *Literary Gazette*. Amongst the books on the table, was a copy of Professor Vander Hoeven's History of the genus *Limulus*, illustrated by plates; and presented to the Society by order of his Excellency the Minister of the Interior of the Netherlands.

GEOLOGICAL SOCIETY.

THE anniversary meeting of the Society was held on the 15th instant, when the following fellows were elected the officers and council for the ensuing year.

President.—Rev. William Buckland, D.D.
Vice-Presidents.—Mr. Greenough, Mr. Horner, Mr. Lyell, Rev. Prof. Sedgwick.
Secretaries.—Mr. Darwin, W. J. Hamilton.
Foreign Secretary.—Mr. De la Beche.
Treasurer.—Mr. Taylor.
Council.—Dr. Daubeny, Sir P. Grey Egerton, Professor Grant, M.D., Rev. Professor Henslow, Mr. Hopkins, Mr. Hutton, Sir Charles Lemon, Professor Miller, Mr. Murchison, Mr. Owen, Sir Woodbine Parish, Mr. G. Rennie, Rev. Professor Whewell.

After the usual reports on the state of the Society and its finances had been read, Mr. Whewell, who presided, delivered to the Chevalier Bunsen the Wollaston medal and balance of proceeds which had been awarded to Professor Ehrenberg, of Berlin; and, in doing so, he said: "Mr. Bunsen,—I have great pleasure in de-

livering into your hands the Wollaston medal, which the council of this Society have awarded to your countryman, Professor Ehrenberg, for his discoveries respecting fossil infusoria. These discoveries, eminently striking and curious to all intelligent persons, are full of the most lively interest for geologists. Such discoveries are a just reward of Mr. Ehrenberg's merits, since he had prepared himself for this success by a profound study of natural history, by practical and scrutinising researches, and by extensive and enterprising travels. We gladly give this medal as a pledge that we sympathise in the admiration which these discoveries have excited throughout scientific Europe. To many others, and to myself in particular, there is an additional source of pleasure at having such a communication to make to Mr. Ehrenberg, in the circumstance of our having recently become acquainted with him, and having seen personally and in our own country, the evidences of his talents and genius, his simple and strenuous love of knowledge. We beg you to communicate to him this medal, the expression of our admiration of his labours, our deep interest in their results, and our warm wishes that he may long have granted him the health, and energy, and opportunity which their successful prosecution demands. Allow me to say, also, that we trust this token of respect will be kindly received by Mr. Ehrenberg's countrymen, as well as by himself; and that they will accept as a testimony how gladly we do honour to the profound knowledge and patient research which distinguish that great branch of the European family. I rejoice to be able to deliver this medal into the hands of a distinguished countryman of Professor Ehrenberg, and I cannot but add, as an additional ground of satisfaction, into the hands of one who, by his wide acquaintance with men of science and learning, and with their works, is so well prepared to sympathise with their honours and successes, as he is by his nature prompted to rejoice in excellence of every kind." The Chevalier Bunsen, in reply, expressed himself in the following terms:—"Sir,—I feel highly gratified by the honours conferred upon me, of receiving at your hands the valued acknowledgment of the merits of my distinguished countryman, Professor Ehrenberg; and I beg to return thanks, not only in my name, but also in that of Baron Bulow, as the representative of Prussia in this country, who is prevented by official business from being present on this occasion. Nobody can be more able or inclined to appreciate duly the value of this distinction than Professor Ehrenberg. I know from himself that it was by England in particular, that he wished his researches to be examined and approved; and it was especially this illustrious Society, so worthily presided over by one whose name is also in Germany equally dear to the friends of religion and moral philosophy, and to the followers of the exact sciences;—it was to this Society, I say, to whose tribunal he was desirous to submit the judgment of the merits and importance of his discovery. Indeed, the honour you have decreed him to-day is only the public confirmation and solemn badge of that kind and encouraging interest which he met with from the members of this Society, and for which he felt the most sincere gratitude. But this feeling, Sir, will not be confined to himself; the honour of the prize awarded to him this day amongst so many illustrious competitors of all nations, will be deeply felt by the whole literary public of Germany; it will, I trust, form a new link in that intellectual union between the two great and enlightened nations, who have so many ties of

common interest and so many objects of warm and deep sympathy, a union which must become more and more intimate, and prove productive of the most beneficial consequences, not only for the progress of science in the whole range of human intellect, but for the welfare of humanity at large. The flattering manner in which you have been pleased to allude to myself obliges me to say a few words on my own behalf. I feel only too much how entirely I must attribute those expressions to the kindness that inspired them, knowing how inadequate my own merits are to deserve them. But I rejoice sincerely at having this opportunity offered to me, publicly to express my feelings of gratitude for the kind and generous reception I have constantly met with in this country, which, for so many years, and for so many and good reasons, has been the object of my love and of my admiration, feelings which will ever remain engraved in my heart, and with a particularly gratifying reference to this day."—The thanks of the Society were then voted to Professor Whewell, retiring from the office of president; to Dr. Fitten and Mr. Murchison, from that of vice-presidents; and to Dr. Boase, Lord Cole, the Marquess of Northampton, Dr. Royle, and Mr. Weaver, late members of the council.—During the morning meeting, Mr. Whewell read his obituary of deceased members, including Sir Abraham Hume, Mr. Winch, Rev. Dr. Carey, Mr. Bevan, Count Munster, Count Montlosier, Baron Schlotheim, and Professor Desmarest; and at the evening meeting, his review of the Memoirs communicated to the Society during the past year.

ROYAL INSTITUTION.

FRIDAY, 15th Feb.—Mr. Faraday, 'On Gurney's Oxy-oil Lamp.' On this occasion, Mr. Faraday observed, he came forward to give a brief but fair description of a lamp most eminently and best calculated for the central one of a lighthouse arrangement, quite disinterestedly, solely on his own account, and not on that of Mr. Gurney. He would and did not compare it with other modern inventions, to avoid offence; but only with the Argand as a standard, and with the French one of Fresnel, because intended for the same purpose. The subject, however, admitted of great variety, which Mr. Faraday proved with his accustomed ability and clearness. He first illustrated the circumstances, or particular conditions, under which light is obtained; the ignition of vaporous particles, or of solid particles, by ether throwing off a mass of matter in ignition of great mobility in an aerial state of substance, and by charcoal, glowing in oxygen gas, incapable of acquiring the gaseous state, now and then beautifully scintillating, emitting solid glowing particles. The oxy-hydrogen gas-lamp for microscopes, the combustion of the two gases igniting the particles of lime, was cited as an example of a light produced by a solid glowing surface: and of flame-lamps, or the combustion of vaporous substance, were mentioned those of tallow, oil, gas, &c. Mr. Gurney's is of the latter class, being a further adaptation of the principles of the Argand lamp; pure oxygen gas being, beautifully in effect, and ingeniously in arrangement, substituted for common air to feed the inner surface of the flame. Beautiful in effect, not only because of its brilliancy and intensity, but also because the most powerful mass of light is concentrated in the given space required for the particular purpose to which the oxy-oil lamp is at present intended to be applied; and ingenious in

arrangement, because after three years' indefatigable exertion and continued perseverance, to remove the rigidly and philosophically practical objections of Mr. Faraday, to whom the original lamp had been submitted by the Trinity Board for an opinion, Mr. Gurney has succeeded in constructing an apparatus calling for the warmest approbation of that severe scrutineer; and because, which has great weight to our mind, the form of the feeder whence oxygen flows to the centre of the flame, has been reduced to the simple elementary form of the flame itself, the core, as it were, of natural, or rather of common artificial flame: many forms had been tried, and as often were the orifices in a short time closed by a deposit of carbon. Means had been adopted, occasionally, to sweep away these deposits, as with a finger, but the desired end was not satisfactorily gained. At length, the form of the deposit was observed invariably to assume a peculiar conical shape: this shape was discovered to be identical with what we have termed the elementary form of flame: to the like form was the feeder fashioned, and then no longer any deposit, no longer any necessity for sweepers or fingers—the lamp was complete and perfect. The form may be more familiarly exemplified to our readers. Who has not in early days watched the phantom flame, the last flicker, the tiny Wilt-o'-the-Wisp-like light at the end of a burning stick or chip, dancing up and down, departing and yet loath to leave, now gone from, and again returning to, its parent, at last gathering itself up into a conical shape previously to final flight? Ah, we hope; for to those who have not, childhood was not a happy time; they could not have felt the memorable wonderings of younger days. Such, then, is the form of the vent through which the oxygen passes, and upon which no deposit accumulates. But we have a mass before us to prove the superiority of Gurney's oxy-oil lamp, to which we must confine ourselves, omitting much interesting matter. The desideratum for lighthouse improvement, has long been an intense light within a space of about $3\frac{1}{2}$ inches in diameter and $1\frac{1}{2}$ in height, in order that its rays may be thrown by a reflector, or directed by a refractor to the greatest possible distance in the greatest possible quantity; and in order to avoid diffusion, the size of the image being in proportion to the size of the light. The elementary lamp, the size of an ordinary Argand, is the common arrangement of cotton wick and oil, with the oxygen introduced into the centre of the flame, as before described, by which the flame is singularly compressed, and the brilliancy greatly exalted to two and a half times above the common Argand. The oxy-oil lamp (by the bye, named by Mr. Faraday, as he stated, without consulting the inventor, but which name is not likely now to be altered) consists of seventeen of these elementary lamps, arranged in a circle of $3\frac{1}{2}$ inches diameter, the given dimensions, and has been calculated, thus heaped together, to afford a mass of light equal to thirty-seven and a half Argands. The flame under ordinary circumstances, without the oxygen, and from common lamps so arranged, would rise to some height, and produce a longer light than desired, and also burn with a reddish hue, from imperfectly burnt carbonaceous particles. Such appears to be the principal defect of Fresnel's lamp, constructed also on the principle of the Argand, with three, four, or any number (four is the number used) of concentric wicks, with space between, so that air might be supplied to the interior and exterior surface of each flame. But in Gurney's, as soon as the

oxygen is turned on, the light is reduced from the height of about 3 to $1\frac{1}{2}$ inches, and its brilliancy exalted from reddish to the purest, brightest white, to the most intense flame lamp ever beheld. Thus has been obtained the desired improvement in the central light for guiding the wayfaring mariner: but there is one other consideration to be noted previously to pronouncing a final decision upon its practical utility and benefit,—and that is, the expense. The cost of oxygen is a very great addition to the expense of oil, &c. The value of a pint of oil is about tenpence, which is calculated to burn, say for one hour; the oxygen required with that measure, and for that time, in the oxy-lamp, would be 10 cubical feet, and its value would be twenty-pence. Here is an addition of double this cost of the oil; and the light cannot be obtained for less than 2s. 6 $\frac{1}{2}$ d. (we take Mr. Faraday's figures, which, of course, include the charge for cotton). But compare this with the other arrangements. To produce the same light for the same time, not now at all taking into consideration the form or dimensions of the light—it would require 37 $\frac{1}{2}$ Argands, which would consume 2 $\frac{1}{2}$ pints of oil, and cost 2s. 2d. The same light in Fresnel's would incur a charge of 3s. 11d. Thus it is shewn, satisfactorily, that, in every respect, Gurney's oxy-oil lamp is superior, for lighthouse purposes, to any other hitherto invented. It possesses, also, many advantages, which our space will not permit us to describe. One curious fact, however, we must delay our conclusion to notice, and that is, that an addition of two-thirds to the cost of the material consumed in the other arrangements should only cause the expense of the oxy-oil lamp to be very little more than that of the Argand, and considerably less than the French, to produce the same light in the same time. The cause of this, Mr. Faraday states to be the suppression of the consumption of the oil by the oxygen to nearly two-thirds. This we conceive to mean, that the oxygen causes every particle of the oil to do its work, by rendering the combustion more complete, and thus effecting a saving of two-thirds of the quantity consumed to produce the same result.

STATISTICAL SOCIETY.

SIR C. LEMON, Bart., in the chair.—Read, a summary of the census of the population of the kingdom of Saxony, to December 1837; including an account compared of the births, deaths, and marriages, with those of the six preceding years. Abstracted from the tenth number of the publication ("Mittheilungen") of the Statistical Society of Saxony for 1838, with remarks by W. R. Deverell, Esq. Secretary of the Society. Saxony, with a comparatively limited territory, possesses a great variety, not only of soil and climate, but of economical and manufacturing industry in every part of civilised life. It has, therefore, a peculiar claim to be regarded as a region for the prosecution of normal observations; the more so, as during several years it has been exempted from war, death, pestilence, and other calamities, which occasion social confusion and alter the natural standard average of mortality. With respect only to the single question of duration of life, the fact that in Saxony the proportion of annual deaths varies, in different localities, from 1 in 19 to 1 in 65, sufficiently displays the important influence of particular circumstances; and justifies the degree of attention which the Statistical Society of that kingdom has bestowed upon the subject of population. There are numerous carefully

collected tables woven into Mr. Deverell's paper; to these we cannot even do more than allude, for an abstract of their contents would be by no means satisfactory to our readers. Another paper, in connexion with the above, by the same author, was likewise read; it was on the population of Belgium; from it we learn that, by the census of 1836, the whole population of Belgium then was 4,242,600, or 125 persons to 100 hectares of land. The whole male population may be considered as consisting of two parts equal in number, namely, those under and those above the age of 23; the same is true of the females, except that the point of division is the age of twenty-five. Of the unmarried male and female, the number under and over the marriageable age is equal. The proportion of the married to the whole population is as one to two. The number of widows is double that of the widowers; and this excess is much larger in the town than in the country population. The total marriages to the total population, are as 1 to 134.9; the number of divorces as 1 to 282.84. The medium duration of life in Belgium is thirty-one years, and so forth. Sir Wilmot Horton, and several other individuals, were elected into the Society.

ENTOMOLOGICAL SOCIETY.

JAN. 7th. J. F. Stephens, Esq., President, in the chair.—F. Baily, Esq., Mr. Lamb, and others, were elected members of the Society. Various entomological works presented to the Society, were laid upon the table. M. Le Koux exhibited a curious pendulous cocoon of one of the Ichneumonidae, which did not produce the perfect insect until the expiration of eighteen months. Mr. W. W. Saunders exhibited a specimen of *Georiscus oleus*, from the various parts of the body of which, a number of minute white filamentous fungi had been produced. Mr. Waterhouse exhibited portions of an enormous nest of a species of wasp, seven or eight feet long, from India, and made some observations upon the mode of construction of the cells. Memoirs were read, by Mr. W. W. Saunders, upon some new Indian Hymenoptera; and by Mr. A. White, upon some new exotic species of Cimicidae, contained in the collection of the British Museum.

JAN. 28. This being the anniversary meeting of the Society, held for the election of council and officers for the ensuing year, and other routine business, the Rev. F. W. Hope was elected president; after which, the retiring president, J. F. Stephens, Esq., delivered an annual address, which was ordered to be printed for distribution.

FEB. 4th. The Rev. F. W. Hope in the chair.—Numerous donations were announced, including a large collection of North American insects, presented by Mr. Smith. Mr. Hope exhibited some new and beautiful species of insects from the island of Johanna, near Madagascar. Mr. Schomburgk presented to the Society the nests of a species of white ant, from the interior of Guiana, accompanied by specimens of the insects, and of a curious parasite found in the nest, belonging to the arachnidous genus *Solpuga*. Mr. S. S. Saunders exhibited a beautiful collection of insects made by himself in Albania; and Mr. Thwaites a considerable number of species obtained by Mr. Raddon and himself, from Indian corn brought from Bonny, on the coast of Africa, including some very interesting parasitic Hymenoptera. Dr. Cantor exhibited a large log of fossil wood from the interior of India, which presented the appearance of having been subjected to the attacks of insects, the burrows being considered, by the

members present, to be produced either by the larva of a longicorn beetle, or some of the Oniscidae. Mr. Tulk read a memoir upon the voracity of the larva of *Dytiscidae*, which destroy great numbers of young fish; and Mr. Westwood exhibited two species of *Tephritis*, injurious to chrysanthemum and celery plants, the larva of which are subterraneous. He also read some observations on the habits of a colony of the French wasp (*Polistes Gallica*), which he had brought to England.

NUMISMATIC SOCIETY.

THURSDAY week, the meeting was not so much occupied with ancient coins as with modern moneys; the grand question discussed being, whether there should or should not be a paid secretary. As there is nothing in this to interest the public, we shall only mention that a close division took place, in which 26 (we believe) were hostile, and 24, including the chairman, friendly to the proposition for remunerating the official organ of the society. Another discussion on the point is anticipated.

BOTANICAL SOCIETY.

FRIDAY, 15th Feb. Dr. Macreight, V.P., in the chair.—Read, 'Notice of a new species of exotic Polypore, by Professor Kickx, of the University of Gand,' translated by Mr. White.—The naturalists travelling in America at the expense of the Belgian government, have sent from the island of Cuba various plants, seeds, &c., which have been placed in the Botanic Garden of Gand, and among which was the subject of the present notice. The odour of this exotic polypore is so like that of myrrh, that it has been named the *Polyporus myrrhinus*. The means adopted by Professor Kickx, with inviolable success, to determine the diagnostic of vegetable emanation, is, placing the specimen for a few minutes over a vessel containing ammonia; this strengthens without altering the flavour, of which, without this process, the small intensity in many cases would escape detection. The new odorous mushroom was fully and botanically described; also some mosses in the earth, in which the plants before mentioned were sent over. Read, also, a paper 'On the construction of the Woody Fibre in the tribe Gymnospermia,' by Dr. W. H. Willshire. If a portion of the woody fibre of an abies be subjected to microscopical examination, it is seen to have upon its surface a row of small bodies; in the centre is seen a circle, more or less transparent, having upon its edge a second one of darker colour, and around this again another, but more transparent than the last: of the nature of these appearances, the most opposite views are taken. After stating the many conflicting opinions which Dr. Willshire considered may be resolved into those of the solid and those of the porous nature of these bodies, and after having described his own experiments, also the results of his comparisons, he concluded by saying, that he looked upon these little bodies he had mentioned as analogous to the glands of the stomata, which are known to be placed over a cavity or pore, and to have the power of closing or opening it, according to the necessity of the woody fibre. The central point, so commonly seen, is the pore or hole originally covered by the stoma-like bodies which are, in the majority of instances, mechanically knocked away, but yet occur in sufficient numbers to indicate the normal condition of the appearances, which he looks upon as the depression of the walls of the fibre inwards, having at its bottom a hole or pore originally covered by two little stoma-like bodies.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, February 14.—The following degrees were conferred:—
Master of Arts.—Fitz Roy Blackford, Brasenose College, Grand Compound.
Bachelors of Arts.—Lord Leveson, Christ Church; H. Milward, Wadham College.

CAMBRIDGE, February 13.—The following degrees were conferred:—
Bachelors of Arts.—E. Ollivant, H. Buak, C. J. Bayley, B. Skinner, G. A. Addison, Trinity College; T. Evans, J. P. Parry, St. John's College; H. S. Anders, Caius College; W. H. Glover, Corpus Christi College; J. Gibson, Catharine Hall; A. J. Rogers, Jesus College; L. Spencer, Christ College; O. P. Vincent, Magdalene College; C. Badham, W. Keown, W. G. Tucker, Emmanuel College.

SOCIETY OF ANTIQUARIES.

MR. HAMILTON, V. P., in the chair.—Mr. Hamilton exhibited a large silver medal of her Majesty, by Pistrucci.—Mr. Rosser exhibited two jugs, a tripod censer, and a simpulum, or ladle, from the ancient tombs of Etruria: he had discovered, by some experiments, that the censer and ladle had been gilt inside and out.—Mr. J. B. Nichols exhibited a chasuble or sacerdotal cope: it was of silk, richly embroidered in gold lace, and coloured silk, with several human figures, and the armorial bearings of King John, and others of the same time.—The conclusion was read of Mr. Gage Rokewode's 'Account of the English Convent at Paris,' which was commenced at the last meeting; the abbeas was elected every three years, and a list of them was given, with the dates of their election and of their deaths; also of several English ladies buried in the cemetery of the convent: the hearts of an Earl of Stafford, and another English nobleman, were also deposited there.—Mr. J. B. Nichols communicated an account of Winchester House, in the City, now being pulled down: it was granted, in 1651, to the Dutch, for a place of worship.—Sir Henry Ellis read a letter, addressed to him by Mr. Crofton Croker, relative to the history of the Harleian Manuscript, No. 913; from which manuscript Sir Frederic Madden had, in 1823, communicated to the Society a very curious poem, composed in the year 1265, on the walling of New Ross, in Ireland, which was printed in the twenty-second volume of the 'Archæologia.' Mr. Croker stated that this manuscript was written by an Irish ecclesiastic, named Michael of Kildare, in the year 1308. About the period of the Reformation, it came into the possession of George Wyse, who was mayor of Waterford in 1871, and to whose family various grants of monastic foundations had been made, and who were distinguished for their literary taste. In 1698, Sir James Ware had transcripts made of some of the poems in this manuscript, which are stated to be copied 'out of a small old book in parchment, called the 'Book of Ross, or Waterford.' These transcripts are preserved among the Lansdowne MSS. in the British Museum, which contains a fragment of a song upon Waterford, now lost from the Harleian Manuscript. From Waterford, the original manuscript passed into the possession of More, bishop of Norwich, having been probably transferred from Ireland to England during the time of the commonwealth. It is mentioned, in 1697, in 'Catalogus Manuscriptum Angliæ et Hiberniæ,' as belonging to More; and, soon afterwards, a poem was printed from it in the 'Thesaurus' of Dr. Hickes, to whom it is said to have been lent by Bishop Tanner. Mr. Croker concluded by observing that a careful comparison of the poem on Cokaygne, printed by Hickes, with the Harleian Manuscript, No. 913, the only early copy now known to exist,

leaves no doubt that Hickes's original was derived from it. That no manuscript of this kind is to be found in the Public Library at Cambridge, where More's manuscripts after his death were deposited, and that the contents of the Harleian Manuscript agree with the Catalogue of 1697. It was therefore, probably, lent by Bishop More to Bishop Tanner; and not having been returned before the death of the former, or from some other unexplained cause,* passed into the library of the Earl of Oxford. The circumstance of this very curious manuscript being mentioned, at nearly the same period, as in the possession of several individuals, induced the belief that two, or even three copies of it were in existence.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Royal Geographical, 9 P.M.
Tuesday.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8½ P.M.
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; Medico-Botanical, 8 P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.; Numismatic, 7 P.M.
Friday.—Royal Institution, 8½ P.M.; Botanical.
Saturday.—Royal Asiatic, 2 P.M.

FINE ARTS. ROYAL SOCIETY.

AFTER routine business, amongst which we noticed the election of Lieut. Col. Reid, the author of the very interesting 'Theory of Storms,' the following letter from Mr. Fox Talbot to the secretary, was read by Mr. Christie:—

PHOTOGENIC DRAWING.

(Further discoveries.)

Dear Sir,—In compliance with the request of several scientific friends, who have been much interested with the account of the art of Photogenic Drawing, which I had the honour of presenting to the Royal Society on the 31st of last month, I will endeavour to explain, as briefly as I can, but at the same time without omitting any thing essential, the methods which I have hitherto employed for the production of these pictures.

If this explanation, on my part, should have the effect of drawing new inquirers into the field, and if any new discoveries of importance should be the result, as I anticipate, and especially if any means should be discovered by which the sensitiveness of the paper can be materially increased, I shall be the first to rejoice at the success; and, in the meanwhile, I shall endeavour, as far as I may be able, to prosecute the inquiry myself.

The subject naturally divides itself into two heads; viz. the preparation of the paper, and the means of fixing the design.

(1.) *Preparation of the paper*.—In order to make what may be called ordinary photogenic paper, I select, in the first place, paper of a good firm quality and smooth surface. I do not know that any answers better than superfine writing paper. I dip it into a weak solution of common salt, and wipe it dry, by which the salt is uniformly distributed throughout its substance. I then spread a solution of nitrate of silver on one surface only, and dry it at the fire. The solution should not be saturated, but six or eight times diluted with water. When dry, the paper is fit for use.

I have found, by experiment, that there is a certain proportion between the quantity of salt and that of the solution of silver, which answers best and gives the maximum effect. If the

* We fancy, from the overturning of a wagon-load of Bishop More's manuscripts at a ford, in consequence of a flood, in their transit to Cambridge.—Ed. L. G.

strength of the salt is augmented beyond this point, the effect diminishes, and, in certain cases, becomes exceedingly small.

This paper, if properly made, is very useful for all ordinary photogenic purposes. For example, nothing can be more perfect than the images it gives of leaves and flowers, especially with a summer sun: the light passing through the leaves delineates every ramification of their nerves.

Now, suppose we take a sheet of paper thus prepared, and wash it with a saturated solution of salt, and then dry it. We shall find (especially if the paper has been kept some weeks before the trial is made) that its sensibility is greatly diminished, and, in some cases, seems quite extinct. But if it is again washed with a liberal quantity of the solution of silver, it becomes again sensible to light, and even more so than it was at first. In this way, by alternately washing the paper with salt and silver, and drying it between times, I have succeeded in increasing its sensibility to the degree that is requisite for receiving the images of the camera obscura.

In conducting this operation it will be found that the results are sometimes more and sometimes less satisfactory in consequence of small and accidental variations in the proportions employed. It happens sometimes that the chloride of silver is disposed to darken of itself, without any exposure to light: this shews that the attempt to give it sensibility has been carried too far. The object is, to approach to this condition as near as possible without reaching it; so that the substance may be in a state ready to yield to the slightest extraneous force, such as the feeble impact of the violet rays when much attenuated. Having therefore prepared a number of sheets of paper with chemical proportions slightly different from one another, let a piece be cut from each, and, having been duly marked or numbered, let them be placed side by side in a very weak diffused light for about a quarter of an hour. Then, if any one of them, as frequently happens, exhibits a marked advantage over its competitors, I select the paper which bears the corresponding number to be placed in the camera obscura.

(2.) *Method of fixing the images.*—After having tried ammonia, and several other reagents, with very imperfect success, the first thing which gave me a successful result was the *iodide of potassium*, much diluted with water. If a photogenic picture is washed over with this liquid, an *iodide of silver* is formed which is absolutely unalterable by sunshine. This process requires precaution; for if the solution is too strong, it attacks the dark parts of the picture. It is requisite, therefore, to find by trial the proper proportions. The fixation of the pictures in this way, with proper management, is very beautiful and lasting. The specimen of *lace* which I exhibited to the Society, and which was made five years ago, was preserved in this manner.

But my usual method of fixing is different from this, and somewhat simpler, or at least requiring less nicety. It consists in immersing the picture in a *strong* solution of common salt, and then wiping off the superfluous moisture, and drying it. It is sufficiently singular that the same substance which is so useful in giving sensibility to the paper, should also be capable, under other circumstances, of *destroying* it; but such is, nevertheless, the fact.

Now, if the picture which has been thus washed and dried is placed in the sun, the white parts colour themselves of a pale lilac tint, after which they become insensible. Numerous

experiments have shewn to me that the depth of this lilac tint varies according to the quantity of salt used, relatively to the quantity of silver. But, by properly adjusting these, the images may, if desired, be retained of an absolute whiteness. I find I have omitted to mention that those preserved by *iodine* are always of a very pale primrose yellow; which has the extraordinary and very remarkable property of turning to a full gaudy yellow whenever it is exposed to the heat of a fire, and recovering its former colour again when it is cold.—I am, &c.

H. FOX TALBOT.

44 Queen Ann Street, Feb. 20th, 1839.

We are much pleased with the frank and ingenuous manner in which our countryman has come forward to give publicity to his process, and state the results of his experiments. This is the way to promote the general benefit, and lead others into the method of pursuing similar inquiries, by which the discovery may be improved and perfected. In this class we rejoice to learn that Sir John Herschel has devoted his attention to the subject, and has already, we understand, made curious progress, inasmuch as he has obtained the pictures from the light of *Daniell's great galvanic battery*. Sir David Brewster too, we are informed, has taken up the investigation; and when such men set to work, we may look for much to follow.

Before laying down our pen, we should mention that, at the Royal Society, Mr. Talbot shewed us the perfect picture of a riband, some three inches broad, and of a ribbed and watered pattern, taken in this manner, but not by the sun, the only active agent being the *common day light*!! and in a London atmosphere of the month of February too. After this, who can doubt the extreme sensibility of the prepared paper?—Ed. L. G.

GRAPHIC SOCIETY.

THE second *conversations* of this Society took place on Wednesday, when the largest assembly of members and visitors took place since its foundation; and we have never seen a more numerous or interesting display of drawings, sketches, and engravings, than were sent by the members for the gratification of their friends—among these, the principal contributors were Mr. T. Creswick, Mr. Evans, Mr. West, Mr. Cope, Mr. Pyne, Mr. Cowen, Mr. S. Cousins, Mr. Doo, Mr. W. Finden, Mr. Corbould, Mr. Windus, and others. It is probable that the very numerous meeting arose from the expectation that some drawings, produced by the action of light, by Mr. Talbot, would be shewn, but they were not sent. Two small specimens, produced by Sir John Herschel, were exhibited, but they were feeble in effect, and said to be first attempts; but it was stated by a gentleman present, who had seen those prepared by Daguerre, in Paris, that his were so far superior, as to bear the character of a different process—still the most favourable report of the process relieved the anxiety of the artists. The painters were quieted that Daguerre could produce nothing in colour; and the engravers, that no impressions could be taken from the design effected by light on his coppers. The secret will soon arrive, and we shall then be able to follow up the early notices which we gave of this curious art, by a full disclosure. There were also shewn some prints of different sizes, taken from the same plate: this seemed to be even a greater puzzle than Daguerre's. It is said, however, that a mode of effecting this has suggested itself to Professor Wheatstone, who saw these prints at the Graphic; if so, we shall hear more about it. This invention is also French, and was dis-

covered by M. Gouard; but it has not yet been brought to any useful application, owing to the slow process of taking the impressions.

BRITISH INSTITUTION.

[Fourth notice.]

410. *Christ Crucified.* A. W. Elmore.—That mind must be strongly imbued with the love of art which can thus persevere, subject to all the disadvantages under which this department of painting labours; having neither premium nor patronage to reward the young aspirant or foster his talents. Such was the reflection which the contemplation of this admirable piece suggested to us. It comprehends some of the highest qualities of the art; but, amidst the general impression of awe and sublimity, the agonising sufferings of the Saviour of mankind claim the principal regard.

345. *The Moment of Victory.* A. Fraser.—In this clever picture the triumph and the wail attendant on "the moment of victory," are brought at once into view. A combat between two cocks, which seems to have been fatal to one of them, has filled a cottage court-yard with variously interested human beings. A female, with an infant in arms, is bending in commiseration over the fallen bird; scared boys are seen clambering over the paling, to escape a dog set on by the master of the dwelling; while the hero of the day, unmindful of the general confusion, claps his wings, and crows forth his song of exultation. This animated scene is depicted in Mr. Fraser's best style; and in such subjects we know no better.

403. *The Watering Place.* T. S. Cooper.—A group of cattle occupies the foreground of this admirable performance, which, with its landscape scenery, cannot be surpassed, either in the skill of its composition or in the truth and beauty of its execution.

378. *The Fisher.* J. J. Chalon, A.R.A.—To the pastoral and finished performance of Mr. Cooper, we can bring nothing of more powerful contrast than this wild and woody scene. A solitary crane, which gives the piece its title, is watching its prey on the banks of a sequestered pool. The Salvator-like grandeur of the composition gives the idea

"Of forests and enchantments drear,
Where more is meant than meets the ear."

355. *On the Zuyder-Zee, off Amsterdam.* J. Wilson.—We are not acquainted with any peculiarity in the waters of this part of the ocean; but from the clearness and fluency with which its waves are here represented by the pencil of this veteran artist, it is evident that they may serve as a model for any sea-piece whatever.

36. *The Rat Trap.* T. Webster.—Admirably treated. It may be doubted if deer-stalking, tiger-hunting, or any other of the nobler sports, can excite a greater intensity of feeling than is here manifested in the expression of the boys, the dog, and the rat, at the moment of the expected outbreak.

274. *Corte della de' Frari, Venice.* J. Holland.—To a character of architecture combining the grand with the picturesque, Mr. Holland's pencil appears to have done ample justice. The style of execution is clear, brilliant, and solid.

29. *The Approach.* F. Stone.—A beautiful cabinet picture. Seated near a window is a very lovely female. What kind of person it is who is *approaching*, may be easily guessed from the pleasure which beams in her delighted countenance.

4. *The Dairy-Maid's Tale.* T. Clater.—Well told in all its graphic relations, and

impressing the truth of the old proverb, that "listeners seldom hear any good of themselves." The interior and its accessories are executed with the artist's usual skill.

105. *The Valentine*, also by Mr. Clater, is a clever composition. The interest of the pictorial drama appears to be shared by the old and the young.

3. *Wood Scene*. J. Stark.—A scene in which Nature, in one of her most pleasing garbs, is faithfully represented by the pencil of this skillful and experienced painter.—92, *Going to the Fair*, by the same artist, a picture of larger dimensions and more extensive prospect, exhibits equal ability.

10. *Christ in the Wilderness, meditating on the Means of Redeeming the World*.—382. *The Rejoicing of Miriam and the Jewish Women on the Overwhelming of Pharaoh and his Host in the Red Sea*. Wilhelm Hensel.—The first of these subjects belongs to the elevated and sublime; the second to the cheerful and triumphant; and Mr. Hensel, who, it is evident, has been a very successful student of the best productions of the Italian school, has given to each its appropriate character.

362. *Scene from the "Taming of the Shrew."* Douglas Cowper.—Although we believe the name of this artist has appeared in former catalogues, his works have never, till now, met our eye. It is with great pleasure that, in the present instance, we bear testimony to his talents. His treatment of the subject is happy and just, especially as regards the arch and apprehensive glance of Bianca, as she listens to Lucentio's "construing;" and his technical execution does him equal credit.

[To be continued.]

NEW PUBLICATIONS.

The Laws of Harmonious Colouring, adapted to Interior Decorations, Manufactures, and other Useful Purposes. By D. R. Hay. London, Orr & Co.; Edinburgh, Chambers. The fourth edition, with additions and improvements, of a work which, on its first appearance, we noticed with the praise which its ingenuity and taste seemed to us to deserve. In its present form, it is more than ever entitled to the attention, not only of the mere decorator, but of the professors of every branch of the fine arts.

The Art-Union, No. I., is the first of a monthly journal, about the size and form of the *Literary Gazette*, to be dedicated to subjects connected with the Fine Arts. This is a very agreeable example of such a production; but it is observable that, of many attempts of the same kind, and some of them of great merit, we have never seen one succeed. Perhaps the small cost of the present essay (8s. per annum) may allow it a longer and more permanent vitality, and a more extended sale among the numerous class of artists. Upon this point we would offer a few words. The introduction says, "Artists are compelled to labour in comparative seclusion: to those repose brings the only serviceable excitement; they can rarely mix in general society; and, consequently, know little of what is passing around them, even concerning matters upon which it is essential they should receive early and authentic information." Now, it has long been our conviction, that to this very plain state of the case is to be traced much of that inferiority which consigns so many artists, old as well as young, to inferiority, or to be at best *imitatores servorum pecus*. It is nonsense to tell us that, with the ease and trifling expense at which information

the most useful to them may be acquired, they cannot procure it. The fact is, they won't spare the time or take the trouble to read, and store their minds, not simply with intelligence relating to their own peculiar profession, but such as interests the general world, and would furnish ideas and hints for their practice in art. They fancy they are becoming mighty painters by continually daubing canvasses after canvasses, and in utter ignorance of all other things. There never was, and never will be, a great artist of this school; and when half a dozen of the poorest that ever took up a brush might, by clubbing a halfpenny or a penny a week each, and allowing themselves leisure to read a single journal, become better informed in three months than they now are during their whole lives, we cannot but think that the fault and error is their own, and that they can never reach the excellence which merits public encouragement whilst they take so dark a road to travel towards it. To become eminent in art, a man must know more than how to imitate the disposition of a group, lay on a few colours, or splash in an effect.

Mr. Hopper's Letter to Lord Melbourne, on the Rebuilding of the Royal Exchange (pp. 14, J. Weale), is a curious illustration of the results of competition for public works in the fine arts, as illustrated in the case of the Post Office, where there were eighty-nine competitors, and the work was given to none of them, but to another artist, called in and instructed after all their designs had been submitted. The resemblance between the design thus adopted, and Mr. Hopper's, is sufficiently striking.

Mr. Behne's Letter to the Committee, on the Nelson Testimonial (pp. 8, J. Fraser), is another not uninteresting lesson in such matters. Mr. B. declares that 25,000l. or 30,000l. is quite inadequate for so great a national tribute, and suggests a noble mausoleum between the front of Trafalgar Square and the statue of King Charles. But as this matter is as yet *sub judice*, and there seems to be, as usual, plenty of opinions afloat upon it, we abstain from observations till they can be more properly made. The general question involved is one of infinite interest to the arts and country.

THE DRAMA.

The Adelphi.—A new piece, called the *Foreign Prince*, has been produced here for the sake of varying *Jim Crow's* very popular performances, and affording the black hero other opportunities for displaying his whimsical traits of negro character. It is a laughable affair, and, what with song and drollery, most certainly it literally deserves the name of an "Entertainment," for a merrier audience than it makes can hardly be made.

The Wild-beast exhibitions "progress" as we anticipated. One fool-hardy barbarian of the name of Haynes, employed in subduing and playing with those at the St. James's theatre, has been severely lacerated by a leopard, and carried to the hospital. A tiger at the same establishment has killed a panther. Van Amburgh is still alive, and has given a feed to some fashionable persons and lovers of the drama!! Instead of manager proprietors, menagerie proprietors are proposed to superintend our refined pleasures.

Mr. Adams's Orrery.—Mr. Adams, to whom the rising generation, and, indeed, the many of maturer years, have been indebted during several

seasons for his Lenten illustrations of Astronomy, is this Lent to be found at the Haymarket, where his apparatus works in the most perfect manner. Upon such a representation and lectures we can have little new to say; but we may say we rejoice to see them so well attended. It ought not to be forgotten by parents, teachers, and individuals desirous of information in so interesting and sublime a science, that a few hours thus bestowed convey more accurate ideas to the mind than months bestowed upon any other kind of study.

At *The Queen's Theatre*, Mr. Howell is also delivering Lectures on Astronomy, illustrated by fine transparencies, and concludes his evenings with Child's beautiful exhibition of dissolving views.

VARIETIES.

The Wellington Statue (Clty).—The report of the sub-committee, alluded to in our last, was yesterday received and sanctioned by the general committee at the Mansion House, the lord mayor in the chair; and the agreement with the sculptor signed. The only difference we have to note is that 3000l. not 2000l. was agreed to be paid down. Thanks were voted to Her Majesty's government for the liberal donation of metal, amounting in value to 1520l.; also to John Masterman, Esq., the treasurer, and — Rainbow, Esq., the secretary, for their great and gratuitous service to the fund. The lord mayor, also, received a vote of thanks for his conduct in the chair, and his politeness in allowing the use of the Mansion House for the meetings.

Lucigraphs.—A correspondent of the "The Times" proposes to call the representation of images, obtained by Mr. Talbot, M. Daguerre, and others, *Lucigraphs*.

Sully's Portrait of the Queen has created a strong sensation in the United States, and, after some discussion with the St. George's Society, for which it was painted, it has been agreed to exhibit it at Philadelphia and New York, for the joint interests of the artist and his employers.

Mr. Blagrove's, &c., Second Concert, on Thursday, was as excellent as the first. The "Bird and Maiden," a new song, sung by Miss Birch (Spohr, with a clarinet obligato, Bowley), and a romance, the "Grave-digger," by Miss Wyndham, were encored. But, indeed, nearly every piece deserved the compliment.

Musical.—The "Musical World" of last week states, that "the classification of the musical MSS. in the British Museum is now in progress."—Are there any of great antiquity?

Novel Drama.—The principal pupils of the Deaf and Dumb Institution at Genoa, recently performed Monti's tragedy of "Aristodeme," and the one-act comedy of "The Deserted House," at the Theatre of the Hotel Gagnoletti. The critics do not accuse them of tearing a passion all to tatters, or splitting the ears of the groundlings: on the contrary, the sound emphasis was unexceptionable.

Cruelty to Animals.—The *Literary Gazette* was among the foremost, and most zealous, to espouse the cause of humanity to animals, and reprobate the barbarities perpetrated upon them in the name of science. Whether Phrenology sported with the mangling of their brains, or Medicine with their limbs and intestines, we protested against the prolonged and horrible tortures to which they were subjected, and maintained that no scientific inquiry whatever could justify or excuse such demoralising cruelties. And we further held, that no light could be thrown upon the subjects of investi-

gation by many of these experiments, the very recital of which filled the rest of mankind with loathing and disgust. The only question is, To what extent you may carry animal suffering for the sake of great benefits to the human race? and, surely, this has been most savagely and sinfully exceeded.

Such being our sentiments, we have much satisfaction in pointing the public attention to *Mr. W. Youatt's* work on "The Obligation and Extent of Humanity to Brutes, principally with reference to Domesticated Animals;" and to *Dr. W. H. Drummond's* volume on the "Rights of Animals;" both of which are well calculated to expose the unnecessary miseries to which the animal creation are doomed by the inconsiderate and relentless acts of man, and to induce the latter, both through reason and a sense of shame, to abate this revolting evil. Another slight performance also deserves our notice here; it is an address to the owners and drivers of carriages on "The Abolition of the Use of the Bearing-Rein," which it clearly demonstrates to be painful to the horse and injurious to his exertions, so that the amount of labour which he would yield without it is decreased, and he is worn out long before the easier and more natural mode would exhaust his strength.

Earthquake at Martinique.—On the 11th ult., a severe shock was experienced at St. Pierre, by which several persons were killed, and nearly a fourth of the town was more or less damaged. The whole island was exposed to the ravages of this terrible visitation, and especially at Fort Royal. It is stated that nearly 800 individuals had perished.

Excellent Translation.—In noticing a production of George Cruikshank's in the *Literary Gazette* some time ago, in order to distinguish that artist from his brother Robert, we said, "this is the real Simon Pure;" and in an extensive German Biographical Dictionary now publishing, the compiler has taken the hint, and gravely states that "He is called George Cruikshank, but it is not his real name; his real name being Simon Pure."

The Yankee Miscellany, No. 1. (pp. 48, Cassady and March), is a merry Boston monthly, in which we looked, of course, for examples of that peculiar style of exaggeration which has characterised the humour, not only of the periodical press, but of many volumes of the Crockett description. Among these we are told of a *Genuine Yankee*, who is never at a loss, and is armed with "double teeth all round."—Again, "*Siamese Monkeys*." 'Tis said a captain of a vessel in New York has brought home two monkeys, with but one tail between them. The captain intends to sell them wholesale, as he cannot re-tail them.—"*Remedy for a Lady's Sore Throat*." Enclose it closely, yet tenderly, with a shirt sleeve; and be sure you have an arm in it."—"*No Danger*." 'Think there's any danger, Mister Meanaggeery-man, from that boy-contractor?' 'Oh, no,' said the man; 'the serpent don't bite, he swallows his vittals whole.'—So much for transatlantic drolletry.

Oxford and Camb. Club, Feb. 14.

Sir,—I send you a few more translations from the "Anthologia." M. H. I.

Anonymous.

"Faithful love I can requite;
Those that bite me I can bite;
See the wretch who fondly lies
Drinking love from his sweet eyes.

* 8vo. pp. 218. London: Longman and Co.
† 12mo. pp. 21. London: Mardon: Smallfield and Son, and Green. Dublin: Hodges and Smith.
‡ Pp. 16. London: Ackermann.

Love like his who'er abuses,
Braves the anger of the Muses!"
Night and morning thus was I
Went in humble suit to cry;
But she cared for me no more
Than the tempest-beaten shore.
Now the case is altered quite;
She doth lovingly invite—
I am deaf and smile in spite!

Diongeius.

Oh that I were a breath of air,
When the cool shade my Chioe seeks;
Then would I kiss her forehead fair,
And breathe upon her damask cheeks!
Oh that I were some happy flower—
The flower which grows the best;
To feel her soft hand's magic power,
And on her snowy bosom rest!

Anonymous.

Think not to fly from Venus' son;
The rogue hath wings, and thou hast none!

TO CORRESPONDENTS.

"The Anonymous Letters" (pp. 70, Saunders and Otley) may be very interesting and amusing to those who understand them, which we do not profess to do.

To the Editor of the *Literary Gazette*.

Sir,—In the biography of the late Mr. Vendramini, in your last Number, you mention a gem from which he had engraved at St. Petersburg; and that, after his return to England, having mentioned the circumstance to Mr. Pistrucci, this gentleman stated that he had executed that gem. Now, as Mr. Vendramini returned in 1807, it is difficult to believe that Mr. Pistrucci (at the early age which he must have been if this were executed by him) could have done it. Your recent exposure of the real paternity of the George and Dragon upon the coins of George III. excites a suspicion that if Mr. Pistrucci fatherned the inventions of others, he may their works. It is, at all events, a statement that requires some explanation.

ERRATUM.—The notice of "Calandrino," &c. engraved after Briggs, which appeared among the *Literary Reviews* in our last (p. 104, col. 1.) should have stood in its proper place, under the head of *Fine Arts*.

ADVERTISEMENTS,

Connected with Literature and the Arts.

Open from Ten in the Morning until Nine in the Evening, without intermission.

Admission, One Shilling each.

AN URGENT APPEAL to the

Literary and Scientific World, and the Public in general, in behalf of the Family of the late Mr. Donovan, the eminent English Naturalist. This distinguished and highly gifted individual, who laboured in the field of natural science for half a century, with wit and ability he exerted his talents and genius in advancing the science, literature, and the fine arts of this country, his works will better explain than any thing emanating from our feeble abilities; but it is deeply to be deplored that, after devoting the whole period of his valuable life, and expending a fortune in his zealous endeavours to elucidate the natural history of his country, he died in want, and left a family of five daughters in the deepest distress, with nothing for their future support but his manuscript works; and their last and only resource for defraying incidental expenses in publishing the works lies in this appeal. The smallest contribution is most graciously solicited for that purpose, and will be very thankfully received by the undermentioned, or by Mr. Don, at the Linnean Society, Soho Square.

SOPHIA DONOVAN.

13 Upper Ashley Street,
Northampton Square,
8th February, 1850.

ARCHITECTS.—Notice is hereby given,

that the Trustees appointed by Sir John Soane to meet at the Museum, 15 Lincoln's Inn Fields, on Monday, the 15th day of March next, at Three o'clock in the Afternoon, precisely, to distribute the Dividends which shall have accrued during the preceding Year from the sum of 5000*l.* reduced three per cent Bank Annuities, invested by the late Sir John Soane, among distressed Architects, and the Widows and Children of deceased Architects left in destitute or distressed circumstances.

Forms of Application may be had at the Museum, and must be filled up and delivered there, on or before Saturday, the 10th day of March, after which day no application can be received.

THE NOBILITY, GENTRY, &c. are

respectfully informed, that the old-established Firm of Colnaghi and Co. was, in 1835, removed to No. 14 Pall Mall East, where the Business has since been carried on, under the style of Paul and Dominic Colnaghi and Co.

ledge. Price 2s. 1838.—An Elementary Treatise on the Tides.
Price 2s. 1839.

Charles Knight and Co. Ludgate Street.

SMITH'S WEALTH OF NATIONS, with
Commentary.

By the Author of "England and America."
There are particular occasions on which it is necessary to
trouble the Public with a statement of private transactions. The
near-completion of this work, the publication of which com-
menced in 1833, is one of these years. In the April of that
year, Mr. Knight agreed with Mr. Edward Gibbon Wakefield,
the Author of "England and America," to publish an edition of
Smith's Wealth of Nations, with a Commentary, by Mr. Wake-
field. The work was to be brought out in periodical Volumes,
and to be sold at 2s. 6d. per Volume. The first Volume, on
account of the Commentary. The First Volume appeared,
and was well received by the public; the Second was also duly
published. The Third Volume, after some interval, was pub-
lished, but Mr. Wakefield did not contribute a single note
towards it. The Last Volume, which connects the text with the
end of the Third Volume, has been printed two years. Of the
Fourth Volume, which was to consist entirely of original matter,
Mr. Wakefield has furnished twenty pages only, after every mode
of entreaty and of remonstrance has been resorted to in vain dur-
ing the course of the last three years. The Publishers feel that
they cannot any longer remain silent under what appears to be a
fraud upon the purchasers of the Three Volumes. They, there-
fore, submit this statement of facts to the Public, and beg to
announce that the Volume which completes the Text will be
published on the 1st of March.
February 11, 1839.

London: Charles Knight and Co. 25 Ludgate Street.

AN EXPLANATORY AND PRACTI-
CAL COMMENTARY ON THE NEW TESTAMENT
OF OUR LORD JESUS CHRIST, intended chiefly as a Help to
Family Devotion.

the same, in roan, 4s.

WALKER'S NEW MODERN GENE-
RAL ATLAS, containing Thirty-four distinct Maps.
To which is added a Description of the principal Cities, Towns,
&c. By RICHARD RYAN.

In which is stated the nature of the government; the amount
of population; the religion; the names of the capitals and of the
chief cities; together with the produce, exports, imports, and
military forces of every kingdom; and a summary of their islands,
and foreign possessions, &c. &c.
"This work is better calculated to facilitate the study of geo-
graphy than any other book of the kind we have hitherto seen.
The Maps are elegantly engraved and well printed, and the Ap-
pendix contains, in a few pages, all the information that is to be
gleaned from reading through larger geographies. In fact, the
author has availed himself of all such information, and arranged it
for the student, in the best possible manner."
London: John Williamson and Co. 13 Warwick Square.

EXTERNAL INSTEAD OF INTERNAL MEDICINE.

8vo. cloth, price 10s. 6d.

COUNTER-IRRITATION.

By A. B. GRANVILLE, M.D. F.R.S.

Author of the "Spas of Germany."

Tic Douloureux, Rheumatism, Inflammation of the Throat and
Chest, Suppressed Gout, Lumbago, Nervous Headach, Tooth-
ache, &c. &c. immediately and effectually cured by External
Means.

"The book is the work of a man of sense, extensive practice,
and perfect power of conveying in plain and comprehensible lan-
guage, the statement of facts on which he grounds his system. It
is distinguished for its clearness of arrangement, and will neither
bewilder nor distract the reader. Strong cases are brought for-
ward to bear witness to its truth."—*Times*, Sept. 1838.
London: John Churchill, Princes Street, Soho.

THE LAWS OF HARMONIOUS
COLOURING, adapted to Interior Decorations, Manu-
factures, and the Fine Arts.

THE ANONYMOUS LETTERS.
Saunders and Otley, Public Library, Conduit Street.

THE COMEDIES OF ARISTOPHANES,
translated into familiar Blank Verse, with Notes, Prefaces, and a Dissertation on the Old Greek Comedy, from the German of Wachsmuth.

By C. A. WHEELWRIGHT, M.A.
Formerly of Trinity College, Cambridge, Author of
"The Odes of Pindar," &c.
3 vols. 8vo. cloth, 11s. 6s.

Sophocles, literally translated into English
Prose, from the Greek, with Notes. The 3d edition, very much
improved, 8vo. boards, 15s.

Euripides. The Hecuba, Orestes, Phœni-
cian Virgins, and Medea of Euripides, literally translated into
English Prose, from the Text of Porson, with Notes. The 4th
edition, revised and corrected, 8vo. boards, 8s.

The Hippolytus and Alceste of Euripides,
literally translated into English Prose, with Notes. A new edition,
8vo. sewed, 6s. 6d.

Aristophanes. The Comedies of Plutus and
the Frogs, literally translated into English Prose, with copious
Notes. 8vo. boards, 8s.

Aristotle's Rhetoric, literally translated from
the Greek, with Notes; to which is added, an Analysis of Aris-
totle's Rhetoric, by Thomas Hobbes, of Malmesbury, and a Series
of Analytical Questions. The 3d edition, very much improved,
8vo. boards, 15s.

D. A. Talboys, Oxford, and 118 Fleet Street, London.

2d edition, 8vo. 2s. 6d.
THE STATE IN ITS RELATIONS
with the CHURCH.

By W. E. GLADSTONE, Esq.
Student of Christ Church, and M.P. for Newark.
John Murray, Albemarle Street.

In 4 large vols. 8vo. price 15s. 2s. boards.
HISTORY PHILOSOPHICALLY
ILLUSTRATED, from the Fall of the Roman Empire
to the French Revolution.

By GEORGE MILLER, D.D. M.B.I.A.
Formerly Fellow of Trinity College, Dublin.

"His work possesses a unity of subject, harmony of propo-
sition, and conversion of parts, that render it not merely the best
modern history in our language, but the only one from which a
student can obtain a systematic view of the progress of civilisa-
tion."—*Foreign Quarterly.*

London: Duncan and Malcolm, Paternoster Row.

Price 1s.
THE TRAGICAL HISTORY OF WAL-
WYN AND AVEOLEA, containing in it a rare Example
of True Constancy.

By I. AMES.
Sweet are the woes of adversity,
Which, like the toad, ugly and venomous,
Wearies yet a precious jewel in his head."—*Shakspeare.*
London: Houlston and Storeman, 65 Paternoster Row.

In 12mo. neatly bound, price 4s. 3d edition.
THE ETON GREEK GRAMMAR;
translated into English, with additional Notes.
By the Rev. G. N. WRIGHT, M.A.
Master of Broom's Grammar School.
This edition is improved from the Grammar of Mathias; new
Examples, both in the Declining of Nouns, Conjugation of Verbs,
&c. are given, and, without departing from the divisions and ar-
rangements of the original, many valuable introductions have
been made.
Wm. Joy, 65 Paternoster Row.

12 Great Marlborough Street, Feb. 23.
M. R. COLBURN has just published
the following NEW WORKS:—

I.
The Youth of Shakspeare.

By the Author of "Shakspeare and his Friends." 3 vols.

II.
A Voice from America to England.

By an American Gentleman. 1 vol. 8vo.

III.
The Romance of the Harem.

By Miss Pardo,
Author of "The City of the Sultan," &c. 3 vols.

IV.
Excursions in the Interior of Russia.

With Sketches of the Emperor Nicholas and his Court.
By Robert Bremner, Esq.
3 vols. 8vo. with Portraits.

V.
Horace Vernon;

Or, Life in the West. 3 vols.

Also, just ready,
I.
MRS. TROLLOPE'S NEW WORK.

Michael Armstrong, the Factory Boy.

To be published in Twenty Monthly Shilling Parts, printed
and embellished uniformly with "Nicholas Nickleby," &c. The
First Part will appear on the 30th instant.

II.
The Idler in Italy.

By the Countess of Blessington.

3 vols. 8vo. with fine Portraits of the Author, and after
E. Landseer, R.A.

Head Quarters.

By BENJAMIN HILL, Esq.
Author of "Recollections of an Artillery Officer," &c.
3 vols. post 8vo.

Henry Colburn, Publisher, 15 Great Marlborough Street.

In 6 vols. 8vo. with a Portrait, after an original Picture
by Vandyke, M. 12s.

THE WORKS OF DR. DONNE, Dean of
Saint Paul's in 1619-1631, with a Memoir of his Life.

By HENRY ALFORD, M.A.
Vicar of Wymondley, Leicestershire.

It has often been a subject of regret that the works of this
eminent divine and poet have not been collected in a modern
uniform edition; and in a recent number of "The Quarterly Re-
view," there occurs a recommendation that such an edition should
be undertaken. Many months, however, before the appearance
of that article, the present editor had commenced preparing for
the press, the Life and Works of Donne; and it is hoped that the
edition will be welcomed by the public, and found worthy of be-
coming a standard book in English libraries.

London: John W. Parker, West Strand.

Price 1s.
PROTECTING DUTIES Essential to the
Prosperity of the Manufacturers, Agriculturists, and
Working Classes of the United Kingdom, 1839.
By L. KENNEDY,
Author of "The Tenancy," &c.
To be had of Messrs. Ridgway, Piccadilly; Wrights, Hay-
market; Thomas Kaye, Liverpool; Sider, Perth; and other
Booksellers in Town or Country.

ARITHMETIC, BY GOODACRE.

REVIEW OF NEW BOOKS.

The Idler in Italy. By the Countess of Blessington. 2 vols. 8vo. London, 1839. Colburn.

"GENOA, April 27th. I have (says the fair and noble writer) been idle the last four days, and have not even opened my journal. One day of idleness, like one sin, is sure to beget another; and I sometimes think that I shall leave off journalising altogether. But then comes the thought, that, perhaps in years to come, these hastily scribbled pages may bring back pleasant recollections, when nought but recollections of pleasure shall be mine: and this foreboding induces me to continue."

We have to congratulate ourselves and the public, that the four days' sin recorded in this passage did not beget the further wickedness of discontinuing the journal; that better thoughts prevailed; and that the pleasant recollections thus preserved are such as must gratify every reader of taste and feeling. If idleness were always to produce so much pleasure, we should pray that there might never be any more labour on the face of the earth; and, in truth, it has always been a maxim of ours, that there is too much toil and too little repose, too much procuring of means to be enjoyed and too little of enjoyment, in the world, and especially in England. Men are like bees, garnering up honey for winter gratification; but they are nipped off as the later season approaches, or benumbed and rendered unable to touch the treasured sweetness during all its cold and frozen reign. And, unlike the bees, they have no returning spring, humming with melody, balmy with scents, and enamelled with flowers rich in nectar.

What a beautiful nosegay is that which old Winter wears in his bosom as he is forced to leave us by this persuasive voice and gentle breath of Spring! The pure snowdrop, the soft primrose, the rich crocus, the fragrant violet,—they all appear to be spontaneous emanations from Nature herself, and to have no alliance with cultivation or art. The slightest kindness from the sun awakens their slumbering loveliness; and, like cherished genius, they force their way through the chill and hardness of all around, to embellish and adorn an epoch of life. They call to them the bee and the butterfly: why do not mankind read the lesson, and the busy and the gay learn alike to enjoy the blessings which court their acceptance?

But to our suggester of these fancies, the volumes before us, and a charming portrait of Lady Blessington from a drawing by Edwin Landseer; it is replete with character and expression, though a faint sketch.

After all we have read of Italy, and the route thither pursued by her ladyship* (A.D. 1822-3), it is only by the vivacity and intelligence thrown over the subject that it could have been made so agreeable as it is, and such as we think the few following extracts, though brief, will shew it to be. We commence with a literary illustration, which displays much condensation and force.

* Through France, and by its southern parts, Toulon, Avignon, Aix, Frejus, &c., to Genoa (six days' travelling on mules); and thence by Florence, Rome, &c. to Naples, and back to Rome.

"Geneva, 16th.—I went to sleep last night with the sound of the murmuring Rhone in my ears; and awoke this morning impatient again to view the 'Leman lake.' How 'brightly beautifully blue it is!' It looks as if the heavens had bathed in it, and left behind in its limpid waters a portion of their azure loveliness. How many eyes, to whom no common vision was granted, have dwelt with pleasure on this beautiful lake!—Voltaire, the most brilliant scoffer that ever lifted the veil from the defects of his species, or gloried in exposing them; Rousseau, who avenged himself on mankind, by displaying, in his 'Confessions,' how base, how unworthy man could be;—he, whose imagination was all warmth and tenderness, and whose heart was cold and hard as the ice of his native mountains; Gibbon, the always patient investigator, but not always impartial narrator, who sneered at, more frequently than he pitied, the errors he related; De Staël, the brilliant, the eloquent De Staël, whose genius caught, as it were, by intuition, the truths that others only discover by a life of laborious study; Shelley, the passionate, the visionary poet, dreaming away life in a world of his own creation, and giving us glimpses of its brightness in his poems; and though last, not least, Byron, the child of genius, whose passions are converted into chords, from which he can draw forth music that finds an echo in every heart. Yes, this lake is invested with an interest, more powerful than its beauty could awaken, by its associations in the mind with the gifted beings who have lingered on its margin."

At Genoa, our travellers associated a good deal with Lord Byron, and, notwithstanding the "Conversations" already published, the subjoined notice of that strange being will be found interesting. If not acting in it, he evinces a naturalness which we greatly admire.

"I like music," said he, "but do not know the least of it, as a science; indeed, I am glad that I do not, for a perfect knowledge might rob it of half its charms. At present I only know, that a plaintive air softens, and a lively one cheers me. Martial music renders me brave, and voluptuous music disposes me to be luxurious, even effeminate. Now, were I skilled in the science, I should become fastidious; and instead of yielding to the fascination of sweet sounds, I should be analysing, or criticising, or connoisseurshipising (to use a word of my own making), instead of simply enjoying them as at present. In the same way, I never would study botany. I don't want to know why certain flowers please me; enough for me that they do, and I leave to those who have no better occupation, the analysis of the sources of their pleasure, which I can enjoy without the useless trouble." Byron (adds Lady Blessington) has little taste for the fine arts; and when they are the subject of conversation, betrays an ignorance very surprising in a man who has travelled so much. He says, that he *feels* art, while others prate about it; but his neglect of the beautiful specimens of it here, goes far to prove the contrary."

The following observations are just, and ap-

plicable to more cases than Lord and Lady Byron's:—

"If people would but consider how possible it is to inflict pain, and perpetrate wrong, without any positive intention of doing either, but merely from circumstances arising through inadvertence, want of sympathy, or an incapability of mutual comprehension, how much acrimony might be spared!! Half the quarrels that embitter wedded life, and half the separations that spring from them, are produced by the parties misunderstanding each other's peculiarities, and not studying and making allowance for them. Hence unintentional omissions of attention are viewed as intended slights, and as such are resented; these indications of resentment for an unknown offence, appear an injury to the unconscious offender; who, in turn, widens the breach of affection by some display of petulance or indifference, that not unfrequently irritates the first wound inflicted, until it becomes incurable. In this manner often arises the final separation of persons who might, had they more accurately examined each other's hearts and dispositions, have lived happily together."

At Naples, Lady B. visited the tomb of Virgil, and tells us:

"A bay-tree once crowned the tomb; but the English travellers, as the *custode* informed us, not only stripped it of its branches, but when they had all disappeared, cut the roots, so that no trace of it is left. This desire to possess memorials connected with celebrated persons is a weakness from which few are exempt; nevertheless, if we analysed the feeling, we should be led to allow that it is puerile to attach value to mere perishable memorials of even a more perishable substance, the human frame; when we have the emanations of the mind which lent the frame its honour, preserved fresh and unfading as when the immortal spark that dictated them animated its frail tenement of clay. Let us place in our libraries the works of the master spirits of past ages, instead of filling our cabinets with lumber, only prized by some remote association connected with the mortality of those whose writings are immortal. The grave of an Englishman, whose name I could not learn, is, by his last desire, close to the tomb of Virgil, and a more beautiful view than the spot commands it is impossible to imagine. A nameless grave, and particularly in a conspicuous situation, is always an object that awakens melancholy reflections in the mind. It denotes that he whose frame moulders in it was uncheered by the hope—a hope so natural to many—that after he should repose in it, some who loved him would seek his tomb, and read his name with pensive eyes. This return to eternity without leaving a trace behind, indicates a broken spirit which had outlived hope and affection. How many pangs must the human heart have endured, ere it is tutored into this last desire of despair, of dying unknown and unnamed! He could not have been poor, who could pay for a grave in this spot; consequently, it was not poverty that compelled a nameless grave. Whoever may have been the sleeper within it, I gave to his memory a sigh; and to the *custode* an additional fee, for the care bestowed in preserving

it from profanation. Another funeral monument, near to that of Virgil, excited less mournful reflections. It is that erected by an English lady to the ashes of her lapdog! This monument has excited so much animadversion, that it is said it will be removed; and I must confess that I shall not regret its disappearance, for I do not like to see the name of her who raised it, a name honoured in Italy, as appertaining to one who has proved herself a liberal patroness of the arts, and an enlightened amateur of literature and science, exposed to the censures of those—and there are many—who think that she has insulted the ashes of Virgil, by placing those of her canine favourite so near them.”

Her ladyship, among other matters, describes the celebrated lunatic asylum at Aversa, to the peculiarities of which the *Literary Gazette* first directed the attention of Great Britain; and we have reason to believe, with much advantage to the humane treatment of the insane throughout every establishment in the empire. It is, however, to her ladyship's interesting notices of the distinguished individuals she met on the continent, both foreign and English (some of the latter eminently distinguished), that we would point the attention of her readers, whilst we content ourselves with instancing a few of the brilliant or useful touches which sparkle over or enrich her work.

“The taking leave of friends is painful; even those whose society afforded little pleasure, assume a new interest in the moment of parting. We remember only their good qualities; but, perhaps, this oblivion of their defects, proceeds from the anticipated release from their consequences. This it is that makes us often part from our friends with more kindness than we feel in meeting them.”

“May not grace be considered to be the esprit of the body?”

The English mania in Parisian estimation:—

“The English here appear to enter into the amusements with a most businesslike assiduity; each tells one that he or she must go to the theatres (*bongré malgré*), for every one goes; must drive in the dusty Bois de Boulogne, or more dusty Champs Elysées, because every one drives or rides there; must form one of the crowd at the English ambassador's on a certain evening; and do half-a-dozen other equally tiresome things: all of which they profess to detest doing, but to which an imaginary sense of necessity compels them. All this seems very incomprehensible to the French; one of whom observed to me, that my compatriots seemed to *s'ennuyer beaucoup en cherchant de s'amuser*.”

Excellent definition of a bore:—

“‘What is a bore?’ asked one of my French female friends last night. ‘At Paris,’ continued she, ‘I have heard English people, when talking to each other, say, What a bore he or she is! Now pray give me your definition of a bore?’ ‘A person who tells you about himself, when you wish to hear only of yourself,’ was my simple explanation, which made them smile.”

Allied to bore-ology:—

“Comte Andriani mentioned a curious instance of the vanity of some friends of his; who, on hearing of the death of a very clever person with whom they were on terms of intimacy, and who was returning from a long voyage, agreed that their escape from the necessity of listening to the details of places which they never saw, and were not interested about, was no common consolation for his loss. ‘Also,’

“‘Since writing the above, the monument has been removed by order of the inspector of police.’”

continued these dear friends, ‘poor ——— would have assumed such an air of superiority over us in boasting of his travels!’

“A lady once told me that the only use of which she found her head was, that it furnished her with an excuse for not doing any thing she disliked; as the assertion that it ached relieved her from importunities. An ill-natured acquaintance added, *sotto voce*, that her friends would never have discovered that she had a head where it not for her continual complaints of the sufferings it caused her.”

“Not the least annoyance occasioned by disease is the being reminded by friends of the imprudence that led to it. One is sure to be told that it proceeds from over exercise, or the want of it; from an insufficiency or an excess of sustenance; from too late hours or too much sleep. In short, all one's habits, however temperate, and all one's pursuits, however rational, are scrupulously brought up in judgment against the unhappy sufferer; and each and all, positive and negative, are pronounced to be equally highly calculated to induce the malady in question.”

Fine comparison:—

“It is not mountains alone to which distance lends charms, it gives a halo to anticipated happiness, that reality dissolves; gilds the visions of hope, and disarms grief of its stings; subduing the memory of sorrow to a pensive but not unpleasant recollection.”

Good advice to artists, &c.:—

“An artist of true merit should keep aloof from politics and the invidious protection they can bestow, and rely on his talents for the ultimate attainment of universal patronage.”

“In the Chigi Chapel is the Magdalene of Bernini, a statue in which the contrition of the penitent has not impaired the beauty of the sinner. One of our party made this remark aloud; on which our cicerone with *naïveté* replied, that probably the sculptor had copied a model who had only lately begun to repent.”

Neapolitan anecdotes:—

“Though uneducated, the King of Naples is by no means deficient in natural ability. He is said to possess a more than ordinary degree of shrewdness; and delights in indulging in a sportive satire, always sure to be well received by his courtiers. A short time ago, when new clothing was required for the army, an officer suggested that it would be advisable to have the jacket padded over the chests, like those of the Austrians; stating that it was not only advantageous to the figure, but also served as a defence against the cut of a sabre. ‘Oh, for protecting the person,’ replied the king laughing, ‘it is much better to have the jackets padded behind.’”

“Our guide pointed out to us the villa of Mi Lor Grandorge, a very respectable English shopkeeper established at Naples, but whom the peasants honour with the designation of ‘Mi Lor’—a custom peculiar to this country. They declared he was a true nobleman and had great possessions. Sir William Gell asked them, ‘How it was that they imagined a grand English lord could keep a shop and serve his customers,’ when one of them answered that ‘he knew all the English nation kept shops, which made them so rich.’ This was a curious coincidence with Napoleon's opinion that ‘the English were a nation of shopkeepers.’

“Two inscriptions, which I copied from the album, one by an Englishman, and the other by a Hibernian, may serve as specimens of the style of writing, which so strongly excited the censure of the French tourists:—‘John Hallett of the Port of Poole England, went to

see M Vesuvius on the 20th of October 1823, hand I would Recommend anney person that go ther to take a bottle of wine with him, for it his a dry place and verrey bad roade.’ 1823. I have witnessed the famous Mountain of Vesuvius in Italy, and likewise the Wicklow Mountains in Ireland which I prefer. They talk of their lava in a palaver I little understand, and as for the crater, give me a drop of the swait cratur of Dublin in preference.

JAMES G.’

“I have met here some young men, and of ancient descent too, who displayed a degree of ignorance, not a little surprising, in the nineteenth century. One, on seeing a small lachrymatory on my table, asked what it was? A person present answered it was a *lacrymo-matoire*. ‘A *lacrymo-matoire*,’ resumed the questioner, ‘surely it is too small to hold enough cream, even for one cup of tea.’ Another seeing a small bronze statue of Voltaire on a console, on which were placed some antique lamps and vases, asked whether the latter were really antique? Being assured in the affirmative, he took up the statue of Voltaire, and observed, ‘Oh! for this, no one could question its antiquity: one has only to look at it, to ascertain that it must be an antique, the fellow looks so old.’”

We conclude with a singular and amusing story:—

“A curious incident lately occurred in our immediate neighbourhood. A gentleman who has a villa near this, dreamt that a certain number would be a prize in the lottery. The morning after his dream, which was only a week previous to the drawing of the lottery, he wrote a note to his clerk to desire him to buy the ticket immediately: and subsequently told many of his neighbours and acquaintances of his dream, the number, and of his purchase of the ticket. Being a very popular person, all who heard of the circumstance were anxious that his dream should be realised; and, to their great satisfaction, the number was drawn a very large prize. Forthwith, a numerous party of artisans and peasants, employed by the gentleman in question, sallied forth from Naples, with musical instruments, colours flying, and a banner gaily decorated; on which the lucky number was inscribed, and also the amount of the prize. In this manner they proceeded to the habitation of Mr. —, and announced the joyful intelligence, which, it is needless to say, spread a general hilarity through the house. This procession was followed by several friends and acquaintances, who came to congratulate the fortunate owner of the prize. Refreshments in abundance were served out on the lawn for the peasants and artisans; and a collation in the *salle-à-manger* was offered to the friends. Sufficient wine of an inferior quality not being in the cellar, the best was copiously supplied, in the generosity occasioned by the good fortune of the host. The health of the winner of the prize was repeatedly drunk; and many suggestions relative to the disposal of a portion of the newly acquired wealth were given. The news spread, and the pleasure grounds of Mr. — became literally filled with visitors of all classes; when, in the midst of the general rejoicings, the clerk who had been a week before deputed to purchase the ticket arrived, with a visage so rueful and woe-begone, that one glance at it announced some disagreeable news. Alas! this unlucky wight had, in the pressure of more than ordinary business, forgotten to buy the ticket! and thought not of it until informed of its having been drawn a prize. The rage and

disappointment of Mr. — may be more easily imagined than described, when he saw the wheel of fortune, which had paused at his door, driven to that of another; who, having heard of the dream of Mr. —, selected the number, and became the buyer of the ticket only the day before it was drawn. The refreshments so liberally dispensed on this occasion had quite exhausted the larder of the dreamer, and nearly emptied his cellar: and thus ended the affair of the lottery. Never were people so addicted to this species of gambling as are the Neapolitans. All classes indulge in it, more or less, but the lower ones give way to it with an extraordinary recklessness. Every dream, encounter, incident, or accident, has its own particular sign and number, which may be found in a book published for the instruction of the buyers of tickets, and of which every house has a copy. The death of a friend, however lamented, refers to a particular number, which the mourner forgets not to secure, if it comes in conjunction with some fortunate sign; thus even out of misfortunes and afflictions the Neapolitans seek to draw some recompense. Nor does frequent disappointment seem to correct their eagerness for the lottery. They always discover some satisfactory reason for having missed the prize; and hope to be more fortunate the next time."

A Narrative. By Sir F. B. Head, Bart. 8vo. pp. 596. London, 1839. J. Murray.

EVENTS "perplexing nations" are rife in these our days, and one of their signs most peculiar and embarrassing seems to us to be the frequent publication of what has been private trust and confidential intercourse. We do not take upon ourselves to determine whether treachery in the employers, or misconduct in the employed, necessarily or unnecessarily leads to such results; but we think we may have it common with every well-wisher to our country and to its good government, to lament that such is the case. All revelations of the kind must impair the strength of the one and injure the character of the other.

We blame no one,—there may be a pressure of wrong beyond individual endurance; and it is a difficult task for a man who has conscientiously buckled himself to the performance of a most arduous duty, to sit down under the stigma of misrepresentation or the odium of censure.

It is on account of the common weal alone that we deplore such circumstances as are connected with Portfolios, Urquhart Speeches, Durham Reports, and Head Narratives. Every thing tortuous is, or ought to be, abhorrent to the policy of Great Britain. Truth and straight-forwardness are her fittest and best intrigues; such as would baffle and defeat all the Machiavellism in the world.

Entertaining these opinions, all we shall say with respect to the volume before us is, that, as a personal vindication of his Government in Upper Canada, Sir F. Head has produced a very strong case; and if the views and politics of the British and Conservative party, which he adopted, as opposed to the Liberal and Republican faction, which he contends that ministers and Lord Durham have too much flattered and encouraged, involve the true principles on which these colonies ought to be governed, then his general arguments are quite as strong as his private justification. The whole question, however, lies between the two lines of policy.

The Cabinet Minister. By Mrs. Gore, author of "Mothers and Daughters," "Stokeshill Place," &c. 3 vols. 12mo. London, 1839. Bentley.

Mrs. GORE has gone into a class of novel, the principle of which we have always disapproved. The mixture of reality and fiction applied to our own times, and the still more objectionable conjunction of real and fictitious characters, are the leading features of this publication, which refers to the period of the Regency of the Prince of Wales, and introduces Sheridan and other individuals by name, commingling them with anonymous personages; the chief traits ascribed to several of whom sufficiently point out the originals whence the drawings were made.

Thus, in our opinion, radically wrong in her framework, Mrs. Gore's acquaintance with society and keen sense of observation are the redeeming qualities to which we can accord our praise; and even these, we think, are deteriorated by the heterogeneous nature of the whole. We shall, however, give an example of her talent in this respect. A *parvenu* peer and his provincial residence are thus described:—

"On his door might have been inscribed (as was chalked by Canning, in a convivial moment, on the door of another *parvenu* lord who was fond of parading over his dignities),

'Bobby Raynham lives here,
George the Third made him a peer,
And took the pen from behind his ear.'

Evidence of the newness of the honours of Raynham Lodge was apparent in the self-sufficiency of the owners. Lord Raynham's elevation to the peerage arose, as was plain to perceive, from his having united himself with the ugly first cousin of the late minister. Yet, in the eyes of his country neighbours, he assumed a sort of oracular dignity, implying that every one was not fit to be trusted with the degree to which he was indispensable to the service of government. He was always assuring Sir William Beckford and Mr. Danston that it was quite a mistake to suppose him in correspondence with Percival, which they had never supposed; and if he ran up to London for a day to go to the dentist, or see a new farce, he took care to visit Downing Street with an invitation to Raynham Lodge, or some other equally trivial purpose, in hopes of having it figure next day in the ministerial journals, and he thence transcribed into his county paper, that 'Yesterday, Lord Raynham had an audience of the First Lord of the Treasury.' Like many other people, he betrayed his sense of his insignificance by the pains he took to render himself important. Almost every one has a secret purpose in life.—Lord Raynham's was to appear a man in power. He knew his incompetency too well to grasp at the substance; the shadow was sufficient for his ambition; provided his kinsfolk, neighbours, tenants, servants, fancied that half the business of the nation was transacted at Raynham Lodge, he was content. The clerk of the parish, clerk of the peace, and other duodecimo dignitaries of the neighbouring town, continually enlarged, at their Saturday club, upon the obduracy of my lord in not choosing to enter the cabinet, though the premier had been so long holding the door open, and waiting to bow his lordship in; nay, many of even the county clergy and provincial place-men were in the habit of waiting upon Lord Raynham with their grievances, in the belief that a petition presented or a request proffered by him could not fail to prosper in the high quarters, where his voice was so influential,

Most parties in power possess a sort of 'dead man' member of this description, like the binding of gilt calf to a valuable volume, or the ornamental frame of a noble picture, having no more real connexion with it, than a cockle-shell floating upon the Thames or Danube with the destinies of those mighty streams. Such men are not dangerous; they assist in maintaining the superficial structure of a party. Those who are divided among themselves in the council-chamber may dip together in the dish at such men's banquets without committing themselves; and waverers, who are not yet tied together by the bonds of red tape in the for-better-for-worse union of the ritual of the red-book, meet at their country houses as on neutral ground. Their explanations to parliament, being ex-ministerial, are implicitly relied on by the country; and a premier is as pleased to possess a Lord Raynham who provides him with agreeable entertainments during the recess, and gratuitous prose during the session, as a Lord Raynham had to meet with a premier whose notice stamps his moral insignificance into value in the estimation of this unjudgmental world."

Another specimen will suffice:—

"Selina, Mary, and Sylvia Beckford were very slight variations of the same tune. The shades of difference perceptible in the colour of their hair, eyes, and complexions, distinguished them as little from each other as difference of temper or character. They were all three rather pretty, rather tall, very good-natured, very lively, and a great addition to the dull society of the neighbourhood of Swansborough. But, above all, they were passionately fond of music. From their childhood Lady Beckford had insisted upon their being inordinate performers; and the boss which (pointed out by phrenological science) had induced her to cultivate their musical talents, was supposed to have ably seconded her intentions. By dint of practising four or five hours a day, under the surveillance of a governess selected exclusively for her musical proficiency, they became what is called mistresses of the harp, piano, and guitar; that is, they played about as well as sixth-rate professors, and well enough to weary to death most people who were in the habit of dining with Sir William Beckford. That they could do little beside, follows as a matter of course; their time and thoughts were devoted to a single object. As they grew to woman's estate, a new duty presented itself to the mind of Lady Beckford. They must sing as well as play; no matter whether they had voices. To her daily inquiry of the governess, 'How went on the practising yesterday?' was henceforward to be added, 'I trust neither of the girls has neglected her *solfeggio*?' Luckily for her maternal solicitude, all three became tolerable proficient. Sylvia, the youngest, had a fine soprano voice; Mary, the second, a contralto; and Selina, a rambling, powerless, available organ, that could take any part when better performers were not at hand; and with Lady Beckford's accompaniment a trio was thus provided. Vocal music is always more popular than instrumental; it is, perhaps, more grateful to the ear: and whereas, though the number of players is limited, most fancy they can sing, or at least indulge in humming a popular tune, there is more sympathy with the attempt. The three Miss Beckford, therefore, increased immensely in popularity on the discovery of their vocal accomplishments. They spent one winter at Brighton, and were torn to pieces by rival dowagers anxious to amuse their company at no expense;

were invited in London to take part in concerts and pleasure in water-parties, and finally considered an acquisition to the most fastidious visiting-book. Meanwhile, being good-humoured, unaffected girls, who played and sang because they liked music, and had been taught nothing else, they did not grow fine, or raise difficulties upon the strength of their new consequence; and, though they returned to Oak Hill, still the three Miss Beckfords returned to be as sociable as ever with their country neighbours. Nevertheless, an evil had resulted from the monomania of the family. The habit of having a sort of permanent concert-room established at their house in Cumberland Place sanctioned the introduction of many objectionable persons to their society. Lady Beckford, as a woman of character and conduct, was studiously correct in the circle of acquaintance; would not have visited a *divorcée* for the world, and made it a rule to bow coldly to such married ladies as appeared in the park carrying on flirtations at both windows of the carriage at the same time. But French or Italian singers, of whose morals she knew worse than nothing, were allowed to be the familiar companions of her daughters; and provided a man could accompany divinely on the flute, or a woman assist in the more difficult concerted pieces of Mozart or Cherubini (Rossini being still below the horizon), they were warmly welcomed to the house of Sir William Beckford. In London this plenary indulgence attracted little notice; those persons daily frequenting the Beckford's society being as music-mad as themselves, regarding harmony as a mantle covering a multitude of sins; while the less familiar friends, admitted only to their occasional concerts, conceived that the signori and signore, warbling or fiddling for their entertainment, were on the same terms in Lady Beckford's house as at the Opera or Ancient Concert. They did not approach the piano near enough to perceive that Signora Rosalvina Sostenuita called the Miss Beckfords by their Christian names, or that they were in the habit of shaking hands with the greasy-haired mustachio'd adventurers who belong in Italy to the lowest rank, and, having received the education, retain the habits and connexions of *laquais de place*. On the close of the second season, things proceeded to extremity. Lady Beckford, having fallen into ill-health, was growing weary of her task as leader of the family orchestra; and the girls, accustomed to be accompanied by their mother, were completely thrown out,—their trios and quartets silenced, their duets dumb. What was to become of them?—no song, no supper! They feared that the society of the Miss Beckfords without their music would be as little cared for as a fiddle without its strings! A remedy was at length suggested—it is impossible to say 'suggested itself,' for the hint was expressly given by their particular friend, Signor Quevriani, a leader of renown. One of his pupils, a young Italian of great promise, who had appeared with success at many professional concerts of the season, was invited to Oak Hill for the autumnal months, the period of Sir William's annual hospitalities, to receive no remuneration ('Signor di Radicati was a gentleman in this own country, and would be offended at any pecuniary offer'), but to reside with the family on terms of acquaintanceship. The Beckfords were enchanted: Radicati was the steadiest accompanier in London; had a perfect knowledge of counterpoint, and a charming bass voice. What more could they require? As he was good-looking and gentlemanlike, and the project made no encroachments on his purse,

Sir William readily coincided. Radicati had been singing gratis at his house all the season, and was ready to entertain his company all the autumn. Having never addressed more than a bow to the head of the family, the head of the family voted him quiet and inoffensive; and a low-bred adventurer, who happened to have a 'bel organe' and a fine ear, was accordingly introduced into the bosom of a well-conditioned family, to sit at table and interchange courtesies with the first families of a highly respectable neighbourhood. One or two of these, old Sir Robert Crewe and Mr. Danston, were highly disconcerted; for in those primeval days, 'when George the Third was king,' this system, so common in the present day, was an innovation. They went so far as to vote 'that d—d Italian fellow of Lady Beckford's a nuisance!' He had sometimes the audacity to linger with the squires and the claret after the ladies had quitted the table. Of what could they converse with him? Sporting or politics were not in the department of a professional fiddler; and the few words of English he was able to jabber were about as intelligible to them as their few words of French or Italian to himself. The Beckfords were considered to have done themselves and the neighbourhood real injury by the introduction of Signor Radicati and his black whiskers at Oak Hill!"

Such lively pictures, applicable to what may be seen every day in the world, are, as we have noticed, the redeeming qualities of the *Cabinet Minister*; and readers for mere amusement, who do not feel the force of the objections we have stated, will no doubt attain all the pleasure they aim at in Mrs. Gore's new Novel.

Francia's Reign of Terror; Sequel to "Letters on Paraguay." By J. P. and W. P. Robertson. 3 vols. 12mo. pp. 400. Vol. III. London, 1839. Murray.

THIS volume is the promised sequel to the "Letters on Paraguay," with which our readers are well acquainted; as their remarkable and interesting matter obtained due notice at our hands. Such being the case, we will not again go over the grounds of Dr. Francia's extraordinary career; but as we are here told he is still alive, in spite of the rumours to the contrary, we shall merely select a single passage to shew that the last tome is equal to the two preceding volumes.

"There was (say the authors) an old Spaniard who lived next door to me, and whom I had known from my first arrival in Paraguay. He went by the *sobriquet* of 'El Pelado,'—the bald man.' He was an inveterate enemy of the Creoles, and a great bigot; but, under a salutary respect for the law of self-preservation, he lived for many years in Paraguay, without intermeddling in political affairs, and denying himself, as much as he possibly could, the privilege of even gossiping about them with his most familiar friends. To my brother and myself he sometimes opened his heart, because he knew he was in safe hands; but we never heard him speak, especially dilate, on such subjects without admonishing him of the danger of its perilous tendency. He was a man of a fiery, irritable temper; but still, he was a man under the check of practical prudence, and being a mere shopkeeper, from whom most people kept aloof, because of his forbidding manners, he was, perhaps, of all the men in Assumption, the least formidable to the dictator. But this personage did not deem his enemies those alone who were capable of doing him an injury: a word uttered to his disparagement, a thought expressed unsuited to his momentary caprice,

however impotent the party who might utter it, was the signal for banishment, chains, or death. When Francia proceeded to annihilate or debase the monastic orders, he converted into barracks some of their monasteries. This so exasperated the poor pelado, especially as his hopes at the time were raised to a great pitch of excitement by a false report of a Russian squadron being on its way to Paraguay, that he gave loose to the following remark:—'The Franciscans have gone to-day, but who can tell that Francia's turn to go may not be to-morrow?' By some busy and malicious tongue this short but fatal speech was conveyed to the ears of the dictator. He summoned the pelado to his presence, and addressed him in these terribly emphatic words: 'As to when it may be my turn to go, I am not aware; but this I know, that you shall go before me.' Next morning the pelado was brought to the *banquillo*, placed not far from Francia's window; and the dictator delivered, with his own hands, to three soldiers, the three ball cartridges with which the unfortunate man was to be shot. The aim was not effectual, and the executioners were ordered to despatch him with their bayonets. Upon the whole of this scene of barbarity and blood, Francia looked from his window, being not distant more than thirty yards from the place of slaughter. You will ask me how the dictator came to limit the number of men who were to do the work of execution on the pelado to three; and as little facts are often illustrative of great, sad, and horrible things, I will answer you. He was too economical of the powder and ball, upon which he mainly depended for protection, to give it out in the necessary quantity to render even execution a work of comparative humanity. In no subsequent case did he deviate from this practice; so that in the great number of executions which followed that of the pelado, in all cases where the ball did not reach the heart, or penetrate the head, the sufferer was reduced to a mangled corpse by the process of stabbing him with the bayonet. Of all such executions, too, Francia was an exulting spectator; nor were the bodies, which had been consigned to death in the morning, ever permitted to be withdrawn till the evening. At frequent intervals, during the day, the dictator came to his window and stood gazing on them as if to glut his eyes with the work of murder, and minister fiendish satisfaction to his revenge, by the view of the mangled carcasses of those whose alleged enmity he had thus made to lick the dust. Not content with this in the case related of the pelado, Francia seized all his property, and sent his wife and children forth, though Creoles, mendicants upon the bounty of their neighbours. An execution precisely similar to that of the pelado, and on almost similar grounds,—viz. some wish expressed by a European, not favourable to the despot,—took place a few days afterwards. From henceforward the reign of terror may be said to have commenced, and that under circumstances which left neither doubt nor conjecture as to what was to be the filling up of the dark picture of Francia's sway. Deeming now the dungeon and the gibbet to be the only means of effecting reform, and that not in matters of political concernment alone, but of those which were merely mechanical, the dictator had a special gallows erected for the intimidation of his workmen and artisans. The best of them had never been initiated into the principles or mysteries of mechanics, and their practical blunders often roused Francia's irritable temper into uncontrollable harshness and asperity. But as all he did was ever done

systematically, he gave no indication for some time to his blundering workmen of his displeasure further than by telling them that he was not pleased with their work. Finding this remonstrance of little effect, he erected the special gibbet in question. In came, according to custom, one afternoon, a poor shoemaker, with a couple of grenadiers' belts, neither according to the fancy of the dictator. 'Sentinel,' said he, and in came the sentinel, when the following conversation ensued:—*Dictator*. 'Take this brionazo,' (a very favourite word of the dictator's, and which being interpreted, means 'most impertinent scoundrel'), take this brionazo to the gibbet over the way; walk him under it half a dozen times: and now,' said he, turning to the trembling shoemaker, 'bring me such another pair of belts, and instead of walking under the gallows, we shall try how you can swing upon it.'—*Shoemaker*. 'Please your excellency I have done my best.'—*Dictator*. 'Well, brion, if this be your best, I shall do my best to see that you never again mar a bit of the state's leather. The belts are of no use to me; but they will do very well to hang you upon the little frame-work which the grenadier will shew you.'—*Shoemaker*. 'God bless your excellency, the Lord forbid! I am your vassal, your slave; day and night have I served and will serve my lord; only give me two days more to prepare the belts; y por el alma de un triste zapatéro (by the soul of a poor shoemaker) I will make them to your excellency's liking.'—*Dictator*. 'Off with him, sentinel.'—*Sentinel*. 'Venga, brion: come along, you rascal.'—*Shoemaker*. 'Señor excelentísimo: this very night I will make the belts according to your excellency's pattern.'—*Dictator*. 'Well, you shall have till the morning; but still you must pass under the gibbet: it is a salutary process, and may at once quicken the work and improve the workmanship.'—*Sentinel*. 'Vamonos, brion; the supreme commands it.' Off was the shoemaker marched: he was, according to orders, passed and repassed under the gibbet; and then allowed to retire to his stall. Whether the electric shock which he had undergone strung his nerves anew, or whether his genius was quickened by a keen perception of the danger of being a sloven or an ignoramus, in a vocation so important as that of belt-maker to his excellency, it is very certain that the shoemaker appeared the next morning before Francia with a couple of belts, so entirely to the dictator's fancy, as to save the operator's neck from the halter, and to procure for him the station of belt-maker general to the army. The example was so salutary that blacksmiths, gunsmiths, architects, tailors, tambourers, cap-makers, all became better tradesmen. The 'tradesmen's gibbet' was the terror of them all, and a single peep at it, even in the distance, sent every man home to his respective calling, with a combination of alacrity, fear, and dexterity, which I doubt much if any other stimulus, however exciting, would have produced.

There is a want of arrangement in this volume which rather perplexes the narrative; but there is much curious matter which may be dipped into by the old method of *sortes*, and it will soon rivet the attention of the reader.

Three Comedies, from the German of G. E. Lessing. By the Rev. J. J. Holroyd, A.M. 12mo. pp. 281. Colchester, 1838. Totham. WZ have much pleasure in congratulating the translator upon the result of his labours. Though a modest and unpretending volume,

his work will form a welcome addition to the library of dramatic literature.

The style of the comedies before us differs essentially from that of our own. And while they possess much of the charm of novelty to those whose dramatic reading has been exclusively confined within the field of English literature, the more classical reader is enabled to estimate what must have been the feelings of the ancients while listening with delight to the productions of Plautus or Terence, of Philemon, or of his great rival and contemporary, Menander. The third comedy, "Minna," is certainly of a modern cast; but in the two which precede it, "The Freethinker" and "The Treasure," and more particularly in the latter, the well-known characters of Chremes-Philo and Davus are distinctly brought back to our recollection. The design of "The Treasure" is avowedly borrowed from one of the above-named authors; and some of the characters in "The Freethinker" (to say nothing of the simplicity of its plot, a distinguishing characteristic of the ancient comedy), remind us very forcibly of their prototypes. To eulogise the talents or the writings of Lessing, would be superfluous. Every embellishment that a ready and fertile imagination—the most refined taste and elegant wit—can impart, the comedies of Lessing must be acknowledged to have received; without having, at the same time, imbibed the indelicate and offensive tone which (being the only species of wit formerly current) too often disfigured the productions of the ancient writers.

We have now to consider the merits of the version before us, and we are most happy in awarding to the translator the meed to which his labours have so well entitled him. He has preserved entire the genuine spirit of the original, while at the same time the peculiarities and idioms of the German language have also, for the most part, been faithfully retained. His *forte* appears to be in the comic scenes, in which we should imagine the greatest difficulties to have existed. The character of Lisidor in "The Freethinker," and the whole of "The Treasure," are ably rendered. Great pains have evidently been bestowed upon the character of Theophilus; and the scene in which Julia tries to persuade her (not yet declared) lover of the beauty and excellence of true religion is, also, finely rendered. We are sorry to be unable to mention at greater length the portions of the work which especially merit our approbation, but we cannot conclude without thanking the translator, for having thus introduced to an English audience three performances which have already gained such "distinguished applause" upon the German stage. The work has been published by subscription.

Narrative of a Journey to the Site of Babylon, in 1811; Memoirs on the Ruins; Remarks on Major Rennell's Topography; with Narrative of a Journey to Persepolis, &c. By the late C. J. Rich, Esq. Edited by his Widow. 8vo. pp. 324. London, 1839. Duncan and Malcolm.

WITH the exception of the Journey to Persepolis (1821), and its valuable product of cuneiform inscriptions, now for the first time given to the public, we have had the satisfaction to pay every proper attention to Mr. Rich's interesting Oriental and philological labours. Former volumes of the *Literary Gazette* may be consulted for full-expositions respecting the Babylonian inquiries; and we shall therefore now confine ourselves to the novelty in the present publication.

At Persepolis, "the general view of the

ruins was grand: the colonnade, in which fifteen columns were still standing, very fine; the principal building rather what the French call *écraisé*, stuffed and very heavy; but the execution of the whole was beautiful. The portals at the landing-place were much too narrow; all the doors were narrow: in short, the same defects were conspicuous in these as prevail in modern Oriental buildings. The whole ruin, however, is extremely interesting. The beauty and fidelity of such of Sir R. K. Porter's drawings as I recollect struck me forcibly. I was out all the morning wandering about the ruins. The inscriptions round the windows in the first building going through the colonnade are all the same. In many parts of the ruins it may be seen that the enormous blocks of stone have been hollowed out, to make them more transportable, as at Mejid i Mader i Suleiman. The plain in which these celebrated ruins stand seems very favourable to longevity. More than one person was mentioned to me as having attained the age of a hundred; and there are many who remember Nadir Shah. These are distinguished by the appellation of Dour i Naderi."

We are sorry that we can give no idea of the inscriptions; but they are beyond our type.

"Every inscription in Persepolis, even the bits on the robes of the figures, are in the three kinds; one line of each of the two last of which expresses two lines of the first, or in longer ones there is a line less of the second, and one less than that of the third; or if the number of lines is the same, those of the second and third are shorter, and the letters wider. The wedges in the third cross each other, which those of the other two never do. * * * I observe that the Zend always occupies the pre-eminent place. If the inscriptions are one under the other, the Zend one is always in the upper tablet; if round a door or window, it is on the top; if side by side over a figure, it is the one over the head of the king; if on his robes, it is on the front fold; if on the face of a platform, it is in the centre, with the figures on each side facing towards it. Even when the course of the letters would seem to prescribe otherwise, that is, when the king is on the right hand, the Zend tablet is still over his head, and consequently the last of the tablets, though the order of the letters of all the inscriptions is from left to right. The other two species always preserve their order; the third in the place of least consideration. * * * The stones at Persepolis have evidently all been cramped with iron, as at Morghau, but it has all disappeared. When there has been a split on a large block, it has been carefully cramped; and where the stone has had a flaw, or has not been of a due form from the sculpture, a piece has been added and neatly fastened with iron."

Meagre as these extracts are, they are all which we can transfer from this volume to our page; and we have only to express our gratitude to all readers interested in such investigations, that they have the researches of Mr. Rich laid before them in a collected form.

Stanley; or, the Recollections of a Man of the World. 2 vols. 12mo. London, 1839. Wiley and Putnam.

THE art of book-making exemplified. Long, and not very just, discussions upon the merits of our favourite English authors, occupy nearly half the book. A few old anecdotes; not a few quotations; a little pardonable partiality for America; a sort of story; and the work is complete. *Ex. gr.*—

"But if you require feeling in poetry, there

is no one richer in the wealth of the heart than Mrs. Hemans. With what luxurious sybaritism of sensibility she atmospherised her mind! She seems to have realised to the fancy the delicious impossibilities with which Volpone tempted Celia.

"Byron's enervating interest is like the fatal sweetness of the panther's breath and body; Southey's untainted vigour has the fragrance of the free mountain air of virtue: the one degrades and belittles the reader; the other exalts and strengthens him: the one is 'naturally inclined to believe the worst, which is the certain mark of a mean spirit and a wicked soul'; the other is generous with 'the princely heart of innocence.'

"Contempt is the disease of solitude. Ascribe to residence and not to reason the bitter gibes of Byron, Landon, Brydges, and Southey."

"Religion is a disease of the mind; it is the offspring of a morbid heart, and a visionary fancy. Will you call that natural to man with which he never sympathises, save in the hour of his sickness and suffering, and which is so opposite to the demands of health and strength, that no motive has yet been found sufficient to keep him mindful of it in those seasons?"

"Of England and America we must say, '*magis pares quam similes*.' The system of civility which prevails in the two countries is different. England is a lake, calm and dignified, shaded by willows and fringed with daisies. America is a river, that dashes along, often muddy and always agitated, rarely graceful and never dignified, but in this wild and free impetuosity an emblem of all that is bold, and daring, and spirited in man, and sometimes, too, not failing in its unfettered energy to work out a high and earnest beauty. Our greatness lies in that enterprise and activity of which we can give no vouchers in the drawing-room. The Englishman walks in a narrow sphere, and in that sphere excels what his colunist can do in any one of the departments in which he figures. The American is a flambeau that stinks in a drawing-room, but burns admirably on the race-ground: the Englishman is a wax-candle, elegantly bright in its station, but which, if moved out of its place, flares desperately."

Paradoxical enough!!

MISCELLANEOUS.

The Religions of Profane Antiquity; their Mythology, Fables, Hieroglyphics, and Doctrines: founded on Astronomical Principles. By Jonathan Duncan, B.A. Pp. 367. London, 1839. Rickerby.

IN this volume, which gives evidence of much curious research, as well as of acute reasoning, in supporting a theory which, if not tenable in all its parts, is demonstrably built on a very broad foundation, the author deduces the earliest religions of mankind, from Fetichism, Sabeism, and Heroism; viz. the worship of material substances, the adoration of the celestial bodies, and the deification of mortals who had distinguished themselves in the first formations of social life. Thence he proceeds to shew that all the subsequent changes proceeded on observations of the zodiac and heavenly bodies. The work is well deserving of the perusal of the student and scholar.

The Life and Times of Archbishop Sharp (of St. Andrew's). By Thomas Stephen, Med. Lib. King's Coll. &c. &c. 8vo. pp. 640. London, 1839. Rickerby.

WITH the aid of some MSS. deposited in the Episcopal chest at Aberdeen, the author has gone carefully over the events of the distracted

period of which he treats, and endeavoured to throw more light upon them and the prominent characters who figured in shaping them. It would not suit our limits nor our inclination to enter into detail upon so wide and so debateable a field, nor to deliver our opinions upon the sad questions of religious oppression and religious fanaticism; upon faction assuming religion as its standard; upon murder justifying itself as sacrifice; nor upon almost any one of the afflicting questions raised by the history of this lamentable period. Suffice it for us to notice that Mr. Stephen takes a high-church view of his subject throughout.

Motives to the Study of Biblical Literature; in a Course of Lectures, &c. By the Author of the Critical Examination of "Bellamy's Translation of the Bible," in the "Quarterly Review." Pp. 346. London, 1839. Hatchard and Son.

ANOTHER production, to which we may justly pay the same compliment with which our preceding notice concludes. It displays a considerable degree of learning upon a subject of more than common interest, and is full of biblical literature, accompanied by enlightened remarks, which, either in a scriptural or philological view, are eminently entitled to attention. We believe we are not wrong in ascribing this meritorious production to Mr. Goodhugh.

The Gift for all Seasons. Edited by William Anderson, &c., author of "Landscape Lyrics." 12mo. pp. 354. London, 1839. Smith, Elder, and Co.

ON the plan of the Annuals, with engravings of the Queen, T. Campbell, and a few subjects and landscapes, this is a pleasing collection of contributions in prose and verse. The following love-song, by the bard we have named, is a specimen which will, we fancy, amuse our fair readers.

"A Song.

I gave my love a chain of gold,
Her beautiful neck to bind;
But she keeps me in faster hold,
With chains around my mind.
I think I have the harder part—
For, neath her lovely clasp,
She carries links outside her heart—
My fetters are within!"

Instructive and religious sentiment are the prevailing qualities, and the editor himself has offered several pleasing examples of his fitness to write on such subjects, as well as to super-
vise the writings of others.

A Popular Treatise on Gout and Rheumatism. Pp. 47. (London, E. Ransden.)—A brief and familiar notice of the symptoms, &c. of these painful disorders, and the mention of various remedies recommended by eminent medical writers on the subject, preferring, of course, a specific of the writer's own, viz. Blair's pills.

The Grammar of Law, &c. &c., by a Barrister. Pp. 337. (London, Rickerby.)—A useful work, not only for the profession, but for all who may be at a loss for the meaning of law terms.

Pope's Book, by Bourne Hall Draper. Pp. 137. (London, Houlston and Co.)—A nice book for little ones, to induce habits of observation and reasoning.

Incidents of Travel in Greece, Turkey, Russia, and Poland, by J. S. Stephens, Esq. 12mo. pp. 472. (Dublin, Curry and Co.)—Having already paid our debts to the London reprint of this work, we need only say that the present is a neat and cheap edition.

The Life of Christ. Part I. Small quarto, pp. 48. (London, Ball and Co.)—The title of the work thus commenced is "Ball's Graphic Library, for Domestic Instruction." The text of the Bible is given, with notes and illustrations from authors of eminence on scriptural subjects; and there are, besides, a number of engravings on wood, well devised, to embellish the publication, and impress the chief subjects of the narrative upon the minds of the reader.

The Book of Fables, by the Authoress of "Sebella." (London, Hooper.)—A very little book for very little people, and very well for its purpose.

The Architect, Engineer, and Operative Builder's Constructive Manual, &c. &c., by Christopher Davy. Part I. 8vo. pp. 179. (London, Orr and Co.) This seems to us to be a comprehensive and useful work, going more minutely and practically than we remember to have met with before, into the questions of foundations for build-

ings, railways, &c. Mr. Davy examines the various materials which the earth presents in this respect for the operations of the architect and engineer—rock, sand, clay, &c. &c.—and discusses the best means of making them available; such as the employment of artificial compositions, pile driving, &c. We consider both design and execution to merit much praise.

Westminster Improvements.—A Brief Account of Ancient and Modern Westminster, with Observations on Former Plans of Improvement, and on the Objects and Prospects of the Westminster Improvement Company, &c., by W. Sandwell, Architect. Pp. 58. (London, Smith and Elder, Fraser; Weale; Williams, and Reid.)—Though directed to a particular object—to promote the measures intended to be pursued by the company formed for the improvement of Westminster, this is, in other respects, a curious pamphlet. Its account of the Isle of Thorney and other antiquarian matters, will be perused with interest by the inhabitants of this populous and important division of the metropolis; and it is sincerely to be hoped that it will have the effect of exciting more attention to the plan for improving it. A skeleton map or plan of the old boundary would have been an acceptable addition.

ARTS AND SCIENCES.

ROYAL GEOGRAPHICAL SOCIETY.

FEBRUARY 25. Mr. Greenough, F.R.S., Vice-President, in the chair.—Lord Malmesbury, Captain the Hon. H. Rous, and nine members were elected. Mr. Holroyd, lately returned from a residence in Egypt, gave a *visé ovis* account of his visit to Sennâr and to Kordofân; he being the only English traveller who has penetrated into that country since the journey of Dr. Rüppell in 1824. Starting from Wadi Halfah, in lat. 22° N. nearly, on the 5th December, 1836, Mr. Holroyd crossed the Nile, and continued to the southward along the west bank of the river; travelling leisurely, and taking time to examine all the ancient remains, he reached New Dongolah on the 22d; he then embarked, and passing Old Dongolah proceeded on to Ambukol, in lat. 18° N.; landing here, he travelled across the desert of Bahyûdah (thus avoiding the great bend which the Nile makes in its course) in a S.E. direction, for about 130 miles, direct distance to El Hajar, a little above the sixth cataract, and went on to Khartûm, at the junction of the Bahr el Abyad and the Bahr el Azrek. After a stay of ten days here, Mr. Holroyd embarked, and continued up the Blue River to Sennâr, where he passed a fortnight; and then returning to Wad Medinah, crossed the desert in a westerly direction to the White Nile at Mongarah, a distance of about 90 miles; from this place he proceeded in a southwesterly direction across the desert, and after nine days' journey reached El Obeid, the capital of Kordofân, on the 30th March, 1837. Mr. Holroyd spent sixteen days in this town, then returned by a different route to Mongarah on the White Nile, which he descended to Khartûm; then on to Shendi, whence he visited the temples of Measurat; to Berber in 18° N., examining on his road the pyramids of Bâi and Jelâsâfrah, to which M. Linant has given the name of Gabina. From Berber, Mr. Holroyd crossed the desert to Jebel Barkel, just below the fourth cataract; and again passing Old Dongolah, reached Wadi Halfah on the 16th August, 1837, after an absence of rather more than eight months. The town of New Dongolah has become a place of importance during the last twelve years; its population is estimated at 6000, including 800 troops and about 100 Copts. The bazar is well supplied; here are baths, a café, and a large indigo factory. Old Dongolah is in ruins, and does not contain above 300 inhabitants; the drifted sand has accumulated in such quantities as to cover some of the houses, nor is there any land capable of cultivation near the place. The chief object of interest near Ambukol is a portion of the desert, of coarse sandstone, where were found five or six siliceous fossil trees; the largest is fifty-one feet long by twenty

inches in diameter: they are apparently of Dóm. Khartúm is situated on the west bank of the Blue Nile, about one mile and a half to the southward of its junction with the White River, and is the seat of government of the Belled of Sédán. It was a small village when Mohammed Ali subdued the kingdom, but has sprung into importance at the expense of Shendi and Sennár, and is now a place of considerable trade, and convenient as a rendezvous for the slave-merchants from Abyssinia, Sennár, and Kordofán. It contains about 15,000 inhabitants, including 1600 soldiers and their families; parts of the town are regularly built of sun-dried bricks, and some of the houses large; the bazars badly supplied. The country around is flat, without trees, and consists of a rich alluvial soil. Sennár stands on the western bank of the Bahr el Azrek, whose banks here are nearly forty feet high at low river, which rises about 20 feet. Here is a daily bazar of the manufactures of the country; plaited straw in various devices, filagree silver-work, weapons, spears, knives, &c., are very tolerable. Six miles S.W. of the town lies Jebel Moël, a hill rising about 800 feet above the plain, which is otherwise quite flat, and scarcely a tree to be seen except in the distant south. The inhabitants of Sennár are of a dark brown colour, the women are lighter than the men; both are handsome, and have good teeth. Mongarah is a boat-building station of the Pasha of Egypt, on the eastern bank of the White Nile, about 80 miles south of Khartúm: there is plenty of wood in the neighbourhood, but better timber is procured from Aleis or from the country of the Shellukhs. About 30 boats are built here annually, 20 pair of sawyers were at work, and five or six boats on the stocks. El Obeid, the capital of Kordofán, is a straggling town of about 40,000 inhabitants, situated on a plain. The houses are chiefly built of straw in the form of English cornstacks, with the exception of that of the governor, the military commandant, and some Europeans employed in the service of the pasha, which are of sun-burnt bricks. Here are a mosque, a military hospital, a water-tank, and powder magazine. The troops stationed at Kordofán are taken annually, after the rainy season, to the hilly country in the south, named Jebel Nubah, on slaving expeditions. When I arrived at El Obeid, says Mr. Holroyd, the troops had just returned with the produce of one of these slave-hunting parties. The handsome women were sold for the harems of the Turks and Arabs; the able-bodied men were placed in the ranks; while the decrepid of both sexes, the pregnant females, and young children, were allotted to the soldiers, in lieu of money, to the extent of half their arrears. I once witnessed this distribution; and a more heart-rending scene cannot be imagined; for, although these blacks had been seized two or three months, and had been deprived of their liberty, they felt deeply the permanent separation from their families. As the soldiers were several months in arrears, they were obliged to receive the slaves considerably above their value, and part with them again at a great sacrifice; and many were compelled to turn their slaves into money to relieve their immediate embarrassments. A slave, therefore, which had been received by the soldiers in lieu of 300 piastres (3*l.*), was sold in the bazar for little more than half that sum; and many were daily hawked about the bazar and disposed of by public auction. The slaves are of various prices. A child of four or five years old is worth from 10*s.* to 12*s.*; an adult, from 4*l.* to 6*l.*; beautiful Darfur girls are in great

request, and an unexceptionable-looking one will fetch from 15*l.* to 20*l.* Abyssinian women also are in demand, and sell from 10*l.* to 20*l.* each. For domestic purposes, slaves from Darfur are esteemed the most faithful and useful. But the most revolting circumstance connected with the slave-trade, and one more than any other calculated to excite our sympathy, is the system of emasculation, which is carried on at El Obeid, chiefly under the direction of a ruffian named Sultan Tamur, brother to the late chief of Darfur. I visited this person, and found him to be an infirm old man, of seventy years of age, who received a pension of 600 piastres a-year from the Pasha of Egypt. This wretch emasculates from 100 to 150 annually, and a similar number of boys are mutilated by other wretches at El Obeid. The inhabitants of Kordofán belong to several tribes, the most numerous is named Gunjarah. The men are well made, spare, and tall; the features handsome, and their skin of a dark brown colour. Their hair, slightly crisped, is usually worn long and plaited. The women are generally very beautiful, and are a shade lighter than the men; they wear their hair long, plaited, and loaded with grease. Their dress consists of a piece of cotton cloth round the waist, and the end sometimes thrown over the shoulder; silver ornaments round the neck, bracelets, enormous ear-rings, ponderous nose-rings, and ornaments of the same metal round the ankles. Both men and women have three or four vertical gashes in the cheeks, and the women are often cut in the same manner in other parts of the body. The women are fond of dancing, and beat the drum; the men play on a flute or pipe of reed; and both sexes perform on the harabab, or lyre of five strings. Mr. Holroyd's highly interesting account was illustrated by a valuable map on a large scale, shewing his route, and compiled from recent observations by M. Linant, in which the course of the Nile differs from the position assigned to it in all our maps; also by numerous characteristic sketches of the natives, of costume, and of scenery; with ground-plans and measurements of many temples and pyramids. Mr. Holroyd also kindly allowed to be present a boy that he had brought with him from Kordofán, where he had redeemed him from slavery; he is a fine lad, from Jebel Nubah, about six days south of El Obeid, of fourteen years of age, with intelligent features, black skin and woolly hair; can speak Arabic and a little English, and has given a vocabulary of about fifty words of his language. He is probably the only native of this country that ever visited England. Mr. Pentland, recently arrived from South America, was present at the meeting, and, in reply to the chairman's congratulations on his return to his country, said that he hoped shortly to be enabled to communicate to the Society some account of his travels in Bolivia and Peru.

GEOLOGICAL SOCIETY.

FEBRUARY 27. Rev. Dr. Buckland, President, in the chair.—The following communications were read. 1. 'On Impressions of Drops of Rain on Slabs of New Red Sandstone, in the Storeton Quarries, Cheshire, and coeval with the Formation of the Strata,' by Mr. John Cunningham, of Liverpool. In a paper read before the Society on the 3d of December, an account was given of the impressions of footsteps of several species of animals in the new red sandstone of the Storeton quarries, about three miles S.W. of Liverpool. In examining some of the slabs of stone, extracted at the depth of

above thirty feet, Mr. Cunningham observed that their under surface was densely covered with minute hemispherical projections, or casts in relief of circular pits in the immediately subjacent layers of clay. The origin of these marks, he is of opinion, must be ascribed to showers of rain, which fell upon an argillaceous beach exposed by the retiring tide, and their preservation to the filling up of the indentations by sand. On the same slabs are impressions of feet of small reptiles, which appear to have passed over the clay previously to the shower, since the footmarks are also indented with circular pits, but to a less degree; and the difference Mr. Cunningham explains, by the pressure of the animal having rendered those portions of the clay less easily acted upon. That rain fell during remote ages of the world, the author stated no person acquainted with geology will dispute, as to the destructive and transporting agency of rain-waters many of the sedimentary strata owe their origin. The vast forests also, which grew at a period anterior to the new red sandstone, and are now treasured up in our coal fields, could not have flourished without abundant supplies of atmospheric waters; and that the effects of drops of rain may be preserved in a solid form, he proved by reference to an account given by Mr. Scrope, of a shower which fell upon extremely fine volcanic ashes thrown out by Vesuvius during the eruption of 1832. The drops of rain formed small globules, which hardened into pellets, and accumulated in some places at the foot of a slope, in beds a foot or more in thickness, and were often so agglutinated, that it required a sharp blow from a hammer to break the mass.—2. Extracts from two letters addressed to Dr. Buckland, one from Mr. John Taylor, jun. 'On the Occurrence of a Slab of Sandstone containing Impressions of Chirotherium Hercules, at the house of Mr. Potts, of Chester;' and the other by Sir Philip Egerton, 'On the Peculiarities of the Impressions.' When the slab was first laid down, there was no appearance of the remains, which have been gradually developed by the action of the weather. Sir Philip Egerton is of opinion, that the weight of the animal compressed the yielding sand near its foot, and that the print being afterwards filled with the same materials, the stone became nearly homogeneous in composition. The effects of the weather would necessarily remove the softer uncompressed portions, but the denser part acted upon by the animal's weight, would resist for a time the same operations, and present in relief the outline of the foot. The slab contains the marks of three hind and two fore feet—the latter bearing the same proportion to the former as in the other species.—3. 'On the Occurrence of Swallow-holes near Farnham, and on the Drainage of the Country at the Western Extremity of the Hog's-back,' by George Long, Esq., communicated by Mr. Lyell. Immediately to the north of Farnham rises a chalk-hill, capped by tertiary strata. No perennial main-springs occur on the face of the hill; but the gullies are for the greater part of the year, occupied by superficial land-springs, which occasionally become formidable torrents. These rivulets pour down the hill upon the surface of the tertiary clay until they arrive at the chalk, where they are entirely absorbed in swallow-holes, except during great rains, when a portion of the water flows along channels in the chalk. Seven of these holes between Clare Park and Farnham Park were described in detail by Mr. Long. The water absorbed by two of them is supposed to well out in great force at the Bourne Mill stream; and, though

soft, where it sinks under ground, it is hard where it reappears. The drainage described in the second part of the paper is effected by a stream which passes through a gap at Runfold, the western extremity of the Hog's-back Hill; and, flowing northward, traverses the chalk, and carries off the surplus waters of a tract bounded on the north by the Hog's-back, and on the south by a semi-circular range of low hills, extending from Seal on the east, by Crooksbury, to Moor Park on the west. This gap in the chalk has hitherto escaped the observation of geologists, but deserves to be recorded among the apertures through the North Downs.—4. 'A Letter from Captain Charters to Mr. Lyell, dated Cape Town, 12th Nov. 1838.' During a very extensive tour through the colony, Captain Charters's attention was particularly drawn to the occurrence of greenstone resting upon the horizontally stratified sandstone, which constitutes so large a portion of the country. The localities mentioned in the latter are in the neighbourhood of Fort Beaufort, on the Kaffir frontier, the small town of Cradock on the Great Fish River, the line of route from the Tarka district, behind the Winterberg range, to Shiloh, and to Colesberg, near the Orange River, and thence, by the Schneeberg, to Graf Reinet. In some places the trap presented thick deposits more or less traversed by irregular tracks, and, in others, heaps of weathered, or spheroidal masses, resembling transported boulders.

ELECTRICAL SOCIETY.

TUESDAY, Feb. 13.—Read, a paper by Mr. Pollock, 'On the Occurrence of the Striking Distance in Frictional, but not in Voltaic Electricity.' One of the most common of the phenomena attendant upon the action of the electrical machine is the spark which passes from the conductor to any conducting body presented to it. The distance at which this occurs has been termed the striking distance. Sparks also occur in the phenomena of voltaic electricity; and it has been very generally supposed that in this respect no difference existed in the two actions. But, in voltaic electricity, let the polar wires be brought to scarcely an appreciable distance, no striking distance can be determined. This Mr. Pollock considers to manifest a marked distinction between these two kinds of electricity, and to depend upon the changes in the relation between the rubber and cylinder of the electrical machine, and between the metal zinc and its oxide of the voltaic battery, and their respective latent heat. There is, perhaps, no philosophical fact better established than that of which Dr. Black may be said to have been the discoverer, namely, that whenever any body undergoes contraction, its capacity for heat is diminished, and when expansion, its capacity is increased. Hence heat is given out during the compression of India-rubber, the hammering of iron, &c., and cold produced during evaporation. By the application of this philosophical fact to the explanation of the phenomena of the electrical machine and the voltaic battery, Mr. Pollock is led to conclude that the spark ought to occur in the former and not in the latter. The compression between the rubber and the cylinder of the machine reduces the bulk from 20 to 15, and the expansion of the zinc by conversion into oxide in the battery increases the bulk from 20 to 35. The result is, that a compression equal to 5, and an expansion equal to 15, occurs in each instance—hence the diminished capacity, the production of heat, and, consequently,

the spark of the former arrangement—and the increased capacity and the production of cold, as proved by recent thermo-electric experiments, and the absence of the spark or striking distance of the latter.—Read, also, an extract of a letter from J. Samo, Esq., dated Surinam, 31st Dec. 1838. "The Gymnotus Electricus is found in the rivers of Surinam. It is very difficult to select the true from the fabulous accounts of this creature. It is generally found in shallow rivulets of fresh water, having a rocky, uneven bottom, and principally in those parts which are shaded by high trees. One of the three which Mr. Samo, by the first opportunity, intended forwarding to the Electrical Society, had been attacked and destroyed by water-rats, which animals, Mr. Samo concludes, must be insensible to the electric shock of the gymnotus, although horses can be paralyzed by them." Mr. Clarke suggested a trial with the one in the Adelaide Gallery, at the same time observing, that fish frequently recover from the shock of the gymnotus; that in all probability the first rats that attacked the eel had been paralyzed, and had afterwards recovered, but that the gymnotus becoming exhausted by the repeated electrical discharges to repel the first assailants, had fallen an easy prey to the others. Mr. Sturgeon exhibited to the Society a piece of copper ore which had been subjected to the action of a voltaic current for about five weeks; but as this subject is to be brought again before the Society next meeting, we reserve our notice.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, February 21.—The following degrees were conferred:—

Bachelor in Divinity.—Rev. R. L. Freer, Christ Church. *Masters of Arts*.—C. R. Strickland, Trinity College, Grand Compounder; Rev. H. G. Adams, Christ Church; G. Whitbread, Brazenose College; F. P. Lowe, Fellow of Magdalen College.

Bachelors of Arts.—J. E. L. Schreiber, Balliol College; Rev. R. J. F. Thomas, Christ Church; G. P. G. Cosserat, Exeter College.

ROYAL SOCIETY.

MR. LUBBOCK in the chair.—Read the conclusion of a paper, 'On the gradual Uprising of the Earth in certain Places,' by Mr. Darwin. The author of this communication follows out the subject taken up some time ago by that eminent geologist, Mr. Lyell. He refers to observations made in the district of Lochaber, in Scotland:—portions of which, it appears, have been equally raised to an extent of 1278 feet above the level of the sea. He illustrates and proves his position, by noticing the equable elevation of what had evidently been the margin of ancient waters in the Lochaber district; and also by reference to the deposition of immense blocks of granite on particular parts of many of the hills in that country, as well as in the valleys. Those, he considers, could not have been so placed, or rolled into the localities they occupy, by the rushing of the waters, nor by irruptions of the earth. The blocks found in the valleys could not have been deposited there by the waters, inasmuch as the rush in such places must have been more impetuous than when the surface of the ground was level. These blocks, in many instances, from the slight elevation of the hills on which they are sometimes found, could not have rolled or fallen from a higher part of the ground. Mr. Darwin discusses the probability of these masses of granite having been transported from situations where their formation had taken place; he describes the positions in which they were found, shewing that they must have been removed considerable distances, by an undoubted elevation which

takes place on the surface of the earth. The subject of the extraordinary parallel roads in Glenroy was discussed at great length in this paper.

ROYAL ASIATIC SOCIETY.

FEB. 16. Sir G. T. Staunton in the chair.—Mr. Wilkinson read a paper 'On the Difference between the European and Indian Methods of making Steel, and on the Reasons which induced him to ascribe many of the Properties of Iron, and much of the variety in its quality, to the action of Electricity.' After adverting to the extraordinary discoveries of Professor Ehrenberg, of Berlin, who has shewn that the bog-iron ore, from which the beautiful Berlin castings are made, is composed of minute animals; that Tripoli powder is of a similar nature, and that the ditches about Berlin abound in such animals, Mr. Wilkinson stated that these wonderful animals had recently been found in England also, and that in localities so near as Hampstead and Highgate. Mr. Wilkinson then entered into a description of the mode of manufacturing iron, and of the process by which it is converted into steel, both in England and India, which differ essentially; the English process being chiefly exposure of the iron to strong heat in close contact with charcoal; while the natives of India put the iron into crucibles with dried branches of a certain shrub, and green leaves of others. Our limits do not admit of going into the arguments adduced corroborative of the opinion that the different properties of iron and steel depend on currents of electricity, which, as the proposer of the theory stated himself, needs to be proved by experiment; they appear at least plausible, and we were glad to hear that Mr. Wilkinson expressed his intention of instituting a set of experiments with a view to ascertain its truth, and its applicability to practical purposes. He hoped shortly to obtain some specimens of Indian steel, which would enable him to proceed with more certainty, and to receive replies to several queries on the subject sent by him to India through the medium of the Society. Mr. Heath said that a copy of Mr. Wilkinson's queries had been sent to him by the Madras government, to whom the Society had transmitted them in 1837; that his labours were at that time too great to admit of his giving close attention to the subject; but that on his voyage home he had written a paper which he conceived embodied all that was required on the subject, and which he would now read. Mr. Heath's paper entered largely into the nature of the Indian ore, and the operations of the natives in manufacturing it into iron and steel. He said that the ore used was the magnetic oxide of iron combined with quartz; that it occurs in the district of Salem, the principal seat of the manufacture, in the form of low hills; and that the quantity exposed above the surface of the country is so great, that it was not likely that underground operations would ever be required. It is prepared by stamping, and then separating the quartz by washing or winnowing. The furnace is built of clay alone, from three to five feet high, and pear-shaped; the bellows is formed of two goat-skins, with a bamboo nozzle, ending in a clay pipe. The fuel is charcoal, upon which the ore is laid, without flux: the bellows are plied for four hours, when the ore will be found to be reduced: it is taken out, and while red-hot, cut through with a hatchet, and sold to the blacksmiths, who forge it into bars and convert it into steel. It is forged by repeated heating and hammering, until it forms an apparently unpromising bar of iron, from which an English manufacturer of steel would

turn with contempt, but which the Hindu converts into cast steel of the very best quality. To effect this, he cuts it into small pieces, of which he puts a pound, more or less, into a crucible, with dried wood of the *cassia auriculata*, and a few green leaves of *asclepias gigantea*. The air is then excluded by a cover of tempered clay, rammed down close into the crucible. When dry, about twenty crucibles are built up in a small furnace, covered with charcoal, and heated for two hours and a half, when the process is complete. Mr. Heath observed that the quality of the steel was excellent; but that the process of smelting was so imperfect, that of 72 per cent, of which the oxide is composed, only 15 per cent of iron was obtained by the natives. The discovery of steel by the Hindus was one of the most astonishing facts in the history of the arts: it seemed too recondite to be the effect of chance, and yet could only be explained by the lights of modern chemistry. In Europe, the case was otherwise. In the early times, repeated hammering after refining appears to have been the only process; and cementation by charcoal was not adopted until chemical investigation had shewn that steel was a compound of iron and carbon. Two patents had been taken out within the present century; one for making steel by the application of "any substance containing the carbonaceous principle;" and another, by exposing the iron to the action of carburetted hydrogen gas at high temperatures; and it appears that the Indian process combined the principle of both these methods. The antiquity of the Indian mode was proved by the present of 30 lbs. weight of steel made by Porus to Alexander the Great; and the ignorance of the Western world was shewn as well by this as by the fact that the arms of the warriors of ancient Europe were composed of alloys of copper and tin. The tools by which the Egyptian obelisks and temples of porphyry and syenite were cut, were, undoubtedly, made of Indian steel. Mr. Heath concluded with observing, that he did not think the Hindu process influenced the quality of the steel; but it enabled the manufacturer to accomplish with very imperfect means that which it would be hopeless for him to attempt by European methods. — Mr. E. Solly read a 'Report on the Chemical Examination of a Series of Soils from some of the principal Cotton Plantations of Georgia,' which has been procured by Viscount Palmerston, at the request of the Committee of Commerce and Agriculture. The examination of these soils was undertaken with a view to ascertain some of the circumstances found to be most favourable to the cultivation of cotton in Georgia, and thus to indicate the best manner of improving the cultivation of cotton in India. Mr. Solly stated that, in order to render a comparison of this kind of any practical value, it was absolutely necessary to take into account a variety of circumstances connected with the nature of the climates of the countries so compared, such as the limits of temperature, the rapidity of evaporation, the form of the surface of the country, the radiating power of the soil, the retentive power for water, and many other points. These were all of the utmost importance, and would completely modify the action of the soil; so that a soil which in one situation would be excellent for the cultivation of cotton, would in another climate be totally unfit. The result of the chemical examination of these specimens of soil shewed them all to be of a light, sandy, and rather poor description; consisting principally

of a fine sand, held together by a small quantity of alumina or clay, and coloured with oxides of iron and manganese. The quantity of organic matter which they contained was small. One of the most important facts observed was the extremely small portion of carbonate, or indeed any form of lime, which they contained, shewing that the presence of this substance is not so essential to a good cotton soil as has been thought by some writers on the cultivation of cotton. The great difference, also, between the black cotton soil of America and that of India was pointed out; the former being composed of a fine white, silicious sand, containing but very little alumina, and coloured wholly by organic matter, whilst the latter consisted apparently of the *débris* of volcanic rocks. Mr. Solly concluded by remarking, that the goodness of the soils from Georgia depended probably far more on the mechanical structure than on the chemical composition; and that the presence of lime, or any other substance, was of far less importance than that it should be of a light, porous, and not too rich a character.

SOCIETY OF ANTIQUARIES.

MR. AMYOT, in the chair. — Mr. Pym, by Mr. C. R. Smith, exhibited a Roman ring found in the bed of the Thames; it was of brass, having on the top a blacksmith, hammer in hand, with an anvil before him. Mr. Nichols, communicated some further observations on the splendid sacerdotal habit, which he exhibited at the previous meeting. Mr. Gage Rokewode exhibited a printed proclamation of James II. against the Duke of Monmouth and others. Mr. Bowyer exhibited and described a Norman font at Radley, near Abingdon, with notices of the ancient history of the parish, the church, and the monastery formerly existing there. Mr. Bruce communicated a paper containing cases illustrative of the wide extent of power exercised by the council; these cases occurred in the reign of Edward VI., and appeared to trench strongly on the royal prerogative: part of which being read, the remainder was postponed.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday. — Entomological, 8 P.M.; British Architects, 8 P.M.
Tuesday. — Linnean, 8 P.M.; Horticultural, 3 P.M.; Civil Engineers, 8 P.M.; Electrical, 7 P.M.
Wednesday. — Society of Arts, 7½ P.M.; Artists' and Amateurs' Conversations, 8 P.M.
Thursday. — Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Zoological, 3 P.M.
Friday. — Royal Astronomical, 8 P.M.; Royal Institution, 8½ P.M.
Saturday. — Guy's Hospital, 8 P.M.; Artists' Conversations, 7 P.M.

FINE ARTS. THE NEW ART.

THE growing interest attached to this subject (of which we have evidence in almost every foreign journal taking cognizance of the Fine Arts that reaches us) will, we are sure, render the following communications very acceptable to our readers, at home and abroad. The *new light* let in upon the *Discovery* by Mr. Bauer is so curious, that we have not ventured to use his permission in making a single alteration. The *originality of the Invention* is, we think, settled; and we consider it to be equally clear that the two processes of M. Niepce and Talbot are different and distinct. At all events, we are glad to be the medium for diffusing every information on the subject. — *Ed. L. G.*

February 26, 1839.

Sir, — I perceive with much satisfaction in some of the latter numbers of your valuable

publication, the *Literary Gazette*, the great attention you bestow upon what you call the *new discovery in the fine arts*; and I hope the few facts regarding this interesting subject, which I am communicating to you herewith, will attract your attention still further. In the month of September, 1827, a French gentleman (*M. Niépce Niepce*, of Châlons-sur-Saône), arrived at Kew, on a visit to a brother of his, who had been a long time in England, and then resided at Kew, and was dangerously ill. I soon became acquainted with M. Niepce; he informed me then that he had made the important and interesting discovery of fixing permanently the image of any object by the *spontaneous action of light*. He exhibited to me several very interesting specimens, as well of images fixed upon polished *pewter* plates, as of impressions on paper, made from such plates after they had been prepared by his chemical process.

These specimens M. Niepce calls *les premiers résultats de ses longues recherches*. M. Niepce was very desirous that this, his interesting and important discovery, might be noticed by the Royal Society of London, and thus to establish the priority of his discovery. I, therefore, advised him to draw up a paper, or memoir, on the subject, which might then be presented to the Society. He did so; wrote and dated it at Kew, the 8th of December, 1827, and of that interesting memoir I have the pleasure of enclosing herewith a translation.

M. Niepce was soon introduced to some of the most efficient members of the Royal Society, to whom he presented his memoir and several very interesting specimens — the products of his discovery; but though he had several interviews with those gentlemen who had that memoir several weeks under consideration, because M. Niepce declined explaining the secret *then*, the Memoir and all the specimens were returned to him, and the subject was never laid before the Society. M. Niepce was obliged, by pressing family concerns, to return to France in the early part of February 1828; and about a fortnight after his departure, his brother died at Kew: that event naturally caused a great interruption in M. Niepce's scientific pursuits, but we continued a friendly correspondence for some time, but a letter dated 9th January, 1829, was his last letter I received. In that, as in all his preceding letters, he alludes always to his successful *recherches*, and expresses a confident hope that during the approaching summer season, he will be enabled to complete his discovery, and promised to communicate to me faithfully and immediately the final result of his long researches, &c.; but from that day, viz., the 9th of January, 1829, I did not see nor hear any thing from M. Niepce nor of his *Héliographie* till the 12th of January, 1839, when, in the *Literary Gazette*, my attention was attracted to a paragraph taken from the *Gazette de France*, dated Paris, 6th of January, 1839, and signed, "H. Gaucheraud," in which I found, to my very great surprise, that M. Daguerre, of justly merited Diorama celebrity, not only claims the merit of first discovery of that interesting and important art, but even to stamp it with his own name. I well recollect that M. Daguerre was intimately acquainted with M. Niepce, but I never heard or understood that he ever took an active part in M. Niepce's researches, more than constantly encouraging him to persevere in his pursuits; and I also know that M. Daguerre was zealously occupied in pursuing some researches, and making experiments, in which he also was successful, but his object was widely different from M. Niepce's — it was what M. Daguerre now calls the *décomposition of light*;

and by which he produces that surprising and wonderful effect of his representations in the Diorama, and of which the newspapers are so full of most marvellous accounts (see "Morning Post.") But the discovery of the *decomposition of light* is a widely different thing from the discovery of *permanently fixing images by the action of light*; though of this later discovery a great deal is likewise said in the French papers (see the *Gazette de France*, Paris, January 6th, 1839), in which the first notice of the Daguerrotype is given, which is as follows: "We have much pleasure in announcing an important discovery made by *M. Daguerre*, the celebrated painter of the Diorama, &c.; and further, *M. Daguerre* has discovered a method to fix the images which are represented at the back of a camera obscura," &c. And again, "*Messrs. Arago, Biot, and Von Humboldt*, have ascertained the reality of this discovery, which excited their admiration; and *M. Arago* will in a few days make it known to the Academy of Sciences," &c. Towards the conclusion of the paragraph the author gives us the following important information:—"*M. Daguerre* generously owns that the first idea of his process was given him fifteen years ago by *M. Niepce*, of *Châlons-sur-Saône*, but in so imperfect a state, that it has cost him long and persevering labour to attain the object." Now I do not think *M. Niepce* could have given such a very imperfect idea fifteen years ago, as the specimens *M. Niepce* brought and exhibited in 1827 in England (and some of them are still in my possession) are quite as perfect as those productions of *M. Daguerre* described in the French newspapers of 1839. But, however, this is the first instance that *M. Niepce's* name is mentioned. In a subsequent paper is a paragraph, dated "Paris, January 9, 1839," in which, after much eulogy, it is stated, "*M. Arago* made, on the 7th of this month, a verbal communication to the Academy of Sciences, on the fine discovery of *M. Daguerre*; and the next paragraph is considering the great utility of the discovery to the public, and the extreme simplicity of the process, which is such that any person may practise it. *M. Arago* is of opinion that it would be impossible by means of a patent or otherwise to secure to the inventor the advantages which he ought to derive from it, and thinks that the best way would be for the government to purchase the secret and make it public; but the name of *M. Niepce* is not mentioned in that report, which is, I confess, quite unaccountable to me, for I have the honour of personally knowing the Baron von Humboldt and *M. Arago*, and more scientific and more honourable men I think cannot exist; and I think every impartial reader, when coupling the formal declaration of *M. Niepce* and the generous avowal of *M. Daguerre*, will agree with me that *M. Niepce* is the inventor of this interesting art; though during the long period of ten years since the interruption and total cessation of our correspondence in 1829, *M. Daguerre* may have made many improvements, and if *M. Niepce* really had ceded and legally transferred the secret to *M. Daguerre*, that, I think, certainly would entitle him to derive the advantages which might accrue from the sale of the secret, but the merit of the invention of the *Heliograph* would still belong to my esteemed friend, *Nicéphore Niepce*.

Of Mr. Talbot's Photogenic drawings I have not yet seen any thing; but what I can gather from the newspapers I find some very interesting experiments he states to have made during the last four or five years; but it appears to me that his process is also grounded upon the same principle as *M. Niepce's* discovery; and if Mr.

Talbot ever succeeds in fixing permanently the image from nature upon paper, he will certainly have the merit of having made the most important, because the most useful, application of that principle.

Before *M. Niepce* left England he presented to me several interesting specimens of his newly discovered art, one of which is the first successful experiment of fixing the image from nature; another plate prepared by what he calls a chemical process, for taking impressions from it like from copperplate etchings, and some impressions of the same plate, &c.

If you, sir, or any other scientific gentleman or artist to whom this subject might be interesting, should wish to see those specimens in my possession, and would take the trouble to call at my house, I shall be happy to shew them and give any explanation.

This communication, sir, is entirely at your service, and you may make what use of it you think proper; but if you think it or part of it fit for publication, I must beg of you to have the kindness to correct my grammatical and orthographical errors, of which I fear you will find too many.

By acknowledging the receipt of this communication in your next publication, that I might know it has come to your hands, you will greatly oblige, sir, your humble servant,

FRANCIS BAUER, F.R.S.

Eglantine Cottage, New Green,
Feb. 27, 1839.

P.S. Since the above was written, I received the melancholy intelligence from good authority that my worthy friend, *M. Niepce*, is no more!—he died several years ago.

[Here follows the communication to the Royal Society, alluded to.]

HÉLIOGRAPHIE.*

(Designs and Engravings.)

Description of some results obtained spontaneously by the action of Light.

THE examples which I have the honour of presenting, are the first results of my long researches on the manner of fixing the image of objects by the action of light, and of reproducing the same by impressions, according to the known process of engraving.

I was occupied with these researches, when a circumstance of recent occurrence urged my departure for England, which prevented my continuing them and arriving at more satisfactory results. I beg, then, that these few first trials may be judged of not so much as they regard the arts, but as chiefly with respect to the presumed means employed for producing the effect itself, for it is on the efficiency of these means that a complete success depends. I will presume to claim, at the same time, in behalf of my work, that indulgence which is generally granted to a first adventurous step in a perfectly new field of discovery.

It will be found, undoubtedly, that my heliographic designs made on pewter plates and framed, are much too weak in tone. This defect arises principally from the light not contrasting sufficiently with the shades, owing to the metallic reflection. It would be easy to remedy this by giving more whiteness and more brightness to the parts representing the effects of light, and receiving the impression of this fluid upon metal plated with silver, well polished and burnished; for then the contrast between the white and black would be so much more marked, and the latter colour, by being rendered more intense by means of some chemical agent, would lose that brilliant reflection which is dis-

* I thought this name might be given to the object of my researches until a more exact denomination should be decided on.

agreeable to the sight, and produces even an effect of dimness.

My examples in engraving will shew that much more remains to be done, both as regards the fineness of stroke and depth of cut, so that I was not decided on presenting them but with the view of establishing this important application of my process, and the possibility of improving it. The obstacles I have had to surmount arose less, indeed, from the nature of the process itself than from my want of proficiency in an art with which I was very little acquainted. It may be proper to observe, that it may be applied on copper as well as pewter. I have tried it several times on stone successfully, and I am led to believe that glass would be, perhaps, preferable. It is sufficient, after having operated, to blacken, slightly, the part engraved on, and place it on white paper, to obtain a strong impression. *M. Daguerre*, the painter of the Diorama at Paris, has advised me not to neglect this mode of application, which, indeed, would not have the advantage of multiplying the copies, but because he considers it eminently adapted for displaying the most delicate traits of nature.

Among the principal means of improving the discovery, those furnished by optics ought to hold the highest rank. I have, as yet, been deprived of these aids in one or two trials in taking points of view by means of the camera obscura, notwithstanding my efforts to supply their place by different contrivances. It is only, however, with an apparatus of this kind, carried to the greatest perfection of which it is capable, that one can obtain a faithful image of nature and fix it properly.

I regret that I cannot explain myself on other improvements more closely connected with the principle of my discovery, and on this account more deserving of interest. I shall abstain, then, from speaking of them, being well convinced besides, that this explanation is not indispensably necessary for any one to form an opinion on the subject in question. I have proposed to myself an important problem for the arts of design and engraving. If I have not been able to collect the data necessary for its complete and entire solution, I have, at least, pointed out those means, which, in the actual state of my researches, can, most efficaciously, contribute thereto, although they may be only secondary. It will be at once admitted that the difficulty having been overcome, appears to me to afford a happy omen for future successful results, which I have reason to look forward to when those means of execution are in my power which I have not hitherto possessed.

I will not advert to the advantages which my discovery offers from the various applications of which it is susceptible. I will content myself with characterizing it as an object of very powerful attraction, from its novelty, in order to recommend it eventually to the attraction of the curious. I deem it fitting to declare formally that I am the author of this discovery; that I have not confided the secret of it to any one; and that this is the first time I have given it publicity. I congratulate myself for making it known in a country as justly celebrated for its taste in the cultivation of the arts, as for its reception and protection which it affords to talent.

(Signed) M. NIEPCE.

De Châlons-sur-Saône,
Rue de l'Oratoire,
Département de Saône et Loire.

Kew, 8th December, 1837.

(From the French original.)

Since the foregoing was in the hands of our

printer, we have received *La Quotidienne*, Paris journal, of the 20th ultimo, which breaks silence respecting M. Niepce, and is somewhat more explicit than the preceding mysterious announcements respecting M. Daguerre's experiments and claims. *Palmam qui meruit ferat*, is all we have to urge; and with this view we extract the following passages. After observing that Mr. Talbot did not commence his inquiries respecting it until the spring of 1834, and after adverting to the unsuccessful experiments of Sir Humphry Davy and Mr. Wedgwood, recorded in the Journal of the Royal Institution for 1802, the writer thus proceeds:—

"In France, at the same time, Charles, of the Academy of Sciences, produced some silhouettes, or chlorure of silver, in his public lectures, and threw out the first idea of a great discovery. Did Charles precede or follow Wedgwood? That is a question of priority which is undecided, but which M. Arago has undertaken to answer hereafter. A more certain priority, because it rests on dates positively known, is that of M. Niepce to Mr. Talbot. It was in 1814 that M. Niepce, of Châlons-sur-Saône, of whom M. Daguerre is the successor, took up Charles's idea. By the assistance of new preparations, he succeeded, some years afterwards, in producing images which resisted all external agents. The artistical world still recollects a superb head of Christ which was exhibited, in 1828, in the workshop of M. Chevalier, an optician (with whom M. Niepce was intimately connected), which had been obtained at the focus of a camera obscura. On the 14th of December, 1829, M. Niepce and Daguerre entered into partnership, by a registered deed, for the purpose of pursuing the details of an invention to which they had both contributed; and drawings attest the gradual advance of their constant efforts. The priority on their part cannot, therefore, be placed in doubt.—But what can be more extraordinary than this coincidence of labour, directed towards the same end, by different means! Nothing can, in fact, be more distinct than the nature of the preparation employed in France and in England, although Mr. Talbot does not explain his secret very clearly;* talking first of nitrate of silver, then of chlorure of the same metal, and finally of a substance much more susceptible, which he calls 'sensitive paper.' It is certain—and it is M. Arago, who knows the French process, that states it—that M. Daguerre operates in a different manner.

We repeat, that the nature of the preparation appears to be essentially distinct in the two processes. Mr. Talbot, whose revelations are much fuller than those of our countryman, tells us that the sensitive paper which he now uses is visibly affected in half a second. M. Daguerre is less expeditious; the substance which he employs requires eight or ten minutes of hazy action. Nevertheless, nothing could, in our opinion, be more rash, than thence to conclude that the English method is preferable. No such decision can be formed without a comparison of the results on both sides. We, who have seen M. Daguerre's, doubt if it be possible to attain to a higher degree of perfection in London."

THE COMPETITION FOR THE NELSON MONUMENT.

THE models and drawings of the candidates for the honour of executing the proposed mon-

ument to Nelson having been arranged in Mr. Rainy's noble Gallery in Regent Street, have been visited during the present week by all (ourselves included) who have been so fortunate as to obtain orders of admission from any of the members of the Committee of Subscribers. It is, we believe, intended very shortly to throw the Gallery open to the public.

As this matter may still be considered *sub judice*,—for we understand that all that has been done respecting it is a recommendation from the Committee of Taste, which recommendation may not be adopted by the General Committee,—we feel much difficulty and delicacy on the subject.

The design which has been recommended as No. 1. by the Committee of Taste is by Mr. Railton, of a Corinthian column, surmounted by a statue of Nelson. Mr. Railton proposes that the height of the column (exclusively of the statue) should be 160 feet; its diameter, 12 feet; being 12 feet less in elevation, and 3 feet less in diameter than the monument in the city of London. "Amongst the ancients," observes Mr. Railton, "particularly in Egypt and Rome, this style of monument was very generally used—in the former, obelisks, in the latter, columns; and while it possesses, in common with others, the means of identifying it with the subject to which it relates, it is, at the same time, well calculated to portray to posterity the progress of two sister arts, at this period of the nineteenth century; and, withal, will not exceed the amount of the subscription." It appears to us to be exceedingly probable that the last consideration mentioned by Mr. Railton in the foregoing passage, has been the all-powerful ingredient in inducing the committee to select this description of monument. If such be the case, surely Englishmen have not become so sordid as to hesitate to furnish whatever means may be found necessary to do justice to the memory of their greatest naval hero.

Although there are a few admirable models and drawings, we were concerned to see that the mass are scarcely above mediocrity. Some are absolutely ludicrous.

BRITISH INSTITUTION.

[Fifth notice.]

385. *The Dairy Maid*. E. Landseer, R.A.—Richly and deeply toned. Our amendment of the title would be "The Cow and the Dairy Maid;" the latter being little more than an accessory to the former, which is portrayed with all the skill of this admirable painter.

393. *Jeanie Deans, visiting her sister Effie in Prison*. John Hayter.—In all that regards the pathetic and the painful part of this sad story, Mr. Hayter has been eminently successful; especially in the self-abandonment of the poor deluded Effie. But while the choice of subject is well calculated to exhibit the powers of the painter, it may be questioned if it is equally attractive in other respects.

394. *Capuchin Convent at Amalfi, Gulf of Salerno*. J. Uwins, R.A.—A cheerful and pleasant scene, which, while with its blue sky and sunlit effect, it must always afford enjoyment to the eye, has passages which will furnish food for reflection.

384. *Interior of Rembrandt's Mill*. E. W. Cooke.—The third picture of the same interior, but rendered still more attractive than the former by the introduction of figures. The management of the light, both within and without the building, also enhances the effect.

346. *The Knight Sir Reginald Front de Bœuf ordering the Saracen Slaves of the Temple to seize and throw on the Flames the Jew*,

Isaac of York. Theodor Von Holst.—With much of the German school and Fuseli-esque character in the knight, we think the slaves are less in accordance with the ferocity of their master. They appear to us to be almost as apprehensive in expression as the poor Jew. Had their faces been concealed, we think the effect would have been better.

203. *Waters of Elys.* W. Etty, R.A.—The sentiment conveyed in the quotation in the catalogue is beautifully illustrated in the disconsolate figure of a female, whose averted countenance cannot conceal the sorrows of the heart. The form and attitude (although very *Ettyish*) are graceful and appropriate. The scenery finely harmonises with the subject.

192. *Mail Coach Horses in Readiness for Changing*. J. F. Herring.—Should the present mania for railroads continue, we shall presently be compelled to say of the subject of this clever picture (after glancing around, like Lady Macbeth, "there's no such thing.") It is a work which, in that case, may perhaps be purchased at a high price by the Society of Antiquaries. Those who are ignorant of its merits as a painting, will be perfectly sensible of its value as a visible record of past times. In the meanwhile, we are content to admire the beauty of its drawing, the truth and contrast of its colour, and the variety in the position of the well-conditioned and finely proportioned animals, of which the composition consists.

178. *A Study of a Jew Rabbi*. A. Morton.—Painted with great care and individuality. The colouring is harmonious and mellow, and the composition not unworthy of the pencil of Rembrandt. But time has yet to do its work.

102. *The Lost Game*. C. W. Cope.—Rather "The Lost Heart." The picture is executed with Mr. Cope's usual skill, and with excellent effect, both in colour and in chiaroscuro.

96. *Shylock*. A. Geddes, A.R.A.—While keeping the determined and fiendlike expression of the character, Mr. Geddes has imparted to it more elevation than is usually found in representations of

"The Jew that Shylock drew."
[To be concluded in our next.]

PANORAMAS OF ROME.

MR. BURFORD has just opened two Panoramas of Rome, from drawings taken by himself in 1837; and, in our judgment, two of the most interesting and attractive examples of this style of art which have been seen in London for many a day. The one is of Modern Rome, the other of the Coliseum and part of the Ancient City. In the former, the rich tone of colour in the buildings, contrasting finely with the surrounding mountains and Italian sky, furnishes every facility for artistical effect; and Mr. Burford has amply availed himself of the opportunity thus afforded. The whole composition is rich and beautiful. To this, when we add the pleasure derived from the association of ideas with all the prominent objects on the scene before us—the temples of every classic memory, and themselves the lasting memorials of the most extraordinary times and men—it is impossible to contemplate this splendid performance without feelings of more than common depth. As studies for youth, too, as visible representations of so many things only known to them through written descriptions, and which are parts of their education, we cannot but consider these panoramas as particularly instructive and valuable. That of the Coliseum is a grand picture of that which, of all the remains of the Roman empire, gives

* The writer in "La Quotidienne" will cease to be of this opinion when he reads the clear and explicit letter, addressed by Mr. Talbot to the Secretary of the Royal Society, which appeared in our last Number.—Ed. L. G.

us the most perfect assurance of Roman greatness.

NEW PUBLICATIONS.

The Rev. James Bunting, D.D. Painted by J. Bostock; engraved by S. W. Reynolds. Manchester, Agnew; London, Riley.

THIS animated and well-executed portrait has, it is evident, called forth all the talents of both the painter and the engraver. We should think that it must become exceedingly popular among the individuals of that respectable religious persuasion—the Methodist connexion—of which Dr. Bunting, a divine of the highest character, is at present, we believe, the acknowledged head and leader, he being the president of the Wesleyan Conference in London.

John Elliotson, M.D. Cantab. F.R.S. Miss Newell, del. et lithog.

As ought to be the case in all works of the class, the expression is the best part of this portrait; although, surely, the forehead must be a little exaggerated.

SKETCHES.

THE SEAMEN'S HOSPITAL.

THE anniversary of this most laudable and philanthropic Charity is observed this day at the London Tavern, and under the exalted presidency of H.R.H. the Duke of Cambridge. We last year took the opportunity to direct the public attention and sympathy to a Society so richly deserving of both; and we have reason to believe that the appeal was not made entirely in vain. It is, therefore, with some degree of self-gratulation we return to the subject, and continue in the hope that a repetition will not be altogether without effect.

Several matters have occurred which seem to us especially to illustrate the services done to humanity by the establishment on board the Dreadnought. It is not the broad, general feature, that the forlorn and afflicted sailors of all nations

“Claim kindred there, and have their claims allowed!”

there are many minor points of extreme interest to be noticed, or at least such as have much interested us. The dreadful steam-vessel accidents which lately occurred in the river were alleviated by the medical skill of this truly benevolent Charity, as far as human means could assuage the agonies of the sufferers; though, unfortunately, from the nature of the injuries, in too many instances, only available to render less painful the inevitable path to the grave. In other cases, the patients are often sent, at the expense of the fund, to their native home and native air, where the presence of relatives and friends may smooth their decline, and shed, at least, the halo of quiet and merciful kindness over the closing days of those whose lives have been passed amid the turbulence of the elements and the strife and danger of war. Again, at a time when almost every daily journal teems with accounts how the wretched on shore are bandied from magistrate to overseer, or commissioner to churchwarden, it is a pleasing thing to learn that the dark-looking Dreadnought (like a rough seaman with a soft and tender heart) not only receives but invites the applications of the afflicted, whose only passports are casual hurt, distress, or disease. *The boatmen are rewarded for bringing them alongside of the ship; and they are instantly attended to and succoured!!*

Such a fact speaks volumes, and we will not weaken it by a comment; but ask, Does not so British an Institution most nobly entitle itself

to British support,—and Foreign support also? for, as we have stated, men of every land and clime find unquestioned refuge in this Hospital.

Need we say a word more? We are informed that, warmly countenanced and carefully superintended by mercantile gentlemen eminent in the city of London, the secure revenue amounts to somewhere about 2500*l.* per annum; double which sum is annually expended in administering to the wants and sufferings of 10,000 of our fellow-creatures. The difference is obtained by voluntary aid subscribed at the anniversary, and by friendly contributions from individuals to whom these occasions are the means of making the merits of the institution more particularly known. To extend this knowledge is the object of these few lines; and we shall be happy if they widely touch responsive chords on behalf of a Charity whose purposes and administration we so highly admire.

CAPTAIN DENHAM AND THE LIVERPOOL DOCK TRUSTEES.

HAVING had opportunities, when the British Association met at Dublin and at Liverpool, to witness the exceedingly skilful and scientific measures devised by Captain Denham for the improvement of the latter port, we have seen with surprise and regret, that a misunderstanding between that gentleman and the Dock Committee, has led to his quitting the post of marine surveyor, in which he rendered such invaluable services to the commerce of Liverpool. Though local, the question at issue is one of so much national importance that, we presume, it must attract the attention of the government and parliament. The issue appears to have been brought about by circumstances connected with the tempest of January 7th, 14th. From a narrative of his proceedings during this melancholy period, it is evident that Captain Denham's strenuous exertions to save life and property were crippled almost to uselessness, by the interference of the Dock Committee, and the insufficiency of the means at his disposal. This led to complaint, and complaint to the termination of the connexion between the parties; and in this position Captain Denham has come gallantly forward with an avowal that he had too long submitted to the trammels imposed upon him, and pointed out the increased powers which he considers to be essential to the beneficial administration of the affairs of this great harbour and city. Whether owing to unwise parsimony, or any other cause, it is certainly to be deplored that the channel of the Mersey and the access to and from the second great commercial dépôt in England, should be endangered, lives lost, shipping wrecked, and other fitting attributes neglected; and we do trust, that the somewhat startling statements of Captain Denham will meet the attention they merit from all authorities concerned in the remedy of the evils in the system which he has exposed, and the trade of Liverpool be placed in these respects on a footing more worthy of its wealth and character.

Among other striking matters, we find the following in Captain Denham's Report touching the erection of an Observatory.

“The first step after equipping it or any other in the region of Liverpool, must be the fixing its relative meridian with Greenwich; for it is a reproaching fact at this moment, that such is not settled within as many seconds as would throw a ship out of her longitude five or six miles on the day of starting, besides the loose mode of even rating the chronometer. This step will be accomplished in less than the first month, as the astronomer royal has already proffered a co-operation which will effect it.

“Many a ship leaves our shores, and is registered as foundering at sea, whilst she is actually lying at the base of some rock or headland, towards which her course has unconsciously been made, owing to her compasses pointing from 1 to 3 points (an iron vessel will actually present an error of even 9 points), owing to local attraction being unprovided for. At a slight expense of instruments, he (the astronomer) could also produce such meteorological data as would contribute most valuable companions—a branch of science, every day, we perceive, being reduced to tangible utility.

“I shall be ready to accompany the committee to the site, or explain, in person, any part of the foregoing; and shall congratulate myself indeed, if, in any way, I can promote this, or a better-devised plan, for mitigating the national loss of property occasioned by shipwreck. I need only remind a committee of discerning gentlemen, that the extent of those calamities amounts to three millions per annum, the value of which, though covered by insurance to certain parties, is not the less loss to the nation; besides the incalculable loss of seamen to the country, and heart-wrings of society.”

And the whole estimated expense is an outlay of 700*l.*, and an establishment (paid out of small fees on the shipping).

“One Astronomer (a graduate, if possible)—salary £500
One Assistant—salary, 100*l.*, and lodgings in the building, or 40*l.* 140
One Messenger and Office-cleaner, combined—salary, 50*l.*, and lodgings in the building, or 20*l.* 70
Books and stationery, coals and candles—say 60

Annual total Establishment £770

Or, after the first year, the astronomer might have the option of taking the fees and 100*l.* salary, and find the assistance, &c. himself.”

After enumerating the losses in consequence of the storm, Capt. D. says:—

“The previous two months had been mortifying enough, kicking about in chance steamers, one of which sunk under our feet on the spot—endavouring and succeeding beyond my own anticipation in dredging down a channel at the only spot which can save the port of Liverpool from being pronounced a bar harbour at half tide next June. The weekly applications to be allowed to proceed in this rigorous season were as replete with cold receptions and reasonings as they ought to have been with cheering ones. . . . An effort to preserve the port's better capacity of approach has been flung into delay and miserable interruption; and the vital exigencies of the port have been this awful week the sport of chance and official helplessness.”

It seems altogether to be a sorry business; and when we recall to mind the unbounded encomiums we heard so universally bestowed on Capt. Denham for his talents, and their unceasing devotion to the improvement of Liverpool, we cannot but wonder at the circumstances to which we have referred, not without a hope that the needful steps will be adopted, and the port be placed under efficient management with efficient funds.

Political Economists' Club.—Many of our readers may not be aware that there is such a club in existence; but there is, and it is no part of its political economy not to dine together (once-a-month, we believe, at Freemason's Tavern) and consume the good things Mr. Cuff “lays upon the table.” At this time, we are told, the meetings display more spirit and activity than at more quiet periods, when no anti-corn-law delegates, &c. &c. are infused into London society, and of course find their way to such assemblies as these. Of the dinner on Monday week, we have heard amusing reports of Mr. M'Culloch having castigated the manufacturers present in great style; and much to the entertainment of the company, including the chairman Sir Wilmot Horton, the Chancellor of the Exchequer, Mr. Poulett Thomson, &c. As a specimen of the sort of questions discussed, we insert the following bill of fare:—

1. Are there sufficient reasons for any duty on foreign Corn?—Mr. Hume.
2. Are there any good grounds for thinking that either the wealth or power of Great Britain would be at all impaired by Canada becoming independent, or being incorporated with the United States?—Mr. M'Culloch.
3. Are there any good grounds for thinking that the proposed plan of conveying letters by post under stamped envelopes could be advantageously carried into effect?—Mr. M'Culloch.
4. What would be the effect produced upon wages if the

rich should adopt the practice of expending a larger portion of their incomes on menial servants and retainers, and a smaller portion on the purchase of commodities?—Mr. Mill.

5. What have been the effects on the production and distribution of wealth of the observance of a seventh day?—Mr. Senior.

THE DRAMA.

Adelphi.—On Monday, a drama, founded on "Oliver Twist," was produced here with a very strong cast of the parts. It is really the same as that which we noticed at the Surrey Theatre, but much shortened, and consequently improved. The localities of popularity are queer enough; for we are bound to say, that the same action which has run a course of extraordinary popularity on the other side of the Thames, has not met with such entire approbation on this side. The refinement of the Strand does not relish things which are the admiration of Blackfriars' Road; and refinement at the Adelphi would no doubt be voted vulgarity at the Haymarket, which is several hundred yards more towards the west end. In this piece, Mrs. Yates, as the woman *Nancy*, the most unfortunate and degraded, but yet the woman, did every thing for a part, which perhaps comes out too strongly for the stage. Her murder, as the character is drawn here, is an outrage against humanity; for the evil portions of her career are suppressed, and thus the poetical justice of the retribution is concealed; and, indeed, the fault of the piece is, that it has no moral. Mrs. Keeley, as *Oliver*, is excellent, though she has not the opportunity to make it equal to her *Smike*. Yates, as the *Jew Fagan*, is both humorous and powerful; and O. Smith, as *Bill Sykes*, a cool but perfect ruffian. Wilkinson, as *Grimwig*; Beverley, as the *Beadle*; F. Mathews, as *Brownlow*; Miss Shaw, as *Mrs. Corney*; and the pretty Miss Fortescue, as *Rose Maylie*, do all that the adapter has allotted to them in an able and efficient manner; and, to conclude the whole, Mr. Wright, as the *Artful Dodger*, elicited shouts of laughter, by the droll, and, we suppose, characteristic style, in which he personates that amiable youth.

Olympic.—On Thursday, and rather late for our detailed notice, *Faint heart never won fair Lady*, was produced here, from the pen of Mr. Planché. Neat and well-finished, as all his productions are, the present, to an agreeable and lively plot, superadded a costume of great beauty, and admirably adapted for scenic effect. It is Spanish, and of the seventeenth century. Vestris, C. Mathews, Bland, and Miss Lee, are the chief props of this little drama, which was entirely and thoroughly successful.

St. James's.—Another novelty brought forward at this theatre, shews the enterprise and spirit of its management. *Take your Choice* is its name, and it has met with a very favourable reception.

The Opera.—M. Laporte has announced the opening of the Opera for Saturday next, with an attractive list, both for music and ballet.

The Drury-Lane Fund anniversary was observed at Freemason's Hall, on Wednesday, H.R.H. the Duke of Cambridge in the chair.—The banquet and entertainments were much as heretofore; but the usual address, well delivered by Mr. Harley, was one of the most severe and biting satires we have met with on the degraded condition of that stage, in aid of which this meeting was held. He shewed how much the wants and distresses of performers were increased by the encroachments of bestial exhibitions; and that if such spectacles were encouraged, the profession would speedily be extinguished. Perhaps when the existing an-

nuitants have died out, the public may be con-
vened to dine and subscribe for superannuated lions, the forlorn widows of panthers, and the helpless orphans of royal tigers!

VARIETIES.

Coinage.—A very beautiful model, we are informed, has been executed by Mr. Wyon, the chief engraver to the Mint, for the reverse of the new five-sovereign piece. It represents the British Lion, *passant*, accompanied by our young Queen, who extends her sceptre before him. There is a simplicity and beauty in the composition, which cannot fail to be justly appreciated, as affording additional evidence of our masterly artist's skill in the die.

Steam Navigation.—Extensive coal measures are said to have been discovered on the Asiatic coast of the sea of Marmora: a very important fact as relates to the future navigation of steamers in that quarter.

More Beasts.—Two noble elephants have been shipped at Bombay for the Pasha of Egypt: the account of the operation is amusing, but too long for us at the hour we received it. Two *Lions*, it seems, have also been sent from America, in company with which Van Amburgh is advertised to appear for Mr. Bunn's benefit. One of his present leonine friends nearly destroyed a lady, who visited him and them the other day at rehearsal; but it only tore her wig and stays off, and, fortunately, did not reach her head and back.

Copyright.—On the second reading of the Copyright Bill in the House of Commons on Wednesday, Mr. Serjeant Talfourd delivered one of the most eloquent speeches ever heard within the walls of parliament. We would advise our readers to peruse it, as a glowing example of oratorical ability, and of very cogent reasoning also on behalf of those whose cause the learned member has so warmly espoused. We rejoice to find that the *ex post facto* parts of the bill have been abandoned.

Caricatures. H. B., Nos. 375, 376, and 377.—In the first of these, the single figure of Lord Glenelg, walking out of a door in a state of perfect somnambulism, is equal to the best H. B. has ever drawn. The expression of deep sleep with the eyes wide open is the triumph of caricature. The next is from "Oliver Twist." O'Connell, as old Fagin, cooking in his wretched abode, has Oliver (Lord Morpeth) introduced by the Artful Dodger (Lord Normanby); whilst Lord Melbourne, J. Russell, Spring Rice, and Lord Howick, are smoking their pipes in the background. The characters are admirably dressed and supported. The last is another hit at Lord Glenelg's exit from office, and entitled "Playing off a practical Joke on an old Friend." His lordship is seated at table, fast asleep; Lord Melbourne picking his pocket of the "Colonial Seals;" and Lord Duncannon stealing the "Privy Seals" from the table. Lord Normanby (we presume, though not a likeness either in this or in the former squib) and Lord Morpeth are looking in to see how the affair comes off. Lord Melbourne says, "How surprised he'll be when he wakes!" but the doze seems so potent that one might fancy waking out of the question.

Hanover Square Rooms.—On Monday, Mori and Lindley's third classical concert was fully attended; and the selection of music excellent.

Raleigh Club.—A portrait of the illustrious man, after whom this Club was named, has been presented to its members, by Sir William Chatterton. Considerable interest attaches to this picture from the history, by which it can be satisfactorily traced to Sir Walter Raleigh,

without having passed through the hands of a dealer.

Master Bassie.—We observe from the Scots papers, that since the Newcastle meeting of the British Association, this fine boy, with his extraordinary powers of memory, has been making a very successful tour in Scotland. His exhibitions at Edinburgh, Glasgow, Stirling, &c. &c., seem to have excited much wonder and admiration.

Astoria.—Mr. Jacob Astor, who has given his name to a country, and to a literary work from the pen of Washington Irving, died last month at New York, leaving the prodigious wealth of millions behind him.

C. Rossi, Esq.—This able and aged sculptor died last week, in his seventy-seventh year. During a long life, he was frequently a competitor for public works; and executed many monuments, and other productions of art.

Boaden, Esq.—Long and well known in the literary world, is also among the departed. His intimacy with the Kemble family, and attachment to dramatic literature, brought him before the public tribunal both as a biographer and dramatist, we fear not with that success which should have cheered his declining years.

Thomas Allen, formerly (boatswain, we believe) of the Victory, and the original of "Ben Brace," in Capt. Chamier's novel, died lately in Greenwich Hospital.

No. 1. of the Life and Adventures of Michael Armstrong, the Factory Boy, by Mrs. Trollope (Colburn), is one of those imitations of a popular writer which it is not possible for us to compliment. We do not think that any individual has a right to establish a monopoly; but we have rarely seen success earned or deserved by those who set themselves to simulate and work out the ideas of another, instead of devising some original design of their own. We shall, however, see how a person of Mrs. Trollope's acknowledged talent acquires herself with this task. The subject is certainly one of great interest.

A New Modern General Atlas (Williamson and Co.) corrected to the present time, by J. and E. Walker, and consisting of thirty-four maps, merits our notice and praise for its convenient form and distinctness. A very useful descriptive index, by Mr. R. Ryan, is prefixed; and the whole, either for common reference or for tuition, is well deserving of employment.

Roman Antiquities.—Many Roman coins, utensils, &c., and some ancient foundation walls, have been discovered at Long Ashton, on the line of the Bristol and Exeter railway.

Gentus in Distress.—The "Times" newspaper of the 15th ult. contains the following advertisement:—"An artist and author, of twenty years' experience, solicits the aid of the benevolent. He has written 30,000 lines of original composition in English verse, and never gained a shilling; twelve tragedies, and two comedies, of which he offered the best to Drury Lane and Covent Garden. He published in 1830, at the cost of 40l., a poetical volume, sent copies to all the Universities, and sold the rest for 1l. 7s. as waste paper. Being now arrived at destitution, he proposes to relieve himself by publishing another volume, consisting of an heroic poem, satire, essays, ballads, &c."—Is the speculation a good one?

A Mare's Nest.—Thomas Moore of Erin;—Othello Moor of Venice. Thousands of admirers of the immortal William—the sweet William of Avon—imagine that the general of the Venetian forces, on whom a deathless fame has been given as *Othello*, was indeed a black

man—a Moor “horribly stuffed with epithets of war.” He was no such a person. A Moor never held that high and noble command. But why associate Mr. Thomas Moore, the author of “The Irish Melodies,” with Shakspeare’s Moor of Venice? Simply because they were namesakes. Referring to the pages of Italian story, we find, that at the period noted by Shakspeare as the time of his drama, one Thomazo Moro, a famous Venetian, had the command. Now whether Cynthia, who wrote the story of “Othello”—the play—in order to make his hero more remarkable, made him a Moor, “Moro” being the Italian for a native of that country, or committed a mere blunder, by rendering it, as it were, Thomas the Moor, instead of Thomas Moore, matters little, the fact is the same.—*Correspondent.*

LITERARY NOVELTIES.

In the Press.

THE Works of Edmund Spenser, with a Memoir by Robert Southey, Esq.

A new literary Journal, at twopence, and illustrated with Engravings, to be called *The Literary World*; is announced by Mr. John Timbs, for eleven years the industrious and able Editor of “*The Mirror*.”

TO CORRESPONDENTS.

“The space we have devoted in this No. to the further illustration of the new application of art both in Paris and London, and the discovery of another claimant to the origination of the process of M. Daguerre (query, the *Nipco-type*, if it is to bear the name of the inventor?), has obliged us to postpone the report of the Royal Institution and some reviewing matter.

“R. M. T.” pretty, but we are pressed for space.
“A Constant Reader” is informed that we have seen no further accounts from Upsal. Perhaps the absence of the king in Norway may have been the cause.

ADVERTISEMENTS.

Connected with Literature and the Arts.

BRITISH INSTITUTION, FALL MALL.

The Gallery, for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s. Catalogue, 1s.
WILLIAM BARNARD, Keeper.

CIVIL ENGINEERING PREPARATORY CLASS. The Second Division of the Course in Chemistry commenced on Friday, the 1st of March. The Term divides this Day.

Hanwell, February 26th, 1839.

TO HEADS OF FAMILIES AND SUPER-INTENDENTS OF SCHOOLS.

INSTRUCTION IN FRENCH AND ITALIAN.
Dépôt of the most approved Works for the Study of those Languages.

M. DE LA CLAVIERIE (Member of the Grammatical and Literary Society of Paris, Author of several Works on Education, and Eight Years a Resident at Rome, where he held an Official Situation directly connected with the Italian Language and Literature), Professor of the French and Italian Languages, and late Teacher in the University of Oxford, begs to announce that, having removed from Liverpool to London, he has resumed his Professional Avocations, and is giving instruction in French and Italian, either at his House or in Private Families and Schools, in or out of Town.

M. De la Clavierie trusts that his long experience, both as a Teacher and a Writer, sufficiently qualifies him for discharging the Duties of his Profession, with credit to himself, and advantage to his Pupils.

Persons of Education may be known at M. De la Clavierie’s Residence, No. 6 Coventry Street, Haymarket; where may be found, a general Assortment of such Elementary Works as have a well-established reputation, and are best calculated to promote and insure the attainment of the French and Italian Languages.

M. De la Clavierie is at all times ready to furnish information personally, between the hours of One and Three daily.

THE PERUSAL OF NEW PUBLICATIONS.

New ready (gratis), for FAMILIES and BOOK SOCIETIES, a Select List of New Works, prepared for the Use of Subscribers, and sent by the Editor of the *Literary Gazette*, Conduit Street, Hanover Square. Terms, as a single letter, on application (post-paid). The best Periodicals are included in the Monthly Supplies, and the Number of Volumes forwarded will be in proportion to the Number of Members forming the Society. It is recommended that adjacent Families in Scotland, Ireland, and the more remote Parts of England, should unite in forming a joint Subscription.

SMITH’S WEALTH OF NATIONS.

Ludgate Street, February 25, 1839.

MR. EDWARD GIBBON WAKEFIELD having published an Advertisement, in which he states that he “has instructed his Solicitors, Messrs. Fox, Hamilton, and Fox, to commence an action against Messrs. Charles Knight and Co. the Publishers, of Ludgate Street, unless they shall immediately assent to a Proposal which has been made to them for removing the injurious and unfounded imputations cast upon him in an advertisement, signed the text with the name of ‘Messrs. Charles Knight and Co. feel it their duty to republish, and to give a more extensive circulation to, the advertisement which Mr. Wakefield has thus endeavored to suppress. It is as follows:—

SMITH’S WEALTH OF NATIONS, with Commentary.

By the Author of “*England and America*.”

There are particular occasions on which it is necessary to trouble the Public with a statement of private transactions. The non-completion of this work, the publication of which commenced in 1834, is one of these occasions. In the April of that year, Mr. Knight agreed with Mr. Edward Gibbon Wakefield, the Author of “*England and America*,” to publish an edition of *Smith’s Wealth of Nations*, with a Commentary by Mr. Wakefield. The work was to be brought out in periodical Volumes, and to be sold cheap. Mr. Wakefield was paid in advance 200*l.* on account of the Commentary. The First Volume appeared, and was well received by the public; the Second was also duly published. The Third Volume, after some interval, was published, but Mr. Wakefield did not contribute a single note towards it. The last Volume, which contained the text with the end of the Third Volume, has been printed two years. Of the Fourth Volume, which was to consist entirely of original matter, Mr. Wakefield has furnished twenty pages only, after every mode of entreaty and remonstrance has been resorted to in vain during the course of the last three years. The Publishers feel that they cannot any longer remain silent under what appears to be a fraud upon the purchasers of the Three Volumes. They, therefore, submit this statement of facts to the Public, and beg to announce that the Volume, which completes the Text will be published on the 1st of March.

London: Charles Knight and Co. 57 Ludgate Street.

“THE ALDINE MAGAZINE gives as much variety and amusement for a shilling, as some of its more ambitious contemporaries supply for half-a-crown.”— United Service Gazette.

James Fraser, 215 Regent Street, London.

In 2 vols. 12mo. price 15s. bound in cloth.
THE PROGRESS OF THE NATION, in its various Social and Economical Relations, from the beginning of the Nineteenth Century to the present Time. By G. R. PORTER, Esq. F.R.S.
Sections I. and II.—Population and Production. Sections III. and IV.—Interchange, and Revenue and Expenditure.
"It rarely falls to the lot of a reviewer to read a book so full of information, and so deeply interesting, as the volume before us. Vast labour must have been bestowed upon it by Mr. Porter, who has collected from various sources the statistics of population and production; and with their help has presented such a picture of the progress of our nation as must make every Briton's heart swell with pride, and every philanthropist's bosom beat with pleasure."
These volumes, which are printed of a uniform size with the "Companion to the Almanac," may be considered as a valuable Supplement to that work; and they offer to the statesman, the commercial man, and to the general reader, the most condensed and authentic view of the present and recent state of the country.
London: Charles Knight and Co. 25 Ludgate Street.

THE UNITARIAN AND TRINITARIAN CONTROVERSY. Price 1s.

A LECTURE delivered by the Rev. T. H. THOM, on Tuesday, February 18, on the Practical Importance of the Unitarian Controversy; being the first of a Series of Lectures now in progress of delivery in Paradise Street Chapel, Liverpool, by the Rev. T. H. Thom, the Rev. James Martineau, and the Rev. Henry Giles.

No. 1155.

LONDON, SATURDAY, MARCH 9, 1839.

PRICE 8d.
Stamped Edition, 9d.

REVIEW OF NEW BOOKS.

A Tour in Sweden in 1838: comprising Observations on the Moral, Political, and Economical State of the Swedish Nation. By Samuel Laing, Esq., author of "A Journal of a Residence in Norway." 8vo. pp. 431. London, 1839. Longman and Co.

MR. LAING, whose previous work, by its solidity and sound observation, obtained a large share of public attention, and whose views will merit the consideration of all those who take an interest in affairs which most nearly concern the well-being of society, has laid us under a fresh and important obligation by the present work. It is a very valuable contribution to our right understanding of the actual condition of the Northern nations; and, by reference to them, to the application of much useful intelligence to the improvement of Great Britain, as well in essential branches of her internal policy as in her foreign relations with these countries.

"To collect (he says in his Preface) ordinary facts of common occurrence in a country, and to draw from them obvious conclusions on the state of its inhabitants, is not a work in which talent and genius are specially required, or from which much literary reputation can be gained. It is a field, however, in which the traveller, with the most ordinary intelligence and observation, may be eminently useful. In Norway and Sweden, such inquiries are peculiarly interesting at the present period, because these two nations, although the furthest removed from the agitation of the French revolution, have, by a singular chance, been affected by it more permanently, and one of them more beneficially, than any others in Europe. Norway received a new and liberal constitution, and has started with the freshness of youth,—a new nation, as it were, called suddenly into life from among the slumbering feudal populations of the North. Sweden received a new dynasty,—and slumbers on amidst ancient institutions and social arrangements of darker ages. Having attempted, in a former work, to give a sketch of the present social condition of the Norwegian people, I considered it necessary, in order to complete the view of the present moral, political, and economical state of the inhabitants of the Scandinavian peninsula, to undertake the following sketch of the Swedish."

And ably has he performed the task, as we trust our selections, however incomplete, will shew. We are compelled to confess to their incompleteness, because it would be absurd in a journal limited like ours, with so many claims upon its notice, to pretend to discuss several of the grave questions which the author sets forth, and which embraces almost every subject of national value—government, legislation, the state of morals and crime, the press, education, religion. For instance, read the following, and see if it were possible for us to do justice to such topics:—

"It is a singular and embarrassing fact, that the Swedish nation, isolated from the mass of the European people, and almost entirely agricultural or pastoral, having in about 3,000,000 of individuals only 14,925 employed in manufactories, and these not congregated in

one or two places, but scattered among 2037 factories; having no great standing army or navy; no extended commerce; no afflux of strangers; no considerable city but one; and having schools and universities in a fair proportion, and a powerful and complete church establishment undisturbed in its labours by sect or schism; is, notwithstanding, in a more demoralised state than any nation in Europe—more demoralised even than any equal portion of the dense manufacturing population of Great Britain. This is a very curious fact in moral statistics. It is so directly opposed to all received opinions and long-established theories of the superior moral condition, greater innocence, purity of manners, and exemption from vice or crime of the pastoral and agricultural state of society, compared to the commercial and manufacturing, that if it rested merely upon the traveller's own impressions, observations, or experiences, it would not be entitled to any credit."

It rests, however, on authentic returns:—
"According to the official returns published in the Swedish State Gazette, in March 1837, the number of persons prosecuted for criminal offences before all the Swedish courts in the year 1835 was 26,275, of whom 21,262 were convicted, 4915 acquitted, and 98 remained under examination. In 1836, the total population of Sweden was 2,983,144 individuals. In this year, therefore, one person of every 114 of the whole nation had been accused, and one in every 140 persons convicted, of some criminal offence. By the same official returns, it appears that in the five years from 1830 to 1834 inclusive, one person in every 49 of the inhabitants of the towns, and one in every 176 of the rural population, had, on an average, been punished each year for criminal offences. In 1836, the number of persons tried for criminal offences in all the courts of the kingdom was 36,925, of whom 22,292 were condemned, 3688 acquitted, and 945 under trial or committal. The criminal lists of this year are stated to be unusually light, yet they give a result of one person in every 112½ of the whole population accused, and one in about every 134 convicted, of criminal offence; and taking the population of the towns, and the rural population separately, one person in every 46 individuals of the former, and one in every 174 individuals of the latter, have been convicted within the year 1836 for criminal offence."

"The proportion, also, of illegitimate to legitimate births in this country leads to the same conclusion. It is as one to 2½ in Stockholm. In no other Christian community is there a state of female morals approaching to this. In Paris, the illegitimate are reckoned by Puchet to be one in five births, and in the other towns of France one in 7½. In England and Wales it is reckoned there is one illegitimate to nineteen legitimate, and in London and Middlesex one to thirty-eight legitimate births."

"Figures do not bring home to our imaginations the moral condition of a population so depraved as that of Stockholm. In such a society, the offspring of secret adultery, and the births merely saved from illegitimacy by the tardy marriage of the parents, must be nu-

merous in proportion to the general profligacy. If it were possible to deduct these from the one side of the account and add them to the other, to which morally they belong, what a singular picture of depravity on a great scale this city presents. Suppose a traveller standing in the streets of Edinburgh, and able to say, from undeniable public returns, 'one out of every three persons passing me is, on an average, the offspring of illicit intercourse; and one out of every forty-nine has been convicted within these twelve months of some criminal offence!'

"The clergy also, and the people, appear to me to view Christianity altogether in a different light from that in which we view it. It is a different species of religion here. This is a subject on which I give my impressions with reluctance, from the difficulty of explaining them. The Swedish clergy are, beyond doubt, a highly educated body of theologians. The people also are educated up to a certain point, which is, that of being able to read, and give proof of understanding the church catechism so well as to be entitled to confirmation, and to be received as communicants. Here the working of the establishment on the people seems to stop. A careful attendance upon all the ceremonials of the church; the saints' days, or prayer days, or church festival days; the high mass; the forms of baptisms, churchings, sacraments, funerals; the decorations of the church and altar, and of the priest's robes; the Easter offerings, Christmas offerings, and such observances—appear to stand in the place of all mental exertion or application, on their part, in religious matters, after they have once, if I may use the expression without offence, taken out their diploma as Christians, by the rite of confirmation, and by receiving their first communion. Religion seems to rest here."

When we mention that these extraordinary statements are mixed up with comparisons with Irish crime, &c., and rebukes of our game-laws, and other illustrative opinions, we think it will be acknowledged that our wiser course is to abstain from discussion. We will first turn to the more congenial topic of literature.

In 1830 were published "121 works on theology, 11 on philosophy, 20 on philology, 32 on education, 134 belles lettres (including 52 novels), 88 historical, 30 geographical works, 77 on political, 20 on physical, 20 on medical, 35 on economical, 25 on mathematical, 46 on juridical science, 4 on fine arts, 43 miscellaneous (not including newspapers, of which the number is reckoned 80, and 19 of which are published in Stockholm), besides 20 other periodicals, of which 15 appear in Stockholm. The price of books is extremely moderate; a volume of 400 pages generally costs about a banco dollar and a half; but the paper is very bad. There are, however, some publications which would do honour to our press; as, for instance, Nelson's 'Fauna Suecica,' with illuminated plates; the 'Scandinavian Fishes,' by Von Wright; the 'Costumes of Sweden,' by Forsell. The numbers of these works cost five banco dollars each, or about one third of what similar works from our press would cost. There is no duty on paper, and only one gratis copy taken for

libraries, viz. for the Royal Academy of Science. Of living Swedish authors, not including men of science, like Berzelius, whose celebrity is of a higher order than that of merely literary production, the only one perhaps who has an European name, and who may be placed by the side of the first writers in other languages, is the historian Geyer. His first volume gives a rapid and masterly sketch of the early history of Sweden; and with the terseness and philosophic spirit in which Tacitus might have written the history of a barbarous period and people. The second and third parts give the history of Gustavus Vasa and his successors, down to the death of Gustavus Adolphus, and the reign and resignation of his daughter Christina. The adventures, as they may be called, of the first Vasa, his exploits, his manly sincere character, his public and domestic life, his racy speeches to the peasantry in the quaint energetic mode of expression which appears to have belonged to the state of society and language in every country about the time of Queen Elizabeth, are given in a spirit truly Shaksperian. This work, although unintentionally, gives a severe shock to the reigning dynasty, for it paints, with the touch of genius, acts and exploits, sayings and doings, of great men, and striking characters of a native race of kings, in picturesque times, opens up a brilliant national history, which before was but dimly seen through obscure or flimsy foreign works, and brings it home to the breasts of the youth of the country, in a literary production of which the nation may be as proud as of the deeds it relates."

Our author is well inclined towards the previous dynasties, and defends the conduct of the deposed Gustavus IV., whilst he considers the reigning monarch as more of a military character than an able sovereign. He particularly impugns the conduct of his government towards the periodical press, for we are told:—

"A desperate war is carrying on in this country between the periodical press and government. By law and the constitution, the Swedish press is free; and every man is entitled to publish what he pleases, being responsible to law for what he publishes. But, in 1812, a temporary power of suppressing periodical publications summarily, without previous trial or accusation before a jury, as in the case of other publications, was granted to the executive by the diet. This power of immediate censorship over newspapers was applied for on the plea that the exigency of the times made it necessary to arm the executive with power to suppress seditious writings summarily, and without waiting for the previous condemnation by a jury of the publication and its author; and it was granted on the understanding that it was to be only temporary. The exigency, whatever it was, passed away, but not the power—and in a constitution so complicated, with its four chambers and absolute veto, it is impossible to carry through a bill for the abolition of this censorship in opposition to the royal will. The retention is loudly complained of as a breach of faith with the nation; and is useless as well as impolitic, for it extends practically only to annoying the daily press, and irritating the public mind, without the power of effectually stopping any obnoxious periodical paper. The ground law entitles every man who pleases to publish a newspaper; and the real editor of a popular newspaper keeps half-a-dozen fellows in pay, who are ready to give their names as editors, and stand all responsibility, for a few dollars. The suppressed paper appears within half-an-hour with a trifling alteration in

the title. The 'Aftonblad' (evening sheet) has been suppressed by government twenty-four times, and now appears under the title of the 'Twenty-fifth Aftonblad,' and may to-morrow appear under the title of the Twenty-sixth, should government suppress the paper called the 'Twenty-fifth Aftonblad.' The ground law secures too well the liberty of the press for this power of censorship to exist by the side of it; and government has the worst of it in the conflict. The want of sincerity in retaining a power granted temporarily, furnishes a theme of powerful moral effect against government, and the unnecessary exertion of the power, and frequently for passages which the jury has subsequently found innocent, keeps the public mind in a perpetual state of ferment. A knot of old nobility, a century behind the age they live in, and unable to appreciate the importance of public opinion in these times, surround the king, and advise measures more suited to the court of France before the revolution, than to the nineteenth century. His majesty himself, imperfectly educated for any civil command or business, and ignorant of the language, and consequently of the people and their concerns, is as far behind as his ministers in the knowledge required for governing with satisfaction a constitutionally regulated state. In the conflict with a periodical press conducted by men of great talent, and wielding an influence in this well-educated nation altogether overwhelming, an executive government so constituted, and exposed in every measure to its attacks, does not slumber on a bed of roses. The number of newspapers published in Sweden is reckoned to exceed eighty, of which nineteen are published in the metropolis. A great number of these are not political, but merely give the advertisements of the neighbourhood. Where there are so many public functionaries in a country, that it may be truly said they are not made for the public business, but the business for them, there is a great superfluity of writings, announcements, official forms, and publications, in all concerns, public or private. Every province and town has its local courts, in which the system of much ado about nothing gives a living to a corps of officials; and the advertisements and proclamations connected with the business of the courts, together with the ordinary notices of buyers and sellers in the district, support a newspaper in a much smaller population than with us. The stamp duty on newspapers does not exceed 1/4 of a farthing per sheet. There is no duty on advertisements; and the cost of advertising in the best newspapers in Stockholm is about 3 1/2 farthings, or two skillings banco, per line. Advertisements are consequently numerous, and the convenience of them extends to lower and smaller objects, and to lower classes of society than with us. We lose an immense advantage in our social condition, by taxing heavily the readiest means of communication between man and man in matters of purchase and sale. The paper used by the provincial press is very bad, but very cheap; and the matter is of the same character. If there is a spare column it is generally filled with a 'continuation' of some insipid French tale. The daily political newspapers of the metropolis are of a higher class. The 'Aftonblad,' the 'Dagblad,' the 'Daglige Allehande,' are the liberal daily papers. The 'Freya,' and many others, are weekly papers, or published twice or three times a-week, on the same side. The 'Stats Tidning,' or 'Gazette,' the 'Argus,' and the 'Svenske Minerva,' are the leading conservative papers, but the first only is in daily circulation. The 'Aftonblad' takes the lead of the

periodical press. Its circulation is above 4000, which, in proportion to the population of Sweden, is greater, perhaps, than the circulation of any newspaper in Europe. The price is ten dollars banco yearly, about 15s. 8d. sterling, delivered from the office six days in the week. Mr. Fijerta, the proprietor and editor, does not publish it on Sundays, although not prevented by law, I believe, from Sunday publication. The postage within the kingdom of a daily paper is one dollar eight skillings, or about two shillings sterling, yearly; but this, I understand, is not secured, as in Norway, by an act or law, but is at the discretion of the executive; and government has been so ill advised as to withdraw this exemption from postage from the 'Aftonblad.' This kind of personal conflict with the opposition press only adds to the celebrity and circulation of its productions; and where the post at the best is an affair of once a-week, and steam-boats are running in all directions once a-day, government has the mortification of adopting an unpopular measure, and of seeing it defeated and laughed at. In all the coffee-rooms, conditors' or confectioners' rooms, kallare or cellars, and such places of resort which I visited, the liberal papers, especially the 'Aftonblad,' 'Daglige Allehande,' and 'Freya,' were never wanting. These are decidedly the newspapers of the middle and lower classes. The 'Gazette,' or 'Stats-Tidning,' is the only one of conservative principles to be found in any public place. The others, on the same side of politics, may have a very considerable circulation among the higher classes; and two of them, at least, the 'Minerva' and 'Argus,' are conducted with great talent; but they have no advertisements from the people, which is a proof that they are not the papers of the people. Over all the Continent, or at least in this quarter, liberal, radical, conservative, aristocratic, are terms applied to classes of political opinions and to newspapers, as distinctly, and with the same meaning, as with us."

The subject of a free port on the island of Gothland, having occupied the House of Commons on Tuesday, we shall close our review for this week with some of Mr. Laing's observations respecting it, and which seem to throw a light upon the matters at issue.

"The distance from the main coast of Sweden to this island is fourteen leagues. * * * The island of Gothland is a great table of limestone, about 77 miles in length, by 35 in breadth, and between 80 and 150 feet above the level of the sea: it is a very remarkable piece of land. The whole mass is a formation filled with the fossil remains of the extinct mollusca. * * * The whole population of Gothland at the end of 1835, when the last official estimate of their numbers was made, was 36,408 individuals in the country, 4268 in Wisby, the only town; being in all 40,671 persons. * * * This island will some day be considered the most important political point in the north of Europe. From its geographical position, it is a padlock upon the gulfs of Finland and Bothnia, which in the hands of an effective power would lock up the Russian navy as in a pond, and secure the free navigation of the Baltic. It is not probable, that a post so important for Russia and for the other European powers will be suffered long to remain in the hands of Sweden. It was rumoured at Stockholm, when the Emperor of Russia so unexpectedly paid a visit this summer to his Swedish majesty, that some arrangements relative to this island were the secret object of conference between the crowned heads. According to one report, Sweden, as a counterpoise to the Russian force maintained in the Åland isles,

wished to establish a free port, under the guarantee of other powers, in the island of Gottland: according to others, England had peremptorily demanded its cession. It is obviously in a position which bridges the power of Russia, as without it she is not mistress of her own Baltic fleet; and it has at Slito, on the west side, and at Capelshamn on the east, harbours, with depth of water, it is said, for ships of war, or at least for steam war-vessels; and it is, therefore, the most important point undoubtedly in the north of Europe for Russia to become mistress of. It is not probable that England would desire to occupy an island which it would require ten thousand men to garrison, and a fleet to prevent her garrison being surprised. A free port at Slitohamn, or Capelshamn, would turn out a failure as a commercial enterprise, unless under circumstances of a general war; because, in the ordinary course of commerce, Baltic produce—corn, timber, hemp, flax, iron—either from great bulk, or low value, will not bear transshipments and double charges. Those reports, therefore, circulated at that time, have probably been only a preparatory feeling of the way—a sounding of the Swedish nation's sentiments—in case of a transfer of this island to Russia being proposed. Russia will lick the morsel into shape, and swallow it herself, as she swallowed Finland. The Swedish government, in fact, tempts her to do so; for, in this important outpost of the kingdom, important to all the commercial powers of Europe as well as to Sweden; from which, in the event of any demonstration against the country from the Åland isles, a similar demonstration to counteract it might be made against Poland, or any weak point of the Russian empire. * * * The Gottlanders, besides, consider and talk of Sweden as foreigners. The communications and ties between the lower classes are too restricted by the privileged system of trade to amalgamate these remote provinces with the main body of the nation, by common interests and feelings."

Trials of the Heart. By Mrs. Bray, author of "De Foix," "The Whitehoods," &c. 3 vols. 12mo. London, 1839. Longman and Co. In our notice of "Trelawny of Trelawne," we took occasion pretty fully to express our opinion of Mrs. Bray's talents as a writer; we have now but to add, that we have always thought her most effective in those delineations which appeal to the heart. Her antiquarian and historical knowledge is considerable; but she throws such topics into the background when she touches on the conflicts of human passion and the accidents of life,—those "thousand natural shocks that flesh is heir to." Nor have we found her less successful in painting those scenes which the face of nature displays; where all is touched with the truth and vigour of a master hand: and, as some utility of purpose should be included in works of the most imaginative description, it may be further observed, that a sound system of morality and Christian principles is every where interwoven with Mrs. Bray's fictions.

In the opening tale of these volumes, Mrs. Bray demonstrates the absurdity of entertaining *superstitious* notions, which too often realise, by their own baleful impulses, the forebodings they have conjured up. Of such a weakness as this Charles Edwards was the self-devoted victim: and his determination, under the impulse of a preconceived destiny, to cross Sebrina's angry flood, presents us with the following catastrophe, under the head of "Prediction:"—

" 'I shall perish,' he replied firmly; 'it is fated:' and, saying this, he let go my hand, leaped into the boat, and, in another minute, that slight and fragile thing was cleaving her way over the angry and agitated waters. The moon was up, but not now did she float through the azure sky in that serene majesty,

'When out of sight the clouds are driven,
And she is left alone in heaven;
Or, like a ship, some gentle day
In sunshine, sailing far away—
A glittering ship, that hath the plain
Of Ocean for her own domain.

No; the moon seemed only to look forth through the dim, heavy, sulphurous clouds that floated near her, round her, athwart her, to send an occasional gleam that made but too distinct the roaring Severn, covered and quivering with foam, as every wild wave came rushing in, as if chased by the Furies, who, on this night, had lent their unmitigable rage to the winds, the waves, and the tides in that forlorn hour, for the ruin of that forlorn bark. Heavy clouds were in the distance; they seemed to fall, to rest upon the hills, and to look on the dreary waters, whilst they bore along their prey as mourners, who, in fixed silence and in gloom, watch the progress of some stern decree of fate, whose end is death. Suddenly the air became more dense, and a distant peal of thunder rolled away among the mountains of Wales, as one brief bright flash shot from east to west, and gave once more to my sight the little bark, distinct in its outline, and surrounded by the disturbed, the all-devouring waves. How shall I speak the sickening of my soul; the sense of horror that thrilled through every vein, when I beheld that bark, so frail, so small, so ill-governed by the hand of a boy, reeling in the midst of the eddies, and driving on towards the sunken rocks; the boat, too, overbalanced by an outspread and straining sail! 'Great God! be merciful,' I exclaimed, 'or he is lost!' A dreadful conviction of impending evil seized on my mind; my head grew dizzy, my trembling limbs almost refused me their support, and my eyes closed, as if to shut out the fearful spectacle that in another moment would meet their agonised gaze. I could not, dared not, look up; I could only fervently and mentally ejaculate a few broken sentences, imploring the mercy of Him who can calm the raging of the tempestuous waters, or the storm of human passions, by his will, by his word! How deeply, how fervently, did I offer up that agitated petition—that Heaven would spare! But the winds were pitiless,—the waves were wild,—they did their work; for God, whose will is higher than that of man, inscrutable as the mysteries of his creation; He was deaf to the cry of nature, to the voice of prayer, in that awful, that fatal hour. 'Lost, lost; struck on the rocks,—down,—sunk—Good God! the poor boy's mother!' These were cries which, in hurried and strange accents of affright, met my ear on every side, as I stood watching on the shore. Such cries, indeed, first announced to me that all was over, that all earthly hopes of aid were alike vain. The boat, my unhappy friend, and the presumptuous boy who had undertaken its guidance in such peril, had found one and the same grave."

The tale of the heroic orphans of La Vendée is beautifully told, Mrs. Bray seems at once to have gleaned the materials and scenery of this pathetic relation during her "Tour in Brittany and other parts of France" with the late lamented Charles Stothard. The sanguinary and determined contest between the loyal Vendéans and the infuriated worshippers

of the Tree of Liberty and the Goddess of Reason, was yet fresh in the recollection of the province. Thus great interest attaches to the progress of this Vendean tale, from the historical and matter-of-fact circumstances on which it is founded, detailed with much power and dramatic effect. The gallant loyalist orphan, Pierre Lobin, is made prisoner by the republican forces, and condemned to be shot by their general, Varras. The following is the picture of the youthful patriot's death:—

His sister, "Jeanne, wept, knelt, humbled herself at the feet of this fierce demagogue; but all in vain. He told her that her brother's crime amounted to more than incivism; he had been in open arms in the support of the tyrant Louis Capet whilst he lived, and of his family since his death. These were offences against fraternity, the nation, and liberty. Pierre Lobin must die for such crimes, but that he (Varras) was very sorry for it. 'Do you really sorrow for it?' said Jeanne; 'then shew him mercy; save his life, and sorrow will never visit your own heart for that act, for it will be a good one.' Varras turned to speak to an officer in attendance; Jeanne heard the words—'Bid the men prepare in the courtyard.' 'No!' shecried, 'You must not,—you must not,—you dare not, give the order for his death.' The drums again rolled. 'Oh, stop that dreadful sound!' said Jeanne. 'It is no other to my ear than the call to the last judgment—the last judgment, Varras; do you believe it will come? Believe it or not, yet it will come, and where will you then stand? Where shall I stand? Even as I do now before you, boldly; and at the foot of God's throne I will call upon you to account for this day's deed. I will appeal to saints and angels to bear me witness that I asked a brother's life, and you denied it to me. You may need some comfort then; some record that may cause the book of blood, which you have helped to fill, to be closed; and in its stead, to open for you the book of mercy. Blood, Varras, blood!—it is a fearful thing; its cries reach from earth to heaven.'

" 'Save him, and if blood must be spilt to satisfy you, kill me, and I will die and thank you!' 'You are frantic. Take away this woman; nor longer let her interrupt my order.' 'Speak it,' cried Jeanne, 'speak it; is it for life or death?' 'For death,' said Varras. 'Lead out the prisoner.' The wretched Jeanne, on hearing this, clasped her hands together and raised them above her head. There was something fearful and wild in the expression of her whole countenance—something convulsive in every movement of her agitated frame. There was a terrific look also in her eye, as she shot its glance of hatred and abhorrence on Varras. It was a glance that would have withered, could looks do the deeds they speak. Her whole person, countenance, and air, might have suited a Cassandra, when, in the frenzy of a prophet's mood, she comes to bid the Trojans cry aloud for the curse that is about to fall on their devoted heads. 'Cruel, blood-thirsty tyrant,' she exclaimed, 'dare you thus out him off? But think not God's justice will rest till he has found you out. Blood shall have blood; the dogs and the carrion birds that prey on the carcass of the slain and make it their feast, shall, ere another month be passed, prey on your heart; and the curse of the wretched, such a wretched being as you have this day made me, shall sound in your ears worse than the wolf's howl in the forest of our Bocage, and bid you die and go down in despair to where that bad spirit waits for you—that spirit who now prompts you to this murder. Yes, murder,—for it is a murder! Oh! would

that the thunder of Heaven, at this moment, might be launched against you. I would call it down with my curse, and stand and see it fall rejoicing, though I myself were also doomed to share the ruin of its fatal bolt ! Varras, God will curse you, if my brother dies.' Varras shewed a strong expression of displeasure at her bitter reproaches. La Forêt endeavoured to soften his anger by whispering to him 'that he must allow for the grief which had unsettled her mind.' 'I believe she is mad,' said Varras, she talks like one frantic. 'But the execution must go forward. Come, La Forêt, we will leave the rest to the lieutenant. We will see that no harm comes to your Jeanne: she will be herself by and by, when this fit of passion is over; she looks well in it. Bid the fifes play; it will drown this vociferation.' But Jeanne was no longer in a state to need this cruel insult to her feelings, by drowning her bitter expressions of despair. She gave up all her thoughts to her dying brother, and with an energy, a resolution that could proceed alone from that love which she bore towards him, and which in death was 'strong as death,' she composed herself as much as she could for his sake, and, at his entreaty, did for him the last offices that he now required at her hands. He bade her untie a blue riband that was under his vest. She did so. He took it from his bosom, and tied the riband round her neck. 'Jeanne,' he said, 'it is the consecrated heart. It was your gift before we parted, when I went forth with our chiefs to the war; it has never since left my bosom; it has been close to that heart which loved nothing so much in life, regretted nothing so much in death, as my dear sister. Adieu, my sweet Jeanne.'

"La Forêt took a brief but feeling farewell of the unfortunate Pierre. Varras bowed to him in silence. He commanded wine to be offered to the prisoner. Pierre declined the cup; but, to the astonishment of all present, Jeanne eagerly snatched at it. She held it up more steadily than could have been expected, considering her previous high state of excitement, and the indignation she had expressed in the frantic curses she had poured out on the revolutionist. She looked for a moment at the cup: and a smile, expressive of bitterness, of a feeling that rejoices over anticipated evil, curled her haughty lip, as she fixed a stern and dark eye on Varras, and said, 'Varras, I drink this to our next meeting; for, trust me, we shall meet again ere long.' She drank a deep draught, put down the cup, and, turning to her brother, said, 'That has refreshed my heart; now I can go through all that is to come.' From that moment a change came over her whole appearance and demeanour. She looked still white as a corpse. A slight convulsive movement passed over her features as she saw the prisoner led forth to death; but she followed in profound silence. The drums come more beat; the fifes played the Marseillais hymn, that favourite air of the revolutionists; and the fusileers took their station. There was a coffin ready to receive the body immediately after death. 'Go no further, Jeanne,' said Pierre; 'your presence only distresses me; I would die as a man.' 'And I will see you die as a man,' replied Jeanne, firmly, 'for, Pierre, I will avenge you as a man !' 'What do you mean, my sister?' 'No matter,' she answered; 'I have no weakness now; I only wish that the fusileers would aim first at me. I would forward and die willingly.—Oh! Pierre, this is too much;' her eye caught a sight of the coffin. [He is shot.] * * * She insisted on seeing the body of her brother. She

was not denied that request; yet her behaviour was not at all such as had been anticipated. She shewed no expressions of violent grief, no want of submission or of firmness; all her frantic energy, her wild unsettled feelings, seemed to have ceased with the extinction of her hopes. She kissed the corpse affectionately, and with her own hands covered the head with the facecloth, begging it might not again be raised. Pierre was buried on that day, and buried in the clothes in which he had fallen. The priest who had not been found to attend him whilst alive, was at last discovered; and, on the assurance of La Forêt being pledged for his safety, performed the service for the dead. Jeanne attended in profound silence, with an air of devotion, of deep settled grief, that was more alarming, though less afflicting for the time, than violent sorrow. She was quiet, calm, and resolute."

And Jeanne's resolution was steeled and maddened to that line of action, which the great Lord Bacon has termed "a kind of wild justice." The following is a *Sister's Revenge*:—

"On the evening of the battle near Doué, when the revolutionists were strongly intrenched, Monsieur de Lescure, then general of the Vendean army, was surprised at the approach of a soldier of a very youthful appearance, demanding to speak with him in private. The soldier appeared in great distress, without shoes, and very poorly clad. He had on the brigand costume, a red handkerchief round the head, the neck, and the waist. Lescure's attention being arrested by the air, the extreme poverty, and the youth of the soldier, he questioned him closely. The soldier burst into tears and said, 'General, I am not what I seem to be;—I am a woman. Madame de Lescure knows me. I saw her once, before I wore this dress: and once since I have assumed it. She also knows that my character is good; she has seen the certificate of my curé. Do not ask me questions, I entreat you; but grant what I ask of you, for I am resolute. To-morrow there is to be a battle; let me have but a pair of shoes, and I am sure I shall fight so that you will not repent my being near you in the action. And I shall be there whether you let me go or not.' Lescure was astonished; he endeavoured to dissuade her from her purpose; but finding all remonstrance vain, he gave her what she needed, and more than she asked; and ordered that she might have the use of a horse, as she told him she could ride as well as any in the army. On the morrow she appeared, and mounted, as one of the cavalry for the action. She purposely fought under the eye of Lescure, and, once or twice, called out to him during the battle.—'General, you must not pass me; I shall always be nearer to the enemy than you are.' She received a wound in the hand, but her courage and determination seemed but to rise the more for this accident. She was advised to retire from the field, but she answered calmly—'This is a trifle; I have not done yet.' It was allowed by all present who on that day observed her, that none fought better than she did; yet, at one period of the action, she was remarked to reserve herself. Her eye watched; she was looking out for some one amongst the enemy. The regiment of Varras now prepared to pour down on the Vendéans. No sooner did she perceive this, than, animating the men with the most enthusiastic expressions, she called out to them by a name which that very body of peasantry afterwards retained throughout the war. 'Follow me, men of La Vendée. Follow; and be, like me, avengers.' She rushed on with an impetuosity that was her

best security at the moment; as, by the rapidity and vehemence with which she made her way through all opposition, she escaped immediate destruction. She rode up to Varras, who was charging at the head of his troop; and, ere a republican could touch her, she snatched a pistol from her side and exclaiming—'Now, Varras, we have met,' shot him dead on the spot. This done, she threw away her pistol, rushed furiously into the thickest part of the battle (where her red handkerchiefs made her a mark), and almost immediately perished. The body was found after the action. By the care of Lescure it was decently interred. On searching the clothes, the certificate of the curé was found; and a consecrated heart, worn next to her bosom, was twisted round with a lock of hair. Probably the hair was her brother's. By the certificate it was ascertained that she was the unfortunate Jeanne Lobin."

A Wreath of Wild Flowers from New England.

By Frances Sargent Osgood. 12mo. pp. 364. London, 1839. Churton.

WE have long been familiar with the name of our fair author, and felt assured that, whenever she launched forth her beautiful thoughts in the shape of a volume, we should find much to amuse the mind and amend the heart. Our expectations have been fulfilled; and we have here a delightful gathering of the sweetest of wild flowers, all looking as fresh and beautiful as if they had grown in the richest of English pastures, in place of having been

"Nursed by the cataract."

True, the wreath might have been improved with a little more care; a trifling attention or two paid to the formation of it; a stalk here and there that obtrudes itself between the bells of the flowers, might have become so interwoven as to have been concealed; and the whole have looked as if it had grown in that perfect and beautiful form. Though, after all, we are, perhaps, too chary; for in nature every leaf is not ironed out to a form, nor propped up with a wiry precision; but blown and ruffled by the refreshing breezes, and looking as easy, and careless, and unaffected, as a child that bounds along with its silken locks tossed to and fro just as the wind uplifts them. Page after page of this volume have we perused with a feeling of pleasure and admiration.

Here is an extract, an image of melancholy beauty, from "The Withered Flower and Broken Heart":—

"The maiden by her mirror stands,
Before her clasped her languid hands!
Her robe is loose—her feet are bare—
Her head is bent in mute despair,
And wildly droops her lovely hair;
Her gleaming girdle thrown aside,
Resplendent still in jewell'd pride,
How mocks its diamond's radiant smile,
The tears in those blue eyes the while!
A withered rose is at her feet;
Wet with those tears, it still is sweet.
Ah! not the only flower whose light
Is lost in sorrow's shower to-night!
A rose was on that eloquent face
When last I marked its glowing grace;
Her happy heart's warm crimson tide
Its soft and changing bloom supplied:
The heart is chilled! the cheek is pale!
Sweet flowers must die when fountains fail.
And what has wrought this wretched change?
Alas! 'tis nothing new or strange!
Her smile within the festive hall
Was saved for one who smiled on all.
Ah! reckless tone and wandering look,
A maiden's spirit ill may brook.
Yet this has Marion met to-night,
With clouded heart and look all light.
Not one throughout the wearying dance
Wore wilder joy of word and glance:
No lighter form, no sunnier eye,
No freer footstep floated by.
And now 'tis o'er, the hated task,
And idle now the mirthful mask;

Quick sobs of anger, grief, and shame,
Like storm-struck blossom, bow her frame;
The azure fire that filled her eyes
Is quenched in tears that blinding rise;
And quivering lip, and pallid cheek,
The young heart's tale of suffering speak.
Ah! beating heart! and blooming flower!
Your fate is one: one glorious hour.
Ye breathe your wealth of sweetness forth
For those who feel not half your worth;
The next—'neath cold and reckless eye—
The full heart breaks!—the blossom dies!"

Another extract, and we must conclude, leaving this Wreath to its fate, at a season when no "sweet south" blows gently upon its leaves. Sorry we are to say it, but how many a fair page of poetry is in this day cast aside almost unregarded!

"Oh! breathe on it softly; it dies in an hour,"

is the sad, and we fear but too true motto, which our fair author has prefixed to her title-page; and yet there are many poems in this volume that would do credit to any collection: witness the following on a subject with which only a truly poetical mind could grapple, "On seeing Celeste in 'The Wept of Wish-ton-Wish.'"

"I too, last evening, joined the throng,
I too beheld in rapture's trance,
Like some wild vision waked by song,
The graceful 'spirit of the dance.'"

In guise of Indian girl she walked,
The forest-fawn less light of foot;
And while each look, each motion talked,
Her step—her voice—alike were mute!

Torn from her home—a trembling child,
Of sense and speech bereft by fear:
She comes—a wanderer from the wild,—
Nor knows that long-lost home is near.

Her sister strives, by many an art,
To bring back memory's power—in vain!
She clasps her red-boy to her heart,—
She's pining for the woods again!

"See, love, the chain you used to wear,"
That out-stretched hand! that look of joy!
Alas! no memory wakens there,—
To her 'tis but a pleasing toy!

But, hark! a soft and soothing strain!
The song her mother used to sing!—
'Tis o'er!—she strives for it again,
As if her spirit would take wing.

Again it comes!—the tinkles fall,—
She rises with the music's swell!
Struggles for utterance—breaks the thrall!—
'Mother!' she sighed, and lifeless fell!

And now, her warrior-love is low;
Her gun is seized—raised—aimed—oh heaven!
They lift her child before the foe!
She shrieks—as if her heart were riven!

"Conanct dies!"—dark Uncas said;
Her arms around his neck she threw,
And moan'd, while mournful droop'd her head,
'Then Narramattah will die too!'

In the next scene her chief is slain,—
And she, o'erwhelmed with wo unspoken,
Creeps to him—takes his hand—and then
Dies silently,—her heart is broken!

She dies! the Indian girl!—but, oh!
When the dark curtain rose again,
Celeste! how radiant was the glow
Of life, o'er all thy features then!

She comes! 'the spirit of the dance!'
And but for those large, eloquent eyes,
Where passion speaks in every glance,
She'd seem a wanderer from the skies!

So light—that gazing breathless there,
Lest the celestial dream should go,
You'd think the music in the air
Waved the fair vision to and fro!

Or that the melody's sweet flow
Within the radiant creature played!
And those soft writhing arms of snow,
And white sylph feet the music made.

Now gliding slow with dreamy grace,
Her eyes beneath their lashes lost,
Now motionless, with lifted face,
And small hands on her bosom crossed.

And now—with flashing eye she springs,
Her whole bright figure raised in air!
As if her soul had spread its wings,
And poised her one wild instant there!

She spoke not—but so richly fraught
With language are her glance and smile;
That when the curtain fell, I thought
She had been talking all the while!

Yet, though so lost in rapture's trance,
Too oft beyond my reason's will,
That I forgot myself, perchance,—
Thou, dearest, wert remembered still.

In every scene of tenderness,
At every proof of noble pride,
Through all the heroine's wild distress,
I wished that thou wert by my side.

Yes! I too sometimes join the throng,
I smile—when smiling eyes I see;
I watch the dance—I list the song,
But every where I think of thee!"

Home Service; or, Scenes and Characters from Life, at Out and Head Quarters. By Benson Earle Hill, author of "Recollections of an Artillery Officer." 2 vols. London, 1839. Colburn.

WITH regard to the *Home Service*, which furnishes the leading title to these volumes, we cannot say that they disclose much of severe military duty to warrant it; but when we look at the quantity of anecdotes, stories of amateur acting, and other gossip and light reading which they unfold, we are bound to acknowledge that, between the Mess and the Green Room, they are stuffed with the same sort of agreeable material which gave popular currency to the author's preceding publication. The little dashes of egotism are part and portion of the writer, whether considered as a gay young officer or an actor; and the descriptions of other persons with whom he was in familiar intercourse, are such as need no apology (though a sort of excuse is offered, vol. 2, pp. 311, 12), on the score of being inconsistent with the retention due to society and gentlemanly feelings. "To avoid personality (says Mr. Hill), in a work like this, was as impossible as to eschew egotism; I have, however, taken no liberties which their themes cannot afford to pardon. In many cases I might, with justice, have been less civil; but, so averse am I to indulging vindictive sentiments, that some once agreeable intimates, to whom I could now scarcely refer with temper, I have forborne from mentioning at all. 'Tis said the injured may forgive, the injurer rarely can; I know not this, but am aware that I have had chances for making enemies for more than the last two years, 'which were not so before.' One has been the office of acting as mouth-piece to editorial decisions, some of which may have mortified the vanity of certain literary aspirants; yet, if prompt courtesy can soften unwelcome truth, I believe it will be allowed that I have honestly done my best to conciliate all parties." This, we believe, alludes to Mr. Hill, as sub-editor of "The New Monthly Magazine;" which has certainly done very little to create offence by its strictures.

The work itself is a perfect *mélange*, in which all kinds of matters are stuck close and continually together, apparently as they occurred or were heard, and without any other connexion whatever. The second volume contains many entertaining and characteristic anecdotes of Mathews, and some of Yates, Betty, and other well-known individuals in the London circles; but two or three samples will tell readers what they have to expect from the whole. The story of the chambermaid at Canterbury (p. 69) being rather *forte*, we go to a philosophical lecturer, who took a little country theatre "to display his Eidoranton, or transparent orrery; and pleasantly edifying it was for young folks, sitting together, in the dark, to see how the world wagged, and have all the circulations of Venus set to music before their eyes, by the Celestina, a very dreamy, spherelike contrivance. The lecturer shewed us a twelve-foot high miniature of the moon, calling the inequalities on its surface seas and mountains; but, though a disciple

of one Walker, he knew nothing of his lexicographic namesake, for thus did he continue:—
'Having proved that this beautiful planet has water, what becomes of the hypothesis that she has no hair? water comes through hair. There could be no Jews without hair; and if some of these dark spots are forests, she must have hair; hair is necessary for all fruits, and vegetation is necessary for the hair. Because, then, we cannot see it, nor ascertain the quality of her atmosphere, dare we conclude that, while we are plentifully blest with hair, she has been deprived of it? If she be occupied by feeling beings, she surely has hair; for how could they subsist, if that chief blessing of life had been cut off, or torn from them? there can be no animals with no hair; no birds without hair to float in; we know that many insects and reptiles live upon nothing but hair, nay, even the fishy tribe must have hair. Hergo, if the useful, the universally admired object in question has but one mount, one sea, one forest, 'tis hard but she should be allowed one inhabitant; and, as he could only breathe through hair, 'tis evident that hair she must decidedly have, as abundantly as ourselves!'"

A longish tale of a secretary of state and custom-house officer (closing at p. 196), is neither very probable in all its details, nor pointed at its conclusion; but some notes upon a gentleman, well known in literary and theatrical circles, and to whom the work is dedicated, will be found very entertaining. "Tohim (Col. Wyldes, says the author) I owe the introduction to Mr. George Raymond, with whom an intimacy has existed up to the present day, and of whom I shall have frequent occasion to speak. He was, when first we met, an admirable specimen of the ranger order; the attainments recently gained at the university mixed up with the rake-helly air of the templar; he was considered, by the ladies, a *beau garçon*, and many a fair damsel, at the Blackheath balls, set her cap at, and her affections on, my agreeable acquaintance.

"Early in the month I dined with Major R—, for the express purpose of meeting his son-in-law, George W—, of whom I have made frequent mention in my first volumes. The reader may recollect that he is there described as a wild young man, who thinks of little else than the gratification of his own passions, regardless of the miseries he may entail upon himself or the objects of his pursuit. I had heard that George — was reformed, and, as I knew he was married, I rejoiced to learn that so desirable a change had taken place, but I was not prepared for the extent of his reformation. With a rational, unostentatious aspect of steady piety and moral conduct, the rake-helly George — was not satisfied; no—he, like Mawworm, was 'pretty sure he had had a call,' and determined to give outward and visible signs of this inward and spiritual grace. His hair was combed straight over his forehead, his face had become pale,—not from fasting or prayer, but the effects of his early debaucheries; he affected a plainness of attire, and from his breast-pocket peeped a brazen-clasped bible. He received me with great coolness, and was not a bit more cordial with my friends, Raymond and Yates. He would not hazard his precious soul by sitting at the same board with his father-in-law and the profane guests invited, but was found seated bolt upright, with a volume of Calvinistic lore in his hand, when we joined the ladies at coffee. Quadrilles were got up, at which W— looked scandalized; but one young lady appealed to Raymond for a waltz, saying,—"Pray let us waltz, let us,

pray!" "Let us pray!" echoed my George, falling on his knees. He again blistered his ungenial namesake that night; Mrs. W—— passing from one room to another, let her shawl drop from her shoulders: my friend offered to arrange it—the lady, 'not caring to have a man so near her'—declined, when, with clasped hands and elevated eyes, he drawled,—"Thy service is perfect freedom." He would not, I am sure, have been so 'tender and profane too o' my conscience,' had he believed in the efficacy of either W——'s faith or works."

The heads of the chapters are, perhaps, too facetious; for they excite much expectation. Altogether, however, we trust Mr. Hill's *ana* will please the palates of readers who look for amusing variety at a leisure hour.

Peru as it is: a Residence in Lima and other Parts of the Peruvian Republic. By Archibald Smith, M.D. 2 vols. 12mo. London, 1839. Bentley.

THE growing interest excited by our monied and mercantile connexions with South America, strongly attracts attention to any work professing to give a clear idea of any one of the countries forming a portion of that continent. Peru is undoubtedly equal, in the senses we have referred to, and in a literary and philosophic sense superior in interest to the remainder, inasmuch as it involves recollections of an anterior state of refinement and cultivation under its Incas, far exceeding the rest. The unbounded wealth, too, of a nation whose real treasures at least equalled the wildest dreams of Oriental imagination, have thrown a charm over our minds in the consideration of the question; and if another source of interest can be wanting, it is found in the relics of antiquity discoverable throughout those regions, and which seem so strangely to connect its original state with the languages, customs, arts, arms, and history, of the earlier nations of our Eastern hemisphere.

The contrast between the past and present civilisation of Peru is not, however, greater than that offered at this day by its geographical and statistical relations. The vast chain of mountains that traverse its extent, appear to form a marked and almost insuperable limit to the extremes of sterility and fertilisation. The western coast to the sea presenting only a barren slope, crossed by rivers of uncertain volume, while the country to the east stretches away in luxuriance unrivalled by any other part of the globe, lavishing spontaneously the richest products of the vegetable world, and the most desirable objects of mercantile speculation, upon a soil almost untrodden by the foot of man, and watered by countless rivers of immeasurable flood.

Such a subject, we should have imagined, would warm the heart and fancy of a writer, and we took up the work before us in full confidence that some material addition would be made to our knowledge of the country, its inhabitants, its natural and historical treasures, by Dr. Smith. We grieve to record a certain degree of disappointment for those expectations. Notwithstanding ten years of residence in the land, our author's accounts, and in the first volume especially, are so generally superficial when they are not purely medical, that we can add little to the previous information acquired from Basil Hall and other English writers, to say nothing of Pöppig's narrative; and, as critics, we are bound to state further, that this little is so overlaid by a style easy, indeed, and not inelegant, but so utterly removed from simplicity, and so full of allusion and intimation, rather

than plain statements, that a previous acquaintance with the subjects referred to is often necessary to understand the Doctor's narrative.

The natives of Lima are singularly delicate according to Dr. Smith:—

"As evidence of the evil results arising from the vain endeavour to avoid the impression of the common physical causes to which, through life, every one must be occasionally exposed, we would particularly notice the peculiar delicacy of the delicately reared Limenian. When somewhat weakened by bad health, or a slight indisposition which confines him to his apartments for a few days, should he happen to shave and wash the face with cold water, he is thereby put in danger of being visited by a spasmodic affection of one side of the mouth, or affected, as is more likely to take place, with a cold in the head; so that the inflammation thus induced in the nostrils and fauces may soon be observed to extend itself along the continuous mucous membrane, and through the windpipe into the cavity of the chest; and there it is hard to foretell what ravages it may commit. We need not, therefore, be surprised to hear the often reiterated query of the convalescent in the words, 'No me hara daño lavar y afeitarme?—Will it not do me harm to shave and wash?' Nor should we indulge in a smile at his expense, as we see him gradually venture on the first degrees of ablution, by rubbing over the hands and face with a cloth dipped in tepid water sharpened with aguardiente, or the common spirits of the country."

The love of consultations makes Lima the paradise of physicians.

"A medical junta in Lima is commonly continued morning and evening, and from day to day, till the patient is pronounced to be out of danger. As the junta breaks up after each separate meeting, it is customary for the president of the meeting, or one of the physicians, to say, as he leaves his seat, 'Vámonos a consolar al enfermo.—Let us go to console the patient;' and then all the doctors present re-enter the patient's apartment to soothe and to console him; and, after this, one of the number steps forward to lay down the regimen—'a dar el regimen'—agreed upon in consultation, and which one or more nurses and attendants are now ready to receive from the mouth of the physician. After the formality of a junta is thought no longer necessary, it often happens that, by wish of the patient or his relatives, two or more of the medical advisers return at separate hours, but by mutual agreement, for several days, by way of further security to the sick, or as a source of satisfaction to his family.

"A sample, on a little scale, of such fashionable follies, is familiar to the Limenian in the well-known local story of the two doctors, who, for a month or more, daily met in consultation at the house of a family in town, where, as they retired to the supposed privacy of a consulting-room, the one would clear his throat, and ask the other, 'Come el enfermo hoy?—May the patient eat to-day?' To which the second doctor would reply, 'Como no? si, comera.—Why not? yes, he shall eat.' Thus, day after day, began and ended the consultation, as far at least as its topics of discussion concerned the patient; while the good old doctors spun out a regular allowance of time before they rejoined the patient, or his attendants, severely to announce the well-matured result of their conference. A man of *nous*, accustomed to listen behind the scenes, at length broke in upon their consultation; and dismissed them one day by paying to each his usual fee, and telling them both how happy he was to find that he now knew as

much as themselves, for that he could repeat as well as any body, 'Come el enfermo hoy?—Como no? si, comera.'"

It seems that these consultations are far better paid than single visits; as in the former, each member of the junta is entitled to four or four and a half dollars, while single visits are valued at but a single dollar.

The connexion of the physical and moral constitution of the Limenian may be thus traced:—

"The ladies, or females of Spanish blood in Lima, usually become mothers at too tender an age, and we think it is chiefly on this account that they are commonly found to be incapable of nursing with impunity; and, if they persist in attempts at nursing beyond what their constitution can bear, they are peremptorily warned to desist by the presence of symptoms that menace a decline or consumption. Hence most ladies in Lima are under the necessity of employing black and brown nurses, who are usually slaves either purchased for milk-nurses or hired out for this purpose. The skin of the negro appears to be cooler than that of the Indian or white race, and this may possibly have been the origin of the prevailing idea already alluded to, that the milk of the negress is more cooling and refreshing than that of the Indian woman,* who, though in other respects a healthy and proper person, is never considered eligible as a milk-nurse, when in this character a negress can be procured. It unfortunately happens, however, that the predilection thus shewn for negresses and those dark women who are nearest allied to the negro race, frequently exposes the white mother's child to a series of evils, such as imperfect nutrition, contamination of blood, and permanent constitutional injury, all originating in the peculiar circumstances and individual character of milk-nurses; of whom a single child may have been so unfortunate as to have had as many as half-a-dozen, and to have suffered successively from the blemishes of each: When the young don, thus nurtured in the very lap of bondage, comes to be fit for school, he goes to, and comes from it, in the company of a slave; and the young Miss, or Niña, who goes out to be educated, is, on her way to and from her parents' house, attended by a sort of *duña*, or experienced *zamba*. On the customary plea, that the evils of life come early enough, children of gentle blood, especially such as are 'rubios,' or fair-complexioned, are allowed all manner of *gusto*, or indulgence; and in the morning, before they set out for school, they usually receive a real or medio,—sixpence or threepence,—either as pocket-money, or as a bribe to be obedient and to submit to be taught. In this way expensive habits are early acquired, and mere children made to do what is right and proper from pecuniary motives, rather than a laudable sense of duty. Reviewing the effects of a close social union, from infancy upwards, between white children and their slave companions, who are seldom endowed with shame or modesty, we are led to remark that, without desiring to make any insinuations against the natural capacity for moral and intellectual improvement observable among all the races of mankind, or wishing in any degree to depreciate the merit of individuals of pure or mixed African and slave descent, we think it may be truly affirmed, that even minds of a naturally amiable and delicate bias, when led habitually to accommodate

* "This idea is not founded on experience; for that the Indian women are really good nurses is proved by the fact, that the offspring of European fathers and Indian mothers—viz. the *Mestizo* race,—are very robust."

themselves to the grovelling feelings and propensities of the more degraded portion of our kind, undergo deterioration by degrees, and slide into a participation of the qualities of a baser nature, with which they inevitably amalgamate their own. The proper medium of domestic intimacy allowable between masters and slaves, may be a nice matter to determine with precision; but it may be said in general, that in proportion as this immediate intercourse may meliorate the condition, and quicken the intelligence, of the slave, it tends to lower the tone of morality in that society where slavery is tolerated."

Dr. Smith considers it owing to this that the "sheer ruffian" seldom, until lately, existed in the capital.

"Assassinations, it must be owned, have been rather frequent of late years, and these have been almost always perpetrated with impunity; but there is reason to believe that the agents concerned in such atrocious crimes were in many instances not sons of the soil, but outcasts and fugitives from neighbouring states. Money, not blood, is what the worst of the dark native vagabonds of the coast are generally in quest of; and he who does not offer resistance when accosted by the robber, but, instead of armour, carries a few dollars or a couple of doubloons for his ransom, may nine times in ten be suffered to escape with entire personal safety from the midst of the most lawless marauders and dreaded highwaymen, who are usually no other than renegade slaves."

This fact is the more curious, as, what the Doctor seems ignorant of, the fact is, that in proportion as murders and assassinations diminished in Spain itself, they flourished in another of her colonies, Mexico, where, even till recently, bravos performed their atrocious tasks for hire in the public streets and in open day.

[To be continued.]

Ellis's Madagascar.

[Second and concluding notice.]

In our last, as far as large type and marked admiration went, we pointed attention to the anomalous and monstrous talk about "religious wars," and it is with much regret that we need so disheartening an account as Mr. Ellis' gives of the results of the missionary labours in Madagascar. We feel here, as every where else, that the most pious Christian labours, unless accompanied by great discretion and a comprehensive view of circumstances, are not only likely to be defeated, but to lead to evils instead of blessings, and cause much misery to the countries where they are unwisely introduced. After speaking of the efforts to abolish the slave-trade, the author tells us:—

"Beyond these, and other points of deep and lasting interest, these volumes supply a faithful record of the means employed for introducing among five millions of our species, a written language, a knowledge of the use of letters, of some of the useful arts of civilised life, and an acquaintance with the sacred truths of divine revelation. The measure of visible success, which for a time attended these efforts, and the melancholy reverses they have recently experienced, with the fierce and destructive persecution which has lately burst forth, and raged with such fearful violence in Madagascar, have excited deep and general interest throughout our country. An account of this persecution—which continues to rage against the native Christians, from whose numbers, there is reason to fear, additions are still made to the noble army of martyrs who have sealed their testimony with their blood—will be found in these

volumes, recorded with greater explicitness than in the statements hitherto made public."

Thus we find the religion of peace and benevolence become the scourge of a people, the source and mother of bloodshed and massacre. And the exposition lets us into some of the details of these horrors.

"The vindictive persecution of the Christians was only one of the calamities which the enormous and iniquitous conduct of the government brought upon the Malagasy. The practice of infanticide was revived. Their efforts to extinguish the light of Christian truth were accompanied by great activity and zeal in reviving and promoting idolatry. Fresh idols were continually brought to the capital; new altars were erected in several places; altars, tombs, and other objects of superstitious veneration, that had been lying in ruins, were repaired; new ceremonies were appointed, and offerings more frequently presented. In all these attempts to restore the influence of idolatry, the queen seemed to take the lead; being, at times, occupied for several days together in the observance of idolatrous ceremonies, and inaccessible to any excepting those who were engaged in the service of the idols. Of this, few would, perhaps, have felt much disposition to complain, had it not been accompanied by increasing oppression from the government, and misery among the people.

"Another expedition was sent against the inhabitants of the south, which perpetrated atrocities surpassing, in treachery and blood, all that had been known in the barbarous and sanguinary wars which had heretofore desolated Madagascar. The inhabitants of the invaded provinces had submitted to the army of the Hovas, and had agreed to acknowledge the sovereignty of the queen. The negotiations relating to the terms of their submission being completed, and, after being induced to give up their arms on the most solemn and repeated promises of the queen's friendship and protection, they assembled, men, women, and children, in the neighbourhood of the Hova army. The men were then required to remove to a short distance, under pretence of taking the oath of allegiance. As striking a pool of water constitutes a part of the ceremony,

a low swampy ground was chosen for the occasion. Such was the ostensible reason of the choice. A darker reason was concealed in the bosoms of the chief leaders of the queen's troops. On the arrival of the natives at the appointed place, they were surrounded by the soldiers, and were then deliberately murdered! Not fewer than ten thousand men were thus basely assassinated on the spot! The troops then selected, from the company of the wives and children of the murdered natives, all the boys capable of carrying arms. A given height had been fixed on by the queen as a standard, and all the youths above that measure, though they did not exceed it by half an inch, were conducted to the fatal spot where their fathers and brothers had perished, and there were also put to death! The wives and the rest of the children were then driven off as slaves towards Imerina; the queen's people carrying with them as booty whatever cattle and other property they could find. In another part of the country, where the inhabitants were subdued, fifty of the most venerable men of the place, after having been kept prisoners in the ditches or trenches around their fortification for several days, were barbarously nailed and bound to crosses, fixed on the outside of one of their villages, where they were left to perish in the

most excruciating torture; their wives, refusing to become the slaves of the barbarians by whom their husbands had been destroyed, were speared on the spot—a fate scarcely more severe than that of those who were carried into bondage by the Hovas. Numbers of these unhappy captives perished from fatigue and suffering on the road towards the market to which their captors were conducting them. The horrible barbarities of the Hovas, and the cowardly slaughter of those whom they had treacherously induced to confide in promises, justly caused their name and character to be held in execration throughout the southern part of the island, and while it inflamed, throughout the remaining provinces, the passion for revenge, forced on the chiefs and people the just dread of extermination, unless able to resist their force.

"The missionaries at Mauritius, though deprived of the privilege of labouring among the afflicted flock in Madagascar, cherished the tenderest solicitude for their welfare, and eagerly seized every opportunity of becoming acquainted with their circumstances. With this object in view, Mr. Johns proceeded to Tamatave in the month of July 1837, and was favoured to meet there with friends from the capital. The tidings of the steadfastness of the Christians, of their joy in believing, of their holy consistency, and faithful and persevering efforts to diffuse the knowledge of the Gospel among their respective households, relatives, and friends, and of the abundant measure of the Divine blessing evidently attending their exertions, filled his heart with the liveliest gratitude, and inspired him with the most animating hopes of the extension and stability of the cause of Christ in Madagascar. Although, since the edict of the 1st of March, 1836, no meetings had been held for public worship, and many who had before associated themselves with the Christians had since appeared foremost amongst their enemies, and had indulged in all the vices of the heathen, a goodly number, holding fast their profession, continued in the faith and purity of the Gospel, shining as lights in the midst of a crooked and perverse generation.

"It appears that the movements of the Christians had been watched, though no infringement of the antichristian edict of the queen was discovered till the last Sabbath in July, or the first Sabbath in August, 1837. On this occasion, a number of Christians having assembled for reading the Scriptures, singing, and prayer, on a mountain, a short distance from the capital, were discovered, and reported to the queen; the premises of the suspected parties were searched, for the purpose of finding ground for accusation against them, and a box of books, viz. copies of the Scriptures and other Christian publications, that had been given by the missionaries, being found buried near the house of that eminent Christian woman, Rafaravavy, who had been previously accused of reading the Bible, she was apprehended and imprisoned; her house, her entire property, was given up to plunder, her person secured, and her hands and feet loaded with heavy iron rings. She was menaced in vain during a period of from eight to ten days, to induce her to impeach her companions. She remained firm, and perfectly composed; and was put to death by spearing on the 14th of August, 1837. She had said repeatedly, by letter, to her friend, Mrs. Johns, 'Do not fear on my account. I am ready to die for Jesus, if such be the will of God.' She was most wonderfully supported to the last moment

of her life. Her age at the time of her death was thirty-eight years. No feature in her Christian character appears to have been more distinctly manifested than her steadfastness and fidelity even to the death. Many, even of the old people, remarked they had never seen any one so 'stubborn' as Rafaravavy, for although the queen forbade her to pray, she did pray, even when in irons; and continued to preach Christ to the officers and to the crowd that followed her for nearly three-quarters of a mile, from the place of public condemnation to the place of common execution. Here she continued to pray and to exhort all around her to believe in Jesus Christ, even till the executioner's spear, thrust through her body, deprived her of the power of utterance.

"When the latest accounts were sent from Mauritius, no report had arrived of the adoption by the native government of any measures less oppressive and sanguinary than those by which the Hovas have now reduced the people under their rule to the extreme of social wretchedness. No tidings had been received tending to allay the deep anxiety of our brethren, and the generous and warmly attached Christian friends of the Madagascar Mission in Mauritius, on behalf of those reduced to perpetual and rigorous slavery, or doomed to fetters and imprisonment. No accounts of leniency on the part of the government, or any mitigation of the sufferings of the Christians, were received; but reports were brought by more than one conveyance, of continued persecution, and continued if not increased severity towards the Christians. An early report stated that accusations had been preferred against a considerable number of the natives, and that another female had been sacrificed. After subsequent arrivals, it was reported that several had been put to death on account of their adherence to the Christian faith. Multiplied as, according to all accounts, the causes of suffering and terror seem to have become, no rumour even has been heard of any one having apostatised; while many statements were given of the steadfastness of the Christians, or, as the heathen natives called it, their determined stubbornness or obstinacy."

Leaving these painful contemplations, we shall now finish our notice with another example or two of the singular customs of the island.

"The superstitions of the Malagasy lead them to regard certain days and hours unlucky, and for an infant to be born at such times is considered fatal. These periods are calculated and declared by a class of men called panandro, 'astrologers.' To these the relations or the parent of a new-born infant repair almost immediately after it has entered the world, to learn from them the *vintana*, or destiny of the child, as if they could not give free current to the tide of their joyous and affectionate feelings until they had ascertained whether those feelings must be suppressed, and the object of their kindling emotions be recklessly torn from their embrace, or whether they might venture to express towards it their tenderness and love. In some cases it is considered sufficient to make a prescribed offering with a special view to averting the evil of the child's destiny. The parents' hopes being thus confirmed, they return to indulge in the overflowings of their joy over the dear object of which a murderous superstition has not deprived them. In other cases there must be exposure to death, or death must be inflicted. The decisions of the panandro are threefold: either a *faditra*, or offering, must be presented, to remove evil; the child must be exposed to death, by being placed in the narrow path at the

entrance to a village or a cattle-fold; or it must be put to death. When the *vintana*, or destiny, is declared to be favourable, no ceremony follows. If the decision be unfavourable (a not unfrequent case), there is ground for but very feeble hopes of the infant's life; yet still the affectionate parents fondly cherish these hopes as long as there is the least prospect of their being realised.

"An infant, a new-born, perfectly helpless, unconscious infant, smiling perhaps in innocence, is laid on the ground in the narrow entrance to a village, or a fold, through which there is scarcely room enough for cattle to pass; several cattle are then driven violently in, and are made to pass over the spot in which the child is placed, while the parents, with agonising feelings, stand by waiting the result. If the oxen pass over without injuring the infant, the omen is propitious, the powerful and evil destiny is removed, the parents may without apprehension embrace their offspring, and cherish it as one rescued from destruction. But should the delicate, frail, and tender body of the helpless victim be mangled and crushed to death by the rugged feet of the oxen, which is most frequently the case, the parents return to mourn in bitterness of grief their loss, with no other consolation than that which the monstrous absurdities of their delusions supply—that had their beloved infant survived, it would have been exposed to the influence of that destiny which now required its exposure to destruction. Distressing, however, as this is, it is, in some respects, less so than the practice which remains to be noticed. This refers to the instances in which it is declared that exposure will not be sufficient, that there is no possibility of avoiding the doom pronounced, and that death must be inflicted. No labour would secure exemption for the hapless victim; no offering or sacrifice could propitiate the powers on whom its destiny depended, and avert its destruction; no treasures could purchase for it permission to live; and those who otherwise would have cherished it with the tenderest affection, and have fostered it with unceasing care through infancy and childhood, are reduced to the dire necessity of extinguishing that life which the dictates of nature would have taught them to regard as equally precious with their own. When this inhuman decision of the astrologers has been announced, the death of the innocent victim is usually effected by suffocation; the rice-pan, a circular wooden utensil, slightly concave on one side and hollow on the other, is generally employed. It is filled with water, and the infant is held with its face downwards in the water, till life becomes extinct; sometimes a piece of cloth is placed on the child's mouth, to render its suffocation more speedy. The remains of the infant thus murdered, are buried on the south side of the parents' house, that being superstitiously regarded as the part appropriated to what is ill-omened and fatal. The parents then rub a small quantity of red earth into their clothes, and afterwards shake them, as if to avert or shake off from themselves the evil supposed to attend their slight and transient contact with that which had been doomed to destruction. Another mode of perpetrating this unnatural deed is by taking the infant to a retired spot in the neighbourhood of the village, digging a grave sufficiently large to receive it, pouring in a quantity of water slightly warmed, putting a piece of cloth upon the infant's mouth, placing it in the grave, filling this up with earth, and leaving the helpless child, thus buried alive, a memorial of their own affecting degradation,

and the relentless barbarism of their gloomy superstition—a trophy of the dominion of the destroyer of our race, and a painfully conclusive illustration of the truth of that word which declares that the dark places of the earth are full of the habitations of cruelty. These heart-rending transactions are generally performed by the parents themselves, or some of the nearest kindred of the family, frequently by the father, while the mother, anxious to press her infant to her bosom as long as possible, holds it while preparations for the savage deed are going forward, and, when it is taken from her arms, to be consigned thus prematurely to the earth, gives vent to her anguish and distress by lamenting and weeping, in which she is joined by her female kindred and companions, who return with her in sad procession to her dwelling. It is affecting to contemplate the extent to which the unnatural practice of child-murder prevails in almost every nation in a state of heathenism, whether learned or illiterate, civilised or barbarous, and to notice the resemblance in motive and end, as well as in the manner of effecting it, which appear among communities the most remote, and in many respects dissimilar, from each other."

One remarkable feature more and we have done.

"Another popular engagement in use among the Malagasy is that of forming brotherhoods, which, though not peculiar to them, is one of the most remarkable usages of the country. The design of this custom might almost justify its being designated the freemasonry of Madagascar. From that institution, however, it differs in two essential respects: its rites and ceremonies are not secret, but public; and its object is to cement two individuals in the bonds of most sacred friendship, and not to constitute a mysterious and secret society. More than two may thus associate, if they please, but the practice is usually limited to that number, and rarely embraces more than three or four individuals. It is called *fatriadi*, i. e. 'dead blood,' either because the oath is taken over the blood of a fowl killed on the occasion, or because a small portion of blood is drawn from each individual, when thus pledging friendship, and drunk by those to whom friendship is pledged, with execrations of vengeance on each other in case of violating the sacred oath. To obtain the blood, a slight incision is made in the skin covering the centre of the bosom, significantly called *ambavafo*, 'the mouth of the heart.' Allusion is made to this in the formula of this tragi-comical ceremony. When two or more persons have agreed on forming this bond of fraternity, a suitable place and hour are determined upon, and some gunpowder and a ball are brought, together with a small quantity of ginger, a spear, and two particular kinds of grass. A fowl also is procured; its head is nearly cut off; and it is left in this state, to continue bleeding during the ceremony. The parties then pronounce a long form of imprecation and mutual vow to this effect:—'Should either of us prove disloyal to the sovereign, or unfaithful to each other, then perish the day and perish the night. Awful is that, solemn is that which we are now both about to perform! O the mouth of the heart!—this is to be cut, and we shall drink each other's blood. O this ball! O this powder! O this ginger! O this fowl weltering in its blood! It shall be killed, it shall be put to excruciating agonies,—it shall be killed by us, it shall be speared at this corner of the hearth (Alakasofo or Adimizana, S.W.) And whoever would seek to kill or injure us; to injure our wives, or our children, to waste our money, or our

property; or if either of us should seek to do what would not be approved of by the king or by the people; should one of us deceive the other by making that which is unjust appear just; should one accuse the other falsely; should either of us with our wives and children be lost and reduced to slavery (forbid that such should ever be our lot!)—then, that good may arise out of evil, we follow this custom of the people; and we do it for the purpose of assisting one another with our families, if lost in slavery, by whatever property either of us may possess, for our wives are as one to us, and each other's children as his own, and our riches as common property. O, the mouth of the heart! O, the ball! O, the powder! O, the ginger! O, this miserable fowl weltering in its blood! thy liver do we eat, thy liver do we eat; and should either of us retract from the terms of this oath, let him instantly become a fool; let him instantly become blind; let this covenant prove a curse to him: let him not be a human being; let there be no heir to inherit after him; but let him be reduced, and float with the water never to see its source; let him never obtain; what is out of doors, may it never enter; and what is within, may it never go out; the little obtained, may he be deprived of it, and let him never obtain justice from the sovereign nor from the people! But if we keep and observe this covenant, let these things bear witness. O, mouth of the heart! (repeating as before) may this cause us to live long and happy with our wives and our children; may we be approved by the sovereign, and beloved by the people; may we get money, may we obtain property, cattle, &c.; may we marry wives (vady kely); may we have good robes, and wear a good piece of cloth on our bodies, since, amidst our toils and labour, these are the things we seek after. And this we do, that we may with all fidelity assist each other to the last. The incision is then made, as already mentioned; a small quantity of blood extracted and drank by the covenanting parties respectively, saying, 'These are our last words. We will be like rice and water; in town they do not separate, and in the fields they do not forsake one another: we will be as the right and left hand of the body; if one be injured, the other necessarily suffers and sympathises with it.' The terms of the covenant are not regarded as binding literally; the respective possessions of the parties, such as cattle, slaves, money, &c., are not considered as common property; but the engagement involves a sort of moral obligation for one to assist the other in every extremity; and, however devoid of meaning some parts of the ceremony of forming brotherhood may appear, and whatever indications of barbarity of feeling may appear in others, it is less exceptionable than many that prevail among the people.

"The practice of a similar mode of entering into the most sacred engagement, by the inhabitants of the large but extremely remote island of Borneo, especially by the Dayaks, one of the chief aboriginal tribes of that country, adds greatly to the opinion generally entertained that Madagascar was, at least in part, peopled from the same source as that from which most of the islands of the Malayan archipelago derived their inhabitants."

MISCELLANEOUS.

Lives of Scottish Writers. By David Irving, LL.D. 2 vols. Edinburgh, 1839. A. and C. Black.

Of thirty-nine biographies of eminent Scottish authors in these volumes, twenty-seven have

already appeared to advantage in the seventh edition of the "Encyclopædia Britannica," to which excellent publication they were no discredit. To Hector Boyce, Knox, Buchanan, Lealey, Crichton, Drummond, and other worthies, the author has now added Winzet, Balfour, Liddell, Gregory, and others of like calibre, and the whole form a very acceptable selection of Caledonian learning and genius.

The Confessions of Harry Lorrequer, with numerous Illustrations, by Phiz. No. 1. Pp. 32. 1839. Dublin, Curry, jun.; London, Orr; Edinburgh, Fraser and Crawford. So many authors in our day "lisp in Nos." that we can scarcely keep account of their appearances and disappearances; for many of them "come like shadows, so depart." Not so, we hope, the *Confessions of Harry Lorrequer*, which is certainly one of the smartest and most entertaining productions of its class we have seen. At least, the first No. is a clever and superior performance; and if the whole story is executed with equal spirit—of which, from the talent already displayed, we see no reason to doubt—the work will well deserve a place among the most amusing pictures of society which adorn our lighter literature. The illustrations, by Phiz, are quite in unison with the text; and each is worthy of comment.

C. Julii Casarii Commentarii de Bello Gallico. With Explanatory Notes of Charles Anthon, LL.D. 12mo. pp. 312. London, 1839. Bentley.

On the same plan as Dr. Anthon's Cicero and Sallust, and well edited from Oudendorp's excellent text. The variations from MS. authority are noted. It is altogether a capital school-book.

Calculus, Juvenalis, Persius, Expurgati. Pp. 195. London, 1839. Longman and Co.

THE copy of these famous poets used at Harrow School, with such expurgations as the authorities deemed necessary for youth.

Milman's Edition of Gibbon, Vol. XII. London, 1839. Murray.

THE concluding volume of this edition, and well concluded by a very copious index.

The Unity of Disease, &c. By S. Dickson, M.D. &c. 8vo. pp. 200. London, 1839. Simpkin and Marshall; Edinburgh, J. Anderson, jun.; Dublin, Milliken.

DR. DICKSON describes his attempt to be "to subvert the entire fabric of British medicine;" and it would be monstrously impudent in us to offer to decide where doctors so utterly disagree. He refers every thing to temperature!

Lardner's Cabinet Cyclopædia: Biography: Lives of English Poets, &c. By R. Bell, Esq. London, 1839. Longman and Co.

MEMOIRS of Drayton, Cowley, Waller, Milton, and Butler occupy these pages.

Progressive Education, &c. 2 vols. 12mo. London, 1839. Longman and Co.

A TRANSLATION from the French of Madame Necker de Saussure, and full of excellent matter, as regards the development of the infant mind.

Lalla Rookh; an Oriental Romance. By Thomas Moore. Nineteenth Edition. Illustrated with Engravings from Drawings by eminent Artists, under the Superintendence of Mr. Charles Heath. 8vo. pp. 397. London, 1838. Longman and Co.

THIS is a beautiful and splendid volume; a temple of art worthy of the poetical shrine it covers. From E. Corbould we have seven designs; from K. Meadows, three; and from T. P. Stephanoff, three, all charmingly en-

* Partly printed, we believe, in the "Dublin University Magazine."

graved, and illustrating the sweetest female characters and most interesting scenes in the poem. Lalla Rookh herself leads the way in Oriental luxury; and the death of Hinda, Zelica in three pictures, the Peri at the gate of Eden and other two situations, Namorna, and Nourmahal asleep, follow and complete the brilliant series. The nineteenth edition is surely so fittingly adorned, that it will be very apt to cause its eighteen predecessors to be neglected, if not forgotten.

Chelsea Hospital and its Traditions. By the Author of the "Country Curate," &c. &c. 12mo. pp. 465. London, 1839. Bentley.

IN a single volume, and forming one of Bentley's Library. There is an excellent portrait of Mr. Gleig prefixed, which will, we think, greatly enhance its value; for every one must wish to possess a likeness of a gentleman who has done so much to adorn our literature.

Gilbert's Railways of England and Wales; with a Map. Pp. 126. London, 1839. Grattan.

A VERY useful view of the railroad system; but the style is rather ornate for such a subject, and the distinction between works actually done, those in progress, and those only projected, might have been more clearly marked.

Henry Aston; or, the Gold Smugglers: and other Tales. By the Hon. Louisa Sayers. 3 vols. London, 1839. Saunders and Otley.

THESE tales are of light and pleasing character; we should think the work of an unpractised hand, for although occasional passages display observation and feeling, probability is in many instances sacrificed for the sake of a malo-dramatic finale.

Popular Instructions on the Calculation of Probabilities, &c. from the French of Quetelet, by R. Basmiah, Esq. C.E. F.R.S. Pp. 157. (London, Weale.)—A popular and useful little volume; and after the elaborate work of Mr. De Morgan, well calculated to impress the value of the science, and lead to the attainment of its rules and principles. We extract a popular specimen of such calculations, by which it will be seen how much *Arithmetic* has to do with *Superstition*:—

"We shall conclude this lesson by a remark relative to a prejudice existing, generally, on the pretended danger of being the thirteenth at table. If the probability be required, that out of thirteen persons, of different ages, one of them, at least, shall die within a year, it will be found that the chances are about one to one that one death, at least, will occur. This calculation, by means of a false interpretation, has given rise to the prejudice, no less ridiculous, that the danger will be avoided by inviting a greater number of guests, which can only have the effect of augmenting the probability of the event so much as spread the alarm."

An Exposure of the Absurd and Contradictory Statements in James's "Six Months in Australia," by John Stephens, Pp. 49. (London, Smith, Elder, and Co.)—Where Company interests in colonisation, &c. are at stake, we are sure to find plenty of difference of opinion and controversy; every one crying up their own commodities, and depreciating the commodities of others, like fish-wives in a market. Mr. Stephens takes Mr. James roundly to task for his statements unfavourable to the condition and prospects of South Australia.

Select British Biography from Boadicea to Victoria, by J. Maumder. Pp. 204. (London, Longman and Co.)—A judicious separate publication of the very excellent biographical portion of Mr. Maumder's "Treasury of Knowledge." The notices are slight, but honestly and faithfully compiled.

System Select Idyls of Theocritus, &c., by D. B. Hickie, LL.D. Pp. 163. (London, Longman and Co.)—Without entering into the question of the propriety of English notes, &c., as here given, to Greek or Latin authors used in schools, we may briefly notice that this is a good copy of the Idyls from the text of Meineke.

Bellingham, by the Rev. W. Palin, B.A. &c. Pp. 167. (London, J. W. Parker.)—A narrative of a Christian in search of the church, in the story of which the author defends the Church of England from the representations of Mr. Harris, the author of "Mammon," &c., and contends that it is more Christian, in every respect, than the congregational party to which Mr. Harris belongs.

A Lecture on the Right Formation of the Mind, &c., by E. J. Portbury, Historical Engraver. Pp. 66. (London, Tilt.)—A sensible exhortation to the sedulous cultivation of the intellectual faculties; very suitable for young people.

A New System of Logic, &c., by S. R. Bosanquet, A.M., of the Inner Temple. 8vo. pp. 372. (London, Parker.)—Mr. Bosanquet is hostile to the system of education which rests on the study of the classics, and contends for a

purest and better development of the principles of truth and reasoning as applicable to future conduct in life. He displays much reading, and no inconsiderable measure of thought; his main object tending to alter opinion on the subject of abstract ideas.

Extracts from Schools and Families in Aid of Moral and Religious Training. Pp. 428. (London, Darton and Harvey.)—Classed under various useful heads, this is a very good collection in prose and verse.

Travels of Minna and Geoffrey. Pp. 336. (London, Smith, Elder, and Co.)—Another very pretty and nice volume of travels on the Rhine and in Nassau and Baden. It is neatly embellished, and well worthy of its preceding exemplars.

An Outline of Ancient and Modern Rome. 8c. by a Lady. Pp. 317. (London, Simpkin and Marshall.)—Is there room for another school-book on Rome? If so, this is a very fair one for the instruction of children.

Lectures to the Authors of the Plain Tracts for Critical Times. by a Layman. Pp. 254. (London, T. Cadell.)—Not having seen the work to which this is an answer, we need only state that it dwells upon "the disconformity of opinion" in the Church of England, and argues strenuously against those who are called the Evangelical party.

Religious Parties in England, their Principles, History, and Present Duty. by R. Vaughan, D.D. Pp. 186. (London, T. Ward and Co.)—The enlargement, we presume, of a former publication, in which Dr. Vaughan, the Professor of History in the London University, espouses the Dissenting interest, or rather, more especially, of the sect of Congregationalists.

A Description of Jamaica Planters, &c. by B. M. Mahon. Pp. 300. (London, E. Wilson.)—Mr. M. Mahon tells and tales of Jamaica Planters, Attorneys, Book-keepers, &c., gathered during an eighteen years' residence; and maintains, that till the present race is superseded by an entirely new one, the British West Indian Colonies can never flourish.

The Year-Book of Facts in Science and Arts. 8c. by the Editor of the "Arcana of Science." Pp. 582. (London, Simpkin, Marshall, and Co.)—We have frequently commended this collection of the accounts and notices of the discoveries, improvements, &c. which have marked the preceding year. It is diligently compiled, and, with a good index, will serve for references on most of the new subjects of interest in the arts and sciences.

The Amateur Florist's Assistant in the Selection and Cultivation of Popular Annuals. 8c. by Geo. Willmott. Pp. 76. (At the Nursery, Lewisham.)—When we read "popular annuals," we thought this little tome was an assistant in the selection of "Forget-me-nots," "Keep-sakes," "Amaranthas," & *hoc genus omne*; and were agreeably disappointed to find that, instead of a critical rival, we had the work of a well-advised practical gardener before us; and that, both for rearing annual and tender perennials, we could not have (as far as it goes) a better guide.

Hours of Solitude; or, Instruction and Comfort for the Mourner. Pp. 315. (London, Cradock.)—A very well chosen reprint of many devotional and instructive passages from authors of celebrity; together with prayers, hymns, and other productions, which might be consolatory under affliction.

An Essay on the Evils of Popular Ignorance (published by the Society for the Promotion of Popular Instruction), by John Foster.—This treatise opens so many important questions and views, that we dare not venture on it. In many things we agree, in many differ from the author, whose opinions, often able, are also often peculiar. To be able to read the printed Bible, Mr. Foster contends, ought to be the condition of every Christian people; and he strenuously enforces the wholesome doctrine, that it is the duty of every good government to accomplish this desirable end.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

FEB. 2.—Mr. Johnston 'On the Leading Distinctions of the Investigation of Mental and Physical Phenomena.' Vast is the field of inquiry which the philosophy of the mind opens to those who will enter upon it. The human mind—"that wondrous work—the human intellect—the instrument and the storehouse of all our knowledge—that which stamps sovereignty upon the brow of rational man, which proclaims him lord and master of the globe he inhabits, and gives him a hope of continued existence after his material organisation shall have lost vitality and mingled with the mass of inorganic matter." The distinctive phenomena of one of its branches—the physiology of mind, which is the most analogous to material science, as it treats of the component parts of thought and the order in which they combine, was selected by Mr. Johnston for illustration, and to encourage the study of the mental powers and moral feelings in addition to the investigation of physical truth: mental philosophy and natural philosophy are both sciences. A scientific knowledge of

any thing is the knowledge of the relations which belong to it, that is, the relation which the whole of any subject-matter bears to its several parts—the relations which these parts bear to one another, and to all the parts separately or collectively of other subject-matters. For instance, a piece of chalk, to the natural knowledge of the man who quarries it, appears a white earthy substance of which the surface easily rubs off. He knows, perhaps, that, being burned, it becomes lime; but how or why, he knows not. But the science of chemistry would teach him the relations of the chalk, the relation of the whole lump to its constituent parts—lime and carbonic acid; the relation of quantity of each component part; the positive relation of affinity between these parts; the comparative relation of affinity which each of them bears to other substances, &c. Another example brought forward was the triangle, which presents, to the uneducated person, no other idea than that of certain lines enclosing space—to the mathematician, the relations which belong to it. Mental examples cannot be shewn to the eye, but they are equally palpable to the reflecting powers. Suppose an unlettered man listening to an argument upon a subject which he understands; he only knows that it is convincing or the contrary, but he may be wholly unable to say why it ought to be so, or ought not. The scientific logician, however, is not thus at a loss. He perceives at every stage of the argument whether a conclusion is fairly drawn from the premises stated, because he knows the relations between propositions placed in any order, and the conclusion to which they lead. With regard to the physiology of mind, the laws of investigation are the same as those which are acknowledged in the investigation of matter. The theories of mental philosophy are not speculations which facts are hunted out to support, but a series of deductions from facts observed. The distinction lies, 1st. in the mode of observation; 2d. in the nature of the evidence; 3d. in the various degrees in which the evidence abounds, according to the varieties of individual minds in which it is sought; and, 4th. the difference of the powers necessary to collect and understand that evidence. In the observation of mental phenomena, the thing to be observed, and the instrument of observation, are the same. In the investigation of physical phenomena, the thing investigated, and the investigating power, are distinct. In both inquiries we are at liberty to philosophise only according to the ascertained phenomena; but the mode of coming at the phenomena is exceedingly different. The science of mind, however, is every where that the operation of thought is going on; and in all the complex business of life, not alone in acquiring ideas by the process of induction, but in all that we may afterwards accomplish, when endeavouring to turn our education to good account, we are dependent upon instruments which mental philosophy explains, and teaches us how to use with better advantage. The operation of the mind may be observed in all scientific proceedings by this simple consideration, that facts are not sciences, until they are perceived and assigned their proper place in the chain of cause and effect. The proper placing is entirely a work of mental science. Every discovery is made by a practical exertion of mental philosophy, in addition to mere perception; and, if we will only look to the means by which the truths of physical science are brought out, and not merely to the results which appear evident to our senses, we must observe as clearly the operations dependent upon the principles of mental

science, as, in looking upon the ponderous and precise movements of a steam-engine, we recognise the magnificent carrying into action of great mechanical principles. On treating of "the nature of the evidence," Mr. Johnston observed, "That hasty inquirers demand an amount of evidence in respect of mental subjects, which they do not dream of demanding in respect of matter. They ask, What is mind? Now we cannot tell what mind is, but neither can we tell what matter is. Of the essence of either we know nothing. We have no means of knowing anything about either, except with reference to their properties. We know that the observation of matter produces in us certain ideas of extension, resistance, form, and so forth; and we know that there is a something in which these ideas are produced, and that we call mind; but how the thing, called matter, happens to produce these ideas, or how the thing within us, called mind, forms and retains these ideas, we are equally ignorant. Why should we demand to know more concerning mind than we know of matter, namely, the properties of each? No man of common sense will either undertake to tell, or insist upon knowing, what the human soul is. Let us rather study its powers, and adore the Giver of them. In the investigation of physical phenomena, the evidence is external; in that of mental phenomena, it is internal; in physical science, it is experimental; in mental, it is cognitive; or, to speak more strictly, the phenomena of experiment are, in the one case, obvious to the senses, while in the other they are perceptible only by reflection. Mr. Johnston illustrated this by the forty-seventh proposition, in the first Book of Euclid; and by the decomposition of a dose of Epsom salts, shewing the magnesia disengaged. The details of either, our space will not allow us to describe; and we pass on to the similar way in which mental compounds were treated. Suppose that to love be added a sufficient amount of respect to saturate and neutralise its violent ardour, the compound will be veneration; let the respect be in a less proportion, the compound will be one of the forms of affection, such as subsists in domestic life; but add to this, some grains of suspicion, the respect flies off, and the suspicion combining with love, will form that acrid and explosive compound—jealousy. Although not palpable to the sight, the truth of the results is not the less evident. There is, however, an uncertainty produced by the want of uniformity in the human mind. Every specific quantity of Epsom salts may be decomposed by a specific quantity of the decomposing agent; but, whereas, in some minds, it will take a good deal of suspicion to decompose affection, in other minds it will take very little; and this brought Mr. Johnston to the third head of distinctions above enumerated. Uncertainty is the common reproach of all branches of moral science; but the reproach, he contended and exemplified, is often made without fair consideration of the limits to which it should be subject. The principles of moral science ought not to be confounded with the uncertainty which belongs to the complex and variable subject-matter to which they are made to apply. Some assert that the uncertainty flows from the doubt as to what mind is, while no such doubt exists as to what they see and feel. This is a mental mistake arising from inattention to the evidence upon which conviction of the existence of a thing depends. Mr. Johnston directed attention to some beautiful specimens from Bates' *Anglyptograph*, pointing out how the sense of sight may be completely deceived:

that is, how we may receive impressions of reality, which, if we had no other sense than sight, would for ever remain reality to us; but we find, by the correction of the other senses, that what we see in such cases, is not reality: shewing, that impressions from the senses, upon which the certainty of the existence of matter depends, cannot themselves always be depended upon; and affirming, that it is much more easy logically to shew that we have no certainty of the existence of matter out of the mind, than that we have no certainty of the existence of mind independently of matter. Under the fourth, and last, division, was remarked, with many other truths, that men, in general, are so much more in the habit of thinking according to what is put into their minds, from moment to moment, by the external senses, than of following out a train of thought in meditation, that we shall find thousands capable and willing to take in the evidence of physical truth, so far as it can be gathered by the eyes, and ears, and touch, whose habits and inclinations would be opposed to the reception of mental evidence. In advancing to the astounding difference of mental power in various individuals, and to the superiority of intellect with which some wonderful creatures of our own kind, liable to like accidents with ourselves, have been, and are, endowed, Mr. Johnston beautifully described the powers of Newton and of Shakspeare—summing up of Newton, “The quick glance of his intellectual sight flashed through material creation, like lightning through the heavens; and the thunder of his fame still reverberates through the world!” and of Shakspeare, “He, with an eagle-like sweep, descended into the depths of the human heart, where mortal never dared to plunge but him; and bearing away its mysteries to the loftiest pinnacles of imagination, fixed them there, to be for ever the wonder and delight of the intelligent universe!” In conclusion, Mr. Johnston strongly recommended, in addition to the investigation of physical truth, the study of the mental powers and moral feelings.

Friday, 1st March.—Mr. Brande ‘On Steel.’ After briefly alluding to the Eastern origin of steel, and the probability of the sculpture of the Egyptians having been executed with instruments of that metal, and not with bronze, or modifications of copper, and tin, and zinc, which Mr. Brande considered an erroneous idea, he proceeded to describe fully, and with his usual clearness, the European mode of manufacture, the anomalies and peculiarities of steel, and its uses in the arts, dependent upon such peculiarities. Throughout, the subject was illustrated by numerous specimens of the many forms and characters this valuable compound assumes, or is made to assume.

PNEUMATIC TELEGRAPH.

It is a matter of surprise and regret, that in a commercial country like England, no improvement has yet taken place in telegraphs, so as to render them available by night as well as by day, and also in foggy weather. Two projects, viz. the Hydraulic and Electro-magnetic, have already been laid before the public. A third, the Pneumatic, has recently been produced, and the great importance of the subject induces us to lay an account of it before our scientific readers. It might be expedient for government to examine their respective merits, in order to ascertain the most practicable and eligible of these projects, for the sake of public adoption.

The following is the description of the Pneumatic Telegraph, invented by Mr. S. Croaley; a

model of which may be seen any day at the Polytechnic Institution:—

“Atmospheric air is the conducting agent employed in the operation of the Pneumatic Telegraph.

“The air is isolated by a tube extending from one station to another; one extremity of the tube is connected with a gas-holder or other collapsing vessel, as a reservoir, to compensate for any diminution or increase of volume arising from compression or from changes in the temperature of the air in the tube, and for supplying any casual loss by leakage; the other extremity of the tube terminates with a pressure index.

“It will be evident to every one acquainted with the physical properties of atmospheric air, that if any certain degree of compression be produced and maintained in the reservoir, at one station, the same degree of compression will speedily extend to the opposite station, where it will become visible to an observer by the index.

“Thus, with ten weights, producing ten different degrees of compression, distinguished from each other numerically, and having the index, at the opposite station, marked by corresponding figures, any telegraphic numbers may be transmitted, referring in the usual way to a code of signals, which may be adapted to various purposes and to any language. The only manipulation is that of placing a weight of the required figure upon the collapsing vessel at one station, and the same figure will be represented by the index at the opposite station.

“In establishments where the telegraphic communications do not require the constant attendance of a person to observe them, and where periodical attendance is sufficient, the signals may be correctly registered on paper, by connecting with the air tube an instrument called a pressure register, invented by the projector of the Pneumatic Telegraph, which has been successfully employed in large gas-light establishments upwards of fourteen years, for registering the variations of the pressure of gas street mains. The same instrument produces also an increased range of the scale, by which means the chance of error from minute divisions is obviated.

“There being now three different projects for improvements in telegraphic communications, viz. the electro-magnetic, the hydraulic, and the pneumatic telegraphs,—and assuming that such improvements are of importance to the state, as well as to railway proprietors and the community at large, it seems desirable that their merits should be thoroughly investigated by competent engineers, and that the aid of government should be solicited, for the purpose of establishing, on a practical scale, the most eligible project.

“It may be observed, that the introduction of railways has not only created an additional use for telegraphic communications, but the important difficulty which previously existed in the expense of providing a proper line and safe foundation, is at once removed by the site of the railway itself, possessing as it does, by its police, the most ample security against injury, either to the tubes or electric wires.

“The prominent questions for consideration seem to be—the certainty and accuracy of the communications, the first cost, the expense of repair and superintendence, also the time required for transmitting intelligence.

“On the question of time, it is quite clear that neither the hydraulic nor the pneumatic can compete with the electro-magnetic telegraph in rapidity. No doubt, on investigation, each project will be found to possess its peculiar advantages. Thus, in considering the advantage one may have in point of time, another may possess a greater degree of certainty or accuracy in the communications, sufficient to outweigh the difference of time; for instance, between one second and one minute, or even between one second and five or ten minutes.

“The time occupied in transmitting intelligence by the Pneumatic Telegraph will depend on the capacity of the air-tube, the degree of compression given, and the distance between the stations; but should greater despatch be required than is afforded by one air-tube, and the cost be of minor importance, several tubes may be employed, each fitted in the manner above described, so that all the figures contained in one telegraphic number may be communicated at once; and, with four tubes, 9999 different signal numbers may be communicated, referring to so many words or sentences, and these numbers may be multiplied four-fold by letters A, B, C, &c., as indices to distinguish each series.

“The projector of the Pneumatic Telegraph is not in possession of any experimental results on a practical scale by the electro-magnetic or by the hydraulic telegraphs, employed at any considerably extended distances, or of their continued operation for any long period of time; nor can he offer much decisive information, of a practical nature, analogous to the operation of the Pneumatic Telegraph on these points; the following circumstances may, however, be referred to:—

“There has been upwards of twenty years’ experience in the transmission of gas for illumination through conduit pipes of various dimensions. In several instances, the gas has been supplied at the distances of five to eight miles by low degrees of pressure. As one proof of great rapidity of motion, it has been observed, that when any sudden interruption in the supply has occurred at the works, the extinction of all the lights, over large districts, has been nearly simultaneous. Another instance of the great susceptibility of motion which frequently happens, is the flickering motion of the lights at great distances when water has accumulated in the pipes.

“The only experience in the transmission of atmospheric air through conduit tubes, which applies

more particularly to this subject, may be referred to at three railway establishments; viz. Edinburgh, Liverpool, and Euston Square, London. In these establishments, air-tubes, from 1½ to 2 miles in length, have been employed for the purpose of giving notice when a train of carriages is ready to be drawn up the inclined plane by the stationary engine at the summit, so that it may without delay be put in motion. This notice is communicated by blowing a current of air through the tube at the foot of the inclined plane, and sounding an organ-pipe, a whistle, or an alarm-bell at the stationary engine. It will be satisfactory to know, that this operation has been regularly performed from two to four years without one single failure or disappointment.

“It may be further noticed, that a trial was made with a tube of one inch in diameter, very nearly two miles in length, returning upon itself, so that both ends of the tube were brought to one place: the compression applied at one end, was equal to a column of seven inches of water; and the effect on the index at the other end appeared in fifteen seconds of time.

“Let us have been propounded by eminent men on the expenditure of aeriform fluids through conduit pipes, and of the resistance of the pipes; but these are not strictly applicable to the present question. Under all circumstances, it seems desirable that experiments on a practical scale, at extended distances, should be resorted to, as the most satisfactory guide, for carrying into effect telegraphic communications of this kind.”

ASHMOLEAN SOCIETY.

FEB. 11. The President in the chair.—Professor Rigaud read a paper ‘On Captain Thomas Savery,’ from which we learn, that hitherto no biographer has collected any account of this remarkable man, although the invention of his steam-engine was destined to form a new era in the civil history of the world. He was descended from an old and most respectable family in the south of Devon, and was probably born in that part of the country, about the middle of the seventeenth century; but the time and place of his birth are not exactly known. He was, by profession, a military engineer, and the Saverys having been active in promoting the revolution of 1688, were especially noticed by King William the Third. Mechanics appear to have been his favourite study, and as he pursued them practically, he was able to form a body of workmen to execute his various plans. He had a patent for his steam-engine in 1698, and the exclusive privilege of constructing it was confirmed to him in 1699 by act of parliament. Desaguliers has unjustly accused him of having derived his plans from the Marquess of Worcester; but all writers have acknowledged that he was the first who ever constructed an engine of this kind, which possessed any great and practical utility; and it must be stated, that the experiments, in 1690, of Papin (to whom it has been attempted to transfer the honour of the invention) were not productive of any useful results, till followed out in England, in the beginning of the following century. It is of no consequence whether Savery was, or was not, acquainted with these experiments, for he worked on essentially different principles. His moving power was the elasticity of steam, to which our engineers have again returned, since Watt demonstrated the great advantage of it; whereas Papin used the pressure of the atmosphere (which can never exceed a few pounds on the square inch of the piston), and steam was only a subordinate agent, by which he procured a vacuum. The arrangement, also, of the different parts of Savery’s engine, and particularly the means he used for condensing the steam, are all his own, and mark him for a man of truly inventive genius. It is said that Savery joined in a patent with Newcomen and Cawley for the atmospheric engine; but this appears to be a mistake, since no traces of such an instrument have been found at the Rolls. He took out a patent, however, in 1686, for polishing plate glass and for rowing vessels with paddle wheels; and, in 1706, for a double bellows to produce a continuous blast. He published, in 1698, “Navigation Improved;”

in 1702, "The Miners' Friend;"* and, in 1705, a translation, in folio, of "Cohorn's Fortification." This last was dedicated to Prince George of Denmark, to whom he was indebted, that same year, for the office of treasurer to the sick and wounded. He is understood to have accumulated a considerable fortune; but he died in 1715, without children, and left every thing to his wife. The will was proved, but she did not live to take possession of the property, and much of it is supposed, even at the present time, to remain unappropriated. The secretary then gave an account of the formation of some cylinders of snow, observed near Keswick.

LITERARY AND LEARNED.

OXFORD, February 28.—The following degrees were conferred:—

Bachelor in Civil Law, by Commutation. — H. Elphinstone, M.A. Merton College.

Masters of Arts.—G. C. Pearson, Christ Church; J. Woolley, Scholar, Rev. P. Lewis, University College; Rev. S. Dendy, Trinity College.

Bachelors of Arts.—T. L. Fellowes, E. Wright, Christ Church; G. J. Stone, Oriel College.

CAMBRIDGE, February 27.—The following degrees were conferred:—

Doctor in Divinity.—Rev. C. Wesley, Christ's College, Chaplain to St. James's Palace, and Priest in Ordinary to Her Majesty.

Masters of Arts.—J. Ware, Trinity College; C. Sawbridge, St. Peter's College; A. Wauchope, Catharine Hall.

Bachelors of Arts.—G. A. Rogers, Trinity College; H. T. Riley, Clare Hall; T. Smith, D. F. Wright, Caius College; W. M. Shaw, Sidney Sussex College.

ROYAL SOCIETY OF LITERATURE.

ON Thursday week, Mr. L. Hayes Pettit in the chair.—After the routine business, Mr. Yates (Secretary to the British Association), who was accompanied by Mr. Charles Fellows, recently returned from a very extensive tour in Asia Minor, &c., directed the attention of the Society to some very interesting Lycian inscriptions, copied by that gentleman from rocks and architectural ruins near Phaneka and the banks of the Xanthus. Referring to Von Hammer's notice of the subject in 1811, to Mr. Cockerell's papers in a collection published some years ago, and also to Grottefend, Letronne, and others, Mr. Yates described these inscriptions to be in an unknown alphabet and tongue. The forms of some of the letters resembled the Greek, but others were altogether novel and peculiar. By comparing four inscriptions of Mr. Cockerell's (the first being, fortunately, bilingual, and accompanied by a Greek translation), with the inscriptions of Mr. Fellows, Mr. Yates made out a very plausible interpretation of the whole; which, from this reading, were evidently sepulchral records on the tombs of ancient Lycian (or Phrygian?) families. The words were, as well as could be deciphered, as follow:—

Abarna yopa Mate Preznafata Aeatacia tappe atle albe se lade albe sa tedeama.

This is Mr. Cockerell's fourth inscription, and supposed to mean that Aeatacia had caused this building to be erected for himself, his wife, and his son or daughter: "lade"† signifying wife, and "tedaema, tedeame," son and daughter. Another supposition is, that the *x* in the inscription may be equivalent to the letter *e*.

* This is now a very rare volume. It is in the British Museum, and, we believe, a copy will be found in All Souls' College Library. Surely, in the present day of science, and of scientific mining, in particular, a republication might be very useful; and it would be rendered infinitely more valuable if the professor of astronomy (the only person we now know who is calculated, from his love of minute research, and the vast accumulation he has made of materials, to do justice to neglected scientific biography) would prefix his notices of the author and his invention.

† The root of our "lady," "lad," &c.?

Accordingly Mr. Cockerell's first inscription, with its Greek context, runs thus:—

ABAEIA ARAFA(X)EIA MATEPRE(X)NAFATA
SEDARKEIA P*** TEDAEAME TAPPEATLEATBE
SA LADE ATBE SA TEDAEAME PE(BE)LAIA.

Mr. Fellows's other inscriptions are very curious, and supply further grounds for philological inquiry and conjecture; but as he is, we believe, preparing his travels for publication, we need not at present go into what could only be a partial view, and we have, therefore, merely to add, that the edifices on which some of them were engraved are of a beautiful class of architecture, and adorned with reliefs in the noblest style of Grecian. The figures seem to be starting from the earliest period of rigid simplicity into that glorious life and spirit which distinguished the greatest period of the art.

SOCIETY OF ANTIQUARIES.

MR. HALLAM, V.P., in the chair.—Mr. W. Harrison exhibited two bronze bracelets, and a carving in jet, found at Stroud, near Rochester, in November, 1838, and belonging to Mr. H. Wickham of Stroud. In the same field, which is between the parish church and a farm called the Temple, and near the line of the Roman road, have been recently discovered, in digging for brick earth, several skeletons, many earthen vessels, and about 600 Roman coins. One of the bracelets terminates in serpents' heads; and the carving is a rude representation of the head of Medusa. Mr. Harrison also exhibited a stone hatchet, found, in 1836, at Hartlip, near Sittingbourne, on the estate of Wm. Bland, Esq. A further portion was read of Mr. Bruce's 'Observations on the Extensive Powers exercised by the Privy Council in the Reign of Edward VI.,' and the remainder postponed.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Royal Geographical, 9 P.M.
Tuesday.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8½ P.M.; Society of Arts, 8 P.M. (Dr. Truman on Organic Matter.)
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; London Institution, 7 P.M.; Medico-Botanical, 8 P.M.; Graphic, 8 P.M.; Literary Fund, 3 P.M. (General Meeting, Election of Officers, &c.)
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.
Friday.—Royal Institution, 8½ P.M.; Statistical, 3 P.M. (Anniversary); Botanical, 8 P.M.
Saturday.—Royal Asiatic, 2 P.M.

FINE ARTS.

BRITISH INSTITUTION.

[Sixth and last notice.]

250. *The Invalid*. H. Montague.—The languor of sickness is finely expressed in the countenance and attitude of a splendidly attired female, on whom the soothing charm of music appears to be entirely lost. The scene is gay and brilliant, as if in contrast to the sadness of its principal occupant.

273. *First Ride*. J. C. Thompson.—The sports of children presented through the medium of art have furnished some of our most pleasing pictures. But how could Mr. Thompson degrade his subject and himself by quoting such silly lines as those which appear in the catalogue? This is an insult to common sense, which we regret to have so frequent occasion to censure.

186. *Bitch and Pups*. C. Landseer, A.R.A.
"Mewling and puking in the nurse's arms."

Our pages have ever borne testimony to the talents of Mr. Charles Landseer; and we have here an additional proof of them. Again, however, we object to the attached quotation. If meant for travesty, it is in bad taste; if seriously applied, it is still worse.

300. *Nick the Philosopher*. J. Zeitter.—In perfect accordance with the description of the "happy-looking critter," in that cleverest and most entertaining of modern works, "Sam Slick, the Clockmaker." Many such philosophers are to be met with in the highways and byeways of our busy metropolis.—277. *Waiting for the Tide on the River*, by the same artist, is no less pleasing in picturesque character and skillful execution; and is of a shape well suited to the mantel.

The Gallery is rich in views and landscape scenery. If, in addition to the works already quoted, the visitor will cast his eye over the following, he will find much to admire:—269. *View in Sussex: the Approach of Autumn*. C. R. Stanley.—251. *Windsor Castle, from the Road to Virginia Water*. W. Linton.—207. *Crummorth Water, from Scale Hill, Cumberland*. T. C. Hoffland.—202. *Scene on the Coast of Sussex: Moonlight*. J. B. Crome.—56. *River Scene: Moonlight*. E. Childe.—247. *Mentone, in the Principality of Monaco, Coast of Genoa*: and 267. *Varazxo, Coast of Genoa*. Hobday Horsley, &c. &c.

Among the most attractive examples in sculpture are—

429. *Statue of a Girl Reading*. P. Mac Dowell.—Graceful in form and character. The drapery is arranged with great judgment; exhibiting the shape and proportions of the figure to the best advantage.

428. *The Infant Lyrist taming Cerberus*. J. G. Lough.—We should rather say, "charming" Cerberus. However, the subject is sufficiently understood; and the contrast between the still unsubdued head of the monster and the expression of the fair and youthful musical enchantress, is happily managed.

431. *Cupid and Psyche*. J. G. Lough.—Although not so light in shape and limb as the usual representations of this enamoured pair, the group is well composed, and the subject is treated in a novel and successful manner. The lady is stealing an arrow from the gentleman's quiver: this is being more than a match for him.

434. *Rebecca at the Well*, W. Calder Marshall; 437. *Grief, a Model*, R. Physic; 430. *The Italian Fishing-Boy*, J. G. Lough, &c., also possess great and various merit.

We have great pleasure in subjoining a list of the works sold in the Gallery of the British Institution, during the present season, begging leave at the same time to hint, that there are some yet remaining which well deserve to be selected for the purpose of ornamenting the mansions of our noble and opulent amateurs.

Subjects.	Painters, or sculptors.	Purchasers.
A Dutch Family	W. Simpson	Marquess of Lansdowne
Brandy of St. Mark's.	C. W. Cope	Doitto.
Venice	G. Jones, R.A.	W. Wells, Esq.
Interior of Rembrandt's Mill.	E. W. Cooke	Doitto.
The Dairy Maid.	E. Landseer, R.A.	Doitto.
The Forum of Nerva.	G. Jones, R.A.	Doitto.
Scene from Nature	F. R. Lee, R.A.	Doitto.

The Lower Chamber of ditto.	Ditto	Ditto.
Rembrandt's Mill.	Ditto	Ditto.
The Rival Performers.	J. C. Horsley	J. Sheepshanks, Esq.
Cupid and Psyche.	J. G. Lough	Duke of Northumberland.
The Infant Lyrist taming Cerberus.	Ditto	Duchess of Northumberland.
The Approach.	F. Stone	Marchioness of Tavistock.
A Group of Chickens, Scene on the Coast of Sussex.	H. Parrott	E. Bell, Esq.
Rosen Cathedral, from the Seine.	H. Gritten	Lord Northwick.
Rosen, from Mount St. Catherine.	Ditto	Ditto.
Scene at Nottingham, Kent.	J. Stark	
Creming the Breck.	T. Crewick	Earl of Normanton.
Entrance to a Wood.	J. Stark	Rev. R. Pemberton.
The Baiter, Venice.	J. Holland	
Canal Scene.	Ditto	
Study of an Arabian.	A. Cooper, R.A.	
Old Bridge at Lynedoch.	F. R. Lee, R.A.	Lord Lynedoch.
Wild Duck and Gargary.	Ditto	N. W. Ridley Colborne, Esq.
Pike and Perch.	Ditto	Ditto.
Scene on the River Yeo, Devon.	Ditto	T. S. Cooper, Esq.
Selling Fish, Scheveling.	E. Landseer, R.A.	— Bell, Esq.
Sorting Shrimps, do.	Ditto	Lord Wharfedale.
Blotch and Pups.	C. Landseer	— Bell, Esq.
The Widow.	C. W. Cope	
Coast Scene.	H. Bright	Rev. R. Pemberton.
Scene on the River Nile, Poestine Marshes.	P. Williams	Mrs. Haskison.
The Croix de St. Pierre, Rouen.	H. Gritten	Marquess of Allon.
The Tower de Buerte, from the Place de la Calender, Rouen.	Ditto	Ditto.
River Scene, Moonlight.	E. Child	T. Smith, Esq.
An Interior.	C. Dukes	J. Goding, Esq. jun.
Bethgellark, N.W.	F. C. Lewis	J. Fairlie, Esq.
Dutch Boats on the River V. near Spaarndam.	E. W. Cooke	Lord Northwick.
The Sentinel.	C. Hancock	W. Meyrick, Esq.
Moonlight.	J. B. Cromie	C. B. Warner, Esq.
St. John Preaching in the Wilderness.	J. Linnell	Sir T. Baring, Bart.
Capuchin Convent at Assisi.	John Uwins	— Baring, Esq.
Die Jungfrau, Switzerland.	S. Bendixen	Earl of Tyrconnell.
Waters of Eile.	W. Etty, R.A.	J. V. Thompson, Esq.

THE DRAMA.

Drury Lane.—On Thursday, *The Duenna* was revived here with an attractive musical cast, including Miss Romer, Miss Betts, Miss Poole, Giubelei, Balfie, Stretton, Allen, &c., who all exerted themselves successfully; and, after the opera, Mr. Van Amburgh exhibited, with the addition of one of the new lions, the other, we believe, not having been bitten, beaten, and tortured enough to be fit for a public appearance. A ballet followed, called *The Little Hunchback*, in which Wieland was the hero. The scenery is showy, and the dancing ditto; without the finish and artistical features of the foreign stage in this respect, John Bull is willing enough to receive in lieu upon the national boards, efforts of agility, *tours de force*, and other more active and boisterous demonstrations of strong limbs and nervous bodies. The physical pleases him well.

Covent Garden.—It is long since we witnessed so brilliant and encouraging a dramatic night as Covent Garden presented on Thursday, when Sir E. L. Bulwer's play of *Richelieu* was presented for the first time. The house overflowed in every part; and even what are called the slips, were fully tenanted by a respectable audience. This indeed is gratifying, because it proves that there is no longer an almost hopeless effort to be made for the national drama. It has been rescued from the abyss, and restored to more than its former legitimacy and splendour, by William Macready, whose name will ever be honoured in the annals of the stage for this great achievement. How must he have been cheered, almost rewarded,

on this occasion, when every opportunity was seized, and by such an assemblage, alike in boxes, pit, and galleries, to testify to him the sense entertained, not merely of his high histrionic powers, but still more of the obligation to him *personally* for having once more placed the chiefest source of recreation enjoyed by a civilised community on the ground which it ought to occupy. If all that has ever been written about the stage, for or against it, be not apocryphal, how much do we owe to him who enables us, after so dark an eclipse, to live again in the light of Shakspeare—to taste the refinements of art—to glow with the emanations of living genius—and to feel that the drama is an elevating, rational, and moral school of instruction! Of the *Richelieu*, as published, we shall speak in our next, for our Friday preparations prevent us from taking up the subject as we ought at so late a period in the week. Many striking passages of poetry, of humorous application, of truth and of nature, were readily apprehended and loudly applauded; and we are confident that many more will be recognised and appreciated as the play becomes better understood by repetition. It is put upon the stage with every advantage of scenery and costume; and a large expense must have been bestowed on these important adjuncts to the illusive design. Marshall is a pupil not unworthy of Stanfield, and nothing can surpass the taste, as well as magnificence, with which he has represented the gorgeoussness of the French court in every scene. Of the dresses, we need only say that they are on a large scale, what the Olympic has so often won our praise for accomplishing on its more limited boards. They are rich, beautiful, accurate, and extremely effective. Before saying a few words on the performances, we may observe, that a fine overture from Gluck, and *entre-act* selections from that composer, Gretry, and Martini, arranged by T. Cooke, are pleasing accessories to the general arrangement.

Richelieu is an admirable acting play, and most dramatically constructed. The mixture of the Lion and the Fox in the Cardinal (agreeably to a *dictum* of Lysander,* whom he thinks a perfect politician), contributes not only to a great variety of situation, but to the development of the principal incidents and final dénouement of the drama. This character was sustained by Macready; and whether in his patriotic bursts of devoted love for France; his natural affections for his ward, *Julie de Mortemar* (Miss H. Faucit); his cajolery of those whom he wishes to flatter into subserviency to his purposes; his withering menaces to *Baradas* and other conspirators; or his occasional playfulness contrasting with his severe and perilous anxiety, when all but overwhelmed by the concatenation of circumstances, we never saw a more perfect piece of acting. In some parts it recalled to our memory some of the noblest personation of Wolsey that ever adorned the stage: in the rest, it was all the author's and the performers' own. The weak and vacillating *Louis XIII.*, who does not appear till the fourth act, was excellently played by Elton, who was really a picture in person as well as in mind of that worthless king. Mr. Warde, as the aspiring and intriguing *Baradas*, was also every thing that could be wished. His *Iago*-like wickedness, checked by saucy doubts and fears, was forcibly portrayed; and his courtier acquiescence in the last scene was eminently happy. Mr. Anderson,

as the *Chev. de Mauprat*, might, but for *Richelieu*, be deemed the hero of the play; and he acquitted himself very ably of the trust throughout the whole of an arduous part. Mr. Vining, as a foppish and fluttering insect of the court, deserves similar commendation;—his lightness was a very agreeable relief to the graver scenes. Mr. Phelps, as the famous Capuchin *Joseph*, looked and acted the priest, expectant of a bishoprick, with great truth and unction; and Mr. G. Bennett, in the humbler cast of a traitorous officer of *Richelieu's* guard, did all that was set down for him with discrimination and judgment. We have but to notice Miss H. Faucit in the heroine, which she performed with her usual feeling and ability; and Miss Charles, as *Marion de Lorme*, who filled up the leading *dramatis personæ* of a play altogether admirably brought out. Enthusiastic cheers attended its announcement for repetition every evening.

Adelphi.—On Monday, a new company of actors appeared here, and were received with unbounded applause. Foreign genius ought to be encouraged by a liberal people, and as very few of the race in question are natives of our isle, we would entirely rejoice in their success, were it not from a fear we entertain, that they are likely to drive a great proportion of inferior English and Irish talent from the stage. Two days a week fasting, in Lent, would be nothing to this total starvation; and all the parliamentary pathos of the honourable member for Finsbury could hardly obtain a majority to vote for their being maintained at the national expense. Be this as it may, Il Signor Ambrogini (the director of music), Signor Brazillini (first in genteel comedy), Mdlle Chieni (leader in the higher walks of the drama), Monsieur Jacko (the premier buffo), and the rest of the troop, are evidently among the greatest performers in the world, for tragedy, comedy, history, pastoral-comical, historical-pastoral, scene indivisible, or poem unlimited. That they are monkeys seems to be a strong recommendation, for since the stage has been degraded by beasts *fera natura*, it seems as if were a step upwards again to have animals more nearly approaching to human intelligence. The Animali Parlante of Casti, and Esop's or Gay's Fables, might prepare us for the scenic triumph of these well-trained actors, who appear to be infinitely better organised than those who are occasionally seen in the training of street musicians, or taking part in a *duo* with Von Bruin. Indeed, nothing could exceed the grace and gravity of Ambrogini, the very Sir George Smart of the party, except, perhaps, the elegance and stateliness of Chieni, its Huddart, as *Madame Pompadour*. Nor ought we to pass unpraised the versatility of its Matheva, Brazillini, or the comicities of its Keeley, Jacko. They certainly beat any thing that could be done when Roscius was an actor at Rome; and it may be confidently anticipated that their London glory will be far more substantial than the plaster of Paris hitherto their meed. The schoolmaster, it is clear, has been abroad among the brutes, and the march of mind can no longer be limited by his own vanity to the presumption of man. The cowardly lion, the fawning tiger, the gentle leopard, and the sweet hyena, are now the epithets justly to be applied to these once ferocious species; and the lovely ape and intellectual monkey already claim similar appellations. To these, we understand, are about to be added polite dogs and accomplished goats; and, better still, a *corps dramatique* of no fewer than twelve well-educated and interesting pigs. Let them come: *suum cuique!*

* The Greek who advised when you could not cover yourself entirely with the lion's skin, to eke it out with the fox's.

Oliver Twist does not improve upon stage acquaintance; though the scene in which *Fagin* works up *Sykes* to the murder of *Nancy*, is one of fearful interest. Nothing can surpass *Yates's* diabolical personation of the *Jew*; whilst *O. Smith*, in the ruffian, and *Wright* in the *Dodger*, add to, and contrast with, its horror, by the hardened determination of the former, and the blind recklessness of the latter.

VARIETIES.

Nelson Tribute.—On Monday, a meeting of disappointed candidates took place at the Thatched House Tavern, and was attended by about fifty artists: Mr. Inman in the chair. A humorous speech was delivered by Mr. Hopper; and some correspondence with the committee and sub-committee on the Tribute was read, from which it appeared that no distinct course could be taken till a further communication was made on Saturday, this day. There was some discrepancy in the opinions expressed; for while it was thought desirable to have public opinion, considerable dissatisfaction was expressed with the manner in which it was pronounced, through the press or otherwise; and the judgment held to be of less or more authority as it agreed less or more with the ideas of the speakers. Again, it was urged to be expedient that the committee should receive the advice of the rejected artists—a manifest difficulty, since they by no means agree among themselves; and, instead of unanimity, there would be variety quite as much as among the general public.

National Monument Society.—At a meeting of this Society last Saturday, at the Thatched House Tavern, Mr. Hume in the chair, a gratifying statement was made of public places which had consented to open their doors gratuitously for the admission of the people; and a Report was agreed to, which will shortly be printed, and lay the progressive advance of the Society towards attaining its objects fully before the public.

Seaman's Hospital Society.—The anniversary on Saturday was attended by about 150 gentlemen, and H. R. H. the Duke of Cambridge, in the chair, had Lords Melville, Colville, Bexley, Ingestre, Sir James Lushington (chairman of the East India Company), Mr. Pelly (deputy chairman of the Trinity House), and other distinguished individuals, as his supporters on the right and left. Nothing could exceed the feeling on behalf of this most benevolent charity which was exhibited on the occasion; and the addresses of Lord Melville and Captain Bowles (the Secretary), were received with great applause. Their description of the institution, and its merciful dispensations, were indeed truly touching. Towards the close of the evening, Mr. Brown (the Treasurer), announced a subscription of 1176*l*. Had it been double this gratifying amount, it would not have been too much; but we hope these notices will cause other benefactions to flow in, so that nothing may be wanting for this good and Christian work.

Photogenic Drawing.—Letters and journals from Germany state that eminent artists and chemists in that country are employing themselves in experiments on photogenic drawing.

Mr. Colley Grattan.—We rejoice to see by the *Gazette*, that Mr. Colley Grattan, whose

* Dr. Græville, we observe, has published a letter to the Duke of Wellington, in which the merits of Mr. Raiton's column, as contrasted with those of one in cast-iron of superior dimensions, are discussed. There are, also, criticisms on other models; but, for the reasons we have stated, we must, for the present, abstain from comment.

literary productions have done honour to his name, has been appointed British Consul for the state of Massachusetts, where we have long had resident another literary gentleman of distinguished talent.

United Service Museum.—The Eighth Annual Meeting took place at the Thatched House on Saturday, Sir George Cockburn in the chair, when a very satisfactory report was read by the assistant director. Several members of the council, going out by rotation, were re-elected or others elected. It was moved and agreed to, that instead of the name "United Service Museum," the name "United Service Institution" should be adopted in future; and it was also resolved that the rooms of the Institution should be open daily from 11 A.M. to 5 P.M. in summer, and 4 P.M. in winter; and that the library should be open to members from 7 to 10 in the evening throughout the year. It is very gratifying to find so excellent and well conducted an Institution thus gradually and progressively working out the purposes for which it was established; and taking the sure path to become a national benefit and honour. It is highly creditable to the United Services.

Survey of Port Adelaide.—An immediate and most elaborate survey of the port was about being made by Colonel Light, assisted by Capt. Field.—*Oriental Herald*.

LITERARY NOVELTIES.

Mr. Adolphus, whose History of England, from the accession of George III. to the close of the American War (published in three vols. 8vo. thirty-seven years ago), went through four large editions, and is now out of print, has issued proposals to republish the same, by subscription, with important corrections and additions, and to add five more volumes, to bring down the history to the close of the reign. No more eventful period ever occupied a historical pen. The volumes are to appear about every two months.

In the Press.

Dearbrook, a Novel, by Miss Martineau.

LIST OF NEW BOOKS.

Greek Testament, with English Notes, Critical, Philological, and Explanatory, by the Rev. S. T. Bloomfield, D.D. F.R.S., 3d edit. enlarged, 2 vols. 8vo. 2*l*.—Mawe and Abercrombie's complete Gardener's Calendar and Directory, 24th edit. improved, by J. Main, 12mo. 6*s*.—Outlines of Military Surgery, by Sir G. Ballingall, M.D. 2d edit. 8vo. 1*s*.—Geometrical Theorems and Analytical Formulas, by W. Wallace, LL.D. 8vo. 6*s*.—Dr. Elliott's Principles and Practice of Medicine, with Notes, &c. by N. Rogers, M.D. 8vo. 2*s*.—Beard's Lectures against Opium, 12mo. 6*s*.—America and the American Church, by the Rev. H. Cartwright, 8vo. 2*s*.—Home Service, by B. E. Hill, 2 vols. post 8vo. 2*l*.—The African Slave-Trade, by T. F. Buxton, 8vo. 5*s*.—or, with a Map, &c.—Reply to the Report of the Earl of Durham, by a Colomist, 8vo. 2*s*.—Ore's Materna Medica of Infancy and Childhood, 2d edit. 12mo. 3*s*.—B. Picart's Religious Ceremonies of every Nation abridged, 4to. 2*s*.—The Town and Country Practice of the Court for relief of Insolvent Debtors, by R. Allen, 12mo. 10*s*.—The Law of Master and Servant, by E. Spike, 12mo. 2*s*.—Anthony's Caesar, with Notes and Indexes, 12mo. 4*s*.—Mémoires on Oil Painting, translated by W. B. S. Taylor, post 8vo. 12*s*.—Rev. R. Montgomery's Poetical Works, 6 vols. 12mo. Vol. 1. 2*s*.—Lives of Scottish Writers, by D. Irving, LL.D. 2 vols. post 8vo. 12*s*.—Treatise on Probabilities, by T. Galloway (from the "Encyclopædia Britannica"), post 8vo. 6*s*.—Alfred Moreland, the would-be Traveller, &c. &c. 4*s*.—Whately's Essays on some of the Dangers to Christian Faith, 8vo. 1*s*.—Smith's Wealth of Nations, with a Commentary, Vol. IV. and last, 12mo. 5*s*.—The Arabian Nights, translated by E. W. Lane, Vol. 1. royal 8vo. 2*s*.—Gems of American Wit, &c.—Langley's Principia Saxonica, 12mo. 4*s*.—The Book of the Grand Junction Railway, by T. Roscoe, 8vo. 1*s*.

TO CORRESPONDENTS.

We are sorry we cannot accept the tender lines of "V. H. L." It is difficult to write for particular objects in a way to produce a general feeling. **REMARKS.**—In our critique on the British Institution last week, the Caricature Concert at Amalfi was ascribed to Mr. J. Uwins, R.A. (p. 139, middle col.), and it was no small compliment to it that we thought it the production of that charming artist, Mr. Thomas Uwins. It is, however, the performance of a younger man, and one, we may judge from it, of excellent promise, Mr. James Uwins, the nephew of the R.A. and son of his late brother, Dr. Uwins, who was at Rome pursuing his studies at the time of his father's unexpected death.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION,

PALL MALL.
The Gallery, for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1*s*. Catalogue, 1*s*.
WILLIAM BARNARD, Keeper.

SOCIETY FOR THE ENCOURAGEMENT

OF BRITISH ART.
The Committee beg to submit for the consideration of the Public the Plan and Objects of the Institution, which was established in 1826. To purchase the Works of British Artists from the Exhibitions of the Year, or from the Studios of the Artists themselves. Each Subscriber to be entitled to One Chance for each Guinea subscribed, a day being fixed shortly after the close of the Exhibitions for the Public Distribution of the Annual Prizes, on the principle of the late State Lottery.

Any additional information may be had of Messrs. P. and D. Colnaghi, 21, Pall Mall East. To whom Subscriptions may be paid; or also to Messrs. Ransoms, Bankers, Pall Mall East; Messrs. Chapman and Hall, 108 Strand; Mr. Havell, 77 Oxford Street; Mr. Jennings, 68 Chancery.

ST. PATRICK'S DAY.—Under the

Patronage of Her Majesty and the Queen Dowager.
BENEVOLENT SOCIETY OF ST. PATRICK.—The 10th Anniversary of this Society will be celebrated on Saturday, March 16th, 1830, at the Freemasons' Tavern, Great Queen Street.

President.

Field-Marshal H. R. Highness the DUKE of CAMBRIDGE, Earl of Tipperary, &c. &c. &c.

Vice-Presidents.

The Duke of Leinster
The Marquess of Normandy, K.P.
The Marquess of Londonderry, G.C.B.
The Marquess of Lansdowne, K.O.
The Marquess of Downshire, K.P.
The Earl of Clancawhill
Chancellor of the Exchequer
Gen. Lord Bloomfield, G.C.B.

Tickets (2*s*. each) to be had of E. T. Baskerville, Esq. M.P. Treasurer, No. 16 St. Paul's Churchyard, at the Bar of the Tavern; and at the Schools, in Stamford Street, Blackfriars' Road. Signed (by order) J. C. MICHELL, Secretary.
Dinner on Table at Six o'Clock.

The Children dine as usual on that Day, at the Schools, at Two o'Clock.

HERALDRY and GENEALOGY. Many

Articles upon these Subjects, both curious and rare, including some valuable Heraldic MSS., are to be brought forward for Sale, on Monday and Tuesday next, by Mr. Sotheby.

LIBRARY of USEFUL KNOWLEDGE.

The First Part of the History of Switzerland, price 6*d*. will be published, at the Society's Office, on the 15th instant, and a Number of this Series will continue to be published there on the 1st and 15th of every Month.

The Current Volumes of "The History of England," of "The History of Ancient Great Literature," of "The Geography of Great Britain," of "Annals," and of "The Differential Calculus," will be completed without delay, by Messrs. Baldwin and Cradock.

THOMAS COATES, Secretary.
50 Lincoln's Inn Fields, 7 March, 1830.

MUSIC.

TO THE MUSICAL WORLD.

NEW MUSICAL INSTRUMENT OF UNEQUALLED SUPERIORITY.

Messrs. Tritschler and Co. beg leave to apprise the Nobility and Gentry, that they have recently received from the Continent a musical self-acting Instrument, which, for sweetness and power of tone, exceeds all efforts ever made by even the most ingenious and accomplished artists, in the construction of the most perfect specimens of music. In fact, the most fertile imagination cannot conceive any thing adequate to the beautiful melodious sounds produced by this Instrument, which are sufficient to embalm the soul.

This new-invented instrument, called "Tribine," plays the following pieces:

Entrée to the Opera of William Tell, by Rossini.
Concerto, by J. A. Gram.
Overture to the Opera of Fra Diavolo, by Aubert.
March, with Variations, to the Opera of Alina, by Spahr.
Variations by Humel.
Overture to the Opera of the Freischütz, by Carl M. von Weber.

In regard to its shape and size, it is well adapted for either the Drawing or Dining Room.
To be viewed at Messrs. T. and Co. German Clock Warehouse, 101 High Holborn.

BOOKS IN THE PRESS.

On the 1st of April will be published, 1 vol. 8vo. uniform with Milman's *Gibbon*.

THE LIFE of GIBBON, with Selections

from his Miscellaneous Works.
Edited by the Rev. H. H. MILMAN.
John Murray, Albemarle Street.

NOVEL, by MISS MARTINEAU.

On the 28th of March will be published, in 3 vols.

DEARBROOK, A Novel.

By HARRIET MARTINEAU.
Edward Mosse, Dover Street.

LADY LYTTON BULWER'S NOVEL,
Chevalier, or the Man of Honour, will positively be published March 21.
Kewest Hall, 19 Holles Street, Cavendish Square.

On the 25th of March, Part I. royal 8vo. price 1s.
PERCY'S RELIQUES of ANCIENT ENGLISH POETRY, consisting of Old Ballads, Songs, &c. of our earlier Poets, preceded by an Essay on Ancient Minstrelsy.
Also, on the 15th of April, uniform with the above, Part I. of **THE PLAYS of MASSINGER,** with Notes by GIFFORD, and an Introduction.
John Templeman, 565 Regent Street.

J. Souter, School Library, 131 Fleet Street.

HISTORY OF the GREAT REFORMATION OF the SIXTEENTH CENTURY, in Germany.

By J. H. MEERLE JAUBIGNE,
President of the Theological School of Geneva, and Member of the Société Evangélique.
"It would be unpardonable to dismiss such a work with a merely eulogistic notice. The absolute merit of this life of Luther is great, but the comparative value far greater. In the English language it has no competitor; and though Meierle Jaubigne himself was the biographer of his friend, we believe no foreign tongue contains so complete and impressive a narrative of these events."—*Edinburgh Review*, No. 128.
D. Wadsworth, 40 Piccadilly.

Printed by JAMES MOYES, of Brook Green, Hammermith, in the County of Middlesex, Printer, at his Printing Office, Number 20 Castle Street, Leicester Square, in the said County; and published by WILLIAM AMHERST SCRIPPS, of Number 13 South Molton Street, in the Parish of St. George, Hanover Square, in the County of Middlesex, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo, Strand, in the said County, on Saturday, March 2nd, 1838.

REVIEW OF NEW BOOKS.

A Voice from America to England. By an American Gentleman. 8vo. pp. 321. London, 1839. Colburn.

THIS appears to us to be a *bonâ fide* work, to come from the quarter announced, and to contain much matter of considerable interest to both the new and the old worlds. European travellers to America, however varied their talent and great their power of observation, can only observe as strangers, and are liable to many misconceptions which a native would avoid, when he writes upon subjects familiar to him for all the years of his life. It is, therefore, of extreme value in discussing questions of public and national importance, to have the opinions of intelligent men who see things in different lights, were it only to compare them with the statements of those who have viewed them from other points, and under other aspects. With these impressions, we would recommend the present volume to the careful consideration of the British public, for it contains much that bears intimately upon most of the affairs which are daily brought upon the tapis in all our political circles and journals.

"American society (the author sets out by declaring) has manifested two leading and opposite tendencies: one towards the lowest level of democracy, and the other towards a spiritual supremacy. The former is pretty well understood; the latter will find its portrait in these pages. Both, indeed, are made subjects of consideration. They are two extremes, that beget each other. As if nothing good could come to man without its evil, and no sweet without a bitter; as if every dawn of a brighter day must have its malignant star; and as the fairest sun must have its spots, so the rapid advancement of society in general improvement, must be visited by the demon of Radicalism, to mar the picture, and charge the onward movement with a portentous and dangerous power. This spirit of evil broods alike over America and over Europe, over all empires and republics, saps the thrones of the former and the constitutions of the latter, and threatens the world with infinite mischief. And as if the history of Christianity were not sufficiently fraught with the abuses of religious power, the great pains that have been taken in America to separate religion from the state, seem only to have opened a new field, and presented temptation for the setting up of a new spiritual dynasty, as much more influential, as it is more independent, than a church allied to the state."

Upon this text nearly the whole of the volume proceeds; and it is contended that a pure democracy is incompatible with civilisation; that there is no individual liberty in a state of society or any where except to a lone and single savage; and that equality is a physical impossibility. The two latter are truisms, and the first is expounded at greater length than we could afford to follow, even were the subject more congenial to our plan. As it is not, we shall look for our illustrations in references to the abolition of slavery and the voluntary system. Our author's principles may be gathered from the following, which involve

new, striking, and important descriptions of American religion.

"No nation in the world has been more jealous of a spiritual jurisdiction than the American republic; and none has contrived more effectually to bring itself under it. The very course of policy she has pursued, in cutting off religion from the state, has set up religion an independent and rival power; has awarded to it a field of influence which the state cannot occupy, and put into its hands weapons of war, which the state cannot take away. The state in America, from the nature of its policy, is a quiet sort of thing; though, peradventure, the people are rather active, and sometimes even noisy. The state resolved to have nothing to do with religion, but to let it go its own way, and do its own work, unmolested, and protected in its pursuits. It, moreover, resolved that religion should have nothing to do with the state; but this last is a contingency which state decrees and parliamentary resolutions cannot so easily dispose of. The perfectly neutral ground which the state has assumed towards religion, and the uniformity of its course in relation to it, have left the leaders in religion to form, adopt, and execute their own policy. The affairs of state have not been sufficient to occupy the public mind in hours of leisure from the cares of business, nor, ordinarily, sufficiently interesting and exciting to claim attention. But religion is a concern that may be brought to every man's own door, that addresses itself to his affections. Hence the minds of the Americans, fond of excitement, have been peculiarly open to the claims of religion; and religion in America has been the most active, stirring power in operation. Such has been its character and sway over individual minds to a great extent. The Americans like a fervent, not to say a hot, religion. Like the Welsh, many of them want a religion that will make them hop and jump. But the stirring power of religion in the primary assemblies of the people at camp-meetings, and in revivals, is not enough. This is only one, and a distinct mode of its operation. It is properly the devotional part, not of the closet, but of the public assembly. It is where the mind luxuriates in its religiously passive condition, and revels in ecstatic joy, or writhes in agony, while acted upon by a singular and powerful combination and concentration of social and religious influences. Such, to a great extent, is the cradle and nursery of American religion. But, like the Puritans of England and the Covenanters of Scotland, those minds that can pray and wrestle with God in suchwise, can also enact their parts in the strife of politics and of arms. They delight in some great enterprise, and the active principle of their religion is a preparation. Denied participation in affairs of state, as a body—though they are represented, and have their share of influence there, an important advantage for the protection of their separate interests and enterprises—they have entered a new field, formed associations, and opened subscriptions, for the conversion—in other words, for the conquest—of the world. As this is an open and declared purpose, there can, of course, be no surprise,

and no deception; and as it is a spiritual subjugation to Christianity that is talked of and proposed, there can be no objection. Such is the more enlarged scheme professed, the minor parts of which are a proper intellectual and moral discipline of the mind of the country, under the machinery that is erected for the accomplishment of this great end. Whereunto there must needs be associations, national and subsidiary, and agencies innumerable—consolidated and centralised governments in this department of society, supervised by presidents, secretaries, and boards of managers, putting in requisition—on account of the variety, extent, and vastness of these concerns—as much talent, sole devotion, and practical tact, as are ordinarily required to conduct the affairs of a nation. It has given birth to a new system of politics, the machinery of which is remote from public view, silent in its operation, but no less efficient on the public mind. Under one board is placed the care of the Bible, its printing and circulation—a very good work, certainly, if it can be shown that such a machinery were necessary, and that more Bibles are distributed in consequence. Under another, domestic missions, which must make itself acquainted with every corner and nook of the country, and so work upon the public mind, through its anniversary meetings, periodical journals, secretaries, travelling agents, and a variety of other operations, as to bring the whole population, as far as possible, under discipline and into action. Under another, foreign missions, a high and commanding power, which has taken the world as its field, and which must necessarily have a twofold economical or political system; one part to draw its resources from home, and the other to carry on its operations abroad. Under another, is placed the superintendence and emission of the more permanent forms of religious literature, tracts and books, involving an indirect, but actual, censorship; ordering, so far as their influence extends, that the public shall have such books, and only such, as they are pleased to publish; and their power in this particular is immense. Next, the cause of temperance requires its national organisation, its general and subsidiary boards of supervision and control, its many thousand agencies, its numerous tracts and periodicals, whereby is published some good doctrine, and some, as is thought, rather questionable. Passing over numerous other associations appertaining to this system—too many to be easily looked up, and yet more difficult to be described—Abolitionism, though last, not least, has already enacted, and seems destined to act, a very important part, and more eminently political, under this regimen of religions and benevolent association in America. As to the right or wrong of these institutions, or as to whether they are good or bad, is not, in this place, a subject of inquiry; but simply the fact of their social importance, and their power. And we say, that in America it is great; nay, we think it has obtained to a supremacy of influence over the state. American society, as we have observed in a former chapter, is a dynasty of opinions; and the state must yield to it. And it happens, that these voluntary

associations are so numerous, so great, so active and influential, that, as a whole, they now constitute the great school of public education, in the formation of those practical opinions, religious, social, and political, which lead the public mind, and govern the country; at least, exercise an influence over the state which cannot be resisted.

"It cannot but be remarked, that America presents one of the fairest and most hopeful fields that was ever opened on the world, for carrying Christian civilisation to the highest point of perfection, to a very millennium of the human state, if the active religious elements existing there were properly taken in hand, rightly directed, and discreetly employed; if the government of the country were consistent with its own professions, and would consent to become, in Scripture phrase, 'the nursing parent of the church.' We observe further, that this American system of voluntarism has called into existence and action an anomalous spiritual power, more formidable to the state than any alliance of church and state that has ever been devised. In bearing off from the rock of Scylla, the American ship of state is fast being drawn into the whirlpool of Charybdis. Better, far better, for the state to have maintained an alliance of any form with religion—even after the obnoxious model—in order to secure a proper control over it, than to have made such a power independent of itself, and to have sent it adrift to its own devices, with a field open before it for the setting up of a rival empire. The political power of religion, as we have shewn in another place, cannot be suppressed, nor in any way prevented. It has always had political influence, both in Christian and pagan lands, and always will. The nature of man, and the elementary composition of society, must first be changed, before it can be otherwise. Religion is the most potent element of the social fabric. The theoretical mistake of American constitutional legislation, in regard to religion, was, in assuming, that it is possible so to divorce religion from the state as to disarm it of political power. It is not surprising, therefore, that such a wide mistake in theory, as it applied to the construction of American society, should have become momentarily practical in its results. Having cut off religion from all authoritative connexion with the state, assigning for the act a reason which covered religion with disgrace, because it was an implied impeachment of its character at the bar of the public, and having resolved to leave religion to its own resources and powers, with a gracious promise of protection in all its forms of action, corporate and otherwise, provided it should not disturb the public peace, nor trespass on other recognised rights, it was a natural consequence, that religion should devote itself to the task of devising and setting up a polity of its own; and there was a good pretext—a sufficient apology for doing it.

"The impartiality of the American national and state authorities towards Christian sects, is manifested in one of its forms by selecting public chaplains from different denominations. When a state convention, or legislature, meets, it is very common, and rather the prevailing practice, in their preliminary resolutions of order, to invite the resident clergy of the several sects to officiate as chaplains by a weekly rotation—not excepting the Roman Catholics, when they happen to be prominent in society. It is the practice of the American Congress to elect its chaplains, one for each house, at the opening of every session, with the understand-

ing, that both branches shall not appoint them from the same sect. And in a course of years, they run through the range of the most prominent religious denominations of the country. It is but two or three years since, that a Roman Catholic was appointed to one of these places, for the first time, without disturbing public feeling, so far as we know. There is a reason, not only of liberality, but of policy, for having done so. The Roman Catholics in America have grown to an important political influence by the acquisition of Louisiana, and by emigration from Europe, so as to be capable of tuening a vote for a national administration, in whichever scale they cast their weight, in the present nearly equal balance of political parties. And the Roman Catholics are generally found on one side, viz. the most thoroughly democratic and radical. And as that is at present the dominant party, it may be said, that Roman Catholics govern the country; so far as that, they are the means of keeping in power the party to which they are attached. The same rule of appointing chaplains prevails in the army and navy, and they will be found of several different sects, as accident has determined. When any clergyman applies for the place, it is not asked to what denomination he belongs, although it may be remarked, that the episcopal service is most popular in the army and navy, and for that reason is often used by chaplains of other denominations.†

"The most remarkable features of American constitutional legislation, touching religion, would hardly be complete if we should omit to notice the Connecticut 'Blue Laws.' We beg leave, therefore, without note or comment, to transcribe a copy:—1. The governor and magistrates, convened in general assembly, are the supreme power, under God, of this independent dominion. 2. From the determination of the assembly no appeal shall be made.

† "Statistics of American Religious Sects.—The following is the table of the religious denominations of the United States, from the 'American Almanac' of 1838:—

	Congregations	Ministries	Communicants	Population
Baptists.....	6319	423	458,000	
Free-willers.....	753	41	36,876	4,300,000
Seventh Day.....	10	40	4,500	
St. Principles.....	16	30	8,117	
Roman Catholics.....	433	369	..	800,000
Christians.....	1009	80	130,000	360,000
Congregationalists.....	1300	110	108,000	1,400,000
Dutch Reformed.....	497	129	15,416	450,000
Episcopalians.....	260	600	..	600,000
Friends.....	508	..	..	100,000
German Reformed.....	400	308	38,000	..
Jews.....	..	..	..	15,000
Lutherans.....	780	267	61,906	540,000
Mennonites.....	300	..	38,000	..
Wesleyans.....	..	2984	480,103	3,000,000
Protestants.....	..	400	50,000	..
Moravians.....	24	33	5,745	12,000
Mormonites.....	..	..	12,000	18,000
New Jerusalem Church.....	27	33	..	5,000
Presbyterians.....	2807	2225	274,084	..
Cumberland.....	180	40	50,000	..
Associate.....	300	97	16,000	2,125,000
Reformed.....	40	30	..	..
Associate Reformed.....	214	116	12,000	..
Shakers.....	15	45	6,000	..
Tunkers.....	40	40	3,000	30,000
Unitarians.....	300	174	..	180,000
Universalists.....	653	817	..	600,000

"Remarks.—The Christians, Mennonites, and Tunkers are Baptists, as well as the first four in the table, which swells the ministers of this great denomination to 8,330; congregations, 5707; and communicants, 686,485. But with most of the Baptists, any uneducated man, who manifests edifying gifts, is made a minister. Hence the great number. This, also, is the leading rule with the great majority of American religious sects. It prevails extensively with the Wesleyans, though they have many distinguished men among their ministers. A professional education for the pulpit is, however, becoming more the practice in America than formerly. The column of population in this table is conjectural, though worthy of some respect. The other columns are averred to have been formed from the latest published records, under the authorities of the different sects. But there are numerous minor sects omitted."

3. The governor is amenable to the voice of the people. 4. The governor shall only have a single voice in determining any question, except a casting vote, when the assembly may be equally divided. 5. The assembly of the people shall not be dismissed by the governor, but shall dismiss itself. 6. Conspiracy against the dominion shall be punished with death. 7. Whoever says, 'There is a power holding jurisdiction over and above this dominion,' shall be punished with death and loss of property. 8. Whoever attempts to change or overturn this dominion shall suffer death. 9. The judges shall determine controversies without jury. 10. No one shall be a freeman, or give a vote, unless he be converted, or a member in full communion of one of the churches allowed in this dominion. 11. No one shall hold any office, who is not sound in the faith, and faithful to this dominion; and whoever gives a vote to such a person shall pay a fine of one pound. For the second offence, shall be disfranchised. 12. No Quaker, or dissenter from the established worship of this dominion, shall be allowed to give a vote for the election of magistrates, or any officer. 13. No food and lodging shall be allowed a Quaker, Adomite, or other heretic. 14. If any person turns Quaker, he shall be banished, and not suffered to return, on pain of death. 15. No priest shall abide in this dominion. He shall be banished, and suffer death on his return. Priests may be seized by any one without warrant. 16. No one shall cross a river, but with an authorised ferryman. 17. No one shall run on a Sabbath day, or walk in his garden, or elsewhere, except reverently to and from church. 18. No one shall travel, cook victuals, make beds, sweep houses, cut hair, or shave, on the Sabbath day. 19. No husband shall kiss his wife, and no mother kiss her child, on the Sabbath day. 20. A person accused of trespass in the night, shall be judged guilty, unless he clear himself by an oath. 21. When it appears that an accomplice has confederated, and he refuses to discover them, he may be racked. 22. No one shall buy or sell lands, without the permission of the select man. 23. A drunkard shall have a master appointed by the select man, who is to debar him the privilege of buying or selling. 24. Whoever publishes a lie to the prejudice of his neighbour, shall sit in the stocks, or be whipped fifteen stripes. 25. No minister shall keep a school. 26. Man-stealers shall suffer death. 27. Whoever wears clothes trimmed with silver or bone lace above two shillings a-yard, shall be presented by the grand jurors; and the select man shall tax the offender at the rate of three hundred pound estate. 28. A debtor in prison, swearing he has no estate, shall be let out, and sold to make satisfaction. 29. Whoever sets fire to the woods, and it burns a house, shall suffer death, and persons suspected of the crime shall be imprisoned without the benefit of bail. 30. Whoever brings cards or dice into this dominion, shall pay a fine of five pounds. 31. No one shall read Common Prayer, keep Christmas or saint's day, make mince pies, dance, or play on any instruments of music, except the drum, the trumpet, and the Jew's harp. 32. When parents refuse their children suitable marriages, the magistrates shall determine the point. 33. The select men, on finding children ignorant, may take them away from the parents, and put them into better hands, at the expense of their parents. 34. A man that strikes his wife, shall pay a fine of ten pounds; a woman that strikes her husband shall be punished as the court directs. 35. A wife shall be deemed good evidence against her husband. 36. No one shall court a maid without first ob-

taining the consent of her parents—five pounds penalty for the first offence, ten pounds for the second, and for the third, imprisonment during the pleasure of the court. 37. Married persons shall live together, or be imprisoned. 38. Every male shall have his hair cut round according to a cap."

The author maintains that an American slavery abolitionist is in a false position, and must be put down by the general government.

"The number of slaves in America at this time is probably but little less than 3,000,000, increasing with a rapidity in excess of the whites in the same states, as 112 per cent is to 80 per cent in the term of forty years, and constituting about one-third of the population of the slave-holding states, besides about 400,000 free blacks scattered over the Union, all whose sympathies will be on the same side with their common kindred. With all the prejudices and aversions of the two races of whites and blacks, one against the other, in consequence of the relations they have so long sustained—not taking into account the moral effects of a difference of physical constitution, from which they can never emerge to have lost them, but are more likely to have them confirmed and augmented—how can they ever live together as equals under the same jurisdiction? And how can the whites do without the blacks in such a climate, where the latter have been accustomed to do all, or nearly all, the manual labour? And if they could do without them, can the blacks be colonised any where in America, and be erected into an independent government, or be made to act in harmony as a separate and constituent member of the American confederacy? Or can they be transported back to the land of their fathers, and be well established there? These are momentarily practical, and stupendously difficult, problems. All theories, it may be said, are likely to be baffled, and the great question seems destined to be surrendered to time and circumstance. There are reasons, also, for the opinion, that the nearer the blacks approach to a state of freedom, so much greater and more violent will be the aversions and animosities between the two races, from causes which are likely to be in operation in the mean time, more especially through the influence of the indiscreet friends of the blacks, who are for that reason their greatest enemies; and that the final result must be for the parties to fight it out, till one has exterminated or effectually subdued the other. In other words, as the whites are likely to be the strongest, that all things revert again to the *status quo* of everlasting slavery."

Our author holds that there is no extensive sympathy with the Canada rebellion in the United States; but we have devoted so much space to the illustration of the momentous topics connected with the effects of the religious system in that country, that we must leave all the rest to the work itself: what we have selected having, we trust, fully borne out the observations with which we started.

Richelieu; or, the Conspiracy: a Play, in Five Acts. With Odes, &c. By Sir E. Lytton Bulwer, Bart., &c. &c. 8vo. pp. 144. London, 1839. Saunders and Otley.

"It is of all things the most instructive," says Burke, "to see not only the reflection of manners and characters, at several periods, but the modes of making this reflection, and the manner of adapting it at those periods, to the taste and disposition of mankind. The stage may be considered as the republic of active literature, and its history as the history of that state."

That we enjoy an opportunity to feel the truth of this passage, we owe to the talent which has produced *Richelieu* in the closet, and the skill which has embodied it on the stage. The instructive reflection of manners and characters is excellently displayed in both instances; and the British public is furnished with a picture which has attracted, and will long continue to attract, crowds every night to the temple of Taste and Genius where it is exhibited. We are not going to debate any minute points of biographical or historical accuracy in this play, which even in history always admit of dispute, but which are sufficient for the drama if they preserve similitude and probability; it is enough for us that the poet has wrought out his own ideas in a way to give delight to the spectator and gratification to the reader, without failing in those qualities of consistency that ally his characters and events closely to what they are represented to have been by the annals of the age to which they belonged. The more jocular parts of Richelieu's dialogue we have heard critically objected to, and in one instance, perhaps, we join in the objection—i. e. where the Cardinal dismisses the Capuchin with the following words:—

"In my closet
You'll find a rosary, Joseph; are you tell
Three hundred beads, I'll summon you. Stay, Joseph!—
I did omit an Ave in my matins.
A grievous fault!—atone it for me, Joseph;
There is a scourge within; I am weak, you strong;
It were but charity to take my sin
On such broad shoulders. Exercise is healthful."

Not so where he thus praises De Mauprat:—

"Beh! the mate for beauty
Should be a man, and not a money-chest!
When her brave sire lay on his bed of death,
I vow'd to be a father to his Julie:—
And so he died—the smile upon his lips:—
And when I spared the life of her young lover,
Methought I saw that smile again! Who else,
Look you, in all the court—who else so well,
Brave, or supplant the favourite!—balk the king—
Baffle their schemes? I have tried him!—He has honour
And courage!—qualities that eagle-plume
Men's souls,—and fit them for the fiercest sun,
Which ever melted the weak waxen minds
That flutter in the beams of greedy Power!
Besides, he has taste, the Mauprat!—When my play
Was acted to dull tiers of lifeless gapers,
Who had no soul for poetry, I saw him
Applaud in the proper places: trust me, Joseph,
He is a man of an uncommon promise!"

The last passages we consider a fine characteristic trait, which hints at all we have read of Richelieu's jealousy of Cornelle, and his own want of dramatic success. Indeed, Sir E. Bulwer has sought out many similar features in the Cardinal's recorded memoirs, and interspersed them very aptly and ingeniously through the general portraiture, to which they impart a very pleasing degree of life and reality.

Though there are many poetical passages in *Richelieu*, and also of happy touches which win rounds of applause from the audience, the latter are too brief to be separated from the context and introduced into a literary notice; and of the former, we shall be content to adduce only a few examples. Thus, when De Mauprat boasts of his gallant bearing, we have the following:—

"Richelieu. Your words
Are bold.
De Mauprat. My deeds have not belied them.
Richelieu. Deeds!
O miserable delusion of man's pride!
Deeds! cities sack'd, fields ravaged, hearths profaned,
Men butcher'd! In your hour of doom behold
The deeds you boast of! From rank showers of blood,
And the red light of blasting roofs, you build
The Rainbow Glory, and shuddering Conscience
Cry,—Lo, the Bridge to Heaven!
De Mauprat. If war be sinful,
Your hand the gauntlet cast.
Richelieu. It was so, sir.
Note the distinction:—I weigh'd well the cause

Which made the standard holy: raised the war
But to secure the peace. France bled—I groan'd!
But look'd beyond; and, in the vista, saw
France saved, and I exulted. You—but you
Were but the tool of slaughter—knowing naught,
Foreseeing naught, nought hoping, nought lamenting,
And for naught fit,—save cutting throats for hire,
Deeds, marry, deeds!"

And again, this impressive lesson:—

"You have outrun your fortune;—
I blame you not, that you would be a beggar—
Each to his taste!—But I do charge you, sir,
That, being beggar'd, you would own false moories
Out of that crucible, called debt.—To live
On means not yours—be brave in silks and laces,
Gallant in steeds—splendid in banquets—all
Not yours—ungiven—unherited—unpaid for—
This is to be a trickster: and to slick
Men's art and labour, which to them is wealth,
Life, daily bread,—quitting all secure with— Friend,
You're troublesome!—Why this, forgive me,
Is what—when done with a less dainty grace—
Plain folks call 'Thrift!'"

In one of his scenes, Richelieu thus apostrophises the *Peu*:—

"True,—this!
Beneath the rule of men entirely great
The pen is mightier than the sword. Behold
The arch-enchanter's wand!—Itself a nothing!—
But taking sorcery from the master-hand
To pamper the Censur—and to strike
The loud earth breathless!—Take away the sword—
States can be saved without it!"

In another, there is a fine soliloquy at midnight, from which we select a few lines:—

"*Richelieu's Castle at Ruille—A Gothic chamber—Moon-
light at the window, occasionally obscured.*
Richelieu (reading). "In silence, and at night, the con-
science feels

That life should soar to nobler ends than power!
So sayest thou, sage and sober moralist!
But wert thou tried?—Sublime philosophy,
Thou art the patriarch's ladder, reaching heaven,
And bright with beck'ning angels—but, alas!
We see these, like the patriarch, but in dreams,
By the first step—dull-slumbering on the earth."

"Yet are my aims not those of circumstance,
That all-pervading atmosphere, wherein
Our spirits, like the unsteady lizard, take
The taint that colour, and the food that nurtures!
Oh! ye, whose hour-glass shifts its tranquil sands
In the unwe'd silence of a student's cell;
Ye, whose untamed hearts have never toer'd
Upon the dark and stormy tides, where life
Gives battle to the elements,—and man
Wrestles with man for some slight plank, whose weight
Will bear but one—while round the desperate wreath
The hungry billows roar—and the fierce fate,
Like some huge monster, dim-seen through the surf,
Waits him who drops;—ye safe and formal men,
Who write the deeds, and with unfeeling hand
Weigh in nice scales the motives of the great,
Ye cannot know what ye have never tried!
History preserves only the fleshless bones
Of what we are—and by the mocking skull
It would be wise to guess the passions!
Without the roughness and the glow of life
How hideous is the skeleton! Without
The colourings and humanities that clothe
Our errors, the anatomists of schools
Can make our memory hideous!"

We shall only add the conclusion, when De Mauprat and Julie are made happy, and Richelieu proceeds:—

"See, my legs—see through plots and counterplots—
Through gain and loss—through glory and disgrace—
Along the plains, where passionate discord rears
Eternal Babel—still the holy stream
Of human happiness glides on!"

And must we
Thank for that also—our prime minister?
Richelieu. No; let us own it: there is One above
Sways the harmonious mystery of the world,
E'en better than prime ministers.

Alas!
Our glories float between the earth and heaven
Like clouds which seem pavilions of the sun,
And are the playthings of the casual wind;
Still, like the cloud which drops on unseen crags
The dew the wild flower feeds on, our ambition
May from its airy height drop gladness down
On unsuspected virtue!—and the flower
May bless the cloud when it hath pass'd away!"

To the play, Sir Edward has appended three Odes, on the last days of Queen Elizabeth, Cromwell, and the death of Nelson. They are, we think, too narrative for this class of composition, with too much of historical reference and classical illustration. But there are brilliant and powerful passages. For instance, in the

description of Elizabeth, commencing with a lament over the fate of her unfortunate sister-victim, Mary Stuart :—

" Rise from thy bloody grave
Thou soft Medusa of the fated line,
Whose evil beauty look'd to death the brave;—
Discreet woe's crown, around whose passionate shame
Terror and grief the palest flowers entwined,
That ever veil'd the ruins of a name
With the sweet parasites of song divine!
Arise, and ghost, arise,
And, if revenge outlive the tomb,
Thou art avenged—behold the doomer brought to
doom!

Lo, where thy mighty murderers lies,
The sleepless couch—the sunless room,
And, quell'd the eagle eye and lion mien,
The wo-mo shadow of the Titan queen!
There, sorrow-stricken, to the ground,
Alike by night and day,
The heart's blood from the inward wound
Ebb'd silently away.
And oft she turns from face to face
A sharp and eager gaze,
As if the memory sought to trace
The sign of some lost dwelling-place
Below'd in happier days :—
Ah, what the clue supplies
In the cold vigil of a hireling's eyes?
Ah, sad in childless age to weep alone,
And start and gaze, to find no sorrow save our own!"

We close with the closing lines on the hero of Trafalgar :—

" But where was he—the noblest son
Of the triumphant Isle;
Where—England's loftiest victory won—
Her hero of the Nile?
Lo, on his couch, the victor-victim lying,
Save to the few—the fatal stroke unknown;
Above—his gladsome crew—his pennon flying,
And he, with that dark angel—Death, alone!
But ever as the loud hurra,
Tim'd with triumphant peal his latest day,
By each new conquest o'er the scattering foe,
Flash'd on the ash'en cheek the flickering glow.
And, like a star that pales beneath the morn,
When gradual broadening o'er the solemn sky,
So life grew dark as glory drew more nigh!
Vain on that gentle heart the levain came;
Nor bays nor mingling myrtle there upturn;
And thoughts, like echoes in a shrine, repeat
Familiar memories indistinctly sweet,
That blend his England's with his Emma's name.
The last guns heard that famous day
Along the deep were dying;
No flag, save ours, within the bay
On a single mast was flying :—
When the captain came where Nelson lay,
The chaplain by his side;
His hand he press'd—his cheek he kiss'd,—
' Look up,' the captain cried :—
' Twenty have struck, and the rest have fled—
We have won the victory!
' Thank God—thank God,' then feebly said
The Sydney of the sea :—
' My duty is done,—so the race was run,
And thus our Nelson died."

A View of the Coinage of Ireland, from the Invasion of the Danes to the Reign of George IV., with some Account of the Ring Money; also, copious Tables, Lists, and Descriptions of Hiberno-Danish and Irish Coins; and an Account of some of the Principal Hoards, or Parcels of Coins discovered in Ireland. Illustrated with Engravings of upwards of One Hundred and Fifty unpublished Coins. By John Lindsay, Esq. Barrister-at-Law. 4to. Cork, 1839. Bolster.

WE have read this volume with much interest. It is an important addition to our numismatic, we may add, to our historical knowledge; but it is difficult for us to illustrate by extracts the value of a work of this nature. We must content ourselves, therefore, by observing generally, that the ring-money currency of Ireland, the discovery of which was most ingeniously made by Sir William Betham, and the hoard of Bracteate coins lately brought to light, and supposed by Mr. Lindsay to be the native Irish coinage, are the most remarkable novelties in Irish numismatic history since the publication of Simon's valuable essay on the subject. At the same time, we observe other curious matters which have rewarded the patient antiquarian

zeal of coin collectors. We allude particularly to the discovery of the national arms of Ireland, which appear to be three crowns, and not a harp, as generally supposed.

"In the 'Numismatic Journal' (observes Mr. Lindsay) will be found, at full length, the very satisfactory proofs adduced by the Rev. Mr. Butler (of Trim), to shew that the three crowns were the arms of Ireland. If any thing is wanting to remove any doubts we may have on the subject, it is afforded by the following additional evidence, which the reverend and learned writer has since discovered :—1st. That Richard II. granted to Robert de Vere permission to bear as his arms, so long as he should be Lord of Ireland, three crowns within a bordure. 2d. At Henry Vth's funeral, on the first car were emblazoned the ancient arms of England; on the second, those of France and England, quarterly; on the third, those of France simply; and on the fourth, three crowns on a field azure; which last, Mr. Butler observes, were erroneously ascribed by Monstrelet, who gives the description, to King Arthur."

Mr. Lindsay records a brief account of the principal hoards, or parcels of coins which have been within the last few years discovered in Ireland; the most remarkable are the following :—

1824.—"A large parcel of coins were sold in Cork, said to have been found at Blarney, county Cork; the best of which were selected by the late Major Hobart. They consisted principally of the Calais and London groats of the Henries; a few smaller coins of the same reigns and mints; and some Scotch groats of David II. and Robert II., one of the latter struck at Dundee."

1830.—"A large hoard of coins was dug up in a field near Youghal; they amounted in weight to between three and four hundred ounces, for which the countryman who brought them received from a silversmith in Cork 86l.; the number of coins was probably eight thousand, all pennies, except about forty half-pence. The late Mr. Leyburn, in Cork, had the picking of them, and after him, another gentleman in Dublin; after which the remainder were melted. Those selected by Mr. Leyburn were mostly English and Irish pennies of Edward I. and II., the English being by far the most numerous; there were also nearly two hundred pennies of Alexander III. of Scotland, a few of John Balliol and Robert, and a considerable number of foreign sterling, some unpublished. The only rare coins amongst them were a Dublin penny, Edward I., without the triangle; and a Cork half-penny of the same prince."

1833.—"A parcel of Hiberno-Danish coins were found near Limerick; the number, I was informed, was about one hundred and seven or one hundred and eight."

1834.—"In the autumn of this year, about three thousand silver coins were dug up in the demesne of Lord Bantry, at Sea-View. They consisted of the English pennies of Henry III., with long cross, together with from one to two hundred of the Irish pennies of the same reign. A few Scotch, of Alexander II., one of them struck at Dunbar, and another at Glasgow, and at least two of William the Lion."

1835.—"At Fountainstown, near Cork, a parcel of brass siege coins were found; they are of a square form, and appear to have been struck at Cork and Youghal about the year 1646; they all fell into the hands of the late Mr. Leyburn."

1837.—"In the spring of this year, a large hoard of silver coins was dug up at Dunbrody Abbey, county of Wexford; they consisted of

between one thousand and eleven hundred Anglo-Saxon coins, mostly of the Confessor, but including three or four of Harthacnut and several of Harold I. Besides the Anglo-Saxon, the hoard consisted of from two hundred to three hundred Hiberno-Danish coins of the eleventh century, of various types, but mostly of the common Irish one; about sixty of them fell into the author's hands; they consisted of one of Harold I., twelve of the Confessor, and the rest Hiberno-Danish, including several of Sihtric IV. and Ifars III."

In the summer of the same year, Mr. Lindsay, among other discoveries, informs us that "a very large hoard of the groats of Edward III. was found near Cork." And in November 1837, he thus chronicles "a find," as collectors term such valuable "turn-ups," which gives one of the novel features we have mentioned to his publication. "A large quantity of Bracteate money was found by a farmer, named Richard Nolan, on the lands of Curraghmore, near Castle Lyons, part of the estate of John Hyde, Esq., and within a few hundred yards of the place where the battle was fought by Lord Castlehaven, called by Smith, vol. ii. p. 157, the battle of Castle Lyons. The quantity found was said to amount to two or three baskets full; but it is supposed the greater part was melted down, as not more than sixty came into the possession of the Cork collectors. About two fields from the place just mentioned, four coins were since found, viz. a London groat of Edward III., a groat of Edward IV., of the same mint, and two York pennies of Edward IV., one of them having the letter E at one side of the head and a rose at the other."

Mr. Lindsay observes, that previous to this discovery few Bracteate coins (or coins struck from one die) were found in Ireland. "Indeed," he adds, "I was not aware of any except two in the cabinet of the Dean of St. Patrick's." On those which Mr. Lindsay has seen, which include thirteen varieties of type, no legend occurs; "they are, from their thinness, generally in a mutilated state, and when unbroken do not weigh more than from seven to ten grains." He thus concludes :—"A comparison of the types of the Bracteate coins with those of English coins, to which I have drawn the attention of the reader, will lead us to conclude, that they have been in general copied from English coins, commencing with William I. or II. and ending with John, or perhaps Henry III., and to assign as the probable period of their mintage the early part of the thirteenth century; and as the Danes had then no power over, or intercourse with Ireland, it is not likely they were struck by that people, and still less by the English, who had a very different coinage of their own, and never appear to have struck Bracteate coins in their own country; and we may, therefore, conclude that they are genuine and unquestionable specimens of the coins of the native Irish princes; and, although a very poor description of coin, highly interesting, as forming a distinct and hitherto unknown class in the annals of the coinage of Ireland."

Mr. Lindsay states, that "the only points of any importance in which he has ventured to differ with Mr. Simon are those which relate to the arrangement of the coins assigned by him to Henry V., and those of the three-crown money, which Simon assigns to Henry VI." The table of the succession of the Danish kings or princes of Dublin, Waterford, and Limerick, from the year 853 to 1200, compiled by an antiquary so able and judicious as Mr. Lindsay

has proved himself to be, is an extremely valuable document for future inquirers, considering "the scanty, and, in many instances, contradictory annals" of those obscure times.

We cordially recommend Mr. Lindsay's volume, and wish that it was in our power to do more justice to what must become not merely the collector's guide, but a standard national work on the coinage of Ireland.

Gethsemane; or, the Death of Julia. Translated from the original French of M. de La-martine, by I. H. Urquhart, Esq. 12mo. pp. 27. London, 1838. Baily and Co.

THIS is a sweet trifle, containing only twenty-four stanzas, but well worth the trouble of translation; and the time of our readers will be much better employed by perusing a stanza or two from the work itself, than in reading any remarks which we might offer. In fact, it needs no criticism, and is far too beautiful to be passed by in silence, as the following will prove:—

"There is at Olivet's dim mouldering base,
Beneath the ramparts which laid Skon low,
A dreary valley, sun-deserted place,
Where Kedron's waters scarcely seem to flow;
Thy tombs, Jehoshaphat, may there be view'd,
Earth genders ruins—not the ripening sheaves,
And spreading roots of blotched trees obtrude
From out the stones once covered by their leaves."

Again, the description of his daughter:—

"She was the only wreck of life's rough sea,
Sole fruit of many blossoms—love's last tie;
All grief at parting, on return all glee,
Throughout my wanderings, pleasure ever nigh,
A ray of sunshine through my lattice peeping,
A bird that from my lip its food would take,
Aerial music when my soul was sleeping,
A kiss that only courted me to wake."

She was my mother's image newly cast,
Her every look recall'd some well-known grace,
Her future promise'd to revive my past,
My happiness had only changed its face.
Ten years of bliss were echoed by her voice,
Her footsteps fill'd my mansion with delight,
A plaintive note forbade me to rejoice,
Her smile would make my anxious bosom light.

Her brow was knit when mien in thought was hid,
Her beautiful blue eyes reflected mine;
My cares would tremble on each moisten'd lid,
As shadows on a glassy lake recline.
Yet all that sprung from her light heart was knd;
Her lips a grave expression would not wear,
Save when her little hands her mother's join'd,
To offer, on her eyes, the fervent prayer.

I dreamt that hither, to this land I led
My beautiful child, and held her on my knee,
One arm sustain'd her feet, and one her head;
While bending o'er her features tenderly,
She turn'd her face on my encircling arms.
Shaking from auburn tresses golden light,
And pearly teeth shone forth from lips, whose charms
Were heighten'd by a smile for ever bright."

Minstrel Melodies; being a Collection of Songs.
By the Author of "Field-Flowers," "The Garland," &c. 18mo. pp. 298. London, 1839. Longman and Co.

ON a former occasion we awarded to this clever writer our praise, and have only to add that the present volume sustains his reputation. As a specimen, we quote the two following sportive stanzas:—

"When I was a wee little slip of a Girl,
When I was a wee little slip of a girl,
Too artless and young for a prude;
The men, as I passed, would exclaim, 'Pretty dear!
Which, I must say, I thought rather rude;
Rather rude, so I did;
Which, I must say, I thought rather rude.
However, said I, when I'm once in my teens,
They'll, sure, cease to worry me then;
But as I grew the older, so they grew the bolder—
Such impudent things are the men;
Are the men, are the men;
Such impudent things are the men.
But of all the bold things I could ever suppose,
(Yet how could I take it amiss?)
Was that of my impudent cousin, last night,
When he actually gave me a kiss;
Ay, a kiss, so he did;
When he actually gave me a kiss!"

I quickly reproved him, but ah! in such tones,
That, ere we were half through the glen,
My anger to smother, he gave me another—
Such strange, coaxing things, are the men;
Are the men, are the men;
Such strange, coaxing things, are the men."

Stanley; or, the Infidel Reclaimed, and other Poems. By J. C. Fyler, Esq., M.A. Pp. 87. London, 1838. Rivingtons.

CHIEFLY of a religious character, versification smooth, thoughts sensible and clearly expressed, and—and—that is all. The following is a fair specimen of the volume:—

"The Village Church."

O'er the far heath, ere sinks the close of day,
The lone, lost wand'rer seeks in vain his way,
Till his glad eye perceives a speck of white—
He finds the village church has led him right.
Thus o'er the waste of life in mercy giv'n
Religion's light directs our path to heav'n."

Visions of the Western Railways. (Printed for Private Circulation.) 8vo. pp. 36. London, 1838. Bagster.

BESIDE the Railway Vision, the volume contains "Thoughts on the British Association at Liverpool." From which we make the following extract, admire it who may!—

"And see such upper forehead in Brunel,
That, from his premises at Rotherhithe,
Although he find a most 'ambiguous middle,'
And of his miners much illicit process,
And reason in a circle—in his tunnel,
He comes to an end and most admired conclusion;
Or view in A the front and pride of trinity,
Who proves what man proves, saved to be unkind;
Or him of every section being o'er
His brow the fir philosophy of facts
And infinite individualities:—
See heavy eyebrows move at sound of G—
(With little lumps at th' end they stop at F
As they go down the street); they mark these things
And thousands else demonstrated in sections
And as they thought at first, think more and more."

Manchester Poetry. Edited by James Wheeler. Pp. 200. London, 1839. Tilt.

WE have, in a former No. (1047) of the *Literary Gazette*, quoted at some length from a work of Mr. Wheeler's, which gave an account of the many eminent literary men who were natives of Manchester. We need, therefore, only add, that the present volume (which is beautifully got up) contains extracts from the writings of almost all the native poets.

Laing's Tour in Sweden.

[Second notice.]

IN continuing our review of this volume, we shall, as in the preceding part, lay before our readers such of Mr. Laing's statements as appear to us to be most generally interesting; and avoid those opinions which are calculated to provoke controversy, either from being hastily adopted or from being pressed into the service of preconceived theories. But the public will know well how to appreciate even these portions of the work of a shrewd and able writer;* for we may often learn as much from what we doubt or deny as from what coincides with our own sentiments and belief.

Our last concluded with some extracts concerning Gothland, which had obtained a present claim to note as a subject of parliamentary, mercantile, and political discussion; and we now return to that island for the sake of illustrating a period of its commercial greatness and consequent antiquarian remains. Of Wisby, its capital, we are told by the author:—

"This ancient city is the most extraordinary place in the north of Europe. It is a city of the middle ages,—existing unbroken, and unchanged in a great measure to the present day; it appears to have undergone less alteration from time, devastation, or improvement, than

* Mr. Laing is, we are informed, the brother of the Scots historian, Malcolm Laing.—Ed.

any place of the same antiquity. The appearance from the sea of this mother of the Hanseatic cities is very striking, from the numerous remains of churches and ancient structures within a small space. I counted thirty-five towers, spires, or prominent ruins. On landing, the aspect is equally novel. Ancient streets, well paved, cross each other in all directions; and the causeway work, with two or three parallel bands, or stripes of larger paving stones, running lengthwise through the streets, looks ornamental, or at least regular. I have seen such paving about some cathedral in England. The houses on each side of these ancient streets are in general poor cabins, with gardens, potato-ground, and corn-crops, all huddled together, among ruins of churches of very extraordinary beauty and workmanship, and, as ruins, in very picturesque preservation. The whole city is surrounded by its ancient wall, with towers—square, octagonal, and round—as they stood in the thirteenth century, and with very little demolition. The wall is entire, and above thirty feet high for the greater part, and is in no place demolished. Of forty-five towers upon it, the greater part are entire: some are roofed-in, and used as magazines, a prison, storehouses, or workshops. There has been no ditch. The wall, with its towers built upon rock scarcely covered with soil, follows the inequalities of the ground from the sea at one end, all round the site of the ancient city, to the sea at the other. There are three gates in the wall; and it appears to have been strengthened at some period by an additional wall on the inside, built against the other, which has also been raised higher. On the north side of the town there has been apparently an outer wall. This wall was built in 1288, and, consequently, without any view to attack and defence by fire-arms; and is, perhaps, the most entire specimen of ancient fortification remaining in the north of Europe. This curious city (which might accommodate within its area and along its paved streets 30,000 or 40,000 people) contains at present only 4268 inhabitants, badly lodged in little tenements, under edifices of great cost and magnificence, which the former inhabitants reared with the superfluity of their wealth. You scarcely see a human being moving in streets once crowded with the wealthiest merchants of all countries. In the earlier part of the middle ages, and before the Hans towns were heard of, Wisby had long been the great emporium of commerce in the north of Europe: the market, in which the productions even of the East, brought by caravans to Novgorod and across the Baltic, met the furs and metals of the north, and the buyers of the south of Europe. In very remote times the Scandinavian side of the Baltic, abounding in copper and iron close to the surface of the earth, and easily smelted from the purity of the ores, must have been a kind of Mexico or Peru to the people dwelling in the plains of the north-east of Europe, who had not the same easy access to the supply of metal for their arms or utensils, in their own soils. Scandinavia, without being the *cunabula gentium* from which swarms of people were thrown off, was a point towards which emigrations would probably tend, in order afterwards to diverge; especially as for the subsistence of a people living by hunting and fishing, it would be, as it is now, preferable to any northern country, from its abundance of fish and game. When the floods of people ceased to be poured from the north, and exchange between individuals instead of conquest in bodies, became the means of obtaining the

metals and other necessities, the situation of Wisby between the two sides of the Baltic, each producing what the other wanted, made it a safe and convenient meeting point for all barter in the north. Wisby was, in the tenth and eleventh centuries (two hundred years before the establishment of the Hanseatic league, in 1241), one of the most important commercial cities in Europe. Its mercantile laws were regarded as the most perfect, and they were transferred to France by Saint Louis, whose code of the Isle of Oleron was copied from the constitutions of Wisby; and these contain the principles of maritime, mercantile, and international law, as now adopted in all civilised countries. Wisby had a population of 12,000 burghesses, besides labourers, tradesmen, women, and children, in the thirteenth century. The foreigners, in the eleventh century, were so numerous, that each nation had its own church and house of assembly; this is evident, indeed, from the many remains of churches within a few yards of each other. Judging from the numerous ruins of costly structures, the remains of her former magnificence, we must consider Wisby to have been a more important city than Lübeck, which at a later period became the seat of the Hanseatic power, and rose by the decline of Wisby. There are said to have been eighteen churches in Wisby; there are ruins remaining of twelve. These are almost all from one to two hundred years older than the date of the Hanseatic league; which shews that Wisby long preceded the Hans towns in the trade of the north, and probably declined from their rise. The more immediate cause of her decline was being stormed and sacked, in 1361, by Waldemar of Denmark, from which time she was often a prey to the Danes and Lübeckers; and in 1438 became a kind of robber-nest for ten years to Eric of Pomerania, the expelled king of Sweden. These churches are the most interesting Gothic edifices in Europe. They shew the style of building, ornament, and workmanship in one precisely determined age; and are not like the larger Gothic cathedrals in other countries, the work of one or two centuries, added to, altered, or rebuilt according to the varying taste or funds of successive generations. They are buildings of the eleventh and twelfth century—older than the oldest specimen we have in England of Norman or of Saxon buildings; and are on this account extremely interesting, as they shew in the arches of the same period, the characteristics which we suppose in England distinguish two distinct periods of Gothic architecture. This is the first idea that will occur to the traveller in this remarkable place, when he sees from his window round Saxon and pointed Norman arches used indiscriminately in buildings of the eleventh century."

Mr. Lasing's detailed examination of several of the ruins brings out some curious points, worthy the attention of antiquaries; and we select one example:—

"In rummaging about the only church, St. Mary's, which is kept up in Wisby, and of which it is unnecessary to say any thing, because, since it was originally built by the German merchants in Wisby, in 1190, it has been apparently repaired and renewed in different ages,—I was struck with the great number of tombstones applied to all sorts of uses,—stairs, pavements, and so on, and many broken and piled up in heaps for building materials. Some of them, with dates of the sixteenth and seventeenth centuries, had evidently been much older tombstones, and the original inscription, with laudable frugality, erased to make room

for that over the new incumbent; but on many there appeared a sort of hieroglyphic or Runic character; a stroke, with other strokes crossing or meeting it in various shapes and angles, of which I could make nothing. It was not possible that a Runic character, which it most resembled, could be in use in Wisby on tombstones of dates between 1500 and 1600. I applied to a young lawyer, a native of the place, whose acquaintance I had made, to solve me the puzzle: his solution was ingenious, and, I doubt not, correct. When writing was not an ordinary accomplishment among the most wealthy burghesses of Wisby or the Hans towns, every merchant had his own particular mark or scratch, known to his customers or correspondents as well as if it had been his signature in letters; and this mark was hereditary, and transmitted in his family, and was their countermark by which their wares were known, or their communications recognised, by all who dealt with or knew them; and this mark or hieroglyphic was inscribed on their tombstones to distinguish them, dead or alive, from others:—this is the tradition of the place with regard to these marks. The most ancient tombstone I saw here was one of 1236, in German, which I had not time to decipher: it was in the summerhouse of a gentleman with whom I dined one day, a few miles from town. He had also half a dozen finely carved, old, straight-backed chairs, and some tapestry, which had belonged to the palace of Eric of Pomerania, demolished in 1468, and of which no remains are left, the stones having been burnt into lime; there was also in his possession a curious iron crown, which had been formerly kept in a church on the east side of the island, which, according to tradition, was built by Saint Olaf."

Another source of antiquarian intelligence is found in the ruins of Sigtuna, not far from Upsala, and the chief seat of the idolatrous religion of Odin, long before Upsala or Stockholm existed. Of these, Mr. L. observes:—

"I was surprised to see four towers of ancient buildings still remaining; for I had understood the site of Sigtuna was all that could be found: and remains of edifices of stone are so rare in this country, that ruins of a much later date excite curiosity. Sigtuna was a town in ruins so early as the tenth century; so that the buildings to which these four square towers and other remains of walls have belonged, must go up probably to the eighth or ninth century. The place being out of the highroad, has not been much observed or visited; but now that steam is making old places new, and new old, to the traveller, ruins which are coeval with the religion of Odin, and older than any edifices connected with Christianity in the north, deserve the careful examination of the antiquarian. The real state of the arts, and the degree of civilisation, among the followers of Odin, before their conversion to Christianity, are little known, and appear to be underrated by historians. Their commerce, even with distant countries, was considerable. The very great quantities of Arabic and Greek coins found in Scandinavia, prove an active intercourse with the East. The gold ornaments, cups, arms, and utensils, found in tumuli in these northern countries, shew a wonderful perfection of workmanship; and if these are of Eastern origin, still the importing them, the obtaining them either by purchase or piracy, proves a great advance in still more important arts than the working in gold or silver. They must have been merchants, ship-builders, navigators, masters of all the

main arts of civilised life, to have crossed the seas to get at them in any way. The obscure traditional accounts of the former commercial greatness of Novgorod, of a caravan trade with the East, and a diffusion from that city of the silks and spices of the East, by the way of Wisby, speak of a course of trade which preceded the rise of the Hans towns, and existed prior to the introduction of Christianity in the north. The remains of buildings belonging to a period of which we know so little, and which had certainly made greater advances in the arts of civilised life than historians admit, are interesting. Sigtuna has still the privileges of a town, but has only 372 inhabitants, who live by manufacturing coarse pottery, the most ancient of manufactures in cities, and one which seems the last to quit its site."

In order to complete all we can refer to our masters of antiquity, we may mention that our author is a confirmed sceptic as to the alleged age of Runic inscriptions and the Sagas; the latter of which, he contends, do not go further back than the fourteenth century: and of the former he tells a story (previously known to the learned among ourselves), viz. that an inscription at Hoby, interpreted to mean (in the old Icelandic tongue, and in regular alliterative verse, A.D. 680!) "Hildetand received the kingdom,—Gard hewed out,—Ole took the oath,—Oden consecrate these runes," &c. &c., has been shewn by Berzelius to be nothing more than natural marks in the rock from the partial decomposition of gneiss and black trap.

As regards the question of political union and position, Mr. L. argues, that it would be well to separate Norway from Sweden, restoring the old dynasty to the latter, and giving the former to the family of Bernadotte. He also points out, and strongly condemns, the religious persecution which is carried to excess under the auspices of the tolerant Lutheran church, and that, too, while undistracted by any dissent. This matter and another of much national concernment are exhibited in the following extract:—

"Here, in Sweden, and in all the north of Europe, three distinct principles seem to be acted upon in applying punishment to crime. In Britain, we recognise but one, the protection of society from similar offences; but on the Continent, a second principle enters into criminal legislation, that of atonement by punishment of the offender for the moral guilt of his offence, without reference to the more or less of injury done to society by such acts. Under this principle, acts not visited with punishment by us are heavily punished abroad. For instance, blasphemy is with us left to the punishment of conscience, and of the contempt of good men. Here I heard this evening of a man of the higher class in the island denounced to the ecclesiastical department of the state, for having uttered some blasphemous joke about the Virgin Mary; a prosecution ordered before the court of the province; and that the case may affect his life, or his liberty for life. 'Hädelse mod Gud,' or contempt of God, is a crime for which, from 1830 to 1836 inclusive, fourteen persons have been condemned to death, or to slavery in chains for life. In this crime, as in treason, government must institute the proceedings; that is, the ecclesiastical department, the minister of state for church affairs, orders the prosecution. It is not, therefore, an old remnant of monkish law working unobserved by government in rare cases; but it is inquisition law working in the hands of a Lutheran state-church, as strongly as in Spain or Portugal in the hands of a Roman Catholic church.

The undefined nature of the crime, which may be twisted so as to comprehend all sorts of religious dissent; the immoral nature of the evidence, which generally must rest upon the espionage of servants or guests, as in the case I heard of; and the guilt itself, which religion takes out of the hands of man, and punishes here or hereafter in its own way, make this no object for human law to deal with in enlightened times. Its retention shows the rude notions of law and its objects, not among the vulgar only, but among the governing class. It is singular enough, that what we call blasphemy, that is to say, cursing, swearing, using dreadful oaths and imprecations, taking the Lord's name in vain—is nowhere, and in no language, so general and habitual as in Sweden; and not among the lowest class only, but among the middle and higher classes. In common conversation you hear the most horrible oaths and imprecations as ordinary phraseology; and these are never punished, as not affecting the established church or its doctrines. Among us, within these fifty years, this habit of swearing has worn out—has become unfashionable—even among our lowest class, a habitual swearer is rarely met with. Our laws have been wise enough to let it alone, or to visit it with a shilling fine, as *contra bonos mores*, when brought before a court. The crime of 'mockery of the public service of God, or contemptuous behaviour during the same,' is one rarely heard of in our courts, and when it occurs is punished only as a breach of the peace. Here it is the first in the rubric of the second class of crimes; that is, it comes after murder, blasphemy; but before perjury, forgery, or theft. It is evidently a very undefined crime; but is visited with punishment in chains for various terms of years, as a crime against the church establishment. Between 1830 and 1836, not fewer than 242 persons have been condemned to chains for this crime in Sweden. Who will say that the inquisition was abolished by Luther's Reformation? It has only been incorporated with the state in Lutheran countries, and exercised by the church through the ecclesiastical department of government, in the civil courts, instead of in the church courts. The thing itself remains in vigour. Lord Molesworth was right, when he said that the whole of the northern people of Lutheran countries had lost their liberties ever since they changed their religion for a better."

We must now, however, conclude, which we do with two passages descriptive of the manners of the country.

Mine Inn.—"I put up at the Skyds house as Orebro, and I suppose it is in much the same state as in the days of Gustavus Vasa. It is built round a court-yard, in which horses, peasants, carts, boys, dogs, and travellers, with a few pigs, and servant girls half undressed for heat, and scudding to and from the kitchen, are mingled in glorious confusion. The bed-room, however, which I got was much cleaner than I expected: but for dinner I was referred to another house in which people keep food but not beds for travellers. Here you order a portion according to a *carte*, or list of dishes; but in country towns the *carte* seldom tells of more than three sorts of dishes, of which only one generally is of any sort of meat. If you want any thing to drink, except it be anise brandy, or ale, which in general is very good, you must go to a third house, the *kallare*, or town's cellar, where you may get wine. Should you want a dessert, you must go to a fourth, the *conditor's*, or confectioner's, where you get pastry, coffee, and liqueurs. The Swede comes home at last to take his siesta, which all classes

enjoy as regularly as in Spain or Italy, at this season. The labouring people regularly sleep in the shade for an hour or two; and the middle classes go to bed after dinner during the summer.

The Military.—"Westeraas, June.—A company of soldiers, as I thought from their appearance, of the foot-guards, marched into the town yesterday, and the captain and six men were billeted upon my landlord. They were remarkably fine-looking grenadiers, well dressed in white round jackets with yellow epaulettes and blue trousers, and all their appointments seemed substantial, clean, and soldierlike. The only part of their equipment, perhaps, not altogether as good as in our service, was copper instead of block-tin canteens. The soldier's ration may often contract acidity, which renders a copper vessel for his soup less suitable. These men were well set up, evidently well drilled, and at ease under arms. Their evening parade upon the street before our door struck me very much. After the roll was called and the reports and orders delivered, the commanding officer called one of the soldiers out of the ranks, it appeared to me without turn or selection, and the whole company taking off their caps at once, this man repeated the Lord's Prayer, after which they all sung a hymn very beautifully, and the parade was dismissed. This morning early, about two o'clock, the company mustered before the door again to march to their next halting place before the heat of the day set in. Between sleeping and waking, I heard the same service repeated—the Lord's Prayer and a morning hymn sung, before they marched off. The service was not hurried over. It lasted from fifteen to twenty minutes, and was gone through as slowly and solemnly as in any religious meeting. This is a remnant of the military practice of the great Gustavus Adolphus, which has been retained in the Swedish army since the thirty years' war. I was surprised when my landlord told me to-day, that these soldiers were not of the guards, but merely a company of one of the ordinary regiments (the *Westmanland*), going to the place at which the other companies were assembling for summer manoeuvres, and that these men were all *Indeldta* soldiers; that is, soldiers occupying and living upon such little farms as I had often observed on the road-side, as in some way connected with the military establishment. This *Indeldta* system is peculiar to Sweden."

MISCELLANEOUS.

Ballot. By the Rev. Sydney Smith. Second Edition. Pp. 46. London, 1839. Longman and Co.

A RARE little pamphlet, of which it is difficult to say whether it is most logical or most amusing, most argumentative or most humorous, most convincing or most witty. It is enough to blow up the ballot-box, ten thousand times worse than Madame Vestris's box by the London Conveyance Company.

Third Letter to Archdeacon Singleton.

Pp. 39. The same.

ANOTHER of those ludicrous illustrations of an argument, in which the humour of the writer is not less entertaining than his reasoning is strong. We have not read the preceding letters; but can state of this alone, that it is a very striking defence of the cathedral establishments of deans and chapters.

Spiritualities and Temporalities of St. Paul's Cathedral. Pp. 42.

A PAMPHLET gravely addressed to the same subject, in which, after a curious historical

view, the minor canons defend their rights and privileges, as founded upon inalienable charters. *The Poetical Works of the Rev. Robert Montgomery, A.M. Oxon.* New edition, carefully revised by the Author. 18mo. pp. 171. Glasgow, 1839. Symington and Co.

THIS neat little volume contains the poem of "Satan;" that bold attempt in which a young poet ventured to exercise his genius in the same field with Milton, and produced a work which, notwithstanding all the criticisms, or rather personalities, aimed at its author, did not fail to give him a distinguished place among the aspirants to poetical fame. We were not blind either to its juvenile faults or imperfections; but we should have felt it to be a cruel injustice to have visited such a performance either with the ready ridicule of pseudo smartness, or the graver test of too severe examination. Five editions have shewn that the author took a pretty strong hold upon the public mind, and that we were right in judging him worthy of encouragement rather than of harsh repression in his early career. A not very good portrait is prefixed to this little volume, published at Glasgow, where Mr. Montgomery, we believe, is engaged in his ministerial duties as a clergyman of the episcopal church. There is rather a discrepancy between the title-page and the preface, the former stating, and the latter apologizing for, the absence of careful revision.

The African Slave-Trade. By T. Fowell Buxton, Esq. 8vo. pp. 250. London, 1839. Murray.

THIS volume confesses that the efforts made by England to extinguish the slave-trade have failed, and that its horrors are now as great, if not greater, than ever. This is a melancholy fact, and illustrated by much dreadful evidence. Mr. Buxton then contends that Africa (of which there is no doubt) contains internal and dormant resources, which, if brought into action, would raise that quarter of the globe, and richly reward the enterprise. But having laid his proposed remedies and measures before government, they are withheld for a future publication; and as the whole gist of the question rests on their practicability and efficacy, we may defer further observation till they appear. *Memoirs of the Early Life and Services of a Field Officer on the Retired List of the Indian Army.* 8vo. pp. 538. London, 1839. Allen and Co.

OF Major David PICE, so well known to Oriental literature, and whose long services in India linked him to so many able friends and associates, this volume is a curious memento. With something of the garrulity of age, he records all his "travel" from youth to advanced years; and though there is not much particularly important in the narrative, the whole is interesting as a picture of life, and the progress of a Briton from his early launch in the East through a variety of vicissitudes and adventures.

Cabinet Colloquia. No. II. Pp. 20. (London, Southgate.)—A squab against the present ministry, with no great quantity of powder.

The Call upon the Great. Pp. 120. (Seeley and Burside.)—Highly conservative, and invoking anti-revolutionary political principles, and religious instruction and example, to prevent the evils which the writer anticipates from our present system.

Lectures on Natural Philosophy, intended for the Instruction of Young Persons: First Series, by Benjamin Lyon Phillips. Pp. 308. (London, Longman and Co., &c. &c.)—Very sensible and useful. Old, as well as young, may read these lectures with advantage. This series relates to the atmosphere.

Scripture Biography for Youth, &c., by a Friend to Youth. Pp. 306. (London, Churton.)—With twelve appropriate woodcuts after Martin and Westall, this is a very commendable work of its kind; a most and instructive little book for the young reader. Historical notices point out the difference in manners and customs

between these ancient times and nations and our own, so as to render the subjects more intelligible; and some Eastern legends further illustrate the interesting narratives drawn from the Bible.

Hind's English Stage, Nos. III. and IV. (Macbeth and Katharine and Petruchio. (London, Simpkin, Marshall, and Co.)—We have only to repeat, that this is a beautiful edition of the acting drama; and, from the correctness of the text, well deserves to be patronised by every one connected with the stage, and all lovers of the drama.

Dr. Ury's Dictionary of Arts, Manufactures, and Mines. Part VII. (London, Longman and Co.)—From "Lead" to "Muriatic Acid," and containing very able accounts, alphabetically, of intervening and important articles, such as "leather," "metallurgy," and "mines."

Cardinal Bellarmine's Notes of the Church examined and refuted, &c., by Dr. Sherlock. Part I. Pp. 65. (London, Houldsworth.)—A defence of the Protestant Church, in a controversial examination of Bellarmine's Notes.

History of Napoleon. Part I. Pp. 64. (London, Tins.)—A popular history of this extraordinary man, and numerously illustrated with woodcuts. It seems to be very fairly compiled.

ARTS AND SCIENCES.

ROYAL GEOGRAPHICAL SOCIETY.

MARCH 11. Mr. Greenough, Vice-President, in the chair.—Members were elected, and extracts from the following papers read:—"Notice of a Journey in Palestine and the adjoining Regions, in 1838; undertaken for the Illustration of Biblical Geography, by the Rev. E. Robinson, D.D., Professor of Theology in New York, and the Rev. E. Smith, American Missionary at Beirut." Drawn up by the former. "We left Cairo," says Dr. Robinson, "on the 12th March, 1838, for Jerusalem, by way of Mount Sinai and 'Akabah. At Suez, our attention was naturally directed to the circumstances connected with the passage of the Israelites through the Red Sea, which most probably must have taken place at or near this spot—perhaps a little below. To Sinai itself we came with some incredulity, wishing to investigate the point whether there was any probable ground beyond monkish tradition, for fixing upon the present supposed site. We were surprised and gratified to find here, in the inmost recesses of these dark and lofty granite mountains, a fine plain spread out before the foot of Horeb (so called at present)—a plain capable of containing two or three millions of people; from the south end of which the mountain rises perpendicularly and overlooks the whole. The summit now called Sinai is about two miles further south on the same ridge; but is not visible from below. With that summit Moses probably had nothing to do. From 'Akabah we struck up the western mountain, and took the ancient Roman road across the great western desert to Hebron and Jerusalem; a journey of eight days, through the 'great and terrible wilderness.' Of the general character of the whole region we traversed, one may judge from the fact, that from the banks of the Nile until we arrived on the borders of Palestine, we saw not a drop of running water, nor a single blade of grass, except a few small tufts in two instances. This, however, was a season of dearth, scarcely any rain having fallen for two years. On this route we found and visited the ruins of the ancient Roman cities, Eboha and Elusa; and also those of Beersheba, twenty-eight miles W.S.W. of Hebron, still called Bir Seba. Here are two wells of excellent water forty feet deep, and close by are the ruins of a large straggling village, corresponding to the description of Eusebius and Jerome. In Jerusalem itself, where we arrived April 14th, we were surprised to find how much of antiquity remains, which no traveller has mentioned, or apparently ever seen.* The lower portion of the works of the great area around the mosque of

Omar, are unquestionably ancient, and must be referred at least to the time of Herod, if not to the days of Nehemiah or Solomon. The size, position, and character of the stones shew this of themselves; but it is further demonstrated by the fact, that near the S.W. corner there still remains in the wall the foot of an immense arch, which evidently once belonged to the bridge that actually led from the temple to the Xystus on Mount Sion. The ancient town, also, in the castle near the Jaffa gate, corresponds entirely to Josephus's description of the tower of Hippicus, which Titus left standing as a memento. We were likewise able to trace, to a considerable distance, the ancient wall N.W. and N. of the present city. The pool of Siloam at the mouth of the Tyropeum, which opens into the valley of Jehoshaphat, is doubtless the Siloam of Josephus and the New Testament; and the well of Nehemiah, further down, is the En Rogel of Scripture, where the border of Judah and Benjamin passed up the valley of Hinnom. We remained nearly four weeks at Jerusalem, and then made several excursions from that city to different parts of the country. We directed our researches chiefly to those parts of the country which had not been explored by former travellers, and sought to obtain information as far as possible, not from the legends of monks and other foreigners, but directly from the native Arabs of the land. For this latter object, the accurate and familiar knowledge which my companion had of the Arabic language was of great value. Our first excursion occupied us ten days, and was directed to the N.E. and N. of Jerusalem, through the region alluded to in Isaiah x. 28, *et seq.* The second excursion, of eight days, led us to the S.E. of Jerusalem, the western shore of the Dead Sea and the Jordan. We ascended the Frank Mountain, visited the ruins of Tekoa, Siph, Carmel, and Maon; and thence directed our course to 'Ain Jiddi [Engeddi] on the shore of the Dead Sea. Here we came out upon the cliffs which overhang the deep chasm of the sea, 1500 feet above its waters. An exceedingly steep and difficult pass leads down to the shore, below the fine gushing fountain which gives name to the place. The spot was full of trees and plants belonging to a more southern clime, and the air was vocal with the carols of the feathered songsters. We bathed in the heavy waters of the sea, and spent the night on this romantic spot. The next morning we were compelled to reascend the pass, in order to pursue our journey northwards, the projecting cliffs cutting off all passage along the water below. We continued our course parallel with the shore, and descended again into the plains of Jericho, or the valley of the Jordan. From Jericho we passed to the fountain of Elisha, and then ascended along the ancient road from Jericho and Gilgal to Bethel—a way so often travelled by the Jewish kings and prophets, and particularly by Elijah and Elisha. From Bethel we returned to Jerusalem. As the plague was gradually increasing, we remained but one day in the city, and then set off on our third excursion to Gaza, Hebron, and Wádi Músá. We took the direct ancient road to Gaza across the mountains, and succeeded, on the way, in discovering the site of the long-lost Eleutheropolis. This we were enabled to do, in consequence of finding a number of places, in respect to which Eusebius and Jerome have specified their distances from that city. Following out these distances from different quarters, they all centered in a spot now called Beit Jibrin, the ancient Betogabris, where are the remains of

a very strong Roman fortress, and traces of an extensive city. These circumstances establish the identity of Eleutheropolis and Betogabris, the latter being the ancient name. From Gaza we went up to Hebron, and thence taking camels, proceeded by way of Wádi Músá, by the south end of the Dead Sea and the great Wádi el 'Arabah. We found this region to correspond entirely with the accounts of Irby and Mangles, and of Legh. The long mountain ridge of rock-salt, the back-water, and the range of cliffs running across the great valley, eight or ten miles south of the sea, were all easily recognised. These cliffs, however, consist of marl, and are merely an offset between a low valley near the sea and the higher level of the valley further south. The name Ghor is applied to the lower or northern part; while all farther south takes the name of El 'Arabah. The great watercourse or bed of El 'Arabah is called Wádi Jib. It drains off all the waters of El 'Arabah and the adjacent deserts on the east and west, and carries them northward into the Dead Sea. We approached Wádi Músá, or Petra, by its magnificent eastern entrance; and, after a survey of its monuments, were preparing to depart, when the old Sheikh Abú Zeitún, the former foe of Mr. Bankes and his party, came down upon us with thirty armed men, demanding a tribute of a thousand piastres for visiting his territory. We declined payment, of course; and contrived, with some address, to extricate ourselves from his clutches. We now returned to Hebron by a different route, stopping for a time at the fountain El Weibé, on the west side of El 'Arabah. Here, or in this vicinity, we are disposed to place the site of ancient Kadesh; at least, the nature of the adjacent country decides the point, that this city must have been situated in the great valley. From Hebron, we proceeded westward to Dúrah, the Adora of Josephus, and Adoraim of Scripture, and thence descended the mountains, and continued our course northward to Bethahemeesh, where are still traces of an extensive city. From this place, I may almost say we followed the track of the cart on which the Philistines sent back the ark, and came then by a new course to Akir, the long-lost Ekron, a large village two hours south of Ramleh. We now returned to Jerusalem, over Lydda, Lower and Upper Bethhoron, and Gibeon. The pass between the two villages of Bethhoron is an ancient road, very steep and long, not a hollow way, but leading up to the point of a ridge between two deep valleys. Near to the lower village is the valley and village of Yalo or Ajalon, corresponding entirely to the circumstances under which Joshua commanded the sun and moon to stand still. We did not enter Jerusalem, which was still shut up on account of the plague, but pitched our tent in the olive grove before the Damascus gate. Our subsequent journey northwards led us over Jifnah; Shiloh, which we were the first to visit; Nablús, where we ascended Mount Gerizim; Samaria, Nazareth, Mount Tabor, Tiberias, Safet, Tyre and Sidon, to Beirut, where we arrived on the 28th June. During all our travels we had constant occasion for gratitude and praise to God, who preserved us in the midst of toil, pestilence, and war, so that not a hair of our heads was injured, nor were we hindered a single hour by sickness or peril."—Mr. Charles Sumner, of Boston, in acknowledging a vote of thanks to his countryman for this interesting communication, said that Professor Robinson was one of the first theological scholars of the United States, that he was well known as the author of an excellent Greek

* We much question this statement, and rather think it must have proceeded from the writer's want of knowledge.—Ed. L. G.

lexicon, and as editor of the "Biblical Repository;" and that he understood that it was the professor's intention to publish an account of his travels in Palestine, accompanied by a new map of the Holy Land, in the course of the summer.—Mr. Gowland exhibited, and gave a description of, a model of an improvement in chronometers, which would enable the traveller to carry these delicate instruments with as little risk of injury on a land journey as had hitherto been done at sea; a great desideratum for the advancement of geographical knowledge.—Among the donations was a portrait of Weddell, the antarctic navigator, painted by Mr. Frederick Peake, of Dover, and presented to the Society by Mr. John Brown. In a conversation which this subject gave rise to, it was announced that her majesty's government had decided upon fitting out on expedition in the course of this spring, in order to establish magnetic observations at certain stations in the southern hemisphere, and to prosecute geographical discovery in the Antarctic Seas.

To this report we have great pleasure in adding the letter which accompanied Mr. Brown's presentation of poor Weddell's portrait. It is so enthusiastic, and yet so just, to the memory of our late valued (and, we are sorry to say, rather neglected) friend; and does, in our opinion, so much honour to the writer, that we feel it will be acceptable to every one who admires (as Mr. Brown so cordially does) the zeal, enterprise, and merit of the brave navigator who, in a humble merchantman, penetrated the antarctic circle to a higher latitude than any other human being; and pointed the way, we trust, to a glorious expedition under the command of James Ross, to whom we rejoice to find the Admiralty has at last consented to intrust this interesting undertaking with its countenance and support.

To the President and Council of the Royal Geographical Society.

Accompanying this letter, you will receive a portrait of the late James Weddell, Esq., R.N. F.R.S.E., which I beg to offer for the acceptance of the Royal Geographical Society. It is scarcely necessary to say Mr. Weddell was the individual who, with most inadequate means, advanced to a higher southern latitude than any preceding navigator. The services he rendered to the cause of science, and to geography in particular, will, I am not without hope, obtain for his portrait a place in the Society's rooms. If high moral worth—if talent as an officer, a seaman, a navigator—if ardent devotion to the advancement of geographical knowledge can gain this honour, I feel assured you will award it to him. It may not, too, be without its uses. Fifteen years have now passed away since Weddell penetrated the icy barrier of the south—since the "meteor-flag" of Britain waved on the site of the cupola of St. Pierre, and we are yet "on our oars." Other nations are pushing discovery where Weddell pioneered the way. No continents intervene; and yet the greatest maritime nation on earth—the one ever foremost hitherto—lingers. The exertions of our arctic heroes no longer warm us: are we paralysed, or become old as a country? Is a nation that can boast not a being like a British sailor on its bosom, or is one of yesterday to step in, and claim for itself the laurel which alone should be ours? Perhaps government does not encourage an antarctic expedition? It should. Still, if it will not, your Society numbers among its members men of wealth. Can we not contribute, and purchase a steam-tug? Oh, let not supineness lead to bitter regret, that we, who have hitherto

been foremost, should, in these days of thriftiness, have nought left but the recollection of what we were. I pass over the advantages to science, to commerce, &c. &c. Weddell has shewn the "red cross" 71° within the antarctic circle, and with "a fair field of discovery" to the pole. It would, indeed, be mortifying and humiliating, if another nation should, by our apathy, supplant us there. I feel there is power in the Society over which you preside to say "onward;" and your wishes would, I am sure, be responded to by the members generally. There are other societies, too, who would assist us, I have no doubt.—I have the honour to be, &c. JOHN BROWN.

26 Red Lion Street, Clerkenwell, London,
March 11, 1839.

ROYAL INSTITUTION.

FRIDAY, 8th March.—Mr. Brayley 'On the Atmosphere, in relation to Gravitation and Temperature.' After fully considering and explaining the chemical constituents and mechanical properties of the atmosphere, also its proportion to that of the earth's mass, and various other interesting particulars, Mr. Brayley proceeded to describe and illustrate his views of its arrangement and the extent of its diffusion; not as to numerical distance, but as to the influence of surrounding conditions. His theory tends principally to overturn the generally conceived and admitted present knowledge of its mechanical constitution. It is almost universally believed that the lower stratum of the atmosphere being the most dense, the next being relieved from the weight of one is proportionably rarer, and so on until the higher is almost entirely lost in space and scarcely to be detected even by calculation. This view holds good in relation to gravity, but has temperature no influence? Mr. Brayley says yes, and to this respect; the absence of heat, or the excessive cold of extreme space, refrigerates, contracts, condenses, and confines the periphery of the atmosphere; and the effect is, that the most distant or exterior structure is of much greater density than several strata below. But if so, how could the higher denser mass be supported by the rarer substrata? It could not. Nor is such the case. The particles of the further concentric crust being rendered dense by the extreme low temperature of space, sink through those underneath, even to the, almost, centre of the atmosphere; or, rather, to where the law of gravitation from below may be said to be counteracted by the effects of temperature above. Arriving there, the particles again become rarified, ascend to replace the more dense, and thus is the circulation of the higher atmosphere maintained. This view of Mr. Brayley's, which we have thus cursorily stated, was supported by Sir J. Herschel's opinions and speculations on the atmosphere of comets, and other numerous and important facts and plausible imaginings.

ZOOLOGICAL SOCIETY.

WE recently noticed, amongst the donations to the museum of this Society, a hornet's nest, sent from Ceylon, and presenting the appearance of an immense cone. We subjoin the following memorandum respecting it. This specimen of the social wasp's nest was found in a talipot tree, near Colombo, in Ceylon. Its apex was secured at the junction of two of the smallest leaves of this magnificent tree, and the bottom of the nest was seventy feet from the ground, at which elevation the leaves began to shoot. It had been abandoned by the wasps, and its exterior wall much injured by the monsoon rains and storms which left the terraces unprotected and unsupported,

except by their interior pillars, and the natives were, in consequence, unable to lower it from such a height without destroying some of the lower terraces. The appearance of the nest, as it hung upwards of seventy feet from the ground, the shaft to it perfectly bare, and the larger leaves (used by the natives as umbrellas and tents) waving over it, presented a very singular appearance.

MEDICAL SOCIETY OF LONDON.

YESTERDAY week, the sixty-sixth anniversary of the Medical Society of London was observed at the London Coffee House, Mr. T. E. Bryant, President, in the chair. Previous to the dinner, Mr. Pilcher delivered the annual oration, taking for his subject the atmosphere and its influences on the human frame, which he handled in a very able manner, and was much applauded by the auditory, including a number of medical practitioners and students, at his conclusion. The dinner which followed was an exceedingly pleasant one; and the president and various officers addressed the meeting with the usual toasts and others, on announcing which the state and objects of the Society were explained. Among other matters, the extent of its ample and curious library was mentioned; and it was described to be very rich, not only in the medical, but the general literature of the last century, and also in manuscripts. Some of our readers are aware that it is from a collection of the latter, consisting of many volumes of memoranda kept by Dr. Ward, of Stratford-upon-Avon, about fifty years after the death of Shakspeare, that Dr. Severn (the registrar) has made the selections about to be published, and containing the remarkable notices of the bard to which we have alluded in former *Literary Gossies*. The medical value of this old-established School was also acknowledged and dwelt upon; and, till half-past eleven, the social enjoyments of the meeting kept up by some pleasant amateur singing, by humorous songs of Mr. Hudson, and by comic glees admirably sung and performed by Messrs. Mathews, Baillie, and James.

THE BRITISH ASSOCIATION.

THE first meeting of the general committee at Birmingham, is appointed for Saturday, August 25th; and the proceedings of the Association (of course) commence on the following Monday, the 27th. We are sorry to hear that the geological section object to the time as inconvenient, and intimate that if not fixed hereafter, either earlier or later in the season, it will probably lead to their absence from the meetings. On the other hand, the period was much discussed both at Liverpool and Newcastle, and strong reasons were adduced for adhering to a date which would suit the convenience of foreign professors, and of many persons at home, who were engaged in the instruction of youth and other professional duties connected with learned and scientific institutions. Birmingham, it is expected, will be very numerously attended; and the proposal for adding an agricultural section will, no doubt, be brought tangibly forward.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, March 7.—The following degrees were conferred.

Bachelor in Divinity.—Rev. T. H. Hawes, Chaplain of New College.

Master of Arts.—Rev. W. Scott, Queen's College.

Bachelors of Arts.—A. R. Denison, Grand Comptroller, C. O. Kemyon, Christ Church; T. C. Powell, Brasenose College; H. E. Adair, St. John's College; A. M. C. Stapleton, University College; R. H. Whiteway, Worcester College.

ROYAL ASIATIC SOCIETY.

MARCH 24.—Professor Wilson in the chair.—The secretary read an interesting paper by Dr. Lhotsky, relative to the discovery of an ancient town in Assam, one of the Caroline Islands, in 11° north latitude. He observed that he had before printed a small account of this discovery at Sydney, in New South Wales; but he had reason to suppose that no copy of the pamphlet had reached this country. The island had been recently discovered by H.M.S. Raven. Some time after the discovery, a gentleman proceeded thither, and resided some months. This gentleman reports that at a place on the island, called Tamen, the ruins of an extensive town are visible, now accessible only by boats, the water coming up to the steps of the houses. The stones are laid artificially, but without cement; and some of them are twenty feet in length. They appear, from description, to be of the well-known Cyclopean structure. The walls have doors and windows; and they are built of a stone that appeared to the reporter unlike that of the neighbourhood. The habits of the people of the island are different from those of the other South Sea Islands. The social system there appears to be more developed; the women are upon a more equal footing with the men; and many of their customs are more like those of Europeans than have been observed elsewhere in the Pacific. They attribute the founding of these ruins to persons departed; but whether of their own, or a different race, it does not appear. Dr. Lhotsky, since his arrival in England, has received a letter from Sydney, by which he learns that Assam has again been visited by the captain of a whaler, who is on his way to this country with a number of maps and sketches; and who is said to report that the islands about that part of the ocean are covered with ruins. — A paper by Mr. F. C. Brown was read. Adverting to the recent success in the cultivation of tea in Upper Assam, Mr. Brown stated that he had seen the tea-plant flourishing in the district of Wynad, on the Western Ghats of the Peninsula of India. In February 1834, the late Colonel Crewe, who commanded in the Neigherries, gave two out of six plants which had been sent him from China to Captain F. Milnechin, who resided with his family for some time at Monantoddy, the chief place of the Wynad district. Here the two plants, though the smallest and unhealthy, in a week or two began to improve; and, during the rains (or in June, July, August, and September), fresh shoots were produced; and they became most healthy plants. Next year they became fine and bushy, and came out in full bloom in June 1835, on the setting-in of the rains. The tea-plants completely failed in the Neigherries. Mr. Brown further states that Captain Evans took a cutting from one of the original plants, and that it thrived equally well at Monantoddy; and he hence infers the suitability of the soil and climate of the Wynad district for the cultivation of tea, as well as a great portion of the tract of country in South-Western India ceded by Tippecoo Sultan, having as fertile a soil, about the same elevation, and enjoying a similar climate, with the same medium temperature. — A letter was then read from Mr. G. Prinsep to Dr. Royle, announcing the arrival in Calcutta of the Cochineal Insect, and the true Cactus plant, which had been sent out last year in charge of Mr. H. Bernhard, to whom the Agricultural Society of India had voted the silver medal. — Dr. Royle then read a paper 'On the *Valeris Indica*, or the Varnish-Tree Vegetable Tallow Tree of the Malabar and

Canara Coast,' specimens of the production of which had been presented by Col. Sykes. The tree has been figured and described by Rheede; and is found in the Wynad and Bednore districts. Mr. S. Dyer stated, in a letter to Dr. Royle, that he knew it grew abundantly, both in the interior and along the coasts. It was called the Piney or Dammer tree; and attains a great size. Its varnish is used on the coast in a liquid state; but when dry, is known in commerce as copal and anima. The tallow is obtained by boiling the seeds in water, when the fatty matter floats at the surface, and becomes of solid consistence, and free from smell. An excellent account of this substance was given by Dr. Babington, in the Journal of the Royal Institution for 1835; which mentions that it sold at Mangalore for 2½d. per lb., and that about 8 cwt. was obtained in about three months. Dr. Royle stated that he had been long desirous of having the vegetable oils of India examined, as they were both abundant there, and in great demand here. Castor-oil and cocoa-nut-oil had been for some time extensive articles of commerce. Linseed and rapeseed had lately become so; but there were many others equally suitable, as is evident from the analyses lately read by Mr. E. Solly; besides some solid, fatty substances like this vegetable tallow, which would be desirable both for medicinal use, as well as substitutes for animal tallow. This also, however, had been brought from India in January 1838, and sold for 44s. 6d. per cwt., approaching the price given for good Russian tallow. — A letter was then read from Mr. S. Dyer, of the Madras Medical Service, who had long resided at Tellicherry, and was well acquainted with the piney varnish-tree, which he states will grow readily, even when the branches are put into the ground. Many of the trees were planted along the road-side in Malabar, about twenty years ago, which is more than is required to bring the tree to perfection. — Mr. E. Solly read a short account of the chemical properties of the vegetable tallow of the piney tree: he described it as being, in its most important characters, something between wax and tallow, and well adapted by its properties as a substitute for animal tallow, both in the manufacture of candles, and likewise for many other purposes to which that substance is at present exclusively applied. One great advantage which the piney tallow possessed over common tallow consisted in the absence of any disagreeable smell, either at common temperatures or when burning; and, consequently, when candles made of it were extinguished, they did not emit the highly offensive smell which is always perceived with candles made of animal tallow. In confirmation of its applicability to candle making, he stated, that Dr. Babington had placed a portion of it in the hands of a practical candle-maker who had given a most satisfactory report; he having succeeded in making good candles of it, which came freely from the mould. Mr. Solly thought, that if it could be obtained at such a price as to admit of its being imported as a substitute for tallow, its important and valuable properties would soon secure a market for it.

ROYAL SOCIETY.

MR. LUBBOCK in the chair.—Read, the conclusion of Mr. Reid's paper, detailing experiments he had made in reference to the presence of alkaline and earthy matter in plants. A communication from Sir John Herschel, 'On Photographic Drawings,' was likewise read. The object of the experiments mentioned in this

paper is similar to that sought by Mr. Talbot, fully noticed in late numbers of the *Literary Gazette*. The paper referred to a great number of drawings, without which, we are afraid, no satisfactory notice of it can be given beyond what we have already laid before our readers. The specimens produced were exceedingly beautiful; it appears that great care is necessary to produce the sharp and delicate lines shown in the steel engraving. Sir John entered philosophically into the question of the lines, the radiation of lights, and other theories illustrating his principles on these subjects, as connected with this new art.

ROYAL SOCIETY OF LITERATURE.

ON Thursday, Mr. Hallam in the chair.—After the routine business the secretary read an episode on the subject of our early Saxon literature, by Mr. Thomas Wright, and intended to form part of the preface to the first volume of the *Biographia Literaria Britannica*, in the course of preparation under the auspices of the Society. We trust to be able to give a more detailed account of this paper, which was listened to with great interest, and much commended by the members present, including several gentlemen of high distinction in the literary world.

Literary Fund. — At the meeting on Wednesday, the Marquess of Northampton was elected a vice-president, in the room of the late Lord Carrington; and Messrs. Charles Dickens and John Bruce into the general committee, in the room of Henry Bransworth, Esq., and J. B. Tennant, Esq. M.P., whose places became vacant in consequence of not having attended a sufficient number of times within the last year. Mr. Blewitt was elected secretary, per the Rev. W. Landon, who has resigned. At the club dinner which followed, Mr. Frederick Salmon, who was in the chair, announced a bequest to the Fund of ONE THOUSAND POUNDS from a friend of his, to whom he had recommended the interests of this most benevolent and valuable Institution. This will make a figure at the ensuing anniversary (the *54th*), at which, we rejoice to learn, H.R.H. the Duke of Cambridge has consented to preside; the President, the Marquess of Lansdowne, having declined the office for a second year.

SOCIETY OF ANTIQUARIES.

MR. HUDSON GURNEY, M.P., in the chair.—A further portion was read of Mr. Bruce's memoir on the proceedings of the privy council, temp. Edward VI., shewing their interference with the decisions and practice of the courts of justice, both civil and criminal, the election of members of parliament, and, in fact, in every department of the state and of society. The remainder was postponed.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Statistical, 8 p.m.; British Architects, 8 p.m.; United Service Institution, 9 p.m.
Tuesday.—Linnæan, 8 p.m.; Horticultural, 3 p.m.; Civil Engineers, 8 p.m.; Electrical, 7 p.m.
Wednesday.—Society of Arts, 7½ p.m.
Thursday.—Royal Society, 8½ p.m.; Antiquaries, 8 p.m.
Friday.—Royal Institution, 8 p.m.
Saturday.—Guy's Hospital, 8 p.m.

FINE ARTS.
GRAPHIC SOCIETY.

THE third meeting this session was as fully attended last Wednesday as the former two; and the spirit of the members and visitors was as fully shown in the beautiful contributions of drawings, engravings, and models. There was

a folio of American scenes, not very interesting, but oddly enough overwritten—the time of day and effect intended. This ill-timed announcement was oftener wrong than right. Yet some of them were true to the record. Mr. Lake Price had a folio of very fine studies of old continental buildings and interiors. Mr. Fielding, Gustaveau Fewler, and others, placed numerous folios on the tables. And there was a drawing by Derby, copied from a picture, "Crossing the Brook," by Calcott, for "Fiddlers' National Gallery," that we think was one of the finest specimens of water-colour drawing ever exhibited. But the great attraction was the specimens of Neipe's Heliography, which Mr. Bener had kindly lent to be shown at the Graphic. They were the productions, in designs and impressions, to which we fully adverted in our *Gazette* of last week. They were examined with great interest by a class of observers the most competent to judge, and the most interested in the discovery.

Being upon the subject of the *New Art*, we may mention that we have heard from a friend of high taste and judgment, just returned from Paris, that Daguerre's specimens are very effective representations of external objects to the utmost minutia, and apparently executed on metal. He is exceedingly enraged with Mr. Talbot and the *Literary Gazette*, for having brought forward other claims to the discovery; as if the truth did not spit his views as well as his pictures. And we believe that Biot, Arago, and others of his friends, do not approve of his application to the government, which our statements have so weakened. At present, however, he is to be pitied, if not injured; for the following, from the "*Quotidienne*," will show that his Diorama has been destroyed.

"The Diorama is gone. About half-past 12 o'clock this morning (March 8th) cries of 'fire' were heard on the Boulevard Saint Martin. M. Daguerre's extensive establishment was discovered to be on fire, and the flames had already burst through the five windows facing the water. Half an hour afterwards, the building fell with a crash. The cause of this disaster is, as yet, unknown. By some persons it is attributed to the displacing of one of the lamps used to produce the effects of light, which might have set fire to one of the paintings exhibited to the public. Notwithstanding the prompt aid afforded by the firemen, by detachments of the municipal and national guards, by the sweeps of the line, and every one who was near the spot, the progress of the flames was so rapid, in consequence of the combustible nature of the materials in the building, that the edifice was entirely destroyed. The wind directed the flames towards the Faubourg du Temple and la petite Rue des Marais. Two houses situated on this side, one of which, six stories high, was surmounted by an elegant cornice, took fire during the early attempts to afford relief, which were directed principally to the more immediate cause of the accident. About two o'clock, the fire, which was only perceptible in parts of the two threatened houses, burst out of the roof of one of them, and a fresh white smoke was mingled with the enormous greyish clouds which were then rising over the ruins of the Diorama alone. The blaze was, however, at length overcome. A very important manufactory, situated a few feet from the building on fire, was the only one which sustained serious injury. A hangard* belonging to this establishment was crushed.

* A hangard is, we believe, the movable wooden apparatus by which a crane is suspended.—Ed. L. G.

This was the only mishap which resulted from the burning of the Diorama; M. Daguerre's chambers, in the Rue des Marais, were almost entirely destroyed. A part of his movables were, however, saved from the ruins. The paintings, which were being exhibited, were the Sermon, the Temple of Solomon, and the *iboulement* of the valley of Goldau. They are now lost, as well as a new picture which was just finished, and on the point of being opened for exhibition. It would be difficult to estimate the damage sustained by M. Daguerre, but all the friends of the arts deplore the misfortune of an artist so worthy of interest, and to whose name is attached one of the most ingenious discoveries in modern art. No one was killed, and only two persons wounded; one, a corporal in the sappers and miners, whose leg was fractured, and a carter."

THE LARGE VICTORIA MEDAL.

Modelled and engraved by Benedetto Pistrucci; published by Russell, Bridge, and Co.

A WARRIOR who has fought a hundred sanguinary battles, a statesman who has conducted a hundred difficult negotiations, a philosopher who has meditated on a hundred perplexing problems,—these, and such as these, with their bald heads, their prominent features, and the deep lines, or rather (as Foote said of Macklin) *cordage* of their faces, are the best subjects for the medallist art. It seems impossible that bronze, however skillfully treated, can be rendered a fit material for representing a youthful and delicate female countenance. No doubt for the purpose of obviating this imperfection in the present instance, and of imparting softness to the flesh by contrast, the artist has given to the hair a hard and harsh character. To a certain extent this has accomplished the desired object; but we much doubt whether the advantage thereby gained is not more than counterbalanced by the loss of breadth and unity of execution and effect in the different parts of the work. However, notwithstanding these, and other minor criticisms to which it may perhaps be liable, this is, upon the whole, a bold, spirited, and noble production, and does Signor Pistrucci high honour.

CABINET SHAKSPEARE GALLERY.

WE have been favoured with a sight of this unique collection by the artist, Mr. Henry Singleton, long and well known for his numerous and varied compositions on subjects historical and imaginative. The present series contains ninety-three illustrations of the plays of our immortal bard. The character of Mr. Singleton's talents is familiar to the public, for we scarcely remember an exhibition,—certainly none of late years,—in which his works have not appeared; and in all the excellence of his adroit pencil, his tasteful display of grouping and composition have been justly admired. Our Shakspeare Galleries have in some instances been strangely anomalous; none more so than that of Alderman Boydell, in which neither selection nor application of talent for the task appear to have been thought of. In such men as Stothard and Smirke, fertility of imagination and power of execution could at that time have been found competent to such an undertaking; but it could not be expected that the portrait, or the portrait painter, exclusively each, should by any chance succeed. Under these circumstances, we think the talents of Mr. Singleton have been judiciously and successfully employed. Ten years of his life have thus been spent, not in task work, but in the pleasures of composition, than which we know of no occupation

more delightful; for with the true artist such works are, indeed, a labour of love.

NEW PUBLICATIONS.

The Art of Painting in Oil and in Fresco; being a History of the various Processes and Materials employed, from its Discovery, by Hubert and John Van Eyck, to the present time. Translated from the original French Treatise of M. J. F. L. Mémée, Secretary to the Royal Academy of Fine Arts, in Paris. With Original Observations on the Rise and Progress of British Art, the French and English Chromatic Scales, and Theories of Colouring. By W. B. Saunders Taylor. 12mo. pp. 371. London, 1839. Whittaker and Co.

ABOUT seven or eight years ago (which, we presume, was soon after its publication), we read M. Mémée's work; and we remember wishing that some one sufficiently conversant with the subject would, by translation, render it accessible to English artists generally. Mr. Taylor has performed this somewhat difficult task, and (although there are a few little inaccuracies and obscurities of expression, which no doubt will disappear in a second edition) has performed it in a manner highly creditable to him. There are some persons who affect to consider technical details in the arts unworthy of attention. We are far from being of that opinion. The mere execution of a picture can be rendered at once easy and effective, the more the painter left at liberty, and with leisure, to devote himself to those intellectual considerations which we admit are of the highest, although not of exclusive, importance. We confess—although we whisper this opinion to our readers, and entreat they will keep it a secret—we never yet have been able to understand why the colouring of a Titian should be injurious to the design of a Michael Angelo. Are meagreness, coldness, crudeness, and opacity essential to the sublime? Is the mind gratified in proportion as the eye is disgusted? Is not beauty of tint almost as fascinating as beauty of form? "And if not," as the equity lawyers say, "why not?" To the attainment of all that relates to the qualities, the value—the subordinate value, but still the value—of which we have been asserting, the volume under our notice must greatly contribute. It does not teach architecture, but it teaches masonry, without which the architect's genius would but moderately avail him. Besides the inquiry into the various methods employed in oil-painting since the days of Hubert Van Eyck (in the course of which M. Mémée expresses his decided opinion that the Venetian and other great colourists used varnish in their colours), it contains dissertations on the various kinds of varnishes and oils, and the modes of making tints; on the preparation of colours; on the priming of panels, canvases, and walls; on the preservation of pictures, and the methods used in restoring them; on the principles of harmony in colouring; on fresco painting, &c. &c. There is a supplement, consisting of original matter, principally observations on the English school of painting, in which Mr. Taylor ably vindicates the merits of that school, shews that it has not existed during a long period than seventy years, and justly remarks: "It will readily be conceded by all persons who are well acquainted with the history of the art and progress of the various schools of painting on the Continent, that seventy years is a very limited period, indeed, to allow for the growth of a school of arts in any country, even in the states where both the government and the people

have been highly partial and encouraging to the development of native talents." The italics are ours.

Desirous to give the general reader "a taste of M. Mérimée's quality," we pass by that which would be unintelligible to him, and subjoin an extract from the "Theory of Colouring."

"Chiaro scuro exists independently of colour, but as it always accompanies it in nature, and as coloured objects are always subject to a lowering of the light, its effects, therefore, are so combined with those of colour, that they appear to justify, to a certain point, the idea of their inseparable nature; in fact, a familiar expression in the arts, when examining an engraving or an original design, is 'that reminds us of colour.' It is, therefore, an art to design or compose in such a manner as to give them full value to objects, by well-managed opposition; and that art distinguishes the colourists still more than the correctness of their tints. This is the reason why Raphael is never cited as an authority in colouring; although we find in several of his pictures tints and colouring as true as the art can produce. The pictures of Caravaggio and Guernichino often display charming tints in the lighter parts, but the colour of the flesh is unnatural, from the too great strength of the shadows. It is true that this extreme force contributes much to the grand effects which they generally display; but that vigorous executive power would have been much more agreeable, if bestowed upon objects capable of supporting it. To this mode of managing chiaro scuro we shall oppose that system adopted by the colourists. We see with what discernment they have placed the strong shadows; they evidently were not ignorant that clearness and brilliancy cannot be obtained without the vigour of strong opposition; but they had the judgment and skill so to dispose the chiaro scuro, that its power was never carried over the interesting parts of the picture, because it would have deteriorated the purity of the colouring. In fact, let us suppose that the figure of a woman has been painted in shadow, upon a bright ground, it is evident that though she might be of the most dazzling brightness of colour, yet that the brilliancy of the flesh tints would disappear so completely, that she would not be of a higher tone than a negress; but change the opposition, and in place of a light ground substitute a dark one; and, further, let the figure have its proper reflections. Then we shall find that, although it is in shadow, the carnations will not appear at all debased in tone. Titian has painted a great number of pictures, in which it appears that he intended principally to display one of the qualities of female beauty, that is, the brilliancy and richness of the flesh tints; it is worthy of remark, that, to obtain his object, he made use of light and shade in opposition; in fact, it did not signify to him that the skin was of a brilliant light tone; he would also express, that the circulation of the blood was in full activity, as the poets never fail to mingle the carnations of the rose with the snowy whiteness of the lily. The opposition of a powerful back-ground becomes quite essential to throw forward the brightness of the skin; and then the opposition of white draperies is brought in, and agreeably arranged to bring out the warm tones of the flesh. Paul Veronese does not seem to have had, at least in the greater number of his pictures, any intention of giving particular brightness to his flesh tints; he seems only to have aimed at giving the effect that was most usually presented to his observation, in which the objects

detached themselves boldly from the background by their local colour; and this is, in fact, one of the most powerful methods of separating the objects from the back-ground of the picture. At the first view, we do not perceive that this painter has employed any artifice in the arrangement of his colours, and we are tempted to believe, that he placed them as they presented themselves to his imagination; but upon a closer observation, we plainly perceive that he has not left anything to chance. For example, in one of his finest works (the Marriage at Cana), the greatest number of the persons present, and especially those placed at the sides of the table in perspective, are detached from each other, alternating and opposing a strong coloured drapery to a light one, the latter being again opposed by one of a darker tone. Rubens, who was born under a sky less ardent, in a country where brilliant flesh tints are by no means uncommon, was not slow in adopting Paul Veronese's system of effect; his object was to arrange the most brilliant colours together harmoniously, and he succeeded in so doing: but probably, being struck with the changes of tone that many of Titian's pictures had even then undergone, he thought it advisable to exaggerate the brightness of the carnation tints, in the hope that time would soften them down to the true tone of nature. No one understood better than Rubens the principle of unity ascribed to Titian, of considering the whole subject of his composition as a bunch of grapes; his most powerful shadows, his principal lights are never in detached parts, but are constantly united in those situations which are best adapted for giving to his groups a grand relief, and much of it flashing out upon the details of the work. In his pictures, the various parts of which they are composed, as well as the arrangement of the chiaro scuro, are more systematically contrived than those of Paul Veronese; the artifice may be more easily discovered, but still we do not the less admire them, when we call to mind that it was by these means the artist had arrived with greater certainty at the end he proposed to attain."

The Royal Academy have given this volume their sanction, by permitting Mr. Taylor to dedicate it to them. Recommended by such high authority, and still more by its intrinsic value, it must speedily be in the hands of every artist and amateur in the kingdom.

Dramatic Sketches. By R. J. Lane, A.R.A. No. IV. Mitchell.

SOME time ago we noticed Parts V. and VI. (published together) of this clever and interesting work; but Part IV. has, to us at least, only just made its appearance. It contains portraits of Mr. Warde, as "Cassius;" Mr. Cooper, as "Marc Anthony;" Madame Vestris, as "Lucy Morton;" and Mr. Charles Mathews, as "Captain Patter." We do not think the resemblances of the gentlemen (especially that of Mr. Cooper) very striking; but there is a truth and a beauty in the drawing of Madame that is quite charming. When we look at it, we agree with "The Times," that the box affair must have been a hoax; for, surely, ruffianism itself could not contemplate injury to so lovely a face.

ORIGINAL POETRY. THE CHILDLESS WIDOW.

By J. W. Laka.

My own sweet child! my own sweet child!
I never more shall see
That eye of innocence, so mild,
Look up in love to me!

Thou wert my pretty bird of joy,
The linnet of my breast,
Whose silver tongue so sweetly sung
Thy mother's cares to rest.

My own sweet child! my own sweet child!
I saw the worm of death
Coil clammy round thy pallid brow;—
I drank thy dying breath!
My boy of hope, my bird of spring!
To Heaven thou hast flown,
With angels thy sweet notes to sing;—
My beautiful! my own!

Champerret, Banlieue de Paris, February 183d.

YOUTH: AGE.

How sadly changed seems ev'ry scene
Since my young boyhood's days!
The fields were surely then more green—
Birds carolled sweeter lays.

The glorious sun more brightly shone,
In azure skies more clear;
Fair faces then wore sweeter smiles,
And friends were more sincere.

And Love, who then but warm'd the heart
With pure and generous flame,
Now wields a mercenary dart,
Or else is but a name.

Or is it but the sombre brush
Of querulous Old Age
Has tinted, with a gloomier touch,
Life's earlier, brighter page?

Ah! perchance 'tis I, poor wight,
Am changed by time and wo;
And Youth still views life's picture bright,
As I did long ago.

Ah! then, to rosy wine I'll fly,
To dissipate this spleen:—
Fill, fill the sparkling goblet high,
Till brighter tints be seen.

H.

THE DRAMA.

Her Majesty's Theatre opened on Saturday, and never, perhaps, in a more inefficient manner. There were two female *débütantes*, a Madame Monnani and Madame Croft, the latter of whom could not sing in tune; and the former, though in a pleasing enough style for a drawing-room, wholly unfit for the Opera House. Tati, never a favourite on these boards, was violently hissed. F. Lablache was the only performer who deserved "a hand;" and the whole thing was a disgrace to the establishment and an insult to the public. The ballet of *Robert le Diable* is got up in a splendid manner, and when it is made to go easy, without stoppages and impediments, will, we think, be a favourite. There was an hour between the anthem and the ballet, and other pauses between the acts, &c. in proportion!

The Haymarket opens on Monday with the *Love Chase*, a new piece, and a popular farce.

St. James's Theatre.—On Monday, *First Champagne*, an exuberantly clever and laughable farce, was produced here from the pen of Mr. L. Rede. It had been previously acted, we believe, two or three times at the Strand Theatre, some years since, just before its close; and was certainly well worth being remembered for resuscitation. Wrench has a part which fits him to a T, and when he has, players will know how entertaining he can make it. Mr. Hughes is also very amusing; and, indeed, the piece is well acted throughout, and is altogether one of those lively things which drive dull care away, and are, therefore, so acceptable to the seekers of dramatic recreation.

VARIETIES.

Artificial Flowers.—At a late meeting of the Horticultural Society were exhibited a rose-tree and some other specimens of artificial flowers, made by Mrs. Randolph, the wife of a respectable surgeon in Bridge Street, Westminster; and we have since examined these and other similar copies after nature at the residence of the ingenious artist. The flowers are entirely composed of the feathers of various birds, from the common goose to the humming-bird and parrot. With these the blossoms, the bud, and the leaf, are so perfectly imitated, that you cannot distinguish the artificial from the real rose, jasmine, wallflower, pink, camelia, or whatever else it may be; and as no dye or colouring matter is used, but simply the feathers, occasionally clipped into the necessary forms and moulded into shape by the hand, it is evident that even the most delicate of them must be of a lasting and unalterable quality. In this way examples of the rarest floral productions may be made and preserved in cabinets of natural history; and, we presume, a hardly less agreeable, though not quite so philosophical a use may be made of the art by our fair countrywomen in adorning themselves for the party or ball-room. At all events we can commend the invention and its accurate and beautiful application as a novelty in this country, and well deserving of notice.

Caricatures, 578, 9, and 80.—H. B. generally comes forth in triplets. The first of these is a triangular duel (see Capt. Marryat's "Midshipman Easy"), in which Lord Durham is receiving the fire of Lord Melbourne on the one side and Lord Brougham on the other. The attitudes are comical, and a hit on the hip is evident from the premier's pistol. The next is "a Council of War." A plan of attack on the Irish church is upon the table. Lord Morpeth, as Secretary, taking notes, and O'Connell pointing out to Lord Fortescue, with a look of extreme wrath, the most vulnerable points. Lord Normanby is in the back-ground. The last represents "Jack Frost," the Welsh magistrate, vaulting upon the shoulders of Lord John Russell, and holding on by his hair. Mr. Fox Maule is in the utmost dismay at the treatment of his chief, who does not himself seem to relish his position at all.

Blagrove's Quartett Concerts.—The third of these, on Thursday, the 7th, was very fully attended, and well worthy of that attendance. The whole selection, from Haydn, Rossini, Mozart, Beethoven, Hummel, Kaller, and Spohr, was excellently performed, and received with great applause.

Gaspard Hauser.—Another publication respecting this mysterious person is spoken of in Germany; in which the writer, the Countess of Albertsdorf (late Miss Graham), promises to furnish some clue towards tracing his persecutors and murderers.

Statistics of Suicide.—By the official returns in France, we are informed that in 1836, 2340 individuals committed suicide, being nearly seven per day, and thirty-five more than in 1835. Of these, 1775 were men, and 565 females. The department of the Seine (Paris and its suburbs) furnished alone more than a sixth of the whole number—425. 11 of those suicides were under 16 years of age, 156 were septuagenarians, and 37 were above 80 years of age. Of the whole number, 789 drowned themselves; 672 hanged or strangled themselves; 478 killed themselves with fire-arms; 156 by suffocation with charcoal; 87 put an end to their existence with cutting instruments; 47 took poison; 94 threw themselves from elevated

places, and 17 had recourse to other means of destruction." [From this statement, we think we may infer that a great number of suicides by poison have never been revealed or discovered; for it is not likely that the easiest and readiest way should have proportionably so few votaries.—Ed. L. G.]

Turkish Improvements.—The establishment of the Academy of Medicine at Galata-Seral (Constantinople) was inaugurated on the 12th ultimo, with a grand banquet, attended by the great dignitaries of the empire. The sultan had announced his intention to be present, but having inspected the arsenal and the new marine school on the same day, he postponed for a week his visit to the academy, in which he takes a lively interest.

Longevity.—The Vienna newspapers mention the death, at Zaránd in Transylvania, of Juon Graza at the great age of 120 years, but who seemed likely to live for many more years, had he not been killed by an accidental fall. He has left a son, another Juon Graza, aged 100, and a grandson of 80, who for fifty years has been a seigniorial judge. Centenaries are said not to be at all rare in Transylvania.

An extraordinary proof of the force exerted by the wind, during the hurricane of April 8th, 1838, in a lateral direction, was evinced in the projection of a slight bamboo, horizontally, through one of the raised tiled walks in Mr. G. Prinsep's salt-works, which pierced through the whole breadth, breaking the tiles on both sides. It has been cut off and preserved *in situ* as a monument of the storm. A 6-pounder could hardly have forced so light an arrow through a mass of earth five feet thick. The ball-stones were as large as walnuts, and one piece of ice fell which weighed 3½ lbs.—*Asiatic Journal*.

Capt. Drummond and an experienced miner have been deputed to the district in the Himalaya (the immediate range between the Dhaul and the Gori), where silver is said to exist, to ascertain the fact.—*Ibid*.

England's Transmarine Possessions are thus stated by Mr. Montgomery Martin:—The colonies of the British empire have an area of 2,200,000 square miles, and a sea coast of 20,000 nautical miles. Population, 105,000,000, with an average of 50 mouths to the square mile. Of Lutherans and Calvinists, there are 800,000; of Dissenters, 700,000; of Mahomedans, 26,000,000; of Hindoos, &c. 75,000,000. The military strength employed is, 56,000 European regulars, 156,000 colonial (coloured) regulars, and 250,000 colonial militia (whites). The colonial revenues amount to 23,000,000£ sterling. The civil and convict expenses defrayed by Great Britain, to 225,000£; the military, ditto, to 1,800,000£; and the total expenditure of the colonies is, therefore, 25,000,000£ sterling, per annum. The taxation averages 4s. 6d. per head. The metallic money circulating in the colonies is about 5,000,000£, and the paper money about 3,000,000£ sterling. Maritime commerce of the colonies: exports, 30,000,000£; imports, 25,000,000£. To Great Britain, exports to 15,000,000£; imports, from 10,000,000£. Total shipping annually, in and out, of colonial ports:—tons, 8,000,000; of which there are to and from Great Britain, tons, 3,000,000. Vessels built in the colonies from 1814 to 1837, No. 8975; tonnage, 1,022,937. The property annually created in the colonies is estimated at 400,000,000£ sterling, and the value of the property, movable and immovable, in the transmarine possessions of the empire, in land, houses, stock, &c., at 2,500,000,000£ sterling.

A cold Pun.—In the snowy weather, last week, Sir — met Mrs. — rather

sprinkled with the fleecy fall, and said, "Why do you wear your sable bon on a day like this?" "Because, my dear sir (replied the lady), I do not like my chin chilly."

A telling Pun.—Richmond bridge is now opened free every day except Sunday to foot-passengers. "I wonder (said X., meeting H. in the Strand) if one can also cross Waterloo bridge without paying?" "Go and ask (answered H.), and you'll be told!"

Pun Political.—When Dan crossed last from Dublin, the sea was very rough and the great Precursor exceedingly discomposed. "How are you, my man?" said Mr. M. of Liverpool, bending kindly over him. "Infernal sick," sighed Dan. "Well, then (rejoined M.), I hope this will convince you how little good and how much ill comes of agitation!"

Anonymous.

One bright morning as he lay,
On his mother's lap divine,
Little Love at dice did play!
The stake—this foolish heart of mine.
We is me! for to my cost,
I know the little urchin lost.

LITERARY NOVELTIES.

In the Press.

The Voyage and Travels of Sir John Mandeville, which treateth of the way to Hierusalem and the Marvayles of Inde, with other Islands and Countreys, new edit. with numerous Facsimiles of the rude Woodcuts from various early editions, and Frontispiece, Vignette, &c., from the Harlan MS. A Volume of Sermons for Children on the Book of Genesis, by W. Wilson, B.D. Vicar of Waltham.—A new poetical Translation of Goethe's Faust, by J. Birch, Esq. with Retzsch's Twenty-nine Illustrations, engraved on steel.

Illustrations of Science, by Professors of King's College, London, in a series of Works forming a course of instruction in Natural Philosophy and Natural History, are announced by Messrs. Longman and Co. Among these are (during the present year)—Illustrations of Mechanics, by the Rev. Professor H. Moseley; Illustrations of Zoology, by Professor Thomas Bell; and, Illustrations of Experimental Philosophy, by Professor C. Wheatstone. Next year—Illustrations of Natural Products useful in the Arts and Manufactures, by Dr. and Professor J. F. Royle; Illustrations of Animal Physiology, by Dr. and Professor R. B. Todd; Illustrations of Experimental Philosophy, by Professor Wheatstone; Illustrations of Hydrostatics and Hydrodynamics, by Professor Moseley; and Illustrations of Botany and Vegetable Physiology, Astronomy, Physical Geography, &c., by other Professors, in succession.

Mr. C. W. Day, the author of "Hints on Etiquette," has, we are informed, been travelling for nearly two years, through Greece, Egypt, and Italy, residing a considerable time at Athens, and also at Cairo, and is now at Rome, employed in preparing for the press an account of his travels. We shall accordingly see the author's *Itinerary* in his new character. And as he is an excellent artist, and has made numerous sketches, we doubt not his work will possess the double attractions of clever embellishments and an agreeable style.

LIST OF NEW BOOKS.

Trials of the Heart, by Mrs. Bray, author of "Warleigh," &c. &c. 3 vols. post 8vo. 31s. 6d.—Select British Biography, by S. Maunders, Esq., 4s.—Introduction to Plane and Spherical Trigonometry, by T. Keith, 7th edit. corrected and improved, by S. Maynard, 8vo. 14s.—The Oxford University Calendar, 1839, 12mo. 6s.—View of the Coinage of Ireland, by J. Lindsay, 4to. with Engravings, 11s.—England and its People, 18mo. 5s.—Letters of Mrs. Isabella Graham, by the Rev. J. Marshall, 12mo. 5s.—Geometrical Theorems, by W. Wallace, 8vo. 6s.—The Philosophy or Mechanism of Blushing, by T. H. Burgess, M.D. 8vo. 6s.—Sermons for Children on the Book of Genesis, by W. Wilson, 18mo. 3s.—Sermons preached at Chester, by C. B. Taylor, post 8vo. 3s.—Cox on the Second Advent, 3d edit. 15mo. 3s. 6d.—Diary of an American Physician, 32mo. 2s.—Lectures on Astronomy, by the Rev. H. Moseley, M.A. post 8vo. 5s. 6d.—Plauti Aulularia, with Notes, &c. by J. Hildyard, 8vo. 7s. 6d.—S. Earnshaw's Dynamics, 2d edit. 8vo. 14s.—Memoir of E. F. Brady, 12mo. 2s. 6d.—Philosophy in Sport, 4th edit. 12mo. 10s. 6d.—Extracts for Schools and Families, 12mo. 4s.—The Bible, with Commentary and Notes, by Scott, new edit. 6 vols. 4to. 6s. 6d.—Practical Treatise on the Culture of the Melon, by J. Duncan, post 8vo. 5s.—Eli's Essay, First and Second Series, post 8vo. 6s. each.—Lamb's Rosamond Gray, new edit. post 8vo. 6s.—Flood's Surgical Anatomy of the Arteries, 12mo. 7s.—The Test of Prophecy, by D. Davidson, 18mo. 2s. 6d.—First Book of Modern Geography, by the Rev. A. Stewart, fcap. 1s.—Pocket Biblical Dictionary, by D. Davidson, 24mo. 4s. 6d.—New Aid to Memory, by a Cambridge MA, post 8vo. 7s.

—Rev. W. Stone's Exposition of the Church Catechism, 12mo. 3s. — Jamaica Plantership, by B. M. Mahon, 12mo. 5s. — Quetelet's Calculation of Probabilities, with Notes, &c. by R. Beanish, 12mo. 4s. 6d. — Cicero's Opera Selecta, Edinburgh Academy, 18mo. 4s. 6d. — W. Jones on Diseases of Women, 8vo. 8s. — The Rights of Persons, according to the Text of Blackstone, to the present Time, by J. Stewart, 8vo. 11s. — The Child's Library; Philip Quarll, 2s. 6d.

Rain fallen, .025 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

[The Apocrypha. Having received the following from Mr. Lovett, we deem it due to him to give it insertion, though, perhaps, some of the explanations might have been couched in more courteous phraseology. As, however, our sole object is literary justice, we will not quarrel with the style of a defence upon so important a subject, and from a gentleman of such acknowledged talent and respectability.—*Ed. Lit. Gaz.*]

SIR,—The treatment which my work on the Apocalypse has received in your *Literary Gazette* has been of such a nature as to require me, in justice to my own reputation, to express myself, to all whose good opinion I value, in terms of strong animadversion; and I think it right to acquaint you with the topics which appear to me to require that animadversion; because, firstly, it is but just to afford you an opportunity of shewing that I have formed an erroneous view of the matter, if I have done so; and, secondly, because I will never, in the absence of any man, make animadversions on his conduct to me, without taking some convenient occasion to express them to himself.

And, sir, in order to prevent all possibility of mistake in the matter, I will begin by stating what I do not complain of. I do not complain of any injustice or severity of stricture on my work, for you have made none at all. I do not complain that you have seen in it nothing worthy of even the slightest commendation. I am willing to admit that if you had found in it any symptom of any qualification to excuse or palliate my "bold attempt to expound the mysteries of Revelation," you would have said so; that if in your opinion there was any indication that the "learning and zeal" which you are pleased to ascribe to my "endeavour to develop the portentous warnings of the Apocalypse" were directed by any quantity, however small, of ability, you would not have suppressed that opinion; and since you think that there is no trace of ability in any part of my work, I fully admit that you only fulfilled your judicial duty in letting your readers know, by your expressive silence, that such is my opinion.

Having stated what I do not complain of, I will now state what I do. I do complain that, professing not to give any opinion on the merits of my book, but to confine yourself to an account of its contents, you have published concerning them a tissue of gross and monstrous misrepresentations, every one of which is obviously calculated, by the ignorance or absurdity which it imputes to me, to degrade me in the estimation of all who may place any credit in your statements.

I now proceed to substantiate my complaint.

The fourth paragraph in your notice of my book is as follows:—"Alarmed, as it appears, from the growing 'spread' of the Romish faith, not only in this country, but throughout Europe, and by the Oxford schism in the Protestant Church, in all of which he believes it to be seen the fulfilment of the prophecies, Mr. Lovett contends that *Saint Gregory the Great*, as the founder of papal domination, and of her long train of innumerable corruptions and abominations, who is fondly and proudly," &c.

Sir, that paragraph contains almost as many gross misrepresentations as it does words, unalloyed with one word of fact.

1. My work contains not one syllable of allusion to any such growing "spread," although you carefully mark the latter word with commas, as if you were actually quoting it after me. I therefore could not express, and certainly never felt, alarm at any such "spread;" nor did I see, or say one word that authorises you to say that I believe, what I do not, and never did, that in it "is to be seen the fulfilment of the prophecies."

* Our estimable correspondent has, indeed, a right to put his own construction upon our language or our silence; but we may be allowed to observe, that in both we might more truly be believed simply to confess our own inability to grapple with such momentous questions, and within so small a compass as a very miscellaneous weekly sheet afforded.

2. My work contains not one word of, or allusion to, any "Oxford schism in the Protestant Church," wherein you are pleased to say that I also see an alarming fulfilment of prophecy.

Had I, indeed, written myself down such an ass as to believe that the Apocalypse contains a reference to any such stuff, or as representing myself alarmed at what I at the same time believed to be a fulfilment of prophecy—as alarmed at the "growing spread" of a faith, whose total extinction I confidently predict to be near at hand—had I written such trash as that, you would then have been justified in exposing me to the scorn and derision of all who do not believe you to be capable of making deliberately such statements without the slightest foundation in fact for them.

3. I do not "contend that *Saint Gregory the Great* was the founder of papal domination, and of her long train of innumerable corruptions and abominations;" for I well know, as does every one acquainted with the merest elements of ecclesiastical history, that he was not; and in the only part of my work (the appendix) that mentions him, he is cited as the indefatigable opponent of every form of ecclesiastical domination, and as denouncing the man who should first exercise it, as the predicted Antichrist. I, moreover (page 113), cite Gibbon as stating *Gregory the Second* (who filled the papal chair above a hundred years after the death of *Saint Gregory*) to have been "the founder of the papal monarchy."

4. But, sir, the gross historical blunder which you have imputed to me would be of comparatively little consequence, if you had not represented it as nearly the sole foundation of my work: for you go on to say, "The same stream (the said blunder) he declares from the one same fountain, which has poured on the head of popery all its mysteries and blasphemies in such copious torrents, has, with them, poured forth also its appropriate designation by which it is so awfully characterised and denounced in Sacred Writ."

What may be the meaning of that tirade I do not pretend to conjecture; but I know that there is not in my work one syllable of foundation for it.

5. Your next paragraph proceeds: "The utter depravation of morals, in all Catholic countries, exhibits at once the cause and consequence of that debasing religion, monstrous in her ritual, and cruel in her maxims. Mr. Lovett assails these in the unmeasured language of reprobation, such as we have repeated in the foregoing sentences!"

So far, sir, from assailing "the utter depravation of morals in all Catholic countries," as you may I do "in the unmeasured language of reprobation." I never even once allude to the morals of any country, excepting ancient Rome, and France in her "dile irreverent," while, after abandoning "*la culte Catholique*," she made open profession of atheism.

In charging me, then, sir, with "assailing the utter depravation of morals in all Catholic countries," you have made an assertion for which there is not one syllable of foundation in fact; notwithstanding which you venture to state, that in so doing "we desire it to be understood that we are quoting our author!"

6. Of Mr. Newman I have never known any thing but what I have learned from the newspapers within these few months; a line of his writings I never saw; I do not believe his earliest publication is so much as two years old; no allusion therefore to him or his writings could be contained in my work, which was published eight years ago. Nevertheless, you direct against me the resentment of that gentleman and all his numerous and zealous friends, by stating that a passage (the only one in my book which, it seems, you thought worth citing) looks as if it were written for the sole purpose of holding up Mr. Newman, in all his offices, (?) to public derision, as one of the swarm of small smokers who are filling the Church with their cloudy nonsense.

7. You say, "Our Saviour, he further contends, declared that he knew not, nor did the angels in heaven know, the day and hour of his second coming."

Sir, so far from contending that our Saviour made such a declaration, I not only never once mentioned it, but I carefully refrained from alluding to it: because I knew that the main purpose of my work must appear directly and presumptuously opposed to that declaration, unless I should remove that appearance by a commentary that would lengthen a work which is, without it, longer than I wished.

In defeat of my cautious forbearance, you have taken care that to your readers my work shall appear as opposed to our Saviour's declaration, without, of course, one word of the explanation which I would have given of the apparent difficulty, had I referred to it at all.

Having now, sir, stated to you some of the instances of monstrous misrepresentation in your notice of my work, every one of which is well calculated, I will not say deliberately intended (for on that point, to use your own words, "we desire it to be understood that we are not offering opinions"), to seriously injure its reputation, and, together with it, that of its author, I will leave even to your judgment to decide whether I have not much ground of just complaint.

You have in your hands the easy means of forming that decision, by comparing your observations with the contents of my book; and if that comparison shall detect one instance in which I have unjustly accused you, I will, as in duty bound, with contrition and humility lament my error, and will acknowledge that the charge of gross and monstrous misrepresentation attaches not to you, sir, but to your obedient servant,

March 13, 1839.

H. W. LOVETT.

ADVERTISEMENTS,

FRENCH ELOCUTION and DECLAMATION.

Instructions are given after the method of M. Michelot, First Professor of Declamation at the Conservatory of Music, in Paris, by a Parisian Gentleman, recently arrived from the French Capital, and favourite of the public at that celebrated Master.

Terms for Private Lessons, or extending Public Classes, may be known on application to Mrs. Chevalier, 27 Wigmore Street, Cavendish Square.

A Course of Lectures (in French) on French Literature and the Art of Speaking, will shortly be given.

TO PRINTERS.—A most eligible opportunity now offers to any Gentleman who may be disposed to engage in a well-established and highly respectable BUSINESS, having an extensive and highly respectable Connection, and in which more than fifty hands are now and generally employed. A person competent to manage the same, and with a reasonable amount of capital to invest (about Five Thousand Pounds), will find this a most favourable opportunity of establishing himself in Business. A clear and satisfactory statement of the Accounts of the Concern will be shown, and every other information given, as well as required.

Applications by letter, post-paid, addressed J. Britton, 11 Burdon Street, Tavistock Square, will meet with due attention.

LIBRARY OF USEFUL KNOWLEDGE.
The First Part of the History of Switzerland, price 6d. will be published, at the Society's Office, on the 15th instant, and a Number of this Series will continue to be published there on the 1st and 15th of every Month.
The Current Volumes of "The History of England," of "The History of Ancient Greek Literature," of "The Geography of Great Britain," of "Annals," and of "The Differential Calculus," will be completed without delay, by Messrs. Baldwin, Cradock, and Co.
THOMAS COATES, Secretary.
36 Lincoln's Inn Fields, 7 March, 1839.

SALES BY AUCTION. SOUTHGATE'S ROOMS. Valuable Collection of BOOKS. MR. SOUTHGATE

Hugs to announce that he has received Instructions to Prepare for Sale, Catalogues of which will be announced in a future Advertisement.

The Third Portion of the Library of John Britton, Esq., F.R.S.

Author of the "Architectural Antiquities of Great Britain;" "The Cathedral Antiquities;" "The Architectural Dictionary;" &c. &c. consisting of a Collection of choice and rare Books in Topography, Architecture, Antiquities, the Fine Arts, Biography, &c. &c. also, several Paintings, Drawings, Prints, Objects of Vertu, Geological and Mineralogical Specimens, Casts, &c. &c. By permission of Mr. Britton, the interesting note intimating his purpose of parting with the above, is here with subjoined:
"Dear Sir,—Fleeting old age creeps on, and old friends die off, and feeling it to be a matter of worldly prudence to 'put the house in order,' I intend to part with a large number of books, prints, and other objects of interest and curiosity, which have afforded me much amusement and information in collecting together. These will be consigned to your custody, to submit for public competition, through the medium of your well-organized establishment. With whom I have commended for forty years—from whose counsel I have derived both useful and entertaining information, and whose subservience to every demand, either of reason or whim, had been uniform, is a painful struggle to—
"To Mr. Southgate."
"Yours, very sincerely,
"J. Britton."

BOOKS IN THE PRESS.

On the 1st of April will be published, 1 vol. 8vo. uniform with Milman's Gibbon,

THE LIFE OF GIBBON, with Selections from his Miscellaneous Works.
Edited by the Rev. H. H. MILMAN.
John Murray, Albemarle Street.

NOVEL, BY MISS MARTINEAU.

On the 30th of March will be published, in 3 vols.

DEERBROOK. A Novel.
By HARRIET MARTINEAU.
Edward Moore, Dover Street.

Just ready, in 3 vols.

LADYBULWER'S NOVEL,
Chevalier, or the Man of Honour.
Edward Bell, Librarian, 10 Holles Street, London.

Nearly ready, in 6 vols. 8vo. with Maps, Charts, and numerous Illustrations, by Landseer and other eminent Artists.

NARRATIVE of the VOYAGES of H. M. S. BEAGLE and ADVENTURE.

These volumes detail the various incidents which occurred during the examination of the southern shores of South America, and the Beagle's circumnavigation of the globe, and add considerably to our knowledge of hydrography, geography, and natural history, and of the habits, &c. of the aborigines. There will be found in them the materials of three distinct works, embracing every thing worthy of notice, by all engaged in the Expedition, during a period of nearly two years. The first volume, by Capt. P. P. King, P.R.S., relates to the expedition under his command, with an Appendix, by Major Sabine, R.A. P.R.S., containing discussions on the magnetic observations made during the voyage. The second volume, with an Appendix, giving the determination of many positions and measurements of meridian distances, and other nautical information. The third volume, by Charles Darwin, Esq. M.A., is an account of his discoveries in natural history, with novel ideas respecting geology, the Coral Islands, &c. The Work is beautifully illustrated with Etchings and Engravings on Steel, by Mr. Landseer and other eminent Artists, from Drawings by Mr. Martens and Mr. Earle, and with Charts and Plans by Mr. Gardiner and Messrs. Walker, and an entirely new Map of South America, by Mr. John Arrowsmith, in which the positions of places may be ascertained to within less than two miles. In the three volumes, notices will be found of the Cape Verde, Falkland, and other islands in the Atlantic Ocean; of the points of South America, from Pernambuco to Uruguay; of the Galapagos Islands; the dangerous Archipelago (or Low Islands); Ombayeh; New Zealand; Australia; the Keeling Islands; Mauritius; and the Cape of Good Hope.

Henry Colburn, Publisher, 13 Great Marlborough Street.

* * * Orders received by all Booksellers.

On April 1 will be published, in 2 vol. 8vo. price 7s. 6d. 12s.

REVIEW OF NEW BOOKS.

The Popular Songs of Ireland. Collected and edited, with Introductions and Notes, by T. Crofton Croker, Esq. 12mo. pp. 340. London, 1839. Colburn.

IN this volume, friend Croker, like the potato formerly called by that name,* has shewn himself to be an Irish life-preserver. Some of his poets, like too many of the peasantry, must have perished, but for the succour he has afforded them; and though these poets are not like the peasants, the "finest" in the world, it is nevertheless a grateful and patriotic office to have saved them from—the bard's most deplorable doom—oblivion.

To have fully illustrated his subject, Mr. Croker ought to have given us many more ballads, and gone to an earlier date; but we presume that, as Ople said when advised to raise the price of his portraits from fifteen shillings to a guinea, "the public canna bear it," his publisher thought the public could not bear the infliction of two or three volumes of Irish verse. We must, therefore, be content as in other Irish matters, to take this by way of an instalment. Looking for what else we may get hereafter, we shall only report of the present collection, that it touches on many historical points from the period of the battle of the Boyne; and, in other respects, exhibits specimens of the national feeling and humour. It is true, that in consequence of the English connexion, it has been questioned whether Ireland possesses any peculiar features of this kind; but we think, after reading Mr. Croker's volume, it will be allowed that if not entirely original, such modifications have taken place as to give a very distinctive character to Irish productions. The local songs, especially, demonstrate this fact.

At all events, our author has subdivided his work into distinct national heads (*quære*, some of them broken?); for he has ranged them under the "Shillelah," "Whisky," "Potatoes," "The Shamrock," "St. Patrick," and *other friends and patrons of the country*. Which are the most religious, burlesque, sentimental, or humorous, it is difficult to decide. In spite of the authorities to the contrary, we have made up our minds that shamrocks are watercresses, just as whisky is, according to its native name, water; and St. Patrick not a gentleman, but an engineer or stoker, and the inventor of the steam-engine, the first that ever reached the shores of Bantry or Dublin Bay. With regard to the first of these matters, however, we are told:—

"The popular notion respecting the shamrock, or trefoil, is, that St. Patrick, by its means, satisfactorily explained to the early converts of Christianity in Ireland, the Trinity in

* "In a MS. among the 'Southwell Papers,' unfortunately without date, but, from the contents, believed to have been written about 1640, potato-roots are called 'Crokens,' from having been first planted in Croker's field at Youghall. Possibly the spot mentioned by Lord Castlereagh, who, in his 'Memoirs,' states, that when he camped with the Irish army before that town in 1645, he caused Major-General Butler to take up a position 'towards the sea near Croker's works.' Tradition also says, 'that the potato-root, besides being planted on Sir Walter Raleigh's ground at Youghall, was likewise planted on some land in the diocese of Tuam, which Sir Walter afterwards let to endow a school.'"

Unity; exhibiting the three leaves attached to one stalk as an illustration. Miss Beaufort remarks, that it is 'a curious coincidence, the trefoil plant (*shamrock* and *shamrakh* in Arabic) having been held sacred in Iran, and considered emblematical of the Persian Triad.'—(*Collect.* v. 118.) 'The botanical name of the shamrock, like that of the Scotch thistle, is a matter of dispute. Mr. Bicheno, in an amusing paper read before the Linnean Society, has, with great ingenuity, endeavoured to shew that the wood-sorrel (*oxalis acetosella*) is the true shamrock; while Dr. Withering and Professor Rennie point out the white clover (*trifolium repens*); and Mr. Loudon marks the black medick (*medicago lupulina*) as the genuine national emblem of Ireland.' That the shamrock was formerly eaten in Ireland as a salad, there appears no reason to doubt. Fynes Moryson, the secretary of Queen Elizabeth's lord-deputy, Mountjoy, treating of the diet and customs of the 'wild Irish,' says, 'they willingly eat the herb shamrock, being of a sharp taste, which, as they run and are chased to and fro, they snatch like beasts out of the ditches.' Spenser, also, in his 'View of the State of Ireland,' describing the misery consequent upon the Desmond rebellion, of which he was an eye-witness, speaking of the wretched and famishing Irish, tells us that 'if they found a plot of watercresses or shamrocks, there they flocked as to a feast for the time, yet not able long to continue there withal.' But these passages, as referring to a period of national distress and famine consequent upon civil warfare, when, according to the authorities quoted, horse-flesh was a luxury, and even dead bodies were taken out of the graves and eaten, do not prove the use of the shamrock as a salad so satisfactorily as the following extract from the humorous poem of 'Hesperio-neographia,' descriptive of national manners, where, in the account of an Irish banquet, it is mentioned that,—

'Besides all this, vast bundles came
Of sorrel, more than I can name.
And many sheaves I hear there was
Of shamrocks, and of water-grass,
Which there for curious salads pass.'

"In that whimsical poem, the 'Irish Hudibras,' printed in 1689, we find

'Springs, happy springs, adorned with sallots,
Which nature purpos'd for their palates;
Shamrogs and watercress he shews,
Which was both meat, and drink, and clothes.'

Again the Irish are there represented as

'Without a rag, trousse, or brogues,
Picking of sorrel and sham-roguet.'

Not wishing to have any thing to do with the shillelah, we shall treat our readers with a sample or proof of the whisky:—

"Were one to find fault with the whisky in the northern counties, the immediate reply would be, 'It's as good poteen as any in Ulster, for it never paid a happ'eth of duty.' From 1802 to June 1806,—a space of four years and a half, no less than 13,439 unlicensed whisky-stills, 11,098 heads, and 9732 worms, were seized in Ireland. Some idea, therefore, of the magnitude of the traffic in poteen may be formed by this official return.

"The Glass of Whisky was originally printed in 'The Sentimental and Alsonic

Magazine,' vol. iii. for December 1793, a Dublin periodical, remarkable from the first productions of the Muse of Moore having appeared therein. This song bears the signature W. P. Carey, and was illustrated in that publication by an engraving, executed by W. P. Carey, probably the author, which represents an old man with clasped hands, uplifting a glass of whisky."

Ah, Time is a tell-tale! this is forty-six years ago; but our Anacreon wears well. Heaven grant it may be long before a grape-stone comes across his waist; and may it be a funnel for many a bumper of wine, of the brightest hue, while he lingers and enjoys himself amongst us.

"At the side of the road, near the bridge of Drumcondra, Was Murrough O'Moonaghan stationed to beg; He brought from the war, as his share of the plunder.

A crack on the crown, and the loss of a leg,
'Och, Murrough! he'd cry—' masha nothing may harm ye.

What made you go fight for a soldier on sea?
You fool, had you been a marine in the army,
You'd now have a pinchun and live on full pay.

But now I'm a cripple—what signifies thinking?
The past I can never bring round to the fore;
The heart that with old age and weakness is sinking,
Will ever find strength in good whisky galore.

Oagh, whisky, ma vurnem, my joy, and my jewel,
What signifies talking of doctors and pills?
In sorrow, misfortune, and sickness so cruel,
A glass of north country can cure all our ills.

When cold in the winter, it warms you so hearty;
When hot in the summer, it cools you like ice;
In trouble—false friends, without grief I can part ye;
Good whisky's my friend, and I take its advice.
When hungry and thirsty, 'tis meat and drink to me,
It finds me a lodging wherever I lie:
Neither frost, snow, nor rain, any harm can do me,
The hedge is my pillow, my blanket the sky.

Now merry be the Christmas! success to good neighbours!
Here's a happy new year, and a great many too!
With a plenty of whisky to lighten their labours,
May sweet luck attend every heart that is true!
Poor Murrough, then joining his old hands together,
High held up the glass, while he vented this prayer:—
'May whisky, by sea or by land in all weather,
Be never denied to the children of Care!'"

Among the songs of feeling, "The Court of Cahiraas," though very unequal, as most of these compositions are (so many, indeed, as to be a part of their characteristic style), has pleased us much by such verses as the following. Of the heroine is sung:—

"On a fine summer's morning, if you saw this maiden,
By the murmuring Maig, or the green fields she stray'd in;
Or through groves full of song, near that bright flowing river.

You'd think how imperfect the praise that I give her.

In order arranged are her bright flowing tresses,
The thread of the spider that fineness expresses;
And softer her cheeks, that is mantled with blushes,
Than the drift of the snow, or the pulp of the rushes.

But her bosom of beauty, that the heart which lies under,
Should have nothing of womanlike pride, is my wonder;
That the charms which all eyes daily dwell on delighted,
Should seem in her own of no worth, and be slighted.

When Charity calls her she never is weary,
Though in secret she comes with the step of a fairy;
To the sick and the needy profuse is her bounty,
And her goodness extends through the whole of the county.

I felt on my spirit a load that was weighty,
In the stillness of midnight, and called upon Katey;
And a dull voice replied, on the ear of the sleeper,
'Death! death!' in a tone that was deep, and grew deeper.

"The verse of an Irish song, in which the poet describes the first meeting with his mistress, was thus translated to the editor by Mr. Edward Penrose:—

'Her hair was of the finest gold,
Like to a spider's spinning;
In her, methinks, I do behold
My joys and woes beginning.'

'Twas an omen to me—'twas an omen of sadness,
That told me of folly, of love, and of madness;
That my fate was as dark as the sky that was o'er me,
And bade me despair, for no hope was before me."

We must add a humorous ditty by way of contrast:—

"The ballad mentioned very glibly runs on in praise of the springs of Mallow, according to this fashion, to the air of 'Ballyspellen,'

'All you that are
Both lean and bare,
With scarce an ounce of tallow,
To make your flesh
Look plump and fresh,
Come, drink the springs at Mallow
For all that you
Are bound to do
Is just to gaze and swallow;
You'll find by that
You'll rowl in that
Most gloriously at Mallow!
Oh, if love's pain
Disturbs your brain,
And makes your reason shallow,
To shake it off,
Gulp down enough
Of our hot springs at Mallow!"

A long poem on the "Entrenchment of New Ross," of the middle of the thirteenth century, and translated into modern verse by the lamented L. E. L., ought to be pointed out to notice, as also a curious letter of the "Mayor of Waterford," of the time of Henry VII.; but to these we can only refer.

In the hunting song, page 225, we should suspect the "five couple of *terriers*" at the bush of the fox to be *harriers*; but there are so many strange things in Ireland, that perhaps they do hunt with packs of Scotch wivies. At any rate, they are good for Reynard if he gets into his hole!!

The Private Journal of Aaron Burr, during his Residence of Four Years in Europe; with Selections from his Correspondence. Edited by Matthew L. Davis, author of "Memoirs of Aaron Burr," &c. 2 vols. 8vo. New York, 1838. Harper and Brothers. London, Wiley and Putnam.

"Give a dog an ill name and hang him," says the adage. Call an American Aaron Burr, and destroy him, might be said of the personage who figures in these volumes. Whether Burr was what one would call in extremes a good or a bad man, a patriot or a traitor, it is not in our power to determine. Were we to form an estimate of his character from the revelations in these pages only, we should consider him as much sinned against as sinning, and of that human mixture in which the better nature predominated over the worse parts. That he was a man of mystery, intrigue, and vanity, is obvious enough; but these defects are redeemed by many traits of right, gentle, and affectionate feelings. Since the "Confessions of Jean Jacques Rousseau," we have seen no picture of an individual drawn by himself that has interested us a tithe so much as this Journal has done. It furnishes a study for mankind. We see a person possessed of the highest talents, and stored with most extensive information, driven from his country, embarked in schemes of the greatest national and personal importance, suspected and watched wherever he goes, exiled from England, and not permitted to leave France, struggling with poverty and privation, mixing with the first men in society whilst nearly starving at his miserable home, vibrating between the palace and the pawn-shop; from meeting dukes, ministers, and distinguished people, retiring to his meagre fare with a single sou in his pocket; sanguine, disappointed, courted, persecuted, intriguing with statesmen and women of every estate—

in short, running a career of the most extraordinary variety and inequality, yet always preserving an equanimity, courage, perseverance, and unruined temper, which plenty, and every means of happiness and luxury, can seldom ensure to their fortunate possessors.

His journal, which exhibits these traits in a manner to us, as we have noticed, of strange and peculiar interest, was kept for his daughter, Mrs. Alston; and in this respect is not the least remarkable, for it goes into many things, of which no one could conceive a father would ever wish a daughter to have the slightest notion. And such a daughter! She was proud of, and deeply attached to, her parent: proud of, and deeply attached, might every parent be to such a child as her correspondence shews her to have been. We never read any female letters so beautiful, so sensible, so touching. Mind and heart seem to have been alike perfect in this noble creature. Even for her sake, we could not think so harshly as we otherwise might of her father's errors; but he was unfortunate also—another claim to our pity and compassion. He was often penniless, and, need we add, had few friends.

Aaron Burr, it is generally known, after filling the highest office but one in the United States, and being very nearly elected president, killed Mr. Hamilton in a duel, in pursuing which his vindictiveness brought upon him almost universal censure. Falling from his high position, he made an attempt upon the territories of Spanish America, which involved him with his own government, and for which he was tried as a traitor, but acquitted. Miss Martineau mentions these facts, and the bad repute in which he, consequently, continued to dwell among his fellow-citizens. It appears from these volumes that he smuggled himself out of America in 1803, the year after his trial at Richmond, and, under the name of H. E. Edwards, arrived in England with peculiar introductions and recommendations. His grand object seems to have been to plan and head the independence of Mexico, which the relations between our government and Spain at that time did not permit us to encourage. One of his chief intimacies was with Jeremy Bentham; but, altogether, his time passed any thing but pleasantly, except on a visit to Edinburgh, where he met with all that warmth of hospitality which does honour to the Land of Cakes, and enjoyed the society of some of the eminent persons who adorned the northern capital. On his return to London, he was arrested under a warrant of Lord Liverpool, and obliged to leave the country as an alien. Upon this occasion, he writes to his daughter a letter, in which it is evident more is meant than meets the eye:—

"To Theodosia.

"London, April 11, 1809.

"I shall leave this on Friday the 14th for Heligoland, whence I shall go to the Continent by the first conveyance. You must not, therefore, expect to hear from me for two or three months after the receipt of this. Let your boy read history and biography of a style suited to his years. The order is of no consequence, in which, with great humility, I differ from Madame Theodosia. By and by, when he shall come to read more in detail, the order may be material. Let him also learn German. Say something more about —. A true Mussulman burns all books except those of Mohammed, which contain all of human knowledge that is valuable, and to have marked the boundary of human genius.

"A. BURR."

Instead of Heligoland, his route was changed

to Gottenburg, and he travelled some months about Sweden and Denmark; whence he got to Paris, and in dudgeon with his treatment in England (where, he says, no statesman had any political comprehension or knowledge, except the late W. Pitt, Lord Melville, and Mr. Canning), proposed to the ruler of France the same project in which he had been balked by Lord Liverpool. He thus writes:—

"To le Duc d'Otrante.

"Paris, May 30, 1810.

"Mr. Burr has the honour to transmit herewith the sheet lately submitted, together with three supplementary notes. A fourth, on the Canadas and Nova Scotia, will be offered, if desired. He asks the favour of an audience of his excellency le Duc d'Otrante, for the purpose of making a few verbal explanations, and of reviewing the translation. Lest the handwriting should not be legible to the translator, Mr. Burr offers to assist him in the reading; and will, for this purpose, meet him at any hour and place he may name. Mr. Burr will wait, to receive a message from him, at Paschand's bookstore, Rue des Petites Augustins, No. 3. He takes the liberty of presenting assurances of his profound consideration and respect.

"A. BURR."

At this period, we find him in Paris, as elsewhere, suspected, baffled, and hunted from post to pillar; but still putting the best face on his trials, and submitting to all sorts of suffering with most stoical complacency. That he had some comfort will be acknowledged, when we quote a few passages from the letters of his angel-souled daughter.

"Now I think we have every reason to believe that my health will soon be restored; and, after all, it will be owing to your prescription. If you had been with me, I should have recovered long since. Oh, my guardian angel, why were you obliged to abandon me just when enfeebled nature doubly required your care? Alas, alas! how often have I deplored the want of your counsel and tenderness! How often, when my tongue and hands trembled with disease, have I besought Heaven either to reunite us, or let me die at once! Yet do not hence imagine that I yield to infantine lamentations or impatience. As soon as relief from pain restored me in some measure to myself, I became more worthy the happiness of being your daughter. Now my strength is greatly increased, my nerves are less irritable; and, if the disorder did not so strangely affect my head, I should feel almost well."

Again:—

"Eighteen days have elapsed since the above was written, and there is no news to add. Nothing has occurred, nothing altered. Shall it always be so with us? All nature changes. Day has followed night. There have been revolutions in the seasons; but our fates, which appear ever like black impending clouds ready to burst, still threaten, and still remain the same. I had hoped long before this to have done something efficient in your pecuniary concerns; but the important person is still from home. A letter received yesterday informs me of this again, and adds that he is expected daily. This has been the case for months. As soon as he reaches his place of destination, he will receive a visit from me. This is the only hope of success. Great Heaven! how truly miserable your situation renders me. What is to be done? Yet do not despair. Wait a little longer; perhaps the next packet may bring you all you wish. Of political affairs, the papers will tell you all I know. Many think that the late proceedings

will produce a war with Great Britain; and I have been seriously told that it would not be in my power to return home by water, because our coasts would soon be lined with English cruisers. I hope not so, in my heart. Your acquaintance, Mr. Smith, arrived a few days since, out of spirits and disappointed. He has left us again with new courage. He has not contributed to enliven me. Already anxious and distressed about you, he has rendered me doubly so by the addition of unavailing regrets, and the dreadful conviction that I have been the cause of real injury to you by the delay my illness occasioned. This I had felt before, but it never appeared to me in its full extent till after my conversation with him. The poignant sufferings this idea has occasioned me are indescribable; and though my life has been saved by it, I cannot rejoice at it, from a belief that your happiness will greatly depend on my existence. And can I then remunerate you for such sacrifices merely by living? Under every sort of misery, this reflection would make me careful of life, as of a treasure which I have in keeping for you, to be spent in your service. My boy improves charmingly, particularly in writing, and we are impatiently looking forward to the period when he will be able to write you a letter. I have not once thanked you for your magnificent present. Though you have been unexpectedly prevented from making it, the intention goes to my heart. The bust of Mr. Bentham does not come, and I begin to fear that it is lost. My veneration for him is enthusiastic. As he is fond of plants, perhaps a few seeds of benne and okro may be acceptable to him. I have sent to Frederic's for some, and shall send them by Mr. S. Mr. Bentham's fondness for botany has determined me to study it. I have hitherto had an aversion to the pursuit, from a belief that it was a mere science of words. But the idea of pursuing a track which has been illuminated by his presence would throw a charm over the driest labours. Perhaps, in that new country, unexplored by the eye of science, it may be my good fortune to make some little discovery which will please him. If his bust should be lost, will it be in your power to get me another? You must not show my letters to any one. I am yet heavy and spiritless. Not out of spirits; 'mais, dépourvue d'esprit.' My mind feels awakening at times, and I am amusing myself in Spanish. I have taken but few lessons, and it will not be in my power to make much progress, as the master comes only thrice a-week, and my departure from hence is not very distant. I hope and trust it will be in my power to make some arrangement of your pecuniary concerns before I leave this part of the world. Unless successful in this, I shall go with a very, very heavy heart."

"March 8.

"This day has arrived and passed over. Yet of all the events which at the commencement of my letter, I imagined must happen before this, not one has occurred. I find that I am still a child, and look forward to a few weeks as an age big with important changes in my situation, and destined to be marked by innumerable improvements in myself. Perhaps, like the great herd of mankind, I too am doomed to look back with continual disappointment in both these expectations. Yet I do not believe that they proceed from an innate or instinctive disposition, ordained as the means of rendering life more dear, so much as from long habit. In the happy days of childhood, occurrences new, and even great in our estimation, are daily taking place. Thus, too,

without thinking of our characters or caring for knowledge, we every day find our minds enlarged. It is a long time before we can bring ourselves to calculate on the uniformity of middle life; and when, at length, experience has taught us this, we are again altering; but how differently! There is now hope of amelioration in your pecuniary concerns."

"Oaks (S. C.), May 10, 1811.

"This morning, and not until this morning, did I receive your letter of the 10th of January, 1811. In this way has our correspondence been maintained for the last two years. Now I hear that you are coming immediately; and while wondering that you have not arrived, I learn that you will be detained much longer. Then my hopes are again awakened, and, when again almost exhausted, they light up with a stronger, though a trembling brilliancy. The icy hand of disappointment falls upon my heart to smother every spark. Do not frown at these complaints. You do not. I will not believe that you do. Your image, kind and indulgent, is my guardian angel. From how many follies, how many faults, does it preserve me. It was accorded to me as a talisman, to cheer my prospects, to strengthen my resolutions, and incite me to noble efforts. The refusal of your passports by the agent of our government is a most overbearing and insulting outrage upon the common rights of a citizen. Who erected an American chargé d'affaires into a supreme judge? Who invested him with the most important prerogatives? I have written to Luther Martin, but have received no answer. I shall write again forthwith. Surely my letter must have miscarried. I have immutable faith in the strength and sincerity of his attachment to you. You, perhaps, have not heard that Robert Smith is removed from office, and Munro created secretary of state in his stead. The removal of Eustis is expected, according to our newspapers. A late paper mentioned that the postmaster-general was soon to yield his office to a steady friend of A. Barr. Who that friend is, or whether there is any truth in the assertion, I cannot tell. The corn-doctor is afraid to correspond with me. He was even very neglectful in giving his advice. 'Tis said he trembles at the great name more than any pious Hebrew ever did at the consecrated and mysterious title they had for the Deity. I have frequently mentioned the fate of my letter to 88-87. There is evidently no hope from that quarter. If the mind is negative, of which there is no assurance, it may be directed to any thing by those nearest, most in confidence, and most prominent in business. I say some; land in New York. This advice is disinterested on my part. But I am incapable of the affection which would sacrifice its object to any selfish gratification. I would, therefore, oppose the plan of embarking for South Carolina. Nothing can be done here. Your arrival will be known. The news of it will reach New York long before you. The fervency of surprise and delighted friendship will have time to cool, cables to be formed, and measures to be taken. Go to New York. Make your stand there. If you are attacked, you will be in the midst of the tenth legion. Civil debts may be procrastinated, for a time, by confinement to the limits. There you can take breath; openly see your friends; make your arrangements; and soon, I think, you will be able to throw off those momentary shackles, and resume your station. I confess I augur ill of government, principally because the newspapers most devoted to it endeavour to keep up feelings of irritation against you. But I believe differently of the citizens generally.

At all events, it is better to brave any storm than to be leading your present life. It is better that things should be brought to a crisis you cannot entirely sink under; and, the worst once over, you will be free from all restraint. You may be situated as formerly. It cannot injure you more than this long-continued threat. If the worst comes, I will leave every thing to suffer with you. Should you determine on this plan, give it a fair trial. I repeat it, nothing can be done for you here, in South Carolina. To land here might ruin all. Would you believe it, Blennerhassett has written the most insulting letter to my husband. In this letter he accuses you and him of plans which never entered the heads of either; and says that, unless Mr. Alston pays him thirty-five thousand five hundred dollars, of which, to use his own phrase, he demands fifteen thousand by August; unless these sums are paid, he (Blennerhassett) will publish a pamphlet containing documents which must ruin him (Mr. Alston) for ever. He concludes by saying that his work is ready for publication, and adds — "If you do not prevent its appearance, you may rest assured I shall not, to save the trouble of smelting, abandon the ore I have with such expense of time and labour extracted from the mines both dark and deep; not, indeed, of Mexico, but of Alston, Jefferson, and Burr. Having mentioned Mr. Burr, I wish you to observe that I have long since ceased to consider reference to his honour, resources, or good faith in any other light than as a scandal to any man offering it who is not sunk as low as himself," &c. &c. His language to Mr. Alston is in the same style. Such, in short, as a low-bred scoundrel may use at the distance of many hundred miles."

And sad ending:—

"Seashore (S. C.), July 12, 1812.

"A few miserable days past, my dear father, and your late letters would have gladdened my soul; and even now I rejoice at their contents, as much as it is possible for me to rejoice at any thing; but there is no more joy for me; the world is a blank. I have lost my boy. My child is gone for ever. He expired on the 30th of June. My head is not now sufficiently collected to say any thing further. May heaven, by other blessings, make you some amends for the noble grandson you have lost.

"THEODORA.

"Seashore (S. C.), August 12, 1812.

"Alas! my dear father, I do live, but how does it happen? Of what am I formed that I live, and why? Of what service can I be in this world, either to you or any one else, with a body reduced to premature old age, and a mind enfeebled and bewildered? Yet, since it is my lot to live, I will endeavour to fulfil my part, and exert myself to my utmost, though this life must henceforth be to me a bed of thorns. Whichever way I turn, the same anguish still assails me. You talk of consolation. Ah! you know not what you have lost. I think Omnipotence could give me no equivalent for my boy. No; none—none."

All her letters are admirable: models of female writing, and alike estimable for sound sense and prudence, warmth of heart, delicacy, and genuine feeling. We will relieve the painful emotions created by the last with two or three slight selections.

Barr, writing from London, October 1806, says:—

"To fill up this blank page, take one of the many epigrams on Sir Hew Dalrymple. It was made impromptu by one of my friends in my presence. Perhaps it may have been published, but not to my knowledge:—

'When knights of old their falchions drew,
Their *mot de guerre* was Hack and Hew;
Our modern knight, of fighting shy,
Should make his motto Hew and cry.'

The following ridiculous epitaph made me laugh. If it raise a smile on the wan cheek of my Theodosia, I should deem it valuable indeed. The subject of it, who is more famed for his wealth and his long services in the corporation than for classic erudition, is in the habit, as is said, like our worthy vice-president, of using *this-ere* and *that-ere*, as *exigra*: Take *this-ere* knife and cut *that-ere* goose. The epitaph was produced at a feast at which he was present, and the story adds that he joined in the laugh with great good humour.

'Here lies William Curtis, our late worthy lord mayor,
Who has left *this-ere* world and gone to *that-ere*.'

"A. BURR."

"In England you see no expression painted on the visage at a concert. All is sombre and grim. They cry bravo! bravissimo! with the same countenance that they 'G—d damn' their servants and their government."

"A gentleman (in Paris) remarked that the English had no word to express *ennui*, which he thought the more remarkable as they were so subject to that evil. 'No,' replied le Comte de L., 'In England it is conceived to be the natural state, and synonymous with existence, and, therefore, no word requisite.'"

Of poor Burr's life in Paris, we shall now proceed to select from his diary a few traits; which we think will bear us out in the sentiments we have expressed. The particular dates or connecting circumstances are of no consequence.

"On my way home met Mr. —, who invited me to go home with him to communicate something. It is, that the Americans here have entered into a combination against Aaron Burr. That every man who speaks to him shall be shunned as unworthy of society. That no master of vessel, or any other person, shall take any letter or parcel for him, or other like benevolent things; all which amused me, but alarmed my friend. The most violent of this association is a young Seaman, son of Edmund Seaman, of New York. More of the like. Mr. —, of Boston, related in a large company, that he, being on a jury at Boston last summer on an insurance case of the Herkimer, Judge Chase presiding, and Luther Martin, one of the lawyers, on some dispute between them, the judge said to Martin, 'I am surprised that you can so prostitute your talents.' Martin replied, 'I never prostituted my talents except when I defended you and Colonel Burr;' and added, in the hearing of the jury, 'a couple of the greatest rascals in the world.' A Mr. Thompson, of Charleston, South Carolina, a Scotchman, but naturalised in the United States, now settled here, being asked if he had called on Colonel Burr, said, 'No; and no good American would call on him.'"

"Certain personal concerns kept me up till two. Waked, wide awake, at six. Got up, lighted candle, made fire. Jul. came in at half-past seven, and greatly astonished to find me at breakfast, having had bread and milk enough of yesterday. At ten to Valkenaer's, where an hour and a half. How good he is. I deposited with him two thousand five hundred francs, about five hundred dollars. Now you will marvel how I could possibly raise so enormous a sum (one hundred guineas!); that was my business yesterday, which I did not then tell you, not knowing whether Valkenaer would take the trouble; not a little, I assure you. Your watch and your ring are both pawned for one thousand francs (two hundred

dollars); this, with the remains of the sum had some time ago of Griswold, as then mentioned, made this bank. On casting up my remains, find I have left just twenty-one dollars. If, therefore, the speculation should fail—" [which it did].

"What cannot be cured must be endured" was his motto.

"I am about to undertake the translation from English into French of two octavo volumes for one hundred louis. It will take me three months hard work. Better than to starve. But the most curious part of the story is, that the book in question contains a quantity of abuse and libels on A. Burr."

He had shewn the people of his lodgings how to mend smoky chimneys, and was assured he might make his fortune as a famous *fumiste*. But mark:—

"Home, made a good fire, and actually have thawed off the ice. Jul. would make me sup on vermicelli, which she cooked very nice, and have agreed by the same advice to lay a-bed to-morrow till nine, in complaisance to the cold. Now one o'clock, madam."

"4. Lay till ten, being so cold Gamp. was afraid. After deliberating two hours whether I should call on Mrs. Robertson, sor. at two to Valkenaer's; found him, as usual, in bed, but mending. Found there Mr. —, just arrived from Amsterdam. A fine, frank, open, decided face. He served in the United States during the revolutionary war, in Pulaski's corps. Had an only daughter, whom he educated in a superior style. She died at twenty. Albertine* came in from a walk, and looked very charming. Gave up my visit to Mrs. Robertson's, and walked round by St. Denis, through Palais Royal, to Helvetius, and thence home. On the way, bought *étrennes* for the children of Madame P., + 40 sous; another pair of *chevettes*, 36 sous. Home, and dined on vermicelli *au lait*; very good. The day has been cold, tempestuous; a little snow falling. Now, at twelve, the wind still higher and snowing faster. From what quarter the gale comes, I don't know; but at intervals of about one or two minutes, it blows directly down my chimney, and with such force as to carry ashes and coals over the whole floor. I have been since four o'clock in purgatory, for the evil is remorseless while the gale stands at the same point and with the same force. After various experiments how to weather the gale, I at length discovered that I could exist by lying flat on the floor; for this purpose I laid a blanket; and reposing on my elbows, with a candle at my side, on the floor, have been reading 'L'Espion Anglois,' translated from the English; extremely well written; and, thus prostrate, I have the honour to write you this. When I got up just now for pen and ink, I found myself almost buried in ashes and cinders. You would have thought I had laid a month at the foot of Mount Vesuvius."

At the close we are told:—

"From the 18th of February until the middle of May, 1811, the journal is missing. This is unfortunate, as the period was interesting; and it is to be regretted that his correspondence, so far as it is preserved among his papers, does not afford a satisfactory explanation as to the manner in which he ultimately obtained a passport to leave France. It is, however, known to the editor of these volumes, that he was greatly indebted to M. Demon and to the Duke de Bassano for their unceasing aid and kindness

* A lady of a certain description.

† A married woman, and a proclaimed favourite of Mr. Burr's.

on the occasion. The latter of whom, through the agency of the former, voluntarily and generously advanced the necessary funds to enable Col. Burr to discharge all his debts, and to leave the country with credit."

His troubles, however, were not ended. The vessel in which he sailed from Holland for America was taken by an English cruiser, and he was brought to London, again to suffer and starve.

"To J. Reeves.

"Yarmouth Roads, October 5, 1811.

"It is something more than two years that I was banished and transported out of England, and now, equally against my will, I am brought back again. Having been detained in France more than eighteen months in a sort of limbo, called surveillance, constantly soliciting and denied a passport, I at length obtained one under an assumed name, and sailed from the Texel on the 28th September, in the American ship Vigilant, Captain Combes, bound for Boston. On Monday, the 29th, were visited by his majesty's frigate, le Désirée, who took possession of our ship and ordered her to Yarmouth; but the wind being ahead, and the Vigilant a dull sailor and badly equipped, after six days' hard labour, without having approached Yarmouth, Mr. Word, the prizemaster, thought it prudent to put into any port he could make. This afternoon we cast anchor in the mouth of the Thames, and I hasten to announce myself to you, as well to avoid all appearance of mystery as to ascertain the measure of hospitality which I may expect from the government. My object was when I embarked, and still is, to get as soon as possible to the United States."

How he fared in London, one extract will shew:—

"Some of the books I must sell: i. e. Bayle and Moreri, at least. I went off to consult my friend Mr. Cooper, the solicitor. He had been at his office to-day. Waited half an hour, standing in the public room, but he came not. Went thence to J. Sm.'s, whose advice, as an intelligent merchant, I thought might be useful; out. Then posted back again to Graves's; he was also out. Being a good deal fatigued, and something hungry, stepped into our eating-house (just by Graves's), and took beef and a pint of ale. Thence to see Koe, who has his office in my walk. Gave him my note to J. B., and told him the story of the books, for I have promised J. B. some of those books. Thence loitering, and staring at picture shops, and thinking of that cursed A., to J. Hug's, to get her to put my thirty-franc watch (the only one left) in order. She discovered the malady, and repaired it in fifteen minutes. Sat an hour. It is, perhaps, the only creature in London who does exclusively love Gam. On my way, passed through Covent Garden, and bought her one shilling and sixpence worth of apples and pears. Then slowly, and by various *détours*, home, where, at half-past five, having trotted about four leagues, was a little *abaties*. Sent out for half a pound mutton, eightpence; pint ale, fourpence; one pound candles, elevenpence halfpenny; one pound sugar, ninepence; pipes and tobacco, fivepence; two quires paper, one shilling and sixpence; half-quarter loaf of bread, eightpence; six pounds potatoes, sixpence. So that my expenses yesterday and to-day, exclusive of room-rent and fire, have been eleven shillings and sixpence; but observe that I have had, in this fortnight, only half a pound of meat, six pounds of potatoes, and four pounds six ounces of bread. In my stroll to-day, seeing St. Paul's open, went in for the

first time; cost fourpence, i. e. twopence for a book, and twopence for entrance."

We must now conclude, and we will do so by simply stating, that in the *Diary and Adventures of Aaron Burr* will be found a very instructive and curious Picture of the World.*

The Fergusons; or, Woman's and the World's Favour. 2 vols. 12mo. London, 1839. Colburn.

THIS is a fashionable novel, and describes what young ladies and young gentlemen, among the upper classes, feel towards each other on meeting at balls, concerts, breakfasts and water parties, &c., and how they speak and act on such occasions. To be a tolerable critic one ought to know something of art or something of nature, so that to give an opinion of a picture or a person might not be a stretch beyond the mark; but in a production of this sort, descriptive of lordlings, titled damsels, dowagers of fashion, guardsmen, *et hoc genus omne*, who ride in their own cabs and carriages, keep bad hours, live on the fat of the land, and give in to flirtations, there is such a mixture of art and nature, that, without a more competent acquaintance with the circles in question than we can pretend to possess, it would be presumptuous to guess at the perfection or inaccuracy of the delineation. All we shall say, that *Woman's Love and the World's Favour* appear to us to be so desirable, either separately or conjointly, that if "*The Fergusons*" teach the way to their attainment, they are schoolmasters whose lessons deserve the best attention.

Having delivered these oracular sentences we shall only add, that the love-affairs are neatly and not intricately involved, the principal female characters of a superior order, and the "gents" drawn with sufficient discrimination. Amongst the company one Jack Thompson is introduced, the original sifter for whom might almost be surmised. He is the wit and lion (*alias* the Van Amburgh and beast) of the day; and as the author not only offers some sound advice of his own upon certain very interesting topics, but puts some clever observations into the mouth of his Punch, we shall select our extracts from these sources:—

"We may, perhaps," says the author, "be excused, if we fill up the time with one or two hints for those who are in the habit of giving dinners; hints which appear so obvious, that we should be ashamed to enforce them, were we not aware, by sad experience, how often they are neglected, and what evils result from this neglect. The one most often disregarded, and apparently most obvious, is this: 'Never ask a disagreeable man to dine with you.' We do not here allude to stupid men, or silent men, or mere chatters; for if all these are excluded, the party, instead of exceeding, as it generally does, the number of the Muses, would hardly reach that of the Graces. Besides, listeners and talkers are necessary, or at least often useful, and the gentlemen we have alluded to are generally well qualified to enact these parts. But your disagreeable man! (an animal, by the by, that requires no description, as every body would recognise him at a glance,) it is always a matter of surprise to us, dinner-eaters, how you, most worthy dinner-givers, can permit the really disagreeable men to join your parties,

and 'spoil the pleasure of the time.' And yet we meet such people, at what would otherwise be the pleasantest parties, but which they contrive to spoil, and to which they come (strange to say) not in sheep's clothing, but with all the snarl, tusks, and hide, of the undisguised wolf. If you are a man of sense, gentle reader, you most likely have no such creature within that limit of acquaintanceship which makes it possible that you should invite him. If, however, your ill fortune, or your own imprudence, has placed you in that predicament, I would merely say, get rid of him as soon as you can; and you will find no mode of more certainly nor more satisfactorily effecting it, than by leaving him out of your dinner invitations. To the host and hostess it can be hardly necessary to suggest the propriety of taking care that the gentleman and lady of the highest rank, who will be certain to sit at their respective elbows, should be agreeable companions; which may easily be either ensured, or rendered impossible, by the decision they form as to inviting, or not inviting, some bores who may happen to be a step higher in the peerage. Another rule, too often neglected, is never to ask any well-known satirical gentleman, whose wit, 'howe'er so well it flow,' is essentially ill-natured. He will most likely select some weak individual among your guests, whom he will contrive to render eminently ridiculous, without giving such offence as the unfortunate sufferer, consistently with his own dignity, can notice. The consequence will be, that the injured individual will turn all his indignation on you, and most likely think that he has double cause of offence against you: first, for having asked any one on purpose to quiz your friends; and, secondly, for having invited him on purpose to be quizzed. Let us also recommend you never to attempt, by general conversation, to amuse your whole company at once, if they exceed the number of twelve. They will amuse each other separately much better, and the chances are, that the subject which you start, and would wish to render interesting to all, will not 'please the many.'"

A Mr. Stephenson Jones, made the cat paw of an elderly fashionable at the Horticultural Gardens, is sketched in an amusing manner.

"Perhaps, Mr. Jones would be so very good as to get our carriage for us?" Poor Mr. Jones was obliged to comply, and after pushing his way through the well-dressed party at the entrance gate, who were waiting, with a look of despair which bespoke half an hour already spent in the same way, the coming up of some dilatory No. 1029, he demanded, in an audible voice, 'Mrs. Aston's carriage.' No answer was given. There was a long line, reaching to the high-road, still remaining. The name was passed along the whole distance, varying, in its progress, to Ashby, Ashly, Oxly, Oxlip, &c., but without any result. Poor Mr. Jones was in despair; at last, a half-drunken linkman asked him whether he was quite sure it was not at the other entrance? Mr. Jones could not take upon him to be quite sure of anything of the kind. Whereupon the linkman ventured to repeat, that it certainly was there, and volunteered to run round, if Mr. Jones would cross the garden to the other gate; which he agreed to do. After hurrying across, by a sunny path, through an empty part of the gardens, the same machinery was set to work at the other entrance, with the same result, or rather no result. This delay, which drove Mr. Jones almost to despair, was perhaps not, in fact, very wonderful, inasmuch as Mrs. Aston's coachman and footman were very

quietly discussing a pot of ale in the George, at Hammersmith; having wisely settled that the ladies would not come away till near the end; and that it was much better to keep the horses out of the crowd and dust. They got up, however, at last, and prepared to take their posts, just as poor Mr. Jones was returning to Mrs. Aston, to declare that he could not hear of her carriage any where, though it had been called in every direction; and that he feared there must have been some accident or mistake. 'I am afraid, Mr. Jones,' said Mrs. Aston, very drily, and laying a marked stress on the name, 'you cannot have asked at the right place. My servants are so very regular, I think if they had been asked for properly (here she addressed herself to a young guardman who had been talking to her), I think they would have answered.' 'I will be bound I find them for you,' said the guardman; and off he went, and, unluckily for Mr. Jones's credit, returned in a few minutes, with the information that her carriage was ready. Mrs. Aston gave a look which seemed to imply her opinion of Mr. Jones's inattention or awkwardness; and his disgrace was complete when her footman protested that he had been in waiting for the last hour, and had not stirred from the place. He took this implied disgrace as if he had really deserved it; and could not persuade himself, as they drove home, that he had had quite so pleasant an afternoon as he expected."

We conclude with Jack Thompson's sketch of a stage-coach ride, and anticipation of a cottage accommodation for the Ascot week, after the school of Hook; and as there cannot be a more amusing one, with it we break up:—

"You must often meet with very curious adventures in stage-coaches?" said Arthur. 'Not so often as you would suppose,' said his companion. 'I was once, however, much amused by what happened to me when I was going down to Lord Saltwick, who, as you know, is a neighbour of the Duke of Lincolnshire. There were only two other passengers, one a very smart, stout, elderly man, who seemed inclined, from the very beginning of the journey, to give himself great airs, at the expense of the other passenger and myself. I had gone the first stage outside; and on my attempting to occupy my own inside place, he objected to the introduction of an outside passenger; and when this was cleared up to his satisfaction by the guard, he disputed my right to the management of my window, and quoted stage-coach law against me most learnedly. At the inn where we stopped to dinner, he desired the waiter to take away 'these,'—pointing most contemptuously to some steel forks—and bring silver ones; adding, 'for that is, I believe, what we have been used to.' In short, he made himself eminently ridiculous and disagreeable. What was my surprise, on the first day at dinner at Lord Saltwick's, at hearing a well-known voice behind me saying, 'Sweet or dry champagne, sir?' and recognising my travelling companion in Lord Saltwick's butler. 'Did you tell them about it at Saltwick?' said Arthur. 'Why, the man looked so terrified when he recognised me, and gave me such an imploring look, that I considered myself sufficiently revenged; I should, therefore, have said nothing more on the subject, only that I knew I was asked there to contribute my quota in amusing a royal duke who was one of the party. And as I did not know any other story so likely to answer that purpose, I thought it would be dishonest to deprive them of it.' 'And the poor butler was turned away, I suppose?' 'No! though I should have had not

* In the printing there are as many blunders as in the usual French misconstruction of English names. Thus, Tisro for Truro; Eghorn for Egham; Turnivell for Turnerelli (to whom Burr sat for his bust); Buth for Buth; Feltus for Fettes (lord-provost of Edinburgh; Gaud for Gand; Conchal for Cancale, &c. &c.

much compassion for him, I did not wish to be the minister of justice. I therefore made a bargain with Lord Saltwick to spare him. It was, however, I fancy, a very unnecessary precaution.' 'Why—was he so invaluable?' He had at least succeeded in making his master think so. Indeed, when I asked Lord Saltwick how long Jervis (for that was his name) had been living with him, he answered, 'Why, he lived nine years with me; and, since then, I have lived five with him,' which was, I fancy, pretty much the real state of the case.' Arthur laughed a merry laugh at old Lord Saltwick's state of domestic servitude, with all the conscious liberty of a young bachelor, who has nothing to do but discharge a delinquent valet one moment, and engage a better the next. 'What sort of a house is Rosebush Cottage?' said he, after they had driven through Egham. 'I never saw it,' answered Mr. Thompson, 'but if it resembles all the rustic cottages I have ever known, I think I can describe it. A good deal of roof, and very little upper story, Brobdignag chimneys outside, Lilliput fireplaces within; a gigantic portico and diminutive hall, a greenhouse as big as a drawing-room, and a drawing-room in temperature and size like a hot-house.' 'And what sort of people are to inhabit this Paradise?' inquired Arthur; 'one likes to have some idea beforehand, in order to escape after-disappointments.' 'There again,' said Mr. Thompson, 'I have no facts on which to ground my information; but if you will allow me to speculate, in the absence of them, I should say that there will be about half a dozen more than the house will conveniently hold, and that the six supernumeraries will be just the sort of people to come within the description of a great addition, but no improvement to the party. I do hope, however, that our hostess will follow the example of the lady I visited last Ascot, and bring about one or two matches by her invitations; there is nothing so interesting and instructive as to see that sickly plant, a London flirtation, gaining strength under the alternations of cloudless suns and rural shades, at one of these villas, till it develops itself in the shape of a matrimonial alliance about to take place. But a truce to speculations as to the cottage or its guests, for here we are.'

This is not amiss.

The Deluge; a Drama, in Twelve Scenes. By John Edmund Reade, author of "Italy, in Six Cantos, with Historical and Classical Notes," "Cain the Wanderer," &c. 8vo. 151. London, 1839. Saunders and Otley.

FROM the time that Homer called in the gods to give more than mortal grandeur to his "Iliad," and piled up that high superstructure whose summit all but reaches Heaven—to the present day, have all our great poets loved to enrich their pages by the aid of the superior powers. Saving the father of song, Milton ventured to soar beyond all others, and flapped his mighty pinions into the "Heaven of heavens," calling forth the voice of Him who is shielded in a glory before which the angels themselves veil their faces with their wings. Byron, in his "Heaven and Earth," shrunk from scaling these dizzy regions, and Moore, in his "Loves of the Angels," rose with light but trembling wings no higher than the human eye pierces into the vaulted firmament. Barry Cornwall, in his "Flood of Thessaly," has also ventured to set his foot on the steep mountain, and panted nobly up towards those summits on whose highest tops are seated only Homer, Shakspeare, and Milton.

It requires superior genius to render merely readable subjects of this overwhelming nature; but even that genius, which on other occasions can far outdistance all common competitors, is not always strong enough to wing its way into those dark and sublime scenes where the red sun sets angrily in the bosom of the deep thunder-cloud, and sheds his ominous light over a world that is growing gloomy and desolate. If, then, even a Milton could scarcely guide the ark aright when the torrentes reared like seas from the mountain-heights, and the sheeted lightning blazed upon such groups as painter could never portray, nor poet imagine, we must expect that a less able hand would leave the mighty vessel a wreck, when no pilot ever lived capable of steering her safely through such troublesome seas. Great credit must, however, be given to him who can at all manage to keep the bark afloat amid such certain destruction until the last ray gilds the roof of the ark, and all beside is darkness.

But, speaking no longer metaphorically, Mr. Reade cannot be said to have failed in that which no one is able to accomplish; he has ventured along as far as the very boldest who ever preceded him, and no one can read his *Deluge* without pronouncing it a daring work—a production of a very high order: such a poem, indeed, as none but a superior genius would dare to venture upon. The language which he has put into the mouths of Azazel and Astarte, Iraphil and Orasiel, overflows with the sweetest eloquence, and abounds in such thoughts as approach the high standard of poetry. We need but point out the following passages, which will speak to every heart:—

"The mountainous solitude of Harmon.

Iraphil—Azazel—Orasiel—Astarte.

Astarte. Is this our doom decreed? and must we stand,

And meet destruction face to face? and feel
The bitterness of death one in our breast;
Without a hope in God or from ourselves?
Oh, though I heard the threat, I deemed it still
A sound; I thought our Maker's mercy was
As infinite as his absorbing love.

Orasiel. And does Astarte in her fears forget
Her angel's presence? that his fate is joined
Inseparably with hers?—these doubts may well
Become the earth-doomed, not the loved of heaven.

Astarte. Look at me! do I tremble?—though those clouds

Hang o'er our heads as if they could no more
Control their wrath; although the sullen sounds
Of pent-up winds and waters meet my ears,
Doth this hand tremble that is clasped in thine?
Orasiel! No—my weaker nature fails;
Because it feels the will within resigned
To meet the death from which it shrinks; it sees
The worst, and sees prepared; and, when it comes,
I shall look passively upon the sight.
That sterner natures might avert.

Farwell,
O thou dear earth—that I have loved so well!
Farewell the dim and leafy places, where
These eyes first opened to the azure air,
And drank in all the glories of the day,
Stamped in my heart, that cannot pass away!
The love, the life, the beauty which there dwells;
The stars that seemed like God's own oracles,
Making me feel, while gazing on each starline,
Although they spoke not, that their homes were mine!
Farewell the twilight imaging that heaven
I never now shall see; and my own flowers,
Mingling their sweet breath with my own;
Gladdening the earth with their bright eyes, which I
Have loved as living things, and felt,
Watching them in my solitary hours,
They were my heart's companions given;
That human sympathies within them dwelt;
For in the sunshine I have seen them glad,
As if my joy they had!

And droop their heads beneath the sky o'ercast,
With a fine sorrow!—they, too, die like me,
But not alone!

When their bright hour is past,
They leave behind them for their memory
Some odorous breathings, and a few light leaves,—
Faint playthings of the wind; the wind that grieves
Or seems to grieve above them!

I shall pass,
And die unknown:—lost—buried in the mass
Of a departed world; I shall not rest
On the sweet pillow of some human breast:

I shall not hear the soothing sympathies
Of human love! the silent speaking eyes,
Whose feeling found no vent in words, but made
Their silence, more than eloquence, pervade
The answering spirit; until even to die
Became but slumber's last tranquillity:
A blessing—on my loved one's breast reclined,
Feeling I left my love—my life behind!
Oh, that I thus had died, and never known
Love's desolating passion! but have flown
Lightly from earth as gossamer doth rise,
Serenely wafted to the twilight skies;
Or slumbered like the violet unseen,
Known only by its breath that it had been!
While human eyes and human hearts had found
My grave, and sanctified the holy ground!—
With tears drawn from the memories of love;
With prayers that had been borne to me above;
And made a haunt of that familiar spot,
While I, in death, should not have been forgot!"

Independent of many passages of similar power to the above, the drama possesses a deep interest; and several of the descriptions abound in a fearful grandeur, which fills the mind with deep awe while contemplating them. Altogether we consider it as Mr. Reade's greatest work, and although it is a subject which, as we have before said, there is scarcely a possibility of working out to perfection, yet, so far as he has gone, he has nobly accomplished his design.

'Tis an Old Tale, and Often Told. 12mo. pp. 322. London, 1839. Jennings.

OUR pleasantest task is ever the encouragement of talent wherever we may find it, and, "though we say it," many an another, now reaping a fair harvest of fame and profit, has thanked us for being the first to discover and point out the incipient promise of such a return. The single volume before us has many claims to our indulgence: it is evidently the work of a young person; and, notwithstanding sundry Latin quotations, that person a lady. The tale is a *bonâ fide* love-story, feelingly told. The following sketches of persons are natural:—

"Miss Page was very fat; she piqued herself on possessing great naïveté and simplicity of character. She was one of those 'unlessoned girls, uneducated, unpractised,' who, with a fearless frankness, give utterance to every crude thought that passes through their fertile brains; she had afflictively high spirits, and laughed so loud, and talked so fast, that you felt, after speaking with her (or rather after hearing her speak, for as to anything like a reciprocity of communication, that was quite out of the question), a weight on your chest, a struggling for breath, similar to that pleasantest sensation, the nightmare; in short, she ran where less mercurial people would have walked; reaped, where others only danced; and jested on many subjects which the prejudices of old-fashioned people have, from time immemorial, venerated as sacred; added to all which, she had a string of pet phrases, that would have made a philologist's hair stand on end: such as, a nice man, a dear little chair, a sweet table, a glorious dress, a darling bonnet, a bewitching necklace, &c. &c."

Did our readers ever meet a Miss Page? Again:—

"Miss Herbert was a singular abstraction. She passed her life in a Rip Van Winkle state of torpor; a tortoise was active-minded and agile in comparison; it was impossible to look on her without feeling a drowsy sensation creep over you. In person she was only noticeable for the colour of her hair, which looked as though it had been spun by the silkworm; her thin compressed lips (but that was no wonder, since she never opened them but to eat or drink), and heavy drooping lids, which seemed always about to play the part of nature's soft nurse, and curtain the eyes beneath them, into

most profound repose. From 'eve to morn, from morn to dewy eve' again, would she sit at her embroidery, which was in her hands a complete Penelope's web: whether she undid every night her morning's work I never could discover; certain however it is, that it did not appear to progress. Visions of Herculaneum and Pompeii were associated with her presence. I never looked at her without thinking of the baker transfixed at his oven, or the soldier discovered immovable in the guardroom, or the luckless wretch with his keys and purse of gold."

One more, and we have done:—

"How shall I describe her? Bizarre, capricious, wild, fantastic, yet withal generous, frank, and confiding; haughty, and at times insolent to her equals and superiors, yet condescending almost to familiarity with those beneath her in station; impatient of control, and headstrong when opposed, yet easily swayed by even the appearance of submission; starting you one moment by a profound knowledge of sciences, generally considered beyond the scope of woman's intellect, perplexing you the next by a child-like ignorance of the commonest every-day topics of discourse; satirical more from exuberance of spirits than bitterness of disposition, Margaret Sidney was one of the most original, yet, at the same time, least popular persons I have ever met with. By her own sex she was universally disliked, for women never pardon in each other the slightest tincture of eccentricity; and although followed, flattered, and admired by the men, none seemed anxious to appropriate to himself what each, perhaps, deemed might prove rather a dangerous possession. Poor Mrs. Sidney, herself the thrall of fashion, the bond-slave of decorum, was driven nearly wild by her daughter's wilful defiance of the Mede and Persian laws of society."

Fables. By the most eminent British, French, German, and Spanish Authors, Illustrated with Numerous Engravings, after Original Designs, by J. J. Grandville. Parts I., II., III., IV. London, 1839. Tilt; Simpkin, Marshall, and Co.

We were exceedingly pleased with the promise given by the first part of this truly, what it ventures to proclaim itself, "Splendid Library Edition of Fables," &c., and have only waited for a more sufficient development of the plan before we committed our judgment to its literary and pictorial excellence. With both we are now perfectly satisfied, and can cordially recommend the publication to the young for moral instruction, not less entertaining than beneficial; to the admirers of embellishments, for the spirit, character, and execution of the designs; and to all, for the well-selected miscellaneous and amusing nature of the fables from the stores of all countries. There are many original, or little known, specimens among them; and these done into verse are flowing and easy. We copy an example:—

"The Black and Red Lobsters.

"My friend, ill-fated Spiky is no more!"

A pensive lobster sighed on Norway's coast,
And mourning for his friend it seemed he wore,
For he was black as good King Henry's ghost.

Sorrow sat heavy on that lobster's soul:
And, though I cannot say he turned his shell,
His anguish thus gained speech, which, on the whole,
His purpose answered possibly as well.

"I grieve that Spiky's dead; nor is this all,
For of my friend defunct, alas! 'tis said,
His colour he deserted in his fall,
Abandoning the black, and dying red."

I little thought that one I loved so well
Would prove a recreant in his parting breath,
Nor dreamed insulting enemies would tell
That he could hence change in life or death.

But former lobsters, history tells, were found
Proud of their coat in youth's bright day, who when
Temptations, dangers, woes, came thickening round,
Could meekly change it, as if only men.

What if 'tis true, as some reports have spread,
That horrid warmth to torture him begun,
That fearful heat assailed both claw and head,
Worse than the noontide glow of summer's sun?

Still I had hoped a lobster, firm and true,
Had held himself superior to arawn,
And fixed to countenance no varying hue,
Died a black-bright example to his spawn.

For me if mighty callipers should clasp,
And bear me to the hottest liquid track,
Faithful to honour, with my latest gasp,
I'd perish as I lived,—sublimely black.

I, in the fiercest storm that ever raved,
When thunder's roar has o'er me fish unsaved,
My colour, lose what else I might, I saved,
And never from it pitifully swerved.

Whatever chance it may be mine to know
(And I may into awful peril rush),
It never shall be said by friend or foe,
That ignominiously 'twas mine to bluish.

He spoke, that all the people of the main
Should know him, thus determined was his wish;
Nor pitted, while indulged this lofty strain,
The weakness of another shelly fish.

But having most magnanimously bawled,
In accents fit for the heroic lyre,
A fisherman secured him as he sprawled,
And dropped him in a kettle on the fire.

And oh! when this calamity involved,
That resolution, which could never bend,
In boiling water instantly dissolved,
And he himself turned scarlet as his friend.

Moral.

Thus men on others' foibles who decimate,
And look on neighbours with disdainful eyes,
Prove in like circumstances just the same,
And grow unconsciously what they despise.

And women, too, whose scorn no sister spares,
Folly pursuing with relentless hate,
Find themselves overtaken unawares,
And wake to share and merit the same fate."

Again we recommend the work: little children will laugh at the cuts,—when more grown they will enjoy the fables,—and, after all, the volume may be an ornament to their libraries when they come, in due course, to have families of their own.

Peru as it is.

[Second notice.]

Of the distinguished individual at the head of the Peruvian confederation, we have the following anecdote:—

"Ever since Europeans became acquainted with the Indian race, self-possession has been noticed as one of their most striking characteristics. Atahualpa was unmoved in the midst of every danger: and Santa-Cruz (of Cacique blood) has, in our own day, signally illustrated the same high feature of character in the Inca family. Finding himself for a moment isolated on the field of battle, and on the point of being pierced through by a trooper, he called out in a commanding voice:—'Akka esa lanza y sigue me!'—Raise that lance and follow me! Thus, his presence of mind saved his life; for the mysterious power of a superior mind triumphed over the hostile arm of the infuriated soldier—who, now, as we are told, occupies a place in the body-guard of Santa-Cruz."

The formidable cholera is a slight affair in Peru.

"The facility of procuring ice renders cholera morbus a disease of easy cure, according to the popular practice of the natives. In the first stage of this malady they administer diluents, such as warm water, linseed or mallow water, with or without a little seasoning of cream of tartar or tamarinds; and these simple drinks they continue to give until they consider that the patient has vomited and voided enough, that is, until all undigested matters be thrown off, and the bowels well unloaded; and then they administer iced water, which produces a powerfully sedative effect. The death-like coldness of the patient deters

neither the vulgar nor the regular practitioner (who sometimes conjoins opiates and iced drinks) from giving this remedy with confidence; and the general consequence of the seasonable use of ice and iced water in this fearful disorder is, that the stage of external coldness is shortened by the early removal of internal heat; and thus the exhausting career of the disease is quickly arrested. Under this vulgar but satisfactory and long-established treatment of cholera morbus in Lima, where the disease is endemic, though more prevalent in the hot months, vomiting, hiccup, and cramps disappear; reaction is so mild and favourable as never to require the lancet; yet recovery is almost always certain, though cases appear from time to time so intense as to assume the aspect of what is called Asiatic cholera, during which, as a native physician expresses it, the patient is a horrid image of death."

It is remarkable, that while in every part of Europe the warmest remedies are applied to this disorder, in Asia it is more successfully combated by cold treatment. The Arabs give rice-water there and everywhere; but in Hindostan, the hot system is unknown or discarded.

It seems that chimneys and stoves have lately become common in Chilian houses, and we understand they are the rage now in Petersburg.

"Such, however, as still want these conveniences, make use of the old-fashioned brasiers, or pans of live charcoal. Over these, though people may tear their legs if they please, still their backs and shoulders are suffering from cold, as the heat of the *brasero*, or brasier, is not sufficient to support a proper degree of general temperature in the air of the apartment in which it is placed."

Of fossils we learn:—

"The Indians of the one and the other hemisphere corroborate the truth of their traditions by being able to present the great molar teeth, or grinders, which are found under the surface of the earth in the places alluded to. In Peru, these teeth, with other bones of enormous magnitude, are found in the province of Chichas, near the tropic of Capricorn; and in Chile there are not wanting vestiges of the same sort of organic remains. I have had in my possession four of these molar teeth, of which I yet preserve one in the library of the Medical College of San Fernando. When compared among themselves, I have judged, from their configuration, that they did not belong to the same fossil elephant; but, rather, that three pertained to the mammoth, and that one had belonged to the mastodonton of Cuvier: from which it is to be inferred that those very bulky animals, which in remote ages lived in Siberia and North America, had penetrated into Southern America, where they have left the natives, in the relics of their destruction, or fossil remains, a memorial of the existence and punishment of antediluvian giants. The bony fragments which are considered to be parts of this gigantic race, may they not rather consist of earthy petrifications in water impregnated with lime? Between the villages of Oborillos and Miraflores, in the locality named Calera, water impregnated with lime is observed to percolate at the foot of the *barranco*, or broken bluff land; and it deposits on the stones, over which it drips or passes, certain crusts or laminæ, which have the same appearance with the bony laminæ of the human skull."*

* "It is evident, from the concluding query and remark of Dr. Unwin, that he suspected some speculators in the science of geology of no small share of credulity;

The scientific notices at the end are the most interesting things in the work.

MISCELLANEOUS.

The Claims of Christian Philanthropy; or, the Duty of a Christian Government with respect to Moral and Religious Education, &c. &c. By R. Whytehead, B.A. 8vo. pp. 258. Simpkin, Marshall, and Co.

This essay is published for the benefit of the Philanthropic Society,* which had issued the

"Prospectus of a Prize Essay on the Pernicious Effects of Inordinate Competition in Worldly Pursuits, and of Intemperance, as Two Evils Frustrating the Efficacy, and impeding the Progress, of National Religious Education. (To be comprised in Four Sections.) Section 1.—To represent the very serious and imperative duty, which attaches to the government of a nation in exercising its functions, towards promoting a sound, religious, and moral education amongst all classes of the community; and on the other hand to suppress, or at least to discourage, whatever may impede it, or be prejudicial thereto. Section 2.—To depict the painful effects produced by inordinate competition, in regard to the unwarrantable and cruel treatment of the dumb and defenceless animal creation, and to urge the necessity of a rational and merciful limitation being affixed to the exertions exacted of them by mankind. Section 3.—To illustrate the baneful effects, both upon the mental and physical energies of a densely crowded and thoughtless population, produced by competition in the unrestricted sale of intoxicating liquors; when, to aid the above demoralizing and pestiferous traffic, every alluring enticement is adopted. Section 4.—To argue how powerfully the above evils must, separately and collectively, tend to neutralize the beneficial effects which Christianity has at so much cost, and with so much labour and talent, striven to dispense, and the characteristic features of which are humanity, temperance, and, the most comprehensive of its doctrines—religion. The Essay to be framed on general principles, and not with the view of entering into the political disputations or religious opinions of any separate party or sect whatever."

The volume before us is an answer to this appeal; and, both for the sake of national instruction and of the Society, we heartily wish it success. Of the essay itself, we can honestly say it deserves it.

The Rights of Persons, according to the Text of Blackstone, incorporating the Alterations down to the Present Time. By James Stewart, Barrister-at-Law, M.P. 8vo. pp. 532. London, 1839. Spettigue.

To follow in the footsteps, and wear the mantle of Blackstone, is no mean honour; but when we look at the elaboration of his subject, his arrangement, and his style, we think the praise may fairly be accorded to Mr. Stewart. Truly does he observe that "The 'Commentaries' of Mr. Justice Blackstone, as a work designed to give information on the laws of this country, may be considered in two lights. They may be viewed as a methodical and elegant statement of what the law was about sixty years ago, when they received the last corrections of their author, or as an authentic account of the law at the present day. In the former light their use remains unimpaired, and they must be read with profit by all who wish to study the legal history of Great Britain; but it is obvious that,

and it also appears that he had not himself examined the bony fragments to which he alludes. Had these come to his hands, it is probable that he might have been able to ascertain such specific and distinct characters as should have served to satisfy him that the teeth in his possession were not only by report, but in fact, parts of those skeletons from among which they appear to have been picked up. We may believe that they were conveyed to Lima chiefly on account of their more portable size; while the other more unwieldy bones would have been considered too heavy for being removed so far, by persons who may not have known their scientific value to the geologist.—*Translator.*"

* Founded in 1788, and located in St. George's Fields. This truly benevolent institution, it should be known to all, "receives the very pitable and destitute children of persons who have undergone the extreme sentence of the law, or are sentenced to transportation; also juvenile criminal boys, recommended by magistrates or others, as likely to be reclaimed. The boys are fully instructed in some of the following trades, viz. either as tailors, shoemakers, printers, bookbinders, or repemakers, according to their respective abilities. The girls must be the offspring of convicts, but are not admissible if morally vicious or depraved."

in the latter, they have lost much of their original value."

To remedy this acknowledged discrepancy, the author has incorporated more recent legislation with the text of his great precursor, and thus produced (not by the contradictory method of notes, emending or pointing out alterations in the original) an entire and uniform work in the law as it now exists, and as it concerns the rights of persons, is clearly laid down and explained.

Having said this much on a volume, the nature of which forbids quotation, we shall conclude by expressing an earnest wish that other branches of the law were simplified in a similar manner, and brought within the common sense of those whom their administration affects in every condition of social life.

America and the American Church. By the Rev. H. Caswell, M.A., Rector of Christ Church, Madison, Indiana, &c. &c. Pp. 368. London, 1839. Rivingtons.

HAVING in a review of another work last week taken a comprehensive notice of the state of religion in America, we need only state of this volume, that it contains an account of the Episcopalian or Church of England establishment, which consists of about half a million of laity, and a thousand clergymen.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

TUESDAY, March 12. Dr. Truman on 'Organic Matter.'—The lecturer commenced by pointing out the elementary substances forming all the materials of which this planet is composed, observing that the term "simple," applied by chemists to these substances, is not the most logical which could be found; because, though they cannot be decomposed at present, it does not follow, as science advances, that they may never be resolved into other elements, and found to be compound bodies. On this account, it would be more correct to name them "undecomposed," instead of simple substances. Inorganic and organic matter are formed of these substances united in different proportions. Organic matter contains fewer of them than inorganic, but the former is more complex than the latter. The analyses given by chemists of organic matter cannot be received as actually correct, because they cannot be proved to be so by synthesis. In fact, the remarkable peculiarities belonging to organic matter render it probable that it is altogether of a nature *sui generis*, though it may be dependent on inorganic matter for its existence. Geology tends to shew that the formation of organic was subsequent to that of inorganic matter, and that organic matter has gone through a series of changes from the simplest kinds, until it has been brought to the complicated condition in which it is presented to us at present. Man and the simie are the representations of the most complicated forms organic matter has yet assumed on this planet. A similar kind of complication has also taken place in vegetable organic matter. The phenomena manifested by organic matter when undergoing decomposition, clearly demonstrate that it possesses properties peculiar to itself. No infusoria are to be met with in inorganic substances whilst undergoing decomposition, and yet these animalcules always make their appearance in organic matter when running into that state. In living beings, the elements of which they are composed are collected together either in a fluid or solid state. The solids predominate generally in vegetables, whilst the fluids are ordinarily most abundant in animals.

The human body, when deprived of its fluid particles, may be reduced from the weight of one hundred and twenty pounds to that of only twelve pounds. Some marine animals, as medusae, contain such an excess of fluid, that though, in a natural state, many of them weigh from twenty-five to thirty pounds each, yet, after desiccation, they will not weigh more than five or six grains. The presence of fluid seems to be indispensable to the manifestation of vitality. The *rotifer ridiculous*, when dried, appears to be inanimate; but, after being supplied with a single drop of water, it soon re-exhibits the ordinary vital phenomena peculiar to it. It is doubtful whether the different quantities of the elementary substances found in organised beings can always be accounted for, by supposing they are introduced with the food. The present occasion does not admit of taking into consideration those observations which render it probable that many of the simple substances of chemists may be converted from one into another through the agency of vital action. At the same time, it is certain that many living beings are endowed with organs specially destined for the evolution, or accumulation, if not for the secretion, of the imponderable substances. Thus light is given out from the animalculæ, causing the phosphorescence of the sea; from the glow-worm, the *pilegora lanternaria*, the *elater noctilucus*, &c. Electricity also is evolved by the torpedo, silurus, and *gymnotus electricus*. These imponderable substances are produced by parts of a peculiar organisation, and not by the entire bodies of these creatures; and there is almost as much reason to regard these parts as organs for the secretion of light and electricity, as that the liver is for the secretion of the bile, or the salivary glands are for the secretion of the saliva. If we are correct in assuming that these imponderable elements are produced by vital action, then, by analogy, it may be inferred that some of the grosser and ponderable elements in organic beings are occasionally produced in a similar manner. The worthy Doctor occasionally introduced anecdotes connected with electricity, &c.; and thereby rendered a lecture which was truly scientific, truly amusing. He also produced a cast, which had been taken from the head of a man who had recently met with an accident in Birmingham. He remarked, in the most delicate manner, that he had not the least intention of disturbing the faith of phrenologists, but that the construction of the skull, which he particularly explained, together with the effect of the blow on it, tended to shake their opinions, as he thought, in a considerable degree. The Society met on Wednesday evening on ordinary business. The claims for premiums in polite arts were exhibited, and will, we understand, be determined next week.

LINNÆAN SOCIETY.

MR. FORSTER in the chair.—Read, a notice of the Birds of Iceland, by George Townsend, Esq. This communication was accompanied by specimens of the birds, which formed part of a collection made in Iceland in 1837, by Mr. W. Proctor, the sub-curator of the museum in the Durham University. Faber enumerates eighty-four species of birds as natives of the island, of which twenty are land and sixty are water birds. From an accurate examination of the skins brought home by Mr. Proctor, Mr. Fox is inclined to think that several of the species hitherto regarded as identical with those of other countries, will turn out to be distinct and peculiar to Iceland. Among the

specimens exhibited were the ringed guillemot, the Iceland grouse (*Tetrao Islandorum*), and the Greenland golden eye (*Clangula Barrowii*). Mr. Proctor was not so fortunate as to procure a specimen of the great Auk (*Alca impennis*), which has now become extremely rare, and is only to be met with on some small islands which lie at the distance of several miles off the southwest point of Iceland. Read, also, an elaborate paper by W. Valentine, Esq. 'On the Structure and Development of the Reproductive Organs of *Ptilularia globulifera*. Among the presents were several Nos. of Dr. Wight's "Illustrations of Indian Botany." The work is printed at Madras, and the coloured lithographic prints of plants are highly creditable to the native artists employed.

STATISTICAL SOCIETY.

SIR C. LEMON, Bart., in the chair.—The paper read was, 'An Account of the recent Progress and present Extent of Manufactures in Prussia, and of the Trade of the Prussian Commercial Union in Manufactured Goods.' From German official documents. The progress of any nation in those branches of industry which have added so much to the power and wealth of this country, and which afford employment to so large a portion of its population, must at all times be a subject of interest; but the importance which has lately been attached to the extension of manufactures in foreign countries by the advocates of a change in the corn-laws, will probably confer additional value upon the following information respecting the present condition of those interests in the Prussian states. It is chiefly the competition of Germany and Switzerland that our manufacturers profess to fear; and it is in those countries that the greatest impulse has recently been given to native industry. The communication goes on to notice the statistics of the cultivation of flax, and its manufacture into yarn, cotton-spinning, wool-spinning, silk-throwing, manufacture of linens, manufacture of woollens, and manufacture of cottons. Each of these heads is illustrated by copious tables of exports and imports, indicating a prosperous state of trade and commerce. We can only find room for the following table, which exhibits the imports and exports of cotton goods in the Prussian dominions alone, upon an average of the three years, 1829 to 1831. Of the Prusso-Hessian league, consisting of Prussia and the two Hesses, in the years 1832 and 1833; and of the whole Union, in the three following years:—

	Imports. lbs.	Exports. lbs.	Excess of Exports. lbs.
Average of 1829-31	1,434,292	2,174,694	740,402
.. 1832	1,671,462	3,065,574	1,394,112
.. 1833	1,329,085	2,753,369	1,424,284
.. 1834	1,598,380	8,848,346	7,249,966
.. 1835	1,630,017	9,590,373	7,960,356
.. 1836	1,594,484	9,948,324	8,353,840

Thus, throughout the whole period the importations have remained nearly stationary. The exports, however, increased to some extent in 1832 and 1833, which was principally owing to the accession of the Grand Duchy of Hesse to the Union, as the exports from that state amounted to about 354,000 lbs. in each year; but an increased exportation took place at the same time from the Prussian dominions; particularly from the Rhenish provinces. In 1834, however, the exports rose in the proportion of 3 to 1, compared with the average of 1832-33, and of 4 to 1 compared with 1829-31. This was chiefly caused by the accession of the kingdom of Saxony. At the anniversary meeting held this day week, Earl Fitz

william in the chair, a very satisfactory report was read, and officers for the ensuing year were elected.

GEOLOGICAL SOCIETY.

MARCH 13. Rev. Dr. Buckland, President, in the chair.—A paper was read 'On the Geology of the north-western part of Asia Minor, from the Peninsula of Cyzicus, on the Coast of the Sea of Marmora, to Koola; with a Description of the Katakekaumene,' by W. J. Hamilton, Esq. Sec. G. S. The line of route taken by Mr. Hamilton from Cyzicus (lat. 40° 22') ascends the valley of the river Macetus to its sources, near Simaul, then crosses the Demirgi chain (lat. 39° 5'), and afterwards passes by Karskeul and Selendi to Koola, on the eastern confines of the Katakekaumene, the whole of the distance being about 170 miles. The principal physical feature of the district is the Demirgi range, which extends from Pergamon on the west, to the lofty mountain of Ak Dagh, or Shapkan Dagh, on the east; but the country is intersected by various ranges of hills sometimes exceeding 1200 feet in height. The geological structure of Mr. Hamilton's line of route is simple, being composed of only schistose rocks with saccharine marble, a compact limestone resembling the scaglia of Italy and Greece, tertiary sandstones and limestones, granite, peperite, trachyte, basalt, and other igneous rocks. Between Kespit and the foot of the Demirgi hills are also remains of an ancient lacustrine deposit; and in the valleys are extensive alluvial accumulations. The schists consist of mica slate, gneiss, and clay-slate, and they occur chiefly near Cyzicus. The strata dip at high angles from the granite, to the protrusion of which the inclination is apparently due. The marble was formerly worked to a very great extent; and Cyzicus was indebted to it for being ranked among the most splendid cities of antiquity. The compact limestone, resembling scaglia, was observed only at the foot of the hills north of Maiuias. It is associated with beds of shale, and is apparently destitute of organic remains. The micaceous sandstone is extensively distributed south of Maniyas, also towards the eastern extremity of the Demirgi mountains, at the point crossed by Mr. Hamilton, and between it and Koola. The stone is fissile, and alternates in some localities with shale: the beds are occasionally much dislocated by the protrusion of igneous rocks. About halfway between the pass over the Demirgi range and Koola, the upper beds of the sandstone alternate with the lower layers of an overlying deposit of peperite. Mr. Hamilton has no doubt that this formation belongs to the one which himself and Mr. Strickland examined between Ghlediz and Ushah. The white tertiary limestone, Mr. Hamilton considers to belong to the great lacustrine formation, which occupies so large a portion of Asia Minor; but within the range of country described in this memoir, it appears to be totally devoid of organic remains. It is sometimes soft, resembling chalk, but at its contact with the igneous rocks it becomes hard; and at one line of junction a layer of serpentine was interposed between the two formations. Thin beds of white opaque flints, resembling those of the lacustrine limestone of Auvergne, were noticed by the author a little south of Kefsut. The strata have been in many places very much dislocated by the protrusion of trachyte. The granite was observed only near Cyzicus, and in the Demirgi chain. It is composed of quartz, felspar, and mica, but it contains large masses

of hornblende, and is traversed by veins of felspar. The schistose rocks are thrown off by it near Cyzicus at high angles, and with a quaquaversal inclination. The peperite, or volcanic tuff, appears to be of intermediate age, between the micaceous sandstone and the white limestone, as it rests upon the former, and is overlaid by the latter. It is distinctly stratified, and varies much in character, being sometimes earthy, occasionally conglomeratic, and not unfrequently hard or semicrystalline. It is chiefly developed south of the Demirgi range. The beds are generally horizontal or slightly inclined; but they are disturbed where igneous rocks have been protruded through them. Trachyte and basalt rise to the surface at many places between the Demirgi hills and Koola, disturbing the stratified deposits, and producing changes both in their structure and hardness. On the banks of the Hermus basalt overlies the white limestone. Mr. Hamilton also described the hot springs situated about seven miles to the east of Singerli at the northern foot of the Demirgi chain. Their temperature he conceives to be equal to that of boiling water; and they are discernible at a considerable distance, by the great volumes of steam which they throw off. Extensive accumulations, several feet thick, of a white fibrous sediment, occur around the mouth of the springs. A strong sulphurous smell accompanies the emission of the water; but at a point where the stream had lost enough of its temperature to be tasted, no peculiar flavour was perceived. After turning several mills, and at the distance of a mile and a half from the spring head, the water is collected and used by the Turks as a warm bath. Copious hot springs are likewise thrown out near the Katakekaumene. The water is tasteless, and the temperature 123° of Fahrenheit, but no sediment is deposited around the mouths. Mr. Hamilton then proceeded to describe the Katakekaumene, a district singularly interesting on account of its extinct volcanoes, and its great resemblance to Auvergne. He first visited it in company with Mr. Strickland, who laid an account of some portions of it before the Geological Society in 1836. The district extends from Koola westward about nineteen miles, and for about eight miles from north to south. The formations included within this area are the schistose rocks and crystalline limestone, which occur near Cyzicus, the white lacustrine limestone, basalt and lavas of two perfectly distinct ages. The leading physical features of the district are ridges of schistose rocks with intervening alluvial plains. On the former are seated all the ancient volcanic cones or craters, and on the latter the modern. This important distinction, Mr. Hamilton is of opinion, may be explained on the supposition, that the elevation of the schistose ridges produced fissures through which, as lines of least resistance, the first eruption of lava found vent. That these openings becoming afterward plugged up by the cooling of injected molten matter, the schistose ridges were rendered so compact, that when the volcanic forces again became active, the line of least resistance was transferred to the valleys. Of the relative periods when the eruptions took place, no opinion can be formed. The more modern must have been long anterior to tradition, though the streams of lava present all the ruggedness of the most recent coulées of Etna and Vesuvius, and the craters preserve, to a great extent, their form and internal cavities. The more ancient lava-currents are covered by sedimentary matter, and are, therefore, considered by Mr. Hamilton to have been

at one period covered with water. They have also lost, in part, their form, the craters being nearly obliterated. The paper concluded with a comparison between this part of Asia Minor and Auvergne. 1. The great ancient volcanic group of Mont Dor, the Cantal, and Mont Mezen, Mr. Hamilton conceives is represented by Ak Dagh, Morad Dagh, the trachytic hills east of Takmak, Hassan Dagh, and Mont Argus. 2. That the more modern volcanic period of central France may be compared with the Katakekaumene, both as respects the composition of the lavas, their arrangement at different levels, and the cones being scattered, not collected in great mountain masses. 3. With respect to the disposition of comparatively recent volcanoes being coincident with the strike of the granitic axis, from the interior of which they have burst forth, Mr. Hamilton stated that the Katakekaumene affords additional illustration. 4. In Central France, as well as the district described in this paper, there are deposits of lacustrine limestone, which have been separated, by the action of bodies of water, into table lands, surmounted by beds of basalt and lava; and in both countries currents of lava of more modern date have flowed into the intervening valleys. In two points, however, there are differences between the volcanic phenomena of Asia Minor and Central France. In the latter, streams of igneous products may be traced from the most ancient system of cones, or that of Mont Dor; but in the former none have yet been discovered which issued from Ak Dagh, or the other contemporaneous volcanic mountains. In France, also, trachytic eruptions took place during the deposition of the lacustrine limestone; but in the Katakekaumene, they appear to have preceded the deposition of the white limestone, or are associated with only its lowest beds.

ASTRONOMICAL SOCIETY.

At the anniversary meeting, the Society's Gold Medal was awarded to the Hon. J. W. R. Wrottesley, for his Catalogue of the right ascension of 1918 stars. Sir John Herschel was elected president, in the room of Mr. Baily.

BOTANICAL SOCIETY.

FRIDAY, 16th. Mr. Gray, President, in the chair.—Various donations to the library were announced. Read "Observations on the Species of *Tilia*, Natives of England; with Notices of some remarkable aged individual Trees," by Mr. Edwin Lees. It has been questioned by botanists whether any species of the genus *Tilia* of Linnæus, commonly called the lime-tree, has any legitimate claim to be considered a native of England. Gerarde, in his "Herbal," published in 1597, says, "The female linden-tree," adverting to the small-leaved lime, "groweth in some woods in Northamptonshire, also near Colchester, and in many places along the highway leading from London to Hemmingham, in the county of Essex." Evelyn, also, in his "Sylva," distinctly remarks that, "Our woods do in some places spontaneously produce them (the lime); and though of somewhat a smaller leaf, yet altogether as good apt to be civilised, and made more florid." These statements might justly seem to remove any doubts as to the real indigenity of the *Tilia*. Yet Withering, nevertheless, says, "In regard to its claim to be strictly indigenous, we consider it may rank among the *Dubia*." Mr. H. C. Watson, in his "New Botanist Guide," attaches the opprobrious asterisk to its name. Sir J. B. Smith, in the "English Flora," taking up Ray's remark, "that he could not

meet with it indubitably wild," seems to infer that it must have been naturalised. And Mr. Loudon, in the "Arboretum Britannicum," following up the dictum of Daines Barrington, excludes the lime from his indigenous list; though afterwards he admits, that, from a fact furnished him by Mr. Lees, his doubts as to the tree being truly indigenous have considerably diminished. Mr. Lees considers the lime indigenous to Worcestershire, the borders of Herefordshire, Gloucestershire, Monmouthshire, and South Wales: and agrees with Mr. S. T. Gray ("Natural Arrangement of British Plants") in admitting two as natives of England—*Tilia grandifolia*, or broad-leaved linden; and *Tilia parvifolia*, or small-leaved linden. Many very interesting "observations" were brought forward in support of his opinion. The paper also enlarged upon the characteristics and localities of the several species of Europe. In England, the lime has given a name to places. According to Mr. Lees, Llantridger, near Bromsbury, Gloucestershire, derives its name from the linden-trees there, which is, in fact, the more common and proper appellation; and also a parish, called Llanwood, in Lincolnshire, where the small-leaved linden is said to grow. Gerarde calls the tree the lime, or linden-tree, and says, "The bark is brownish, very smooth, and plaine on the outside; but that which is next to the timber is white, moyst, and tough, serving very well for ropes, trasses, and halters." Evelyn also says, that "Even the coarsest membrane or slivers of the tree, growing 'twixt the bark and the main body, they now twist into bass-ropes." Linnæus, in his "Lachesis Lapponica," mentions the same substance as forming nets. The term "lime," as it would seem to be only a corruption of "lime," ought not to be applied to the *Tilia*, particularly as an edible fruit is so called, and linden is preferable, as the original appellation, used also on the Continent. The wood of the *Tilia* has been universally celebrated for its soft, close-grained, and light character; hence its employment in the exuberant carvings of fruit and foliage common to the drawing-rooms of the Louis Quatorze era, and its more modern application, as the chief material of the elegant Tounbridge ware. From the sap, drawn off in spring, sugar may be manufactured, and a substance, simulating chocolate, has been prepared from the pounded fruit. The flowers are exceedingly mellifluous; and an infusion of them has been recommended as an antispasmodic. Clothing is made of the bark; also are made tiles for cottages; and of the twigs, baskets, cradles, &c., so that Pliny's expression may still be justified, *Tilia ad mille usus potenda*. The character and appearance of the linden-tree in its old age, and its historical and poetical associations, which, it was stated, formed the other portion of Mr. Lees' very interesting paper, will be read and described at the next meeting.

ROYAL INSTITUTION.

FRIDAY, 16th. Mr. Cowper, 'On Pottery.'—The basis of pottery is clay; in the lower processes, a mixture of one with another; in the higher, with sand or ground flint. The preparation of the clay and flint for mixing, and their subsequent treatment, previously to being fit for the potter, formed the first part of the illustration. The stages we will do little more than enumerate; and first of the flint, because more numerous. Flint being calcined, and placed in water, splits in all directions. These small pieces are then stamped with heavy weights to a coarse powder, which is afterwards ground in a mill with water to a consistency

of cream. The clay is also reduced to a similar substance, by the process of plunging and by the stirring-mill. The flint cream should weigh 32 oz., and the clay-cream 24 oz. so the pint. They are then mixed and sieved, and afterwards boiled to evaporate the water, being at the same time well stirred to allow the air to escape. For the latter purpose also, when the clay thus produced is cold, it is cut through, lifted in the hands of the workman, and again thrown down on the other portion; this is called slapping, or wedging, and intended to destroy any remaining air-bubbles. The clay is then stove and thus mellowed. The potter's wheel, the ancient Egyptian, and the modern, the spindle and wheel being the principle of both, were next described; one of the latter kind, temporarily constructed, was practically explained; and the potter present, with a lump of clay thrown on the wheel before him, turned by his foot on a treadle and crank, fashioning the clay with his hands, raising and depressing it, hollowing it with his thumbs and moulding it with his fingers pressed against the outer sides of the rapidly revolving plastic materials, to which he also now and then applied the edge of a thin plate of steel acting as a scraper, and cut to fit the exterior of the form required, made first a bowl. He then converted the bowl into a basin, and the basin again into a jar, a common pickle jar, and the jar again, without having moved either from the wheel, into a bottle (a common stone bottle it will be understood, as the clay he used was that prepared for the ordinary stone ware). And again, to shew his power over the docile nature of his handiwork of the thing he had made, he changed, widened out, the bottle into an open bell-shaped vessel. In this he was much assisted by the centrifugal force consequent upon the revolving motion, which, when Mr. Cowper pointed out, the potter surrendered the last form to its influence, it widened and widened until it at last split, and was thrown from the wheel and was destroyed. We had watched the proceedings so intently, and felt so much interest in the inanimate creation thus given up to the destroyer, and returning to its former condition, that thoughts were busy within us. But even whilst they flashed through our mind, the potter, still turning on, had, with another lump of clay, raised another form, and a new interest was excited. Such is life! The new form was a jug, an ordinary stone jug, without a handle, and not a horse nor a huntman, nor a hound nor a Toby Philpott, ornamenting its rotund sides. These, however, were soon added. A handle was moulded in a chalk mould, and the figures on a chalk die; the latter, smacked down on a lump of clay, left on it the clay which had been previously pressed into its figure. But how was this design in relief to be transferred to the jug to which already the handle had been fixed with water and a sponge? It was cut, from the lump, as thin as possible, preserving the figures, with a wire, and then stuck on the sides of the jug by the simple sponging process. All of the ornamented jug thus formed of parts being merely clay and water, when fired became one substance. To produce the shades of the "brown jug," ochre is used; and to give it its polish or glaze, common salt. But here a simple and interesting chemical action takes place. A coating of glass, which the polish really is, is to be placed on the surface of the jug: no sponging process, no gumming, no gluing, nor cementing, could effect this. Chemical combination alone could accomplish it. Thus then is it produced. Salt is com-

posed of marlatic acid and soda, glass of silica and soda. By the heat of the kiln in which the jugs and salt are placed, the salt is volatilised, the marlatic acid goes off, while the soda remains, and combines with the silica already in the jug, and produces on its surface that glossy, glassy appearance, which is in fact, as before stated, a thin coating of glass. The action on the surface of the finer ware is similar; but previously to being fired, instead of salt being placed with it in the kiln, it is dipped in a prepared glaze, or a solution of glassy material. Mr. Cowper treated, in a local and illustrative manner, the whole of his subject, embracing further the more finished processes of the finer ware and porcelain, the useful and ornamental. He dwelt on form, and exhibited many beautiful antique vases. He showed, by a diagram, that the oval was the basis of their figure, almost all being oval opened out. Mr. Reinegal has treated of this fully, but Mr. Cowper considered that he had carried his principle too far, in defining all elegant forms to be modifications of that figure. Besides the antique models, were exhibited some very varied and beautiful mosaic and tessellated slabs for floorings or panellings, a new invention and application of Messrs. Singer and Foster, by which Mr. Cowper stated the admired charms of the Alhambra may be rivalled.

UNITED SERVICE INSTITUTION.

MONDAY, 18th. — First evening meeting of the season, Major Stedwell Clarke, V.P. in the chair. Numerous presents were announced, and exhibited also for inspection the model of an ingeniously contrived portable boat, by Mr. Dumas. The papers read were, 1st. No. 1, of a series of communications 'On the Longitudes of the principal Places on the Globe,' by Lieut. H. Raper, R.N. 2d. 'On a new Method of connecting and disconnecting the Paddle-wheel of a Steamer,' by Captain Ramsay, R.N.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

Oxford, March 14. — The following degrees were conferred:—

Masters of Arts.—Rev. W. Cockayne Adams, Balliol College; R. Downes, Trinity College.
Bachelors of Arts.—J. B. P. Dennis, Queen's College, Grand Canon; J. B. P. Dennis, Queen's College; H. S. Scott, Balliol College.

CAMBRIDGE, March 13. — The following degrees were conferred:—

Honorary Masters of Arts.—Lord J. J. R. Mansel, second son of the Duke of Rutland, Sir H. Dryden, Bart., Trinity College.

Bachelors of Divinity.—Rev. G. Johnson, Christ's College, and Head Master of Barnstable Grammar School; Rev. G. Ingram, Queen's College.

Masters of Arts.—R. Wilson, Trinity College; R. Shortland, Pembroke College; C. Spenser, Christ's College.

Bachelors in Physics.—T. Barton, Queen's College.

Bachelors of Arts.—T. Thring, Trinity College; T. Ridley, Catherine Hall; A. Kemp, Caius College; E. Ridgway, Jesus College; E. C. Sharpe, J. Bennett, Christ's College.

The Chancellor's Medalists.—The chancellor's two gold medals for the best classical scholars among the commencing Bachelors of Arts of the present year, were on Monday last adjudged to Arthur Shelly Biddis, and John Gorham Westland, both of Trinity College.—*Cambridge Chronicle.*

ROYAL SOCIETY.

THE Marquess of Northampton in the chair.—Read, 'An Account of the Fall of a Meteoric Stone,' communicated in a letter to Sir John Herschel. The stone fell on the 13th of October last. Some time previous to its falling the air was hot and sultry; a noise like the discharge of artillery was heard; this was followed by the descent of pieces of the stone: when it fell, it was so soft as to be capable of being

cut with a knife. Another account of a similar description of stone, given by Mr. Faraday in a letter to Sir J. Herschel, was likewise read. A paper, by S. B. Howlett, Esq. giving an account of a barometer constructed by him, was also communicated by Sir John Herschel. The advantages of this barometer must be obvious, when it is mentioned, that no correction or adjustment for zero is required. A communication, by Mr. Talbot, describing a new kind of sensitive paper for photogenic drawing, was then read, which shall appear in next *Literary Gazette*. Mr. Talbot then mentioned, that in his memoir on the *New Art*, read lately before the Royal Society, on account of the haste in which it had been written, he had omitted to give the details of a method by which etchings on copper might be successfully imitated. This may be done by covering a sheet of glass with a solution of resin in turpentine, and afterwards smoking it by the flame of a candle; and upon the blacked surface the drawing was made with a needle, or other fine-pointed instrument. A sheet of the sensitive paper being placed over it, a perfect copy was obtained.

SOCIETY OF ANTIQUARIES.

MR. HAMILTON, V.P. in the chair.—Mr. Roper exhibited a facsimile, by rubbing, of a monumental brass, in Croydon Church, being the effigies of Sir Walter Gabriel, a charyman, who died in the early part of the reign of Henry VIII. The reading of Mr. Bruce's paper, containing a selection of cases from the proceedings of the privy council in the reign of Edward VI., was concluded. The meetings of the Society were adjourned over Easter to the 11th of April.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Royal Geographical, 9 P.M.
Tuesday.—Civil Engineers, 8 P.M.; Zoological, 8½ P.M.
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; London Institution, 7 P.M.
Thursday.—Numismatic, 7 P.M.
Saturday.—Artists' Conversations, 7 P.M.

FINE ARTS.

PHOTOGENIC DRAWING.

FEW discoveries or disclosures have produced so many amateurs in the art and the sciences of the subject as this, since the announcement of the so-named Daguerreotype. We have done some service in giving honour to Niepce where honour is due, by the disclosures which we have made, and the publication of his claims, for which we were indebted to M. Baer. The process of Niepce, or that now shown by Daguerre, is, however, essentially different from that of Mr. Talbot. Since publicity has been given to the latter of these discoveries, many and important improvements have been made, by Sir J. Herschel and others, among men of science, and by artists, especially engravers; in the hands of two of these, who appear to have simultaneously made the same discovery, it has become an important art. Mr. J. F. Havell, and Mr. Willmore, have, by covering glass with *etching ground* and smoke, sketched designs upon it. Through the glass thus exposed by the scratches, the photogenic paper receives the light, and the design, which the sun may be said to print, may be multiplied with perfect identity for ever! Designs thus produced will probably become much more com-

* M. Daguerre, we understand, declares that his process is different from that originally pursued with Niepce, and the name Daguerreotype mentioned by a poet agreed upon between the parties.—*M. L. G.*
+ See *Scientific Report of the Royal Society*.—*M. L. G.*

mon, and even more generally applicable than lithography, because all the means are more readily accessible, whilst it will receive its rank as an art, and be excellent in proportion to the skill of the artist, as a draughtsman with the etching needle. The also need no longer be kept down by that of the printing press, as the size of the glass can alone limit the size of the design. This is a real and valuable discovery, applicable to a thousand purposes. It is reported that Mr. Havell, and his brother, the well-known painters, have succeeded in giving some true colours, also, to their productions, by the action of light. Beautiful imitations of washed bistre drawings may be produced, by stopping out the light on the glass by black varnish, which will obstruct the transmission of light in proportion to the thickness with which the varnish is laid on; and specimens like fine monochrome prints have been produced by this process. The first report of the discovery in France alarmed the painters from nature; next, the specimens of etched plates and printed impressions alarmed the engravers; this further discovery has replaced it, as an art, in the hands of its professors. But, since the sun has turned printer, we fear that the devils will ultimately suffer. It is curious and interesting to hear of scientific men already seeking to apply the process to self-registers of thermometric, barometric, and magnetic variations. We shall watch with interest the new disclosures and applications of this suddenly noised abroad discovery.

The Suffolk Street Gallery has its private view to-day, and opens to the public on Monday. We are sorry we cannot give any idea of its qualities, but were not admissible for that purpose: a fact which, in our humble opinion, does not shew absolute wisdom in those most concerned for the success of the exhibition.

THE DRAMA.

Her Majesty's Theatre.—The dull and heavy opera of *Belshazzar* has been repeated every night without any improvement in the performances: so far for the beginning of the season, more helpless and paltry than usual. But—after Easter, the subscribers and the public are promised *Griek, Lablache, and Rubini*, "successfully;" and so Tamborini as all. If *emais* be the natural and habitual temperament of the English people (see review of *Aaron Burr*), they need only go to this foreign theatre to enjoy it to the utmost extent.

Covent Garden.—Our prognostication respecting *Richard III.* has been fulfilled: to the letter, and the theatre filled to the top every night it has been repeated; that is to say, every open night. In doing justice to the exertions of the performers, we accidentally omitted to notice the spirited and natural acting of Mr. Howe; and we take this opportunity of doing our duty in that respect. Now that the earlier portions of the play are shortened and condensed, it goes throughout with uninterrupted vigour and effect. The telling points, and they are many, are brought closer together, and the mastery of the Cardinal shines through every act, with a splendour which is the perfection of dramatic character.

Haymarket.—On Monday this delightful little theatre opened with the popular play of *The Looe Chase*, with a partially new cast, and a new farce, in which Mr. Hill performed. The novelties in the *Looe Chase* were Mr. W. Lacy, who played *Master Walker* judiciously, but rather too passively; Miss Mordaunt, who placidly walked through the sweet chamber of *Lynka*,

looking pretty and interesting, and delivering her rôle in an even tone—she is not at present equal to the part; and Miss Taylor, as *Constance*, for the first time. Of her, we are delighted to speak in terms of the highest commendation; her conception of the part is faultless—her acting feminine, buoyant, graceful, animated; in truth, every thing it should be. The dash of sentiment in her description of the pleasures of the chase divests it of all approach to the masculine, and the archness with which she makes “the points” in her dialogue is quite charming. She was warmly applauded throughout the play. The new farce, *A Wife for a Day*, also met with an excellent reception. It was acted with great spirit by Mr. Hill (who kept the house in a roar), Mr. W. Lacy, Mr. Strickland, Mrs. W. Clifford, Mrs. F. Matthews, &c. &c. It is the production of Mr. Bernard. The house has been well filled during the week.

Concerts.—We regret to use the word *last* with regard to concerts, but Mori and Lindley's series ended last week, when the full room plainly said another and another would delight us. On Thursday, Messrs. Blagrove, Gattie, Dando, and Lucas, held their last quartet meeting; when, in addition to Mozart, Beethoven, Weber, Himmell, Spohr, and Mendelssohn, a fine musical quartet in C minor was, for the first time, splendidly performed.

VARIETIES.

The Probe, No. I., has started as a periodical of criticism, &c. on the Fine Arts; and seems to propose being a sort of *Lancet* in that branch of national industry and luxury. It proceeds, *secundum artem*, to denounce the “Art Union,” to which it announces its rivalry; discusses the Nelson models with perfect freedom and dogmatism; and, as a consequence, asks, “What does the *Literary Gazette* mean by avowing so much subserviency on this important point? [The decision of the prizes.] Does it abandon its pretensions to critical discernment? Or why say, ‘As this matter may still be considered *sub judice*, we feel much difficulty and delicacy on the subject?’ Is the public to suffer detriment, that a few judges, not of the first water, may be pampered into self-approbation? Verily, the frankness of the critic in the ‘Morning Chronicle’ is much to be preferred to this parasitical conduct.” Now, though our inquisitor is yet very young, and his mode of asking questions not very polite, we will state, in answer, what the *Literary Gazette* does and does not mean. It does not mean to set itself up, like too many of its brethren of the press, and proclaim, “I am Sir Oracle: when I speak let no dog bark.” It does not mean to lend itself to any partisanship upon a public question. It does not mean to disparage the judgment of a set of men, of the taste, cultivation, and acquirements of many of whom it has a very high opinion. It does not mean to interfere in an authoritative, impudent, and dictatorial manner; as if it was endowed with all the collective wisdom on the subject, and the rest of the world knew nothing about it. It means, and means, candidly and respectfully to offer its opinions; and it did state, that it thought the first prize erroneously decided,—the second pre-eminently deserved,—and the third such as, allowing for differences of sentiment in every similar competition, could be well maintained against objections. When the real competition, which is to determine the electoral for a national design, comes to be dis-

cussed, it will consider it the proper time to say what it has to say,—so that if not a *Probe*, it will not fear the reproach of being *Im-probe*.

Artists' General Benevolent Fund.—H. R. H. the Duke of Cambridge, since his return amongst us, seems emulous to follow the example, and fill the place of his royal brothers, York, Kent, and Sussex, in regard to affording his countenance to benevolent and patriotic institutions. When we consider the great benefits derived from the influence of so high a station upon occasions of this kind, we cannot but feel that there is a deep debt of public gratitude to H. R. H., for having already, this season, presided at several meetings, where objects of national interest were sought to be advanced; and here, again, in another most praiseworthy instance, undertaken to occupy the chair. The fund, and the Arts generally, will, no doubt, reap great advantage from this act of condescension and kindness.

New Institution for Curing Diseases of the Ear.—A numerous meeting of the friends of this Institution was held in the committee-room, on Friday week, Alderman Sir Matthew Wood in the chair, when a report of the origin and progress of the Institution was read by Mr. Yearley, from which it appeared that upwards of two hundred poor persons afflicted with deafness had shared its benefits since its opening in July last. Various resolutions were agreed to expressive of the utility of the Institution, and its claims to public patronage and support. Several medical and other gentlemen addressed the meeting, after which thanks were voted to the chairman, and it separated.

Convalescent Hospital for the Destitute Poor of the Metropolis.—A humane improvement is suggested, under this head, for establishing an hospital, such as indicated, about eight or ten miles from town. It was first broached in a letter to the “Morning Herald,” and has, it is stated, met with so much approbation, that a Public Meeting is about to be called on the subject, to form a managing committee and receive donations and subscriptions. A statement, circulated by Dr. Garrett Dillon, of Harrow, among other observations, says:—

“The working and productive classes in London, wearied by labour, and occasionally enduring great privations, are constantly suffering from disease of one kind or another; and, after they are discharged from hospitals or dispensaries, the condition of the poor is the most afflictive that can be imagined. When cured of their diseases, or sufficiently relieved in the hospitals, they are turned out to attend as outpatients, that their beds may be filled with new cases, more urgent. For the cure or relief of their maladies they have generally to undergo a course of treatment that leaves them, though pronounced cured, emaciated and weak, and totally unfit to resume work; but, on the other hand, requiring, for the recovery of health, good and sufficient food, warm clothing, domestic comforts, with rest and good air. In this situation they are too often without a home, a friend, or a penny. Some of those who are in this predicament either resort to street begging or fall upon the parishes, where, in the best of times, there is but cold comfort for a convalescent; others return to the tainted dens inhabited by the poor, and it is no unusual thing for those who can find employment to undertake hard labour, though unable to work, for the purpose of procuring food. To these causes, and especially to the ‘going to work too soon after illness,’ I traced, in my investigation of cases, in the St. Pancras Infirmary, an awful mortality, and that amongst the best of the poor, those anxious to live by their own labour. To save the lives and re-establish the health of the poor so afflicted, it has often occurred to me that the establishing and supporting of Convalescent Hospitals, or houses of recovery, in the country, eight or ten miles from town, out of the reach of the London atmosphere, would be the most efficacious means. Into such asylums all persons discharged from the London Hospitals, cured or relieved, and considered by a board sitting in London proper objects, should be admitted. The value of climate and change of air in restoring health is so generally known, it would be a loss of time to write a word in dwelling upon the necessity of such retreats for the convalescent London poor. Medical attendants invariably recommend such a course, and if to those in easy circumstances, residing in the best parts of the metropolis, and enjoying domestic comforts and plenty, it is useful, how absolutely necessary must it be to those who live by incessant labour,

under privations such as I have attempted to describe? The question is, how are such asylums to be established? I think it probable that parliament would grant a sum of money for the purpose. The metropolitan parishes would, I think, subscribe; and it is possible that the large endowed hospitals, which are so very rich, would also contribute. It is, however, from the voluntary contributions of the public that most is to be expected; and, seeing what is derived from that source for the maintenance of medical and other charities in London, the project I propose has, I think, only to be brought before the public with the support of the press, to insure it a liberal and a speedy support. To the press, therefore, I commit the subject, and trust that it will be taken up and promoted by persons of talent, power, and influence, to whom my humble co-operations and a subscription of 100*l.* are offered.”

Polytechnic Institution.—On Monday evening, Mr. T. Philipps commenced a course of six lectures on the art of singing and vocal composition, for which task he is most competent, and simple, comprehensive, and elegant in his mode of execution. In order probably to lessen the dryness of a mere lecture, six popular melodies illustrative of the subject were sung by Mr. Philipps and the Misses Brandon, his pupils, with good effect. Some of these were warmly encored. The theatre was well filled, principally with young persons.

Antarctic Expedition.—The outpost letters state that the Erebus and Terror have been appointed for the antarctic expedition under the command of the experienced and gallant Sir James Ross, and with Commander F. R. M. Crozier in the latter vessel.

Anti-bridge-toll Association.—The object of this Association is to open Waterloo, Southwark, and Vauxhall bridges, free from tolls. The prospectus dwells upon the expediency of free communication between all parts of the capital, and especially between the opposite banks of the Thames, and points out the inadequacy of the un-tolled bridges (Westminster, Blackfriars, and London) for that purpose. It also notices the inequality as well as generally injurious effects of this tax, and concludes with recommending the matter to the consideration of parliament, with “the view of inducing the government to provide a means” for throwing open these metropolitan bridges.

Heads from Nicholas Nickleby. No. I. (R. Tyas.) Four imagined portraits of Mr. Dickens's popular characters (Kate, Ralph, Hawk, and Noggs), tolerably characteristic, but not well drawn.

“The March of Intellect.”—In this wonderful age we have at least a miracle a-week. The last report is, that M. — has acquired the power of rendering any person invisible. Of this more anon.

LITERARY NOVELTIES.

In the Press.

The Life and Times of Sir Thomas Gresham, compiled chiefly from Correspondence in Her Majesty's State-Paper Office, with Memoirs of many of his Contemporaries, and some Account of the Royal Exchange and Gresham College, by John W. Burgon.—A Brief Sketch of Native Education in India, under the Superintendence of the Church of Scotland, with Remarks bearing upon the Question of Conversion to Christianity, by James Bryce, D.D.

TO CORRESPONDENTS.

To the Editor of the Literary Gazette.

PNEUMATIC TELEGRAPH.

SIR, — Having read in your last publication some details
of a proposed telegraph on a pneumatic principle, devised
by Mr. Crosley, I beg leave to state that the subject has
for some time past occupied much of my attention, and
that I have nearly perfected a theory of one which has
been completely supported by experiment so far as com-
paratively limited opportunities have permitted, and
which seems to offer considerable and peculiar advantages.
I will not, however, presume to make a comparison of
its general merits with the plans proposed by others, but
will content myself with saying, that the mode of working
it would be characterized by extreme simplicity, ease, and
freedom from complexity of manipulation, and is calcu-
lated to supply an important desideratum in particular
instances, when applied to railways.

I beg leave, therefore, to say, that I have a two-fold
purpose in addressing you promptly on the subject: first,
as you have, in the notice above alluded to, called at-
tention strongly to it, to invite gentlemen practically
interested therein to allow me an opportunity of putting
myself in communication with them upon it; and, se-
condly, to avoid the appearance, as any future develop-
ment of my plan, of my ideas having merely followed in
the wake of others, while, in point of fact, they have been
concurrent with them; and at the same time I wish to
observe, that, although a very favourable opinion of it has
been expressed by one or two scientific gentlemen to whom
I have submitted it, my chief reason for not giving im-
mediate publicity to its details arises from a desire that in so
doing I should have it in my power to present it in as
perfect a form as possible, which can only result from
having ample opportunities of testing its powers on a scale
of sufficient magnitude. — I am, &c.

J. S. TEMPLETON.

"Vindicator" is under consideration. If the subject is
taken up, it should be done in all its relations, and not
partially.

We do not know the edition of Virgil mentioned by
"Amicus," but conceive, by the date, that it is of no
great value. The supplement, by Mafei Vegio, as well as
the smaller pieces he mentions, were printed very com-
monly in the older editions of this post. As some of our
readers may know more of this particular edition, we add
its title. "Pub. Virgilii Maronis Opera, Pauli Manutii
Annotationibus illustrata, &c. Leovvdie, apud Abrahamum
Radaum, 1614."

The cards of the Quadrille and Concert Institute have
twice reached us too late. It is a pity musical people do
not know how to keep time.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, FALL MALL.

The Gallery, for the Exhibition and Sale of the Works of Brit-
ish Artists, is open daily, from Ten in the Morning until Five in
the Evening.

Admission, 1s. Catalogue, 1s.
WILLIAM BARNARD, Keeper.

THE LIVING TALKING CANARY—

Corner Room, 209 Regent Street.
"He has the singular power of uttering a variety of sentences,
so completely articulated that the ear at once detects the division
of the syllables. Altogether, this little animal is an extraordi-
nary exhibition, and will astonish his patrons."—Times.
To be seen and heard daily, from Ten till Half-past Four.
Admittance, One Shilling.

THE ART-UNION OF LONDON: in- stituted in 1826, to aid in the Encouragement of the Arts of Design.

The Subscription Lists for the Year 1838-9 are now open. Sub-
scriptions are received by Charles Palmer Dimond, Esq., Treas-
urer, 10 Henrietta Street, Cavendish Square; by Edward Edwards,
Esq., Honorary Secretary, 15 Lower Brook Street (of whom the
Prospectus and Reports may be obtained); and by any Member of
the Committee; at the Office of the London and Westminster
Bank; and by Mr. Thomas Brittain, Collector, 10 Clarendon
Square, Somerset Town.

The Picture now engraving, by Mr. Giller, for the Subscribers
of last year (who are entitled to one copy for each Guinea sub-
scribed), is, "A Camaldolese Monk showing the Relics in the
Sacristy of his Convent at Rome," by William Simpson. This
picture, painted in Rome, was selected from the Exhibition of the
Royal Academy, at the price of 150 Guineas; by Benjamin Bond
Cubell, Esq., the holder of a prize of 25*l.* at the last allotment.
The engraving, it is hoped, will be in the hands of Subscribers
in the course of the month of March.

New ready,
Dedicated, by especial permission, to Her Majesty the Queen,
PROUT'S SKETCHES IN FRANCE,
SWITZERLAND, AND ITALY.
Imperial folio, 4*l.* 4*s.*; India Proof, 5*l.* 5*s.* half-bound; a few
Copies will be coloured and mounted, 10*l.* 10*s.* in a portfolio.
London: Hodgson and Graves, Her Majesty's Printers and
Publishers in Ordinary, 6 Pall Mall.

MUSIC.

TO THE MUSICAL WORLD.

NEW MUSICAL INSTRUMENT OF UNEQUALLED SUPERIORITY.

Messrs. Triebner and Co. beg leave to apprise the Nobility
and Gentry, that they have recently received from the Continent
a musical self-acting instrument, which, for sweetness and power
of tone, exceeds all efforts ever made by even the most ingenious
and accomplished artists, in the construction of the most superb
specimens of music. In fact, the most fertile imagination cannot
conceive any thing adequate to the beautiful melodious sounds
produced by this instrument, which are sufficient to enchant even
those who possess only a very moderate taste for music.
This new-invented instrument, called "Tibicinas," plays the
following pieces:

Overture to the Opera of William Tell, by Rossini.
Concerto, by J. A. Grom.
Overture to the Opera of Fra Diavolo, by Auber.
March, with Variations, to the Opera of Aline, by Spohr.
Variations by Rameau.
Overture to the Opera of the Freischütz, by Carl M. von
Weber.

In regard to its shape and size, it is well adapted for either the
Drawing or Dining-Room.

To be viewed at Messrs. T. and Co. German Clock Warehouse,
191 High Holborn.

BOOKS IN THE PRESS.

NOVEL, BY MISS MARTINEAU.

On the 28th of March will be published, in 3 vols.

DEERBROOK. A Novel.

By HARRIET MARTINEAU.

Edward Moxon, Dover Street.

VALPY'S GREEK TESTAMENT.

FOURTH EDITION, with Parallel References, and other Improvements, 3 vols. 8vo. 2l. 6s. boards.

GREEK TESTAMENT,

WITH ENGLISH NOTES.

Critical, Philological, and Explanatory, from the most eminent Critics and Interpreters; with Parallel Passages from the Classics, and with References to Viper for Idioms, and Sae for Ellipses; to which is prefixed, a TREATISE on the DOCTRINE of the GREEK ARTICLE, according to Bishop Middleton, Mr. Granville Sharp, &c. briefly and compendiously explained, as applicable to the Criticism of the New Testament. The various Readings are recorded under the Text. Greek and English Indexes are added.

By the Rev. E. VALPY, B.D.

Two Plates are added, of the Travels of the Apostles; a Map of Judea, and a Plan of Jerusalem.

This work is intended for Students in Divinity, as well as the Library.

"This 'Greek Testament' is the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish to purchase only one edition."—*Horn's Introduction to the Bible*.

"'Valpy's Greek Testament' is to be preferred to either Dr. Burton's or Dr. Bloomfield's."—*Christian Guardian*.

"This is a valuable accession to the aids of the undergraduates, the divinity student, and even the theologian. We cordially recommend it; and those who wish to purchase only one comprehensive 'Greek Testament,' and that not very expensive, will find in this edition the very object of their search."—*Christian Remembrancer*.

Printed by Valpy; and sold by Whittaker and Co. London; and all Booksellers in Town and Country.

TO THE 20,000 ORIGINAL SUBSCRIBERS.

FISHER'S ILLUSTRATIONS FOR CADELL'S
WAVERLEY NOVELS.

48 VOLUMES.

Comprising 75 Landscape-Historical Subjects, from Drawings by Turner, MacIise, Hart, Linnell, Balmer, Allam, Melville, &c. &c.; and 35 Comic Subjects from the laughter-loving pencil of George Cruikshank.

Repeated applications having been made to Fisher and Co. by Purchasers of the above Work, to supply their Illustrations on paper of a uniform size, they now offer the

One Hundred and Ten Engravings for Thirty Shillings.

Each Plate having References to the Volume and Page, the whole can either be inserted in their respective places, or bound up uniformly as additional Volumes.

FISHER, SON, AND CO. NEWGATE STREET, LONDON.

DISMISSABLE ILLUSTRATED.

2d edition, post 8vo. 7s. 6d.

NEW CURIOSITIES OF LITERATURE.

By BOLTON CORNETT, Esq.

"A clever little work."—*Orlando*."A very amusing and clever specimen."—*Atlas*."A masterly volume."—*Examiner*."The author has conferred a service on literature."—*Observer*."We should like to see the thin octave that the poetry of D'Israeli in all libraries."—*Metropolitan*.

Richard Bentley, New Burlington Street (Publisher in Quarterly to Her Majesty).

Price 10s. 6d. cloth.

THE THEORY OF THE DIFFERENTIAL
AND INTEGRAL CALCULUS. Derived synthetically
from an original Principle.

By JOHN FORBES, D.D.

Minister of St. Paul's Church, Glasgow.
"We may safely assert, that this author has advanced further than his predecessors towards completing the harmony and unity of mathematical science."—*Albion*.

"In an instrument formerly unknown in analytic investigation,—results of a new and interesting description in infinite series,—and the establishment of the differential and integral calculus upon an elementary and synthetic basis, are presented the peculiar features of one of the most original works of the present time."—*Presbyterian Review*.

"The connecting link between the ancient and the modern analysis is now unquestionably supplied, and the student is in the midst of the calculus as he is aware of it."—*Glasgow Courier*.

"We are satisfied, indeed, that those who shall read it with care and attention, will regard the evidence throughout as highly satisfactory."—*Review by Dr. Thompson, Professor of Mathematics, University of Glasgow*.

"The student is led, step by step, by common algebraic reasoning, until he finds himself in the very midst of the differential and integral calculus."—*Orlando*.

"Such is the merit of the work before us,—such the purity of its principles, and such the facility with which these principles may be applied, that we have no doubts it will be fully appreciated by all the friends of true science, and induce many to enter on the same field of inquiry."—*Review by Professor Wilson, of the Andersonian University*.

Wm. Collins, and Shanks and Son, Glasgow; W. Curry, Jun. and Co. Dublin; and Longman and Co. London.
